153 The parts of our wealth most intimately ours are those which are saturated with our labor. There are few men who would not feel personally annihilated if a life-long construction of their hands or brains—say an entomological collection or an extensive work in manuscript—were suddenly swept away. The miser feels similarly towards his gold, and although it is true that a part of our depression at the loss of possessions is due to our feeling that we must now go without certain goods that we expected the possessions to bring in their train, yet in every case there remains, over and above this, a sense of the shrinkage of our personality, a partial conversion of ourselves to nothingness, which is a psychological phenomenon by itself. We are all at once assimilated to the tramps and poor devils whom we so despise, and at the same time removed farther than ever away from the happy sons of earth who lord it over land and sea and men in the full-blown lustihood that wealth and power can give, and before whom, stiffen ourselves as we will by appealing to anti-snobbish first principles, we cannot escape an emotion, open or sneaking, of respect and dread.

William James, Psychology, X

154 Poverty indeed is the strenuous life,—without brass bands or uniforms or hysteric popular applause or lies or circumlocutions.

William James, Varieties of Religious Experience, XIV-XV

155 The praises of poverty need once more to be boldly sung. We have grown literally afraid to be poor. We despise anyone who elects to be poor in order to simplify and save his inner life. If he does not join the general scramble and pant with the money-making street, we deem him spiritless and lacking in ambition. We have lost the power even of imagining what the ancient idealization of poverty could have meant: the liberation from material attachments, the unbribed soul, the manlier indifference, the paying our way by what we are or do and not by what we have, the right to fling away our life at any moment irresponsibly—the more athletic trim, in short, the moral fighting shape.

William James, Varieties of Religious Experience, XIV-XV

156 In the millionaire Undershaft I have represented a man who has become intellectually and spiritually as well as practically conscious of the irresistible natural truth which we all abhor and repudiate: to wit, that the greatest of our evils, and the worst of our crimes is poverty, and that our first duty, to which every other consideration should be sacrificed, is not to be poor. "Poor but honest," "the respectable poor," and such phrases are as intolerable and as immoral as "drunken but amiable," "fraudulent but a good after-dinner speaker," "splendidly criminal," or the like.... The thoughtless wickedness with which we scatter sentences of imprisonment, torture in the solitary cell and on the plank bed, and flogging, on moral invalids and energetic rebels, is as nothing compared to the silly levity with which we tolerate poverty as if it were either a wholesome tonic for lazy

people or else a virtue to be embraced as St Francis embraced it. If a man is indolent, let him be poor. If he is drunken, let him be poor. If he is not a gentleman, let him be poor. If he is addicted to the fine arts or to pure science instead of to trade and finance, let him be poor. If he chooses to spend his urban eighteen shillings a week or his agricultural thirteen shillings a week on his beer and his family instead of saving it up for his old age, let him be poor. Let nothing be done for "the undeserving": let him be poor. Serve him right! Also—somewhat inconsistently—blessed are the poor!

Now what does this Let Him Be Poor mean? It means let him be weak. Let him be ignorant. Let him become a nucleus of disease. Let him be a standing exhibition and example of ugliness and dirt. Let him have rickety children. Let him be cheap and let him drag his fellows down to his own price by selling himself to do their work. Let his habitations turn our cities into poisonous congeries of slums. Let his daughters infect our young men with the diseases of the streets, and his sons revenge him by turning the nation's manhood into scrofula, cowardice, cruelty, hypocrisy, political imbecility, and all the other fruits of oppression and malnutrition. Let the undeserving become still less deserving; and let the deserving lay up for himself, not treasures in heaven, but horrors in hell upon earth. This being so, is it really wise to let him be poor?

Shaw, Major Barbara, Pref.

157 All capital... is nothing but spare subsistence. It is the superfluous part of a man's income—that which he is content not to consume, or can easily be persuaded to forego for the present for the sake of some future

advantage. Thus capital has been called "the reward of abstinence"; and though the phrase has fallen into general ridicule through its absurd and hypocritical implication that the quantity of capital saved by any person is in direct proportion to their powers of virtuous self-denial, yet if we substitute "result" for "reward," and strip the word "abstinence" of its moral implication, we can accept the definition as practically true. Capital, then, is the result of abstinence. If a man wants a flour mill, he must save the cost of building it and fitting it up out of his income. If he wishes to maintain it, he must not spend on his immediate personal satisfaction all that it brings him in, but must set aside a certain sum annually to make good the wear and tear of the millstones and machinery. If he desires to enlarge the mill, to put in additional pairs of stones, to substitute steam power for water power, or to introduce the steel roller system method of grinding, he must abstain from consuming the cost of these things in personal expenditure. The accumulation and maintenance of capital is possible in no other way. Abstinence is the inevitable condition.

Shaw, Capital and Wages

158 Unfortunately, the poor man suffers much less from poverty than the community does, just as a man who never washes his clothes is unbearable to his neighbor though quite tolerable to himself. It is positively delightful to be naked in warm weather; we are forced to dress for the sake of our neighbors against our own inclinations. A destitute man depresses his neighbors, defiles his dwelling, becomes a centre of infection, depraves morals: is, in short, a scandal. We may take it

then that a man will not be allowed to be poor, whatever other indulgence may be extended to him.

Shaw, Redistribution of Income

159 Why do we, in fact, almost all of us, desire to increase our incomes? It may seem, at first sight, as though material goods were what we desire. But, in fact, we desire these mainly in order to impress our neighbours. When a man moves into a larger house in a more genteel quarter, he reflects that "better" people will call on his wife and some unprosperous cronies of former days can be dropped. When he sends his son to a good school or an expensive university, he consoles himself for the heavy fees by thoughts of the social kudos to be gained. In every big city, whether of Europe or of America, houses in some districts are more expensive than equally good houses in other districts, merely because they are more fashionable. One of the most powerful of all our passions is the desire to be admired and respected. As things stand, admiration and respect are given to the man who seems to be rich. This is the chief reason why people wish to be rich. The actual goods purchased by their money play quite a secondary part.

Russell, Sceptical Essays, VI

160 Wealth must justify itself in happiness.

Santayana, Life of Reason, II, 3

11.3 Labor

Labor, or what is sometimes called "work" and sometimes called "toil," is considered in most of the texts here quoted as that form of human activity which is productive of wealth—either consumable goods or the means of production. Some writers explicitly distinguish it from, as well as relate it to, such other modes of activity as play or recreation and the creative pursuits of leisure that have nothing to do with the production of economic goods.

Beginning with the famous passage in Genesis, in which Adam, expelled from Eden, is condemned to live by the sweat of his brow, the pain of toil or labor is discussed by a succession of Christian writers as one of the punishments for sin. This is balanced by another line of texts in which the satisfactions of work and the dignity of labor are emphasized. But labor is nowhere praised as the be-all and end-all of human life. The need to alleviate the fatigues, if not the pains, of toil are acknowledged, and for this therapeutic purpose play or recreation is recommended.

The division of labor and its effect on increased efficiency in the production of wealth is a favorite theme of modern economists, but there are anticipations of it in earlier writers, even as far back as Plato.

The economists, as well as others, are also concerned with the wages of labor and with the special role that labor plays in the creation of economic value. The passages quoted here from Marx, which state his "labor theory of value," i.e., that labor is the sole productive source of

wealth, should be contrasted with the passages quoted from Locke in Section 11.1 above, which state his "labor theory of property," i.e., that labor is the indispensable condition of a rightful acquisition of wealth.

The reader will find the tripartite distinction of work, play, and leisure more fully discussed in certain passages included in Section 9.8 on Happiness. The conception of work as a punishment for sin will be found in Section 20.13 on Sin and Temptation.

■ ■ ■

1 In the sweat of thy face shalt thou eat bread, till thou return unto the ground.

Genesis 3:19

2 Man goeth forth unto his work and to his labour until the evening.

Psalms 104:23

3 Go to the ant, thou sluggard; consider her ways, and be wise:

Which having no guide, overseer, or ruler,
Provideth her meat in the summer, and gathereth her food in the harvest.

How long wilt thou sleep, O sluggard? when wilt thou arise out of thy sleep?

Yet a little sleep, a little slumber, a little folding of the hands to sleep:

So shall thy poverty come as one that travelleth, and thy want as an armed man.

Proverbs 6:6-11

4 I looked on all the works that my hands had wrought, and on the labour that I had laboured to do: and, behold, all was vanity and vexation of spirit, and there was no profit under the sun.

Ecclesiastes 2:11

5 Whatsoever thy hand findeth to do, do it with thy might; for there is no work, nor device, nor knowledge, nor wisdom, in the grave, whither thou goest.

Ecclesiastes 9:10

6 Still on the sluggard hungry want attends;
The scorn of man, the hate of Heaven impends;
While he, averse from labour, drags his days,
Yet greedy on the gains of others preys;
E'en as the stingless drones devouring seize
With gluttoned sloth the harvest of the bees.

Love every seemingly toil, that so the store
Of foodful seasons heap thy garner's floor.
From labour, men returns of wealth behold,
Flocks in their fields, and in their coffers gold:
From labour shaft thou with the love be bless'd
Of men and gods; the slothful they detest.
Not toil, but sloth, shall ignominious be;
Toil, and the slothful man shall envy thee;
Shall view thy growing wealth with alter'd sense,
For glory, virtue, walk with opulence.

Hesiod, Works and Days

7 *Amasis*. Bowmen bend their bows when they wish to shoot; unbrace them when the shooting is over.

Were they kept always strung they would break, and fail the archer in time of need. So it is with men. If they give themselves constantly to serious work, and never indulge awhile in pastime or sport, they lose their senses, and become mad or moody.

Herodotus, History, II, 173

- 8 *Socrates*. We are not all alike; there are diversities of natures among us which are adapted to different occupations.

Adeimantus. Very true.

And will you have a work better done when the workman has many occupations, or when he has only one?

When he has only one.

Further, there can be no doubt that a work is spoilt when not done at the right time?

No doubt.

For business is not disposed to wait until the doer of the business is at leisure; but the doer must follow up what he is doing, and make the business his first object.

He must.

And if so, we must infer that all things are produced more plentifully and easily and of a better quality when one man does one thing which is natural to him and does it at the right time, and leaves other things.

Plato, Republic, II, 370A

- 9 *Socrates* says that a state is made up of four sorts of people who are absolutely necessary; these are a weaver, a husbandman, a shoemaker, and a builder; afterwards, finding that they are not enough, he adds a smith, and

again a herdsman, to look after the necessary animals; then a merchant, and then a retail trader. All these together form the complement of the first state, as if a state were established merely to supply the necessities of life, rather than for the sake of the good, or stood equally in need of shoemakers and of husbandmen. But he does not admit into the state a military class until the country has increased in size, and is beginning to encroach on its neighbour's land, whereupon they go to war. Yet even amongst his four original citizens, or whatever be the number of those whom he associates in the state, there must be some one who will dispense justice and determine what is just. And as the soul may be said to be more truly part of an animal than the body, so the higher parts of states, that is to say, the warrior class, the class engaged in the administration of justice, and that engaged in deliberation, which is the special business of political common sense,—these are more essential to the state than the parts which minister to the necessities of life. Whether their several functions are the functions of different citizens, or of the same,—for it may often happen that the same persons are both warriors and husbandmen,—is immaterial to the argument.

Aristotle, Politics, 1291a11

- 10 Let us consider trade and other occupations. Which ones befit a gentleman and which are beneath him, we have generally been taught as follows. First, any occupation is to be rejected if it incurs public ill-will, such as tax-collecting and usury. Also unfit for gentlemen are those jobs done by hired workmen, whom we pay for manual labor only and not for artistic skill. Their very wage is a

token of their slavery. We also consider vulgar those who buy from wholesale agents to sell at retail. They would make no profit without a good deal of outright lying. And there is nothing more base than misrepresentation. Mechanics also pursue a common calling, because there can be nothing liberal about a workshop....

But those professions that call for a higher level of intelligence and which confer some benefit on society, such as medicine and architecture, are proper for those whose social position they become. Commerce on a small scale is contemptible. But a wholesale business on a large scale, importing great quantities of goods from all over the world and purveying them without deceit, cannot be disparaged. It may, in fact, deserve the highest respect, if those who engage in it, when they have made their fortune, forsake the harbours for a country estate, just as they have often gone from sea to port. But of all occupations by which gain is secured, none is better than agriculture. None is more profitable, delightful, or becoming a free man.

Cicero, De Officiis, I, 42

11 Then saws were toothed, and sounding axes made;
(For wedges first did yielding wood invade);
And various arts in order did succeed,
(What cannot endless labour, urged by need?)

Virgil, Georgics, I

12 The laborer is worthy of his hire.

Luke 10:7

- 13 Let him that stole steal no more: but rather let him labour, working with his hands the thing which is good, that he may have to give to him that needeth.

Ephesians 4:28

- 14 Yourselves know how ye ought to follow us: for we behaved not ourselves disorderly among you;
Neither did we eat any man's bread for nought; but wrought with labour and travail night and day, that we might not be chargeable to any of you.

II Thessalonians 3:7-8

- 15 One of the greatest and highest blessings Lycurgus procured his people was the abundance of leisure which proceeded from his forbidding to them the exercise of any mean and mechanical trade. Of the money-making that depends on troublesome going about and seeing people and doing business, they had no need at all in a state where wealth obtained no honour or respect. The Helots tilled their ground for them, and paid them yearly in kind the appointed quantity, without any trouble of theirs. To this purpose there goes a story of a Lacedaemonian who, happening to be at Athens when the courts were sitting, was told of a citizen that had been fined for living an idle life, and was being escorted home in much distress of mind by his condoling friends; the Lacedaemonian was much surprised at it and desired his friend to show him the man who was condemned for living like a freeman. So much beneath them did they esteem the frivolous devotion of time and attention to the mechanical arts and to money-making.

Plutarch, Lycurgus

16 He who labors as he prays lifts his heart to God with his hands.

Bernard of Clairvaux, Ad Sororem

17 Not everyone sins that works not with his hands, because those precepts of the natural law which regard the good of the many are not binding on each individual, but it suffices that one person apply himself to this business and another to that; for instance, that some be craftsmen, others husbandmen, others judges, and others teachers, and so forth.

Aquinas, Summa Theologica, II-II, 187,3

18 Being is something we hold dear, and being consists in movement and action. Wherefore each man in some sort exists in his work.

Montaigne, Essays, II, 8, Affection of Fathers

19 *Prince*. If all the year were playing holidays,
To sport would be as tedious as to work.

Shakespeare, I Henry IV, I, ii, 227

20 No kind of men love business for itself but those that are learned; for other persons love it for profit, as an hireling, that loves the work for the wages; or for honour, as because it beareth them up in the eyes of men, and refresheth their reputation, which otherwise would wear; or because it putteth them in mind of their fortune, and giveth them occasion to pleasure and displeasure; or because it exerciseth some faculty wherein they take pride, and so entertaineth them in good humour and pleasing conceits toward themselves; or because it

advanceth any other their ends. So that as it is said of untrue valours, that some men's valours are in the eyes of them that look on; so such men's industries are in the eyes of others, or at least in regard of their own designments: only learned men love business as an action according to nature, as agreeable to health of mind as exercise is to health of body, taking pleasure in the action itself, and not in the purchase: so that of all men they are the most indefatigable, if it be towards any business which can hold or detain their mind.

Bacon, Advancement of Learning, Bk. I, 11, 5

- 21 Whereas many men, by accident inevitable, become unable to maintain themselves by their labour, they ought not to be left to the charity of private persons, but to be provided for, as far forth as the necessities of nature require, by the laws of the Commonwealth. For as it is uncharitableness in any man to neglect the impotent; so it is in the sovereign of a Commonwealth, to expose them to the hazard of such uncertain charity.

But for such as have strong bodies the case is otherwise; they are to be forced to work; and to avoid the excuse of not finding employment, there ought to be such laws as may encourage all manner of arts; as navigation, agriculture, fishing, and all manner of manufacture that requires labour.

Hobbes, Leviathan, 11, 30

- 22 *Eve. Adam*, well may we labour still to dress
This Garden, still to tend Plant, Herb and Flour.
Our pleasant task enjoyn'd, but till more hands
Aid us, the work under our labour grows,

Luxurious by restraint; what we by day
Lop overgrown, or prune, or prop, or bind.
One night or two with wanton growth derides
Tending to wilde. Thou therefore now advise
Or hear what to my mind first thoughts present,
Let us divide our labours, thou where choice
Leads thee, or where most needs, whether to wind
The Woodbine round this Arbour, or direct
The clasping Ivie where to climb, while I
In yonder Spring of Roses intermixt
With Myrtle, find what to redress till Noon:
For while so near each other thus all day
Our task we choose, what wonder if so near
Looks intervene and smiles, or object new
Casual discourse draw on, which intermits
Our dayes work brought to little, though begun
Early, and th' hour of Supper comes unearn'd.

Milton, Paradise Lost, IX, 205

- 23 It [is not] so strange as, perhaps, before consideration, it may appear, that the property of labour should be able to overbalance the community of land, for it is labour indeed that puts the difference of value on everything; and let anyone consider what the difference is between an acre of land planted with tobacco or sugar, sown with wheat or barley, and an acre of the same land lying in common without any husbandry upon it, and he will find that the improvement of labour makes the far greater part of the value. I think it will be but a very modest compulation to say, that of the products of the earth useful to the life of man, nine-tenths are the effects of labour. Nay, if we will rightly estimate things as they come to our use, and cast up the several expenses about

them—what in them is purely owing to Nature and what to labour—we shall find that in most of them ninety-nine hundredths are wholly to be put on the account of labour.

Locke, II Civil Government, V, 40

24 It is labour... which puts the greatest part of value upon land, without which it would scarcely be worth anything; it is to that we owe the greatest part of all its useful products; for all that the straw, bran, bread, of that acre of wheat, is more worth than the product of an acre of as good land which lies waste is all the effect of labour. For it is not barely the ploughman's pains, the reaper's and thresher's toil, and the baker's sweat, is to be counted into the bread we eat; the labour of those who broke the oxen, who digged and wrought the iron and stones, who felled and framed the timber employed about the plough, mill, oven, or any other utensils, which are a vast number, requisite to this corn, from its sowing to its being made bread, must all be charged on the account of labour, and received as an effect of that; Nature and the earth furnished only the almost worthless materials as in themselves. It would be a strange catalogue of things that industry provided and made use of about every loaf of bread before it came to our use if we could trace them; iron, wood, leather, bark, timber, stone, bricks, coals, lime, cloth, dyeing-drugs, pitch, tar, masts, ropes, and all the materials made use of in the ship that brought any of the commodities made use of by any of the workmen, to any part of the work, all which it would be almost impossible, at least too long, to reckon up.

Locke, II Civil Government, V, 43

25 No labour is so heavy but it may be brought to a level with the workman's strength, when regulated by equity, and not by avarice. The violent fatigues which slaves are made to undergo in other parts may be supplied by a skilful use of ingenious machines.... Possibly there is not that climate upon earth where the most laborious services might not with proper encouragement be performed by freemen. Bad laws having made lazy men, they have been reduced to slavery because of their laziness.

Montesquieu, Spirit of Laws, XV, 8

26 The machines designed to abridge art are not always useful. If a piece of workmanship is of a moderate price, such as is equally agreeable to the maker and the buyer, those machines which would render the manufacture more simple, or, in other words, diminish the number of workmen, would be pernicious. And if water-mills were not everywhere established, I should not have believed them so useful as is pretended, because they have deprived an infinite multitude of their employment, a vast number of persons of the use of water, and great part of the land of its fertility.

Montesquieu, Spirit of Laws, XXIII, 15

27 *Pangloss*. When man was placed in the garden of Eden, he was placed there, ... to cultivate it; which proves that mankind are not created to be idle.

Voltaire, Candide, XXX

28 From the moment one man began to stand in need of the help of another; from the moment it appeared

advantageous to any one man to have enough provisions for two, equality disappeared, property was introduced, work became indispensable, and vast forests became smiling fields, which man had to water with the sweat of his brow, and where slavery and misery were soon seen to germinate and grow up with the crops.

Rousseau, Origin of Inequality, II

29 Equality might have been sustained, had the talents of individuals been equal, and had, for example, the use of iron and the consumption of commodities always exactly balanced each other; but, as there was nothing to preserve this balance, it was soon disturbed; the strongest did most work; the most skilful turned his labour to best account; the most ingenious devised methods of diminishing his labour: the husbandman wanted more iron, or the smith more corn, and, while both laboured equally, the one gained a great deal by his work, while the other could hardly support himself. Thus natural inequality unfolds itself insensibly with that of combination, and the difference between men, developed by their different circumstances, becomes more sensible and permanent in its effects, and begins to have an influence, in the same proportion, over the lot of individuals.

Rousseau, Origin of Inequality, II

30 What if I should undertake to show humanity attacked in its very source, and even in the most sacred of all ties, in which fortune is consulted before nature, and, the disorders of society confounding all virtue and vice, continence becomes a criminal precaution, and a refusal

to give life to a fellow-creature, an act of humanity? But, without drawing aside the veil which hides all these horrors, let us content ourselves with pointing out the evil which others will have to remedy.

To all this add the multiplicity of unhealthy trades, which shorten men's lives or destroy their bodies, such as working in the mines, and the preparing of metals and minerals, particularly lead copper, mercury, cobalt, and arsenic: add those other dangerous trades which are daily fatal to many tilers, carpenters, masons and miners: put all these together and we can see, in the establishment and perfection of societies, the reasons for that diminution of our species, which has been noticed by many philosophers.

Rousseau, Origin of Inequality, Appendix

- 31 It is allowed that vocations and employments of least dignity are of the most apparent use, that the meanest artisan or manufacturer contributes more to the accommodation of life than the profound scholar and argumentative theorist, and that the public would suffer less present inconvenience from the banishment of philosophers than from the extinction of any common trade.

Johnson, Rambler No. 145

- 32 *Johnson*. "Why, Sir, you cannot call that pleasure [that is, labor] to which all are averse, and which none begin but with the hope of leaving off; a thing which men dislike before they have tried it, and when they have tried it." *Boswell*. "But, Sir, the mind must be employed, and we grow weary when idle." *Johnson*. "That is, Sir, because,

others being busy, we want company; but if we were all idle, there would be no growing weary; we should all entertain one another. There is, indeed, this in trade:—it gives men an opportunity of improving their situation. If there were no trade, many who are poor would always remain poor. But no man loves labour for itself." *Boswell*. "Yes, Sir, I know a person who does. He is a very laborious Judge, and he loves the labour." *Johnson*. "Sir, that is because he loves respect and distinction. Could he have them without labour, he would like it less." *Boswell*. "He tells me he likes it for itself."—"Why, Sir, he fancies so, because he is not accustomed to abstract."

Boswell, Life of Johnson (Oct 26, 1769)

- 33 The greatest improvement in the productive powers of labour, and the greater part of the skill, dexterity, and judgment with which it is anywhere directed, or applied, seem to have been the effects of the division of labour. [These] effects ... in the general business of society, will be more easily understood by considering in what manner it [labour] operates in some particular manufactures. ... To take an example, therefore, from a very trifling manufacture; but one in which the division of labour has been very often taken notice of, the trade of the pin-maker; a workman not educated to this business (which the division of labour has rendered a distinct trade), nor acquainted with the use of the machinery employed in it (to the invention of which the same division of labour has probably given occasion), could scarce, perhaps, with his utmost industry, make one pin in a day, and certainly could not make twenty. But in the way in which this business is now carried on, not only the whole work is a peculiar trade, but it is divided into a

number of branches, of which the greater part are likewise peculiar trades. One man draws out the wire, another straightens it, a third cuts it, a fourth points it, a fifth grinds it at the top for receiving the head; to make the head requires two or three distinct operations; to put it on is a peculiar business, to whiten the pins is another; it is even a trade by itself to put them into the paper; and the important business of making a pin is, in this manner, divided into about eighteen distinct operations, which, in some manufactories, are all performed by distinct hands, though in others the same man will sometimes perform two or three of them. I have seen a small manufactory of this kind where ten men only were employed, and where some of them consequently performed two or three distinct operations. But though they were very poor, and therefore but indifferently accommodated with the necessary machinery, they could, when they exerted themselves, make among them about twelve pounds of pins in a day. There are in a pound upwards of four thousand pins of a middling size. Those ten persons, therefore, could make among them upwards of forty-eight thousand pins in a day. Each person, therefore, making a tenth part of forty-eight thousand pins, might be considered as making four thousand eight hundred pins in a day. But if they had all wrought separately and independently, and without any of them having been educated to this peculiar business, they certainly could not each of them have made twenty, perhaps not one pin in a day; that is, certainly, not the two hundred and fortieth, perhaps not the four thousand eight hundredth part of what they are at present capable of performing, in consequence of a proper division and combination of their different operations.

Adam Smith, Wealth of Nations, I, 1

34 In the first fire-engines, a boy was constantly employed to open and shut alternately the communication between the boiler and the cylinder, according as the piston either ascended or descended. One of those boys, who loved to play with his companions, observed that, by tying a string from the handle of the valve which opened this communication to another part of the machine, the valve would open and shut without his assistance, and leave him at liberty to divert himself with his play-fellows. One of the greatest improvements that has been made upon this machine, since it was first invented, was in this manner the discovery of a boy who wanted to save his own labour.

Adam Smith, Wealth of Nations, I, 1

35 When the division of labour has been once thoroughly established, it is but a very small part of a man's wants which the produce of his own labour can supply. He supplies the far greater part of them by exchanging that surplus part of the produce of his own labour, which is over and above his own consumption, for such parts of the produce of other men's labour as he has occasion for. Every man thus lives by exchanging, or becomes in some measure a merchant, and the society itself grows to be what is properly a commercial society.

Adam Smith, Wealth of Nations, I, 4

36 Great labour, either of mind or body, continued for several days together, is in most men naturally followed by a great desire of relaxation, which, if not restrained by force or by some strong necessity, is almost irresistible. It

is the call of nature, which requires to be relieved by some indulgence, sometimes of ease only, but sometimes, too, of dissipation and diversion.

Adam Smith, Wealth of Nations, I, 8

- 37 Custom everywhere regulates fashion. As it is ridiculous not to dress, so is it, in some measure, not to be employed, like other people. As a man of a civil profession seems awkward in a camp or a garrison, and is even in some danger of being despised there, so does an idle man among men of business.

Adam Smith, Wealth of Nations, I, 9

- 38 There is one sort of labour which adds to the value of the subject upon which it is bestowed: there is another which has no such effect. The former, as it produces a value, may be called productive; the latter, unproductive labour. Thus the labour of a manufacturer adds, generally, to the value of the materials which he works upon, that of his own maintenance, and of his master's profit. The labour of a menial servant, on the contrary, adds to the value of nothing.... The labour of the latter, however, has its value, and deserves its reward as well as that of the former. But the labour of the manufacturer fixes and realizes itself in some particular subject or vendible commodity, which lasts for some time at least after that labour is past. It is, as it were, a certain quantity of labour stocked and stored up to be employed, if necessary, upon some other occasion. That subject, or what is the same thing, the price of that subject, can afterwards, if necessary, put into motion a quantity of labour equal to that which had originally produced it. The labour of the menial servant,

on the contrary, does not fix or realize itself in any particular subject or vendible commodity. His services generally perish in the very instant of their performance, and seldom leave any trace or value behind them for which an equal quantity of service could afterwards be procured.

The labour of some of the most respectable orders in the society is, like that of menial servants, unproductive of any value, and does not fix or realize itself in any permanent subject; or vendible commodity, which endures after that labour is past, and for which an equal quantity of labour could afterwards be procured. The sovereign, for example, with all the officers both of justice and war who serve under him, the whole army and navy, are unproductive labourers. They are the servants of the public, and are maintained by a part of the annual produce of the industry of other people. Their service, how honourable, how useful, or how necessary soever, produces nothing for which an equal quantity of service can afterwards be procured. The protection, security, and defence of the commonwealth, the effect of their labour this year will not purchase its protection, security, and defence for the year to come. In the same class must be ranked, some both of the gravest and most important, and some of the most frivolous professions: churchmen, lawyers, physicians, men of letters of all kinds; players, buffoons, musicians, opera-singers, opera-dancers, etc. The labour of the meanest of these has a certain value, regulated by the very same principles which regulate that of every other sort of labour; and that of the noblest and most useful, produces nothing which could afterwards purchase or procure an equal quantity of labour. Like the declamation of the actor, the harangue of

the orator, or the tune of the musician, the work of all of them perishes in the very instant of its production.

Both productive and unproductive labourers, and those who do not labour at all, are all equally maintained by the annual produce of the land and labour of the country. This produce, how great soever, can never be infinite, but must have certain limits. According, therefore, as a smaller or greater proportion of it is in any one year employed in maintaining unproductive hands, the more in the one case and the less in the other will remain for the productive, and the next year's produce will be greater or smaller accordingly; the whole annual produce, if we except the spontaneous productions of the earth, being the effect of productive labour.

Adam Smith, Wealth of Nations, II, 3

- 39 In the progress of the division of labour, the employment of the far greater part of those who live by labour, that is, of the great body of the people, comes to be confined to a few very simple operations, frequently to one or two. But the understandings of the greater part of men are necessarily formed by their ordinary employments. The man whose whole life is spent in performing a few simple operations, of which the effects are perhaps always the same, or very nearly the same, has no occasion to exert his understanding or to exercise his invention in finding out expedients for removing difficulties which never occur. He naturally loses, therefore, the habit of such exertion, and generally becomes as stupid and ignorant as it is possible for a human creature to become. The torpor of his mind renders him not only incapable of relishing or bearing a part in any rational conversation, but of conceiving any generous, noble, or tender

sentiment, and consequently of forming any just judgment concerning many even of the ordinary duties of private life. Of the great and extensive interests of his country he is altogether incapable of judging, and unless very particular pains have been taken to render him otherwise, he is equally incapable of defending his country in war. The uniformity of his stationary life naturally corrupts the courage of his mind, and makes him regard with abhorrence the irregular, uncertain, and adventurous life of a soldier. It corrupts even the activity of his body, and renders him incapable of exerting his strength with vigour and perseverance in any other employment than that to which he has been bred. His dexterity at his own particular trade seems, in this manner, to be acquired at the expense of his intellectual, social, and martial virtues. But in every improved and civilised society this is the state into which the labouring poor, that is, the great body of the people, must necessarily fall, unless government takes some pains to prevent it.

Adam Smith, Wealth of Nations, V, 1

- 40 The brethren (of the ancient monasteries] were supported by their manual labour; and the duty of labour was strenuously recommended as a penance, as an exercise, and as the most laudable means of securing their daily subsistence. The garden and fields, which the industry of the monks had often rescued from the forest or the morass, were diligently cultivated by their hands. They performed, without reluctance, the menial offices of slaves and domestics; and the several trades that were necessary to provide their habits, their utensils, and their

lodging, were exercised within the precincts of the great monasteries.

Gibbon, Decline and Fall of the Roman Empire, XXXVII

- 41 All trades, arts, and handiworks have gained by division of labour, namely, when, instead of one man doing everything, each confines himself to a certain kind of work distinct from others in the treatment it requires, so as to be able to perform it with greater facility and in the greatest perfection. Where the different kinds of work are not distinguished and divided, where everyone is a jack-of-all-trades, there manufactures remain still in the greatest barbarism.

Kant, Fundamental Principles of the Metaphysic of Morals, Pref.

- 42 There is no real wealth but the labor of man. Were the mountains of gold and the valleys of silver, the world would not be one grain of corn the richer; no one comfort would be added to the human race.

Shelley, Queen Mab, Notes

- 43 The means of acquiring and preparing the particularized means appropriate to our similarly particularized needs is work. Through work the raw material directly supplied by nature is specifically adapted to these numerous ends by all sorts of different processes. Now this formative change confers value on means and gives them their utility, and hence man in what he consumes is mainly concerned with the products of men. It is the products of human effort which man consumes.

Hegel, Philosophy of Rights 196

44 The universal and objective element in work, on the other hand, lies in the abstracting process which effects the subdivision of needs and means and thereby *eo ipso* subdivides production and brings about the division of labour. By this division, the work of the individual becomes less complex, and consequently his skill at his section of the job increases, like his output. At the same time, this abstraction of one man's skill and means of production from another's completes and makes necessary everywhere the dependence of men on one another and their reciprocal relation in the satisfaction of their other needs. Further, the abstraction of one man's production from another's makes work more and more mechanical, until finally man is able to step aside and install machines in his place.

Hegel, Philosophy of Right 198

45 When a regular division of employments has spread through any society, the social state begins to acquire a consistency and stability which place it out of danger from particular divergencies.

Comte, Positive Philosophy, VI, 5

46 When a workman is unceasingly and exclusively engaged in the fabrication of one thing, he ultimately does his work with singular dexterity; but at the same time he loses the general faculty of applying his mind to the direction of the work. He every day becomes more adroit and less industrious; so that it may be said of him that in proportion as the workman improves, the man is degraded. What can be expected of a man who has spent twenty years of his life in making heads for pins? And to

what can that mighty human intelligence which has so often stirred the world be applied in him except it be to investigate the best method of making pins' heads? When a workman has spent a considerable portion of his existence in this manner, his thoughts are forever set upon the object of his daily toil; his body has contracted certain fixed habits, which it can never shake off; in a word, he no longer belongs to himself, but to the calling that he has chosen. It is in vain that law's and manners have been at pains to level all the barriers round such a man and to open to him on every side a thousand different paths to fortune; a theory of manufactures more powerful than customs and laws binds him to a craft, and frequently to a spot, which he cannot leave; it assigns to him a certain place in society, beyond which he cannot go; in the midst of universal movement it has rendered him stationary.

In proportion as the principle of the division of labor is more extensively applied, the workman becomes more weak, more narrow-minded, and more dependent. The art advances, the artisan recedes. On the other hand, in proportion as it becomes more manifest that the productions of manufactures are by so much the cheaper and better as the manufacture is larger and the amount of capital employed more considerable, wealthy and educated men come forward to embark in manufactures, which were heretofore abandoned to poor or ignorant handicraftsmen. The magnitude of the efforts required and the importance of the results to be obtained attract them. Thus at the very time at which the science of manufactures lowers the class of workmen, it raises the class of masters.

Tocqueville, Democracy in America, Vol. II, II, 20

47 All work, even cotton-spinning, is noble; work is alone noble.

Carlyle, Past and Present, III, 4

48 Were he never so benighted, forgetful of his high calling, there is always hope in a man that actually and earnestly works: in Idleness alone is there perpetual despair.

Carlyle, Past and Present, III, II

49 The latest Gospel in this world is, Know' thy work and do it.

Carlyle, Past and Present, III, 11

50 Consider how, even in the meanest sorts of Labour, the whole soul of a man is composed into a kind of real harmony, the instant he sets himself to work! Doubt, Desire, Sorrow, Remorse, Indignation, Despair itself, all these like helldogs lie beleaguering the soul of the poor dayworker, as of every man: but he bends himself with free valour against his task, and all these are stilled, all these shrink murmuring far off into their caves. The man is now a man. The blessed glow of Labour in him, is it not as purifying fire, wherein all poison is burnt up, and of sour smoke itself there is made bright blessed flame!

Carlyle, Past and Present, III, 11

51 When I go into my garden with a spade, and dig a bed, I feel such an exhilaration and health that I discover that I have been defrauding myself all this time in letting

others do for me what I should have done with my own hands.

Emerson, Man the Reformer

52 Every man who removes into this city with any purchasable talent or skill in him, gives to every man's labor in the city a new worth.

Emerson, Wealth

53 The crime which bankrupts men and states is job-work—declining from your main design, to serve a turn here or there.

Emerson, Wealth

54 Labor is the curse of the world, and nobody can meddle with it without becoming proportionately brutified.

Hawthorne, American Notebooks (Aug, 12, 1841)

55 Most men would feel insulted if it were proposed to employ them in throwing stones over a wall, and then in throwing them back, merely that they might earn their wages. But many are no more worthily employed now.

Thoreau, Life Without Principle

56 The aim of the laborer should be, not to get his living, to get 'a good job,' but to perform well a certain work; and, even in a pecuniary sense, it would be economy for a town to pay its laborers so well that they would not feel that they were working for low ends, as for a livelihood merely, but for scientific, or even moral ends. Do not hire a man who does your work for money, but him who does it for love of it.

Thoreau, Life Without Principle

57 I found that the occupation of a day-laborer was the most independent of any, especially as it required only thirty or forty days in a year to support one. The laborer's day ends with the going down of the sun, and he is then free to devote himself to his chosen pursuit, independent of his labor; but his employer, who speculates from month to month, has no respite from one end of the year to the other.

In short, I am convinced, both by faith and experience, that to maintain one's self on this earth is not a hardship but a pastime, if we will live simply and wisely; as the pursuits of the simpler nations are still the sports of the more artificial. It is not necessary that a man should earn his living by the sweat of his brow, unless he sweats easier than I do.

Thoreau, Walden: Economy

58 If we except the *light* and the air of heaven, no good thing has been, or can be enjoyed by us, without having first cost labour. And, inasmuch (as) most good things are produced by labour, it follows that [all] such things of right belong to those whose labour has produced them. But it has so happened in all ages of the world, that *some* have laboured, and *others* have, without labour enjoyed a large proportion of the fruits. This is wrong, and should not continue. To [secure] to each labourer the whole product of his labour, or as nearly as possible, is a most worthy object of any good government.

Lincoln, Fragments of a Tariff Discussion (Dec. 1, 1847)

59 If at any time all *labour* should cease, and all existing provisions be equally divided among the people, at the end of a single year there could scarcely be one human being left alive—all would have perished by want subsistence.

So again, if upon such division, all that sort of labour, which produces provisions, should cease, and each individual should take up so much of his share as he could, and carry it continually around his habitation, although in this carrying, the amount of labour going on might be as great as ever, so long as it could last, at the end of the year the result would be precisely the same—that is, none would be left living.

The first of these propositions shows, that universal *idleness* would speedily result in universal ruin and the second shows, that useless *labour* is, in this respect, the same as idleness.

I submit, then, whether it does not follow, that *partial* idleness, and partial *useless labour*, would, in the proportion of their extent, in like manner result, in partial ruin—whether, if *all* should subsist upon the labour that *one half* should perform, it would not result in very scanty allowance to the whole.

Lincoln, Fragments of a Tariff Discussion (Dec. 1, 1847)

60 Labor is prior to, and independent of, capital. Capital is only the fruit of labor, and could never have existed if labor had not first existed. Labor is the superior of capital, and deserves much the higher consideration. Capital has its rights, which are as worthy of protection as any other rights. Nor is it denied that there is, and probably always will be, a relation between labor and capital, producing mutual benefits. The error is in assuming that the whole

labor of community exists within that relation. A few men own capital, and that few avoid labor themselves, and, with their capital, hire or buy another few to labor for them. A large majority belong to neither class—neither work for others, nor have others working for them.

Lincoln, Annual Message (Dec. 3, 1861)

61 There is not, of necessity, any such thing as the free hired laborer being fixed to that condition for life. Many independent men everywhere in these States, a few years back in their lives, were hired laborers. The prudent, penniless beginner in the world, labors for wages awhile, saves a surplus with which to buy tools or land for himself; then labors on his own account another while, and at length hires another new beginner to help him. This is the just, and generous, and prosperous system, which opens the way to all—gives hope to all, and consequent energy, and progress, and improvement of condition to all. No men living are more worthy to be trusted than those who toil up from poverty—none less inclined to take, or touch, aught which they have not honestly earned.

Lincoln, Annual Message (Dec. 3, 1861)

62 Labour power can appear upon the market as a commodity only if, and so far as, its possessor, the individual whose labour power it is, offers it for sale, or sells it, as a commodity. In order that he may be able to do this, he must have it at his disposal, must be the untrammelled owner of his capacity for labour, that is, of his person. He and the owner of money meet in the market and deal with each other as on the basis of equal

rights, with this difference alone, that one is buyer, the other seller; both, therefore, equal in the eyes of the law. The continuance of this relation demands that the owner of the labour power should sell it only for a definite period, for if he were to sell it rump and stump, once for all, he would be selling himself, converting himself from a free man into a slave, from an owner of a commodity into a commodity.

Marx, Capital, Vol. I, II, 6

- 63 Nature does not produce on the one side owners of money or commodities, and on the other men possessing nothing but their own labour power. This relation has no natural basis, neither is its social basis one that is common to all historical periods. It is clearly the result of a past historical development, the product of many economic revolutions, of the extinction of a whole series of older forms of social production.

Marx, Capital, Vol. I, II, 6

- 64 Within the process of production... capital acquired the command over labour, i.e., over functioning labour power or the labourer himself. Personified capital, the capitalist takes care that the labourer does his work regularly and with the proper degree of intensity.

Capital further developed into a coercive relation, which compels the working class to do more work than the narrow round of its own life-wants prescribes. As a producer of the activity of others, as a pumper-out of surplus labour and exploiter of labour power, it surpasses in energy, disregard of bounds, recklessness, and

efficiency, all earlier systems of production based on directly compulsory labour.

Marx, Capital, Vol. I, III, 11

65 If we consider the process of production from the point of view of the simple labour process, the labourer stands in relation to the means of production, not in their quality as capital, but as the mere means and material of his own intelligent productive activity. In tanning, e.g., he deals with the skins as his simple object of labour. It is not the capitalist whose skin he tans. But it is different as soon as we deal with the process of production from the point of view of the process of creation of surplus value. The means of production are at once changed into means for the absorption of the labour of others. It is now no longer the labourer that employs the means of production, but the means of production that employ the labourer. Instead of being consumed by him as material elements of his productive activity, they consume him as the ferment necessary to their own life process, and the life process of capital consists only in its movement as value constantly expanding, constantly multiplying itself. Furnaces and workshops that stand idle by night, and absorb no living labour, are "a mere loss" to the capitalist. Hence, furnaces and workshops constitute lawful claims upon the night labour of the workpeople. The simple transformation of money into the material factors of the process of production, into means of production, transforms the latter into a title and a right to the labour and surplus labour of others.

Marx, Capital, Vol. I, III, 11

66 The foundation of every division of labour that is well developed and brought about by the exchange of commodities is the separation between town and country. It may be said, that the whole economical history of society is summed up in the movement of this antithesis.

Marx, Capital, Vol. I, IV, 14

67 It is a result of the division of labour in manufactures that the labourer is brought face to face with the intellectual potencies of the material process of production, as the property of another, and as a ruling power. This separation begins in simple cooperation, where the capitalist represents to the single workman the oneness and the will of the associated labour. It is developed in manufacture which cuts down the labourer into a detail labourer. It is completed in modern industry, which makes science a productive force distinct from labour and presses it into the service of capital.

Marx, Capital, Vol. I, IV, 14

68 Every kind of capitalist production, insofar as it is not only a labour process, but also a process of creating surplus value, has this in common: that it is not the workman that employs the instruments of labour, but the instruments of labour that employ the workman. But it is only in the factory system that this inversion for the first time acquires technical and palpable reality. By means of its conversion into an automation, the instrument of labour confronts the labourer, during the labour process, in the shape of capital, of dead labour, which dominates and pumps dry living labour power. The separation of the intellectual powers of production from the manual labour,

and the conversion of those powers into the might of capital over labour, is, as we have already shown, finally completed by modern industry erected on the foundation of machinery. The special skill of each individual insignificant factory operative vanishes as an infinitesimal quantity' before the science, the gigantic physical forces, and the mass of labour that are embodied in the factory mechanism and, together with that mechanism, constitute the power of the "master."

Marx, Capital, Vol. I, IV, 15

69 The whole system of capitalist production is based on the fact that the workman sells his labour power as a commodity. Division of labour specializes this labour power, by reducing it to skill in handling a particular tool. So soon as the handling of this tool becomes the work of a machine, then, with the use-value, the exchange value of the workman's labour power also vanishes; the workman becomes unsaleable, like paper money thrown out of currency by legal enactment. That portion of the working class thus by machinery rendered superfluous (that is, no longer immediately necessary for the self-expansion of capital) either goes to the wall in the unequal contest of the old handicrafts and manufactures with machinery, or else floods all the more easily accessible branches of industry, swamps the labour market, and sinks the price of labour power below its value. It is impressed upon the workpeople, as a great consolation, first, that their sufferings are only temporary ("a temporary inconvenience"), secondly, that machinery acquires the mastery over the whole of a given field of production only by degrees, so that the extent and intensity of its destructive effect is diminished. The first

consolation neutralizes the second. When machinery seizes on an industry by degrees, it produces chronic misery among the operatives who compete with it. Where the transition is rapid, the effect is acute and felt by great masses.

Marx, Capital, Vol. I, IV, 15

70 The more the productiveness of labour increases, the more can the working day be shortened; and the more the working day is shortened, the more can the intensity of labour increase. From a social point of view, the productiveness increases in the same ratio as the economy of labour, which, in its turn, includes not only economy of the means of production, but also the avoidance of all useless labour. The capitalist mode of production, while on the one hand enforcing economy in each individual business, on the other hand begets, by its anarchical system of competition, the most outrageous squandering of labour power and of the social means of production, not to mention the creation of a vast number of employments, at present indispensable, but in themselves superfluous.

The intensity and productiveness of labour being given, the time which society is bound to devote to material production is shorter, and, as a consequence, the time at its disposal for the free development, intellectual and social, of the individual is greater, in proportion as the work is more and more evenly divided among all the able-bodied members of society, and as a particular class is more and more deprived of the power to shift the natural burden of labour from its own shoulders to those of another layer of society. In this direction, the shortening of the working day finds at last

a limit in the generalization of labour. In capitalist society, spare time is acquired for one class by converting the whole lifetime of the masses into labour time.

Marx, Capital, Vol. I, V, 17

71 In proportion as the bourgeoisie, i.e., capital, is developed, in the same proportion is the proletariat, the modern working class, developed —a class of labourers, who live only so long as they find work, and who find work only so long as their labour increases capital. These labourers, who must sell themselves piecemeal, are a commodity like every other article of commerce, and are consequently exposed to all the vicissitudes of competition, to all the fluctuations of the market.

Owing to the extensive use of machinery and to division of labour, the work of the proletarians has lost all individual character, and, consequently, all charm for the workman. He becomes an appendage of the machine, and it is only the most simple, most monotonous, and most easily acquired knack that is required of him. Hence, the cost of production of a workman is restricted almost entirely to the means of subsistence that he requires for his maintenance and for the propagation of his race. But the price of a commodity, and therefore also of labour, is equal to its cost of production. In proportion, therefore, as the repulsiveness of the work increases, the wage decreases. Nay more, in proportion as the use of machinery and division of labour increases, in the same proportion the burden of toil also increases, whether by prolongation of the working hours, by increase of the work exacted in a given time, or by increased speed of the machinery, etc.

Marx and Engels, Communist Manifesto, I

72 In bourgeois society living labour is but a means to increase accumulated labour. In Communist society accumulated labour is but a means to widen, to enrich, to promote the existence of the labourer.

Marx and Engels, Communist Manifesto, II

73 The workingmen have no country. We cannot take from them what they have not got.

Marx and Engels, Communist Manifesto, II

74 Intellectual speculation must be looked upon as a most influential part of the productive labour of society, and the portion of its resources employed in carrying on and in remunerating such labour, as a highly productive part of its expenditure.

Mill, Principles of Political Economy, Bk. I, II, 8

75 The number of persons fitted to direct and superintend any industrial enterprise, or even to execute any process which cannot be reduced almost to an affair of memory and routine, is always far short of the demand; as is evident from the enormous difference between the salaries paid to such persons, and the wages of ordinary labour. The deficiency of practical good sense, which renders the majority of the labouring class such bad calculators—which makes, for instance, their domestic economy so improvident, lax, and irregular— must disqualify them for any but a low grade of intelligent labour, and render their industry far less productive than with equal energy it otherwise might be.

Mill, Principles of Political Economy, Bk. I, VII, 5

76 Hitherto it is questionable if all the mechanical inventions yet made have lightened the day's toil of any human being. They have enabled a greater population to live the same life of drudgery and imprisonment, and an increased number of manufacturers and others to make fortunes. They have increased the comforts of the middle classes. But they have not yet begun to effect those great changes in human destiny, which it is in their nature and in their futurity to accomplish. Only when, in addition to just institutions, the increase of mankind shall be under the deliberate guidance of judicious foresight, can the conquests made from the powers of nature by the intellect and energy of scientific discoverers, become the common property of the species, and the means of improving and elevating the universal lot.

Mill, Principles of Political Economy, Bk. IV, VI, 2

77 The Bible legend tells us that the absence of labor—idleness—was a condition of the first man's blessedness before the Fall. Fallen man has retained a love of idleness, but the curse weighs on the race not only because we have to seek our bread in the sweat of our brows, but because our moral nature is such that we cannot be both idle and at ease. An inner voice tells us we are in the wrong if we are idle. If man could find a state in which he felt that though idle he was fulfilling his duty, he would have found one of the conditions of man's primitive blessedness.

Tolstoy, War and Peace, VII, 1

78 Tom said to himself that it was not such a hollow world, after all. He had discovered a great law of human action, without knowing it—namely, that in order to make a man or boy covet a thing, it is only necessary to make the thing difficult to attain, If he had been a great and wise philosopher, like the writer of this book, he would now have comprehended that Work consists of whatever a body is *obliged* to do, and that Play consists of whatever a body is not obliged to do. And this would help him to understand why constructing artificial flowers or performing on a treadmill is work, while rolling tenpins or climbing Mont Blanc is only amusement. There are wealthy gentlemen in England who drive four-horse passenger-coaches twenty or thirty miles on a daily line, in the summer, because the privilege costs them considerable money; but if they are offered wages for the service, that would turn it into work and then they would resign.

Mark Twain, Tom Sawyer, II

79 Leisure, though the propertied classes give its name to their own idleness, is not idleness. It is not even a luxury: it is a necessity, and a necessity of the first importance. Some of the most valuable work done in the world has been done at leisure, and never paid for in cash or kind. Leisure may be described as free activity, labor as compulsory activity. Leisure does what it likes: labor does what it must, the compulsion being that of Nature, which in these latitudes leaves men no choice between labor and starvation.

Shaw, Socialism and Culture

11.4 Money

Most of the passages quoted in this section are concerned with the conception of money as a common measure or universal medium of exchange. In the background of this discussion lies the distinction between a money economy and a barter economy in which goods are exchanged directly without the use of money. One profound difference between these two economies, observed by a number of writers, is that where money is not in use, spoilage and waste exert a restraining influence on the accumulation of goods that is not present when coin can be acquired through trade and then stored away indefinitely.

Some of the passages deal with the borrowing and lending of money, and this leads into a discussion of usury, debt, and credit. Though money is seen to be useful in a variety of ways, it is generally agreed that it is useless in itself, which leads certain writers to call it "artificial wealth" as contrasted with the natural wealth of consumable goods and instruments of production.

The passages that enunciate or comment on the theme that the love of money is the root of all evil might have been placed in Section 11.2 on Wealth and Poverty; but since they use the word "money" instead of the word "wealth" they are included here. The reader should consult that section and also Section 11.1 on Property and Section 11.5 on Trade, Commerce, and Industry for the treatment of other contexts.

■ ■ ■

- 1 All things that are exchanged must be somehow comparable. It is for this end that money has been introduced, and it becomes in a sense an intermediate; for it measures all things.

Aristotle, Ethics, 1133a18

- 2 There are two sorts of wealth-getting.... One is a part of household management, the other is retail trade: the former necessary and honourable, while that which consists in exchange is justly censured; for it is unnatural, and a mode by which men gain from one another. The most hated sort, and with the greatest reason, is usury, which makes a gain out of money itself, and not from the natural object of it. For money was intended to be used in exchange, but not to increase at interest, ... Of all modes of getting wealth this is the most unnatural.

Aristotle, Politics, 1258a38

- 3 One has a duty to make money, but only by honorable means. It is also one's duty to save money and increase it by diligence and thrift.

Cicero, De Officiis, 11, 24

- 4 Are you ignorant of what value money has, what use it can afford? Bread, herbs, a bottle of wine may be purchased; to which [necessaries], add (such others), as, being withheld, human nature would be uneasy with itself. What, to watch half dead with terror, night and day, to dread profligate thieves, fire, and your slaves, lest they should run away and plunder you; is this delightful? I

should always wish to be very poor in possessions held upon these terms.

Horace, Satires, I, 1

5 For the love of money is the root of all evil: which while some coveted after, they have erred from the faith, and pierced themselves through with many sorrows.

I Timothy 6:10

6 It is the higher accomplishment to use money well than to use arms; but not to need it is more noble than to use it.

Plutarch, Coriolanus

7 The loss of money is awful, Such a terrible thing that no one can counterfeit mourning,
No one be content with merely rending his garments,
Rubbing his eyes to produce crocodile tears. If your money
Is gone, you will really cry with genuine lamentation.

Juvenal, Satire XIII

8 All material things obey money so far as the multitude of fools is concerned, who know no other than material goods, which can be obtained for money. But we should take our judgment of human goods not from the foolish but from the wise.

Aquinas, Summa Theologica, I-II, 2, 1

9 In view of the fact that the Utopians' customs are so different from ours, a shrewd judge will not be surprised to find that they do not use gold and silver at all as we do. Since they keep gold and silver only for grave

contingencies, they take care that in the meantime no one shall value these metals more than they deserve. Iron is obviously greatly superior to either. Men can no more do without iron than without fire and water. But gold and silver have no indispensable qualities. Human folly has made them precious only because of their scarcity. Nature, like a wise and generous parent, has placed the best things everywhere and in the open, such as air and water and the earth itself, but she has hidden vain and useless things in remote and faraway places.

Thomas More, Utopia, II, 7

- 10 *Panurge*. Be still indebted to somebody or other, that there may be somebody always to pray for you; that the giver of all good things may grant unto you a blessed, long, and prosperous life; fearing, if fortune should deal crossly with you, that it might be his chance to come short of being paid by you, he will always speak good of you in every company, ever and anon purchase new creditors unto you; to the end, that through their means you may make a shift by borrowing from Peter to pay Paul, and with other folk's earth fill up his ditch.. . . Believe me, your creditors, with a more fervent devotion, will beseech Almighty God to prolong your life, they being of nothing more afraid than that you should die; for that they are more concerned for the sleeve than the arm, and love silver better than their own lives.

Rabelais, Gargantua and Pantagruel, III, 3

- 11 *Grumio*. Nothing comes amiss, so money comes withal.

Shakespeare, Taming of the Shrew, I, ii, 82

12 *The Bastard*. Bell, book, and candle shall not drive me back.

When gold and silver beckons me to come on.

Shakespeare, King John, III, iii, 12

13 *Falstaff*. I can get no remedy against this consumption of the purse: borrowing only lingers and lingers it out, but the disease is incurable.

Shakespeare, II Henry IV, I, ii, 264

14 *Polonius*. Neither a borrower nor a lender be;
For loan oft loses both itself and friend.
And borrowing dulls the edge of husbandry,

Shakespeare, Hamlet, I, iii, 75

15 Money is like muck, not good except it be spread.

Bacon, Of Seditious and Troubles

16 As to money, it may be observed that its uses do not result from any value intrinsically belonging to the precious metals, or to the specific denomination and shape of coin, but from the general application which can be made of it, as a standard of payment for all commodities. For whatever is taken as a common measure of all other things, ought to be liable, in itself, to but little variation. Now the precious metals are of this description, possessing nearly the same intrinsic value at all times and in all places. Though the nominal value of the same quantity of gold and silver, whether paid by weight or coin will be greater or less, in proportion to the abundance or scarcity of the things for which there is a general demand.

Grotius, Rights of War and Peace, Bk. II, XII, 17

17 Gold and silver, being, as it happens, almost in all countries of the world highly valued, is a commodious measure of the value of all things else between nations; and money, of what matter soever coined by the sovereign of a Commonwealth, is a sufficient measure of the value of all things else between the subjects of that Commonwealth. By the means of which measures all commodities, movable and immovable, are made to accompany a man to all places of his resort, within and without the place of his ordinary residence; and the same passeth from man to man within the Commonwealth, and goes round about, nourishing, as it passeth, every part thereof.

Hobbes, Leviathan, II, 24

18 As money has presented us with an abstract of everything, it has come to pass that its image above every other usually occupies the mind of the multitude, because they can imagine hardly any kind of joy without the accompanying idea of money as its cause.

Spinoza, Ethics, IV, Appendix XXVIII

19 Those... who know the true use of money, and regulate the measure of wealth according to their needs, live contented with few things.

Spinoza, Ethics, IV, Appendix XXIX

20 The greatest part of things really useful to the life of man, and such as the necessity of subsisting made the first commoners of the world look after—as it doth the Americans now—are generally things of short duration,

such as—if they are not consumed by use—will decay and perish of themselves. Gold, silver, and diamonds are things that fancy or agreement hath put the value on, more than real use and the necessary support of life.

Now of those good things which Nature hath provided in common, every one hath a right (as hath been said) to as much as he could use; and had a property in all he could effect with his labour; all that his industry could extend to, to alter from the state Nature had put it in, was his. He that gathered a hundred bushels of acorns or apples had thereby a property in them; they were his goods as soon as gathered. He was only to look that he used them before they spoiled, else he took more than his share, and robbed others. And, indeed, it was a foolish thing, as well as dishonest, to hoard up more than he could make use of. If he gave away a part to anybody else, so that it perished not uselessly in his possession, these he also made use of. And if he also bartered away plums that would have rotted in a week, for nuts that would last good for his eating a whole year, he did no injury; he wasted not the common stock; destroyed no part of the portion of goods that belonged to others, so long as nothing perished uselessly in his hands. Again, if he would give his nuts for a piece of metal, pleased with its colour, or exchange his sheep for shells, or wool for a sparkling pebble or a diamond, and keep those by him all his life, he invaded not the right of others; he might heap up as much of these durable things as he pleased; the exceeding of the bounds of his just property not lying in the largeness of his possession, but the perishing of anything uselessly in it.

And thus came in the use of money; some lasting thing that men might keep without spoiling, and that, by

mutual consent, men would take in exchange for the truly useful but perishable supports of life.

Locke, II Civil Government, V, 46-47

- 21 In the beginning, all the world was America, and more so than that is now; for no such thing as money was anywhere known. Find out something that hath the use and value of money amongst his neighbours, you shall see the same man will begin presently to enlarge his possessions.

Locke, II Civil Government, V, 49

- 22 The greatest security of the liberties of a people who do not cultivate the earth is their not knowing the use of money. What is gained by hunting, fishing, or keeping herds of cattle cannot be assembled in such great quantity, nor be sufficiently preserved, for one man to find himself in a condition to corrupt many others: but when, instead of this, a man has a sign of riches, he may obtain a large quantity of these signs, and distribute them as he pleases.

The people who have no money have but few wants; and these are supplied with ease, and in an equal manner. Equality is then unavoidable; and hence it proceeds that their chiefs are not despotic.

Montesquieu, Spirit of Laws, XVIII, 17

- 23 A specie is the sign of the value of merchandise paper is the sign of the value of specie; and when it is of the right sort, it represents this value in such a manner that as to the effects produced by it there is not the least difference.

In the same manner, as money is the sign and representative of a thing, everything is a sign and representative of money; and the state is in a prosperous condition when on the one hand money perfectly represents all things, and on the other all things perfectly represent money, and are reciprocally the sign of each other; that is, when they have such a relative value that we may have the one as soon as we have the other. This never happens in any other than a moderate government nor does it always happen there; for example, if the laws favour the dishonest debtor, his effects are no longer a representative or sign of money. With regard to a despotic government, it would be a prodigy did things there represent their sign. Tyranny and distrust make every one bury their specie; things therefore are not there the representative of money.

Montesquieu, Spirit of Laws, XXII, 2

- 24 Money is not, properly speaking, one of the subjects of commerce; but only the instrument which men have agreed upon to facilitate the exchange of one commodity for another. It is none of the wheels of trade; It is the oil which renders the motion of the wheels more smooth and easy.

Hume, Of Money

- 25 Money has never appeared to me as valuable as it is generally considered. More than that, it has never even appeared to me particularly convenient. It is good for nothing in itself; it has to be changed before it can be enjoyed; one is obliged to buy, to bargain, to be often cheated, to pay dearly, to be badly served. I should like

something which is good in quality; with my money I am sure to get it bad.

Rousseau, Confessions, I

- 26 The money which a man possesses is the instrument of freedom; that which we eagerly pursue is the instrument of slavery.

Rousseau, Confessions, I

- 27 When the price of any commodity is neither more nor less than what is sufficient to pay the rent of the land, the wages of the labour, and the profits of the stock employed in raising, preparing, and bringing it to market, according to their natural rates, the commodity is then sold for what may be called its natural price. The commodity is then sold precisely for what it is worth, or for what it really costs the person who brings it to market.

...

The actual price at which any commodity is commonly sold is called its market price. It may either be above, or below, or exactly the same with its natural price.

The market price of every particular commodity is regulated by the proportion between the quantity which is actually brought to market, and the demand of those who are willing to pay the natural price of the commodity, or the whole value of the rent, labour, and profit, which must be paid in order to bring it thither.

Adam Smith, Wealth of Nations, I, 7

- 28 A guinea may be considered as a bill for a certain quantity of necessaries and conveniencies upon all the tradesmen in the neighbourhood. The revenue of the

person to whom it is paid, does not so properly consist in the piece of gold, as in what he can get for it, or in what he can exchange it for. If it could be exchanged for nothing, it would, like a bill upon a bankrupt, be of no more value than the most useless piece of paper.

Adam Smith, Wealth of Nations, II, 2

- 29 In some countries the interest of money has been prohibited by law. But as something can everywhere be made by the use of money, something ought everywhere to be paid for the use of it. This regulation, instead of preventing, has been found from experience to increase the evil of usury; the debtor being obliged to pay, not only for the use of the money, but for the risk which his creditor runs by accepting a compensation for that use. He is obliged, if one may say so, to insure his creditor from the penalties of usury.

Adam Smith, Wealth of Nations, II, 4

- 30 A bag of shining leather, filled with pearls, fell into the hands of a private soldier; he carefully preserved the bag, but he threw away its contents, judging that whatever was of no use could not possibly be of any value.

Gibbon, Decline and Fall of the Roman Empire, XIII

- 31 How beauteous are rouleaus! how charming chests
Containing ingots, bags of dollars, coins
(Not of old victors, all whose heads and crests
Weigh not the thin ore where their visage shines,
But) of fine unclipt gold, where dully rests
Some likeness, which the glittering cirque confines.

Of modern, reigning, sterling, stupid stamp:—
Yes! ready money is Aladdin's lamp.

Byron, Don Juan, XII, 12

32 Money alone is absolutely good, because it is not only a concrete satisfaction of one need in particular; it is an abstract satisfaction of all.

Schopenhauer, Property

33 Money, which represents the prose of life, and which is hardly spoken of in parlors without an apology, is, in its effects and laws, as beautiful as roses.

Emerson, Nominalist and Realist

34 A dollar is not value, but representative of value, and, at last, of moral values.

Emerson, Wealth

35 A dollar in a university is worth more than a dollar in a jail; in a temperate, schooled, law-abiding community than in some sink of crime, where dice, knives and arsenic are in constant play.

Emerson, Wealth

36 The urbane activity with which a man receives money is really marvellous, considering that we so earnestly believe money to be the root of all earthly ills, and that on no account can a monied man enter heaven. Ah! how cheerfully we consign ourselves to perdition!

Melville, Moby Dick, I

37 The ways by which you may get money almost without exception lead downward.

Thoreau, Life Without Principle

38 You may raise money enough to tunnel a mountain, but you cannot raise money enough to hire a man who is minding *his own* business. An efficient and valuable man does what he can, whether the community pay him for it or not.

Thoreau, Life Without Principle

39 Gold is now money with reference to all other commodities only because it was previously, with reference to them, a simple commodity. Like all other commodities, it was also capable of serving as an equivalent, either as simple equivalent in isolated exchanges, or as particular equivalent by the side of others. Gradually, it began to serve, within varying limits, as universal equivalent. So soon as it monopolizes this position in the expression of value for the world of commodities, it becomes the money commodity.

Marx, Capital, Vol. I, I, 1

40 The first chief function of money is to supply commodities with the material for the expression of their values, or to represent their values as magnitudes of the same denomination, qualitatively equal, and quantitatively comparable. It thus serves as a *universal measure of value*. And only by virtue of this function does gold, the equivalent commodity *par excellence*, become money.

Marx, Capital, Vol. I, I, 3

41 It is not money that renders commodities commensurable. Just the contrary. It is because all commodities, as values, are realized human labour, and therefore commensurable, that their values can be measured by one and the same special commodity, and the latter be converted into the common measure of their values, that is, into money. Money as a measure of value is the phenomenal form that must of necessity be assumed by that measure of value which is immanent in commodities, labour time.

Marx, Capital, Vol. I, I, 3

42 In order that it may play the part of money, gold must of course enter the market at some point or other. This point is to be found at the source of production of the metal, at which place gold is bartered, as the immediate product of labour, for some other product of equal value. From that moment it always represents the realized price of some commodity. Apart from its exchange for other commodities at the source of its production, gold, in whoever's hands it may be, is the transformed shape of some commodity alienated by its owner.

Marx, Capital, Vol. I, I, 3

43 The commodity that functions as a measure of value, and, either in its own person or by a representative, as the medium of circulation, is money. Gold (or silver) is therefore money. It functions as money, on the one hand, when it has to be present in its own golden person. It is then the money commodity, neither merely ideal, as in its function of a measure of value, nor capable of being represented, as in its function of circulating medium. On

the other hand, it also functions as money, when by virtue of its function, whether that function be performed in person or by representative, it congeals into the sole form of value, the only adequate form of existence of exchange value, in opposition to use-value, represented by all other commodities.

Marx, Capital, Vol. I, I, 3

44 There cannot... be intrinsically a more insignificant thing, in the economy of society, than money; except in the character of a contrivance for sparing time and labour. It is a machine for doing quickly and commodiously, what would be done, though less quickly and commodiously, without it: and like many other kinds of machinery, it only exerts a distinct and independent influence of its own when it gets out of order.

Mill, Principles of Political Economy, Bk. III, VII, 3

45 The value of money, other things being the same, varies inversely as its quantity; every increase of quantity lowering the value, and every diminution raising it, in a ratio exactly equivalent. This, it must be observed, is a property peculiar to money.

Mill, Principles of Political Economy, Bk. III, VIII, 2

46 Nothing precipitates and solidifies this gold » readily as contact with human flesh heated by passion.

Mark Twain, Remarkable Gold Mines

47 Now to . . . , teach children that it is sinful to desire money, is to strain towards the extreme possible limit of impudence in lying and corruption in hypocrisy. The

universal regard for money is the one hopeful fact in our civilization, the one sound spot in our social conscience. Money is the most important thing in the world. It represents health, strength, honor, generosity and beauty as conspicuously and undeniably as the want of it represents illness, weakness, disgrace, meanness and ugliness. Not the least of its virtues is that it destroys base people as certainly as it fortifies and dignifies noble people. It is only when it is cheapened to worthlessness for some and made impossibly dear to others, that it becomes a curse. In short, it is a curse only in such foolish social conditions that life itself is a curse. For the two things are inseparable; money is the counter that enables life to be distributed socially; it is life as truly as sovereigns and bank notes are money. The first duty of every citizen is to insist on having money on reasonable terms; and this demand is not complied with by giving four men three shillings each for ten or twelve hours' drudgery and one man a thousand pounds for nothing. The crying need of the nation is not for better morals, cheaper bread, temperance, liberty, culture, redemption of fallen sisten and erring brothere, nor the grace, love and fellowship of the Trinity, but simply for enough money. And the evil to be attacked is not sin, suffering, greed, priestcraft, kingcraft, demagoguery, monopoly, ignorance, drink, war, pestilence, no? any other of the scapegoats which reformers sacrifice, but simply poverty.

Shaw, Major Barbara, Pref.

- 48 The whole record of civilization is a record of the failure of money as a higher incentive. The enormous majority of men never make any serious effort to get rich. The few who are sordid enough to do so easily become

millionaires with a little luck, and astonish the others by the contrast between their riches and their stupidity. In fact it is the complete breakdown in practice of the sufficiency of the pecuniary incentive that has compelled us to turn our backs on Adam Smith and Cobden, and confess that both the old Tories and the modern Socialists are right, and that there is no salvation for the world in Free Contract and Free Trade.

The belief in money as an incentive is founded on the observation that people will do for money what they will not do for anything else. Careless observers think that men will do anything for money; but this is clearly not true: if it were, the majority would not be poorer than the minority. They say also that everything men do is done for money; and this also is obviously untrue: if it were men would be always earning and never spending. The most important, arduous, and painful of normal human activities is the bearing of children; but when I try to persuade women that they should refuse to do it unless they are handsomely paid for it, they are shocked, and persist in doing for nothing even when the result is starvation for themselves and the children. We must therefore keep strictly to the terms of the proposition, which is, that people will do for money what they will not do for love or for anything else except money. For instance, an immense mass of the work of the modern community consists in the oppression of the poor. To take a crude instance, no man will go into the house where naked and hungry children are crying for food and warmth, and extort from their mother four shillings to pay a slum landlord who already has more money than is good for him, unless he is paid to do it.

11.5 Trade, Commerce, and Industry

The subjects covered here are connected with earlier ones, especially the sections devoted to Money and to Wealth and Poverty. Trade and commerce are concerned with exchangeable wealth, in the form of commodities to be bought and sold—either directly by barter or indirectly through the use of money. Industry is concerned with the production of wealth and with the production of capital instruments or means of production. Money in the form of financial capital plays an important role in the process.

Among the great authors, Adam Smith, Karl Marx, and J. S. Mill deal with these subjects mainly as professional economists within whose field of study they fall. But other writers contribute ethical, political, or historical comments—questioning the motivation underlying trade, comparing it with usury as unproductive of wealth, relating trade and commerce to conflicts between states and wars, and yet also seeing trade and commerce as one of the principal sources of progress.

■ ■ ■

1 It is naught, it is naught, saith the buyer: but w en he is gone his way, then he boasteth.

Proverbs 20:14

2 There is a country in Libya, and a nation, beyond the Pillars of Hercules, which they are wont to visit, where they no sooner arrive but forthwith they unlade their wares, and, having disposed them after orderly fashion along the beach, leave them, and, returning aboard their ships, raise great smoke. The natives, when they see the smoke, come down to the shore, and, laying out to view so much gold as they think the worth of the wares, withdraw to a distance. The Carthaginians upon this come ashore and look. If they think the gold enough, they take it and go their way; but if it does not seem to them sufficient, they go aboard ship once more, and wait patiently. Then the others approach and add to their gold, till the Carthaginians are content. Neither party deals unfairly by the other: for they themselves never touch the gold till it comes up to the worth of their goods, nor do the natives ever carry off the goods till the gold is taken away.

Herodotus, History, IV, 196

3 *Athenian Stranger*. In order that the retail trader who dwells in our city may be as good or as little bad as possible, the guardians of the law shall remember that they are not only guardians of those who may be easily watched and prevented from becoming lawless or bad, because they are well-born and bred; but still more should they have a watch over those who are of another sort, and follow pursuits which have a very strong tendency to make men bad. And, therefore, in respect of the multifarious occupations of retail trade, that is to say, in respect of such of them as are allowed to remain, because they seem to be quite necessary in a state—about these the guardians of the law should meet and

take counsel with those who have experience of the several kinds of retail trade, as we before commanded concerning adulteration (which is a matter akin to this), and when they meet they shall consider what amount of receipts, after deducting expenses, will produce a moderate gain to the retail trades, and they shall fix in writing and strictly maintain what they find to be the right percentage of profit; this shall be seen to by the wardens of the agora, and by the wardens of the city, and by the wardens of the country. And so retail trade will benefit every one, and do the least possible injury to those in the state who practise it.

Plato. Laws, XI, 920A

- 4 Of everything which we possess there are two uses: both belong to the thing as such, but not in the same manner, for one is the proper, and the other the improper or secondary use of it. For example, a shoe is used for wear, and is used for exchange; both are uses of the shoe. He who gives a shoe in exchange for money or food to him who wants one, does indeed use the shoe as a shoe, but this is not its proper or primary purpose, for a shoe is not made to be an object of barter. The same may be said of all possessions, for the art of exchange extends to all of them, and it arises at first from what is natural, from the circumstance that some have too little, others too much. Hence we may infer that retail trade is not a natural part of the art of getting wealth; had it been so, men would have ceased to exchange when they had enough. In the first community, indeed, which is the family, this art is obviously of no use, but it begins to be useful when the society increases. For the members of the family originally had all things in common; later, when the

family divided into parts, the parts shared in many things, and different parts in different things, which they had to give in exchange for what they wanted, a kind of barter which is still practised among barbarous nations who exchange with one another the necessities of life and nothing more; giving and receiving wine, for example, in exchange for corn, and the like. This sort of barter is not part of the wealth-getting art and is not contrary to nature, but is needed for the satisfaction of men's natural wants. The other or more complex form of exchange grew, as might have been inferred, out of the simpler. When the inhabitants of one country became more dependent on those of another, and they imported what they needed, and what they had too much of, money necessarily came into use. For the various necessities of life are not easily carried about, and hence men agreed to employ in their dealings with each other something which was intrinsically useful and easily applicable to the purposes of life, for example, iron, silver, and the like. Of this the value was at first measured simply by size and weight, but in process of time they put a stamp upon it, to save the trouble of weighing and to mark the value.

When the use of coin had once been discovered, out of the barter of necessary articles arose the other art of wealth-getting, namely, retail trade; which was at first probably a simple matter, but became more complicated as soon as men learned by experience whence and by what exchanges the greatest profit might be made.

Aristotle, Politics, 1257a6

- 5 A tradesman is one whose business consists in the exchange of things. According to the Philosopher

[Aristotle], exchange of things is twofold; one, natural as it were, and necessary whereby one commodity is exchanged for another, or money taken in exchange for a commodity, in order to satisfy the needs of life. Such like trading, properly speaking, does not belong to tradesmen, but rather to housekeepers or civil servants who have to provide the household or the state with the necessities of life. The other kind of exchange is either that of money for money, or of any commodity for money, not on account of the necessities of life, but for profit, and this kind of exchange, properly speaking, regards tradesmen, according to the Philosopher. The former kind of exchange is commendable because it supplies a natural need: but the latter is justly deserving of blame, because, considered in itself, it satisfies the greed for gain, which knows no limit and tends to infinity. Hence trading, considered in itself, has a certain debasement attaching thereto, in so far as, by its very nature, it does not imply a virtuous or necessary end. Nevertheless gain which is the end of trading, though not implying, by its nature, anything virtuous or necessary, does not, in itself, connote anything sinful or contrary to virtue: wherefore nothing prevents gain from being directed to some necessary or even virtuous end, and thus trading becomes lawful. Thus, for instance, a man may intend the moderate gain which he seeks to acquire by trading for the upkeep of his household, or for the assistance of the needy: or again, a man may take to trade for some public advantage, for instance, lest his country lack the necessities of life, and seek gain, not as an end, but as payment for his labor.

Aquinas, Summa Theologica, II-II,

- 6 The gains of ordinary trades and vocations are honest, and furthered by two things chiefly: by diligence, and by a good name for good and fair dealing. But the gains of bargains are of a more doubtful nature; when men shall wait upon others' necessity, broke by servants and instruments to draw them on, put off others cunningly that would be better chapmen, and the like practices, which are crafty and naught.

Bacon, Of Riches

- 7 When a democracy is founded on commerce, private people may acquire vast riches without a corruption of morals. This is because the spirit of commerce is naturally attended with that of frugality, economy, moderation, labour, prudence, tranquillity, order, and rule. So long as this spirit subsists, the riches it produces have no bad effect. The mischief is, when excessive wealth destroys the spirit of commerce, then it is that the inconveniences of inequality begin to be felt.

In order to support this spirit, commerce should be carried on by the principal citizens; this should be their sole aim and study; this the chief object of the laws: and these very laws, by dividing the estates of individuals in proportion to the increase of commerce, should set every poor citizen so far at his case as to be able to work like the rest, and every wealthy citizen in such a mediocrity as to be obliged to take some pains either in preserving or acquiring a fortune.

Montesquieu, Spirit of Laws, V, 6

- 8 Commerce is a cure for the most destructive prejudices; for it is almost a general rule that wherever we find

agreeable manners, there commerce flourishes; and that wherever there is commerce, there we meet with agreeable manners.

Let us not be astonished, then, if our manners are now less savage than formerly. Commerce has everywhere diffused a knowledge of the manners of all nations: these are compared one with another, and from this comparison arise the greatest advantages.

Commercial laws, it may be said, improve manners for the same reason that they destroy them. They corrupt the purest morals. This was the subject of Plato's complaints; and we every day see that they polish and refine the most barbarous.

Peace is the natural effect of trade. Two nations who traffic with each other become reciprocally dependent; for if one has an interest in buying, the other has an interest in selling; and thus their union is founded on their mutual necessities.

But if the spirit of commerce unites nations, it does not in the same manner unite individuals. We see that in countries where the people move only by the spirit of commerce, they make a traffic of all the humane, all the moral virtues; the most trifling things, those which humanity would demand, are there done, or there given, only for money.

The spirit of trade produces in the mind of a man a certain sense of exact justice, opposite, on the one hand, to robbery, and on the other to those moral virtues which forbid our always adhering rigidly to the rules of private interest, and suffer us to neglect this for the advantage of others.

The total privation of trade, on the contrary, produces robbery, which Aristotle ranks in the number of means of

acquiring; yet it is not at all inconsistent with certain moral virtues. Hospitality, for instance, is most rare in trading countries, while it is found in the most admirable perfection among nations of vagabonds.

Montesquieu, Spirit of Laws, XX, 1—2

- 9 It is very usual, in nations ignorant of the nature of commerce, to prohibit the exportation of commodities, and to preserve among themselves whatever they think valuable and useful. They do not consider that in this prohibition they act directly contrary to their intention; and that the more is exported of any commodity, the more will be raised at home, of which they themselves will always have the first offer.

Hume, Of the Balance of Trade

- 10 The greatness of a state, and the happiness of its subjects, how independent soever they may be supposed in some respects, are commonly allowed to be inseparable with regard to commerce; and as private men receive greater security, in the possession of their trade and riches, from the power of the public, so the public becomes powerful in proportion to the opulence and extensive commerce of private men.

Hume, Of Commerce

- 11 Talking of trade, he [Johnson] observed, "It is a mistaken notion that a vast deal of money is brought into a nation by trade. It is not so. Commodities come from commodities; but trade produces no capital accession of wealth. However, though there should be little profit in money, there is a considerable profit in pleasure, as it

gives to one nation the productions of another; as we have wines and fruits, and many other foreign articles, brought to us."

Boswell, Life of Johnson (Oct. 26, 1769)

- 12 *Johnson*. The great increase of commerce and manufactures hurts the military spirit of a people; because it produces a competition for something else than martial honours,—a competition for riches. It also hurts the bodies of the people; for you will observe, there is no man who works at any particular trade, but you may know him from his appearance to do so. One part or other of his body being more used than the rest, he is in some degree deformed,

Boswell, Life of Johnson (Apr. 13, 1773)

- 13 This division of labour, from which so many advantages are derived, is not originally the effect of any human wisdom, which foresees and intends that general opulence to which it gives occasion. It is the necessary, though very slow and gradual consequence of a certain propensity in human nature which has in view no such extensive utility; the propensity to truck, barter, and exchange one thing for another.

Whether this propensity be one of those original principles in human nature of which no further account can be given; or whether, as seems more probable, it be the necessary consequence of the faculties of reason and speech, it belongs not to our present subject to inquire. It is common to all men, and to be found in no other race of animals.

Adam Smith, Wealth of Nations, I, 2

- 14 People of the same trade seldom meet together, even for merriment and diversion, but the conversation ends in a conspiracy against the public, or in some contrivance to raise prices,

Adam Smith, Wealth of Nations, I, 10

- 15 Monopoly... is a great enemy to good management which can never be universally established but in consequence of that free and universal competition which forces everybody to have recourse to it for the sake of self-defence.

Adam Smith, Wealth of Nations, I, 11

- 16 The great commerce of every civilised society is that carried on between the inhabitants of the town and those of the country. It consists in the exchange of rude for manufactured produce, either immediately, or by the intervention of money, or of some sort of paper which represents money. The country supplies the town with the means of subsistence and the materials of manufacture. The town repays this supply by sending back a part of the manufactured produce to the inhabitants of the country. The town, in which there neither is nor can be any reproduction of substances, may very properly be said to gain its whole wealth and subsistence from the country. We must not, however, upon this account, imagine that the gain of the town is the loss of the country. The gains of both are mutual and reciprocal, and the division of labour is in this, as in all other cases, advantageous to all the different persons employed in the various occupations into which it is subdivided.

Adam Smith, Wealth of Nations, III, 1

17 The importation of gold and silver is not the principal, much less the sole benefit which a nation derives from its foreign trade. Between whatever places foreign trade is carried on, they all of them derive two distinct benefits from it. It carries out that surplus part of the produce of their land and labour for which there is no demand among them, and brings back in return for it something else for which there is a demand. It gives a value to their superfluities, by exchanging them for something else, which may satisfy a part of their wants, and increase their enjoyments. By means of it the narrowness of the home market does not hinder the division of labour in any particular branch of art or manufacture from being carried to the highest perfection. By opening a more extensive market for whatever part of the produce of their labour may exceed the home consumption, it encourages them to improve its productive powers, and to augment its annual produce to the utmost, and thereby to increase the real revenue and wealth of the society. These great and important services foreign trade is continually occupied in performing to all the different countries between which it is carried on.

Adam Smith, Wealth of Nations, IV, I

18 The balance of produce and consumption may be constantly in favour of a nation, though what is called the balance of trade be generally against it. A nation may import to a greater value than it exports for half a century, perhaps, together; the gold and silver which comes into it during all this time may be all immediately sent out of it; its circulating coin may gradually decay, different sorts of paper money being substituted in its place, and even the debts, too, which it contracts in the

principal nations with whom it deals, may be gradually increasing; and yet its real wealth, the exchangeable value of the annual produce of its lands and labour, may, during the same period, have been increasing in a much greater proportion. The state of our North American colonies, and of the trade which they carried on with Great Britain, before the commencement of the present disturbance, may serve as a proof that this is by no means an impossible supposition.

Adam Smith, Wealth of Nations, IV, 3

- 19 To found a great empire for the sole purpose of raising up a people of customers may at first sight appear a project fit only for a nation of shopkeepers. It is, however, a project altogether unfit for a nation of shopkeepers; but extremely fit for a nation whose government is influenced by shopkeepers. Such statesmen, and such statesmen only, are capable of fancying that they will find some advantage in employing the blood and treasure of their fellow-citizens to found and maintain such an empire.

Adam Smith, Wealth of Nations, IV, 7

- 20 Whatever evils either reason or declamation have imputed to extensive empire, the power of Rome was attended with some beneficial consequences to mankind; and the same freedom of intercourse which extended the vices, diffused likewise the improvements of social life. In the more remote ages of antiquity, the world was unequally divided. The east was in the immemorial possession of arts and luxury; whilst the west was inhabited by rude and warlike barbarians, who either disdained agriculture, or to whom it was totally unknown.

Under the protection of an established government, the productions of happier climates, and the industry of more civilised nations, were gradually introduced into the western countries of Europe; and the natives were encouraged, by an open and profitable commerce, to multiply the former, as well as to improve the latter.

Gibbon, Decline and Fall of the Roman Empire, II

- 21 It is the nature of all greatness not to be exact; and great trade will always be attended with considerable abuses. The contraband will always keep pace in some measure with the fair trade. It should stand as a fundamental maxim, that no vulgar precaution ought to be employed in the cure of evils which are closely connected with the cause of our prosperity.

Burke, Speech on American Taxation (1774)

- 22 I believe it will be found invariably true, that the superfluities of a rich nation furnish a better object of trade than the necessities of a poor one. It is the interest of the commercial world that wealth should be found everywhere.

Burke, Letters to Gentlemen in Bristol (1778)

- 23 If nature wisely separates nations, which every state would seek to combine, by artifice or force, and even according to the principles of the law of nations; who, on the other hand, through the interested spirit of all nations, produces an union between them, which the idea of the cosmopolitical right alone would not have sufficiently secured from war and violence. It is the spirit of commerce that sooner or later takes hold of every

nation, and is incompatible with war: the power of money being that which of all others gives the greatest spring to states, they find themselves obliged to labour at the noble work of peace, though without any moral view; and instantly seek to stifle, by mediations, war, in whatever part it may break out, as if for this purpose they had contracted a perpetual alliance; great associations in a war are naturally rare, and less frequently still successful. It is in this manner that nature, by means of the human propensities, guarantees a perpetual peace; and though the assurance which she gives us thereof is not sufficient to predict theoretically, yet it prevents us from regarding it as a chimerical aim, and makes it thereby a duty in us to contribute towards it.

Kant, Perpetual Peace, Supplement I

- 24 The spirit of enterprise, useful and prolific as it is, must necessarily be contracted or expanded in proportion to the simplicity or variety of the occupations and productions which are to be found in a society. It must be less in a nation of mere cultivators than in a nation of cultivators and merchants; less in a nation of cultivators and merchants than in a nation of cultivators, artificers, and merchants.

Hamilton, Report on Manufactures

- 25 It seems not always to be recollected that nations who have neither mines nor manufactures can only obtain the manufactured articles of which they stand in need by an exchange of the products of their soils; and that if those who can best furnish them with such articles are unwilling to give a due course to this exchange, they

must, of necessity, make every possible effort to manufacture for themselves; the effect of which is that the manufacturing nations abridge the natural advantages of their situation through an unwillingness to permit the agricultural countries to enjoy the advantages of theirs, and sacrifice the interests of a mutually beneficial intercourse to the vain project of selling everything and buying nothing.

Hamilton, Report on Manufactures

- 26 The material existence of England is based on commerce and industry, and the English have undertaken the weighty responsibility of being the missionaries of civilization to the world; for their commercial spirit urges them to traverse every sea and land, to form connections with barbarous peoples, to create wants and stimulate industry, and first and foremost to establish among them the conditions necessary to commerce, *viz.*, the relinquishment of a life of lawless violence, respect for property, and civility to strangers.

Hegel, Philosophy of History, Pt. IV, III, 3

- 27 In democracies nothing is greater or more brilliant than commerce; it attracts the attention of the public and fills the imagination of the multitude; all energetic passions are directed towards it. Neither their own prejudices nor those of anybody else can prevent the rich from devoting themselves to it. The wealthy members of democracies never form a body which has manners and regulations of its own; the opinions peculiar to their class do not restrain them, and the common opinions of their country urge them on. Moreover, as all the large fortunes that are

found in a democratic community are of commercial growth, many generations must succeed one another before their possessors can have entirely laid aside their habits of business.

Tocqueville, Democracy in America, Vol. II, II, 19

- 28 I know of nothing more opposite to revolutionary attitudes than commercial ones. Commerce is naturally adverse to all the violent passions; it loves to temporize, takes delight in compromise, and studiously avoids irritation. It is patient, insinuating, flexible, and never has recourse to extreme measures until obliged by the most absolute necessity. Commerce renders men independent of one another, gives them a lofty notion of their personal importance, leads them to seek to conduct their own affairs, and teaches how to conduct them well; it therefore prepares men for freedom, but preserves them from revolutions.

Tocqueville, Democracy in America, Vol. II, III, 21

- 29 The greatest meliorator of the world is selfish, huckstering trade.

Emerson, Works and Days

- 30 There are geniuses in trade, as well as in war, or the State, or letters; and the reason why this or that man is fortunate is not to be told. It lies in the man; that is all anybody can tell you about it.

Emerson, Character

- 31 The craft of the merchant is this bringing a thing from where it abounds to where it is costly.

Emerson, Wealth

- 32 We rail at trade, but the historian of the world will see that it was the principle of liberty; that it settled America, and destroyed feudalism, and made peace and keeps peace; that it will abolish slavery.

Emerson, Journal (Dec. 31, 1843)

- 33 "A bargain," said the son. "Here's the rule for bargains —'Do other men, for they would do you.' That's the true business precept. All others are counterfeits."

The delighted father applauded this sentiment to the echo.

Dickens, Martin Chuzzlewit, XI

- 34 This world is a place of business. What an infinite bustle! I am awaked almost every night by the panting of the locomotive. It interrupts my dreams. There is no sabbath. It would be glorious to see mankind at leisure for once. It is nothing but work, work, work. I cannot easily buy a blank-book to write thoughts in; they are commonly ruled for dollars and cents. An Irishman, seeing me making a minute in the fields, took it for granted that I was calculating my wages. If a man was tossed out of a window when an infant, and so made a cripple for life, or scared out of his wits by the Indians, it is regretted chiefly because he was thus incapacitated for—business! I think that there is nothing, not even crime, more opposed to poetry, to philosophy, ay, to life itself, than this incessant business.

Thoreau, Life Without Principle

35 That so many are ready to live by luck, and so get the means of commanding the labor of others less lucky, without contributing any value to society! And that is called enterprise! I know of no more startling development of the immorality of trade and all the common modes of getting a living.

Thoreau, Life Without Principle

36 The exchange of commodities is... accompanied by the following changes in their form:

Commodity—Money—Commodity
C---M--- C

The result of the whole process is, so far as concerns the objects themselves, C—C, the exchange of one commodity for another, the circulation of materialized social labour. When this result is attained, the process is at an end.

C— M, First Metamorphosis, or Sale

The leap taken by value from the body of the commodity into the body of the gold is, as I have elsewhere called it, the *salto mortale* of the commodity. If it falls short, then, although the commodity itself is not harmed, its owner decidedly is. The social division of labour causes his labour to be as one-sided as his wants are many-sided. This is precisely the reason why the product of his labour serves him solely as exchange value. But it cannot acquire the properties of a socially recognized universal equivalent, except by being converted into money. That money, however, is in some one else's pocket. In order to entice the money out of that pocket, our friend's commodity must, above all things, be a use-value to the owner of the money. For this, it is necessary that the labour expended upon it be of a kind

that is socially useful, of a kind that constitutes a branch of the social division of labour. But division of labour is a system of production which has grown up spontaneously and continues to grow behind the backs of the producers. The commodity to be exchanged may possibly be the product of some new kind of labour that pretends to satisfy newly arisen requirements, or even to give rise itself to new requirements. A particular operation, though yesterday, perhaps, forming one out of the many operations conducted by one producer in creating a given commodity, may today separate itself from this connection, may establish itself as an independent branch of labour and send its incomplete product to market as an independent commodity. The circumstances may or may not be ripe for such a separation. Today the product satisfies a social want. Tomorrow the article may, either altogether or partially, be superseded by some other appropriate product. Moreover, although our weaver's labour may be a recognized branch of the social division of labour, yet that fact is by no means sufficient to guarantee the utility of his 20 yards of linen. If the community's want of linen, and such a want has a limit like every other want, should already be saturated by the products of rival weavers, our friend's product is superfluous, redundant, and consequently useless. Although people do not look a gift-horse in the mouth, our friend does not frequent the market for the purpose of making presents. But suppose his product turns out a real use-value, and thereby attracts money. The question arises, how much will it attract? No doubt the answer is already anticipated in the price of the article, in the exponent of the magnitude of its value. We leave out of consideration here any accidental miscalculation of value

by our friend, a mistake that is soon rectified in the market. We suppose him to have spent on his product only that amount of labour time that is on an average socially necessary. The price, then, is merely the money name of the quantity of social labour realized in his commodity. But without the leave, and behind the back, of our weaver, the old fashioned mode of weaving undergoes a change. The labour time that yesterday was without doubt socially necessary to the production of a yard of linen, ceases to be so today, a fact which the owner of the money is only too eager to prove from the prices quoted by our friend's competitors. Unluckily for him, weavers are not few and far between. Lastly, suppose that every piece of linen in the market contains no more labour time than is socially necessary. In spite of this, all these pieces taken as a whole, may have had superfluous labour time spent upon them. If the market cannot stomach the whole quantity at the normal price of 2 shillings a yard, this proves that too great a portion of the total labour of the community has been expended in the form of weaving. The effect is the same as if each individual weaver had expended more labour time upon his particular product than is socially necessary. Here we may say, with the German proverb: "Caught together, hanged together." All the linen in the market counts but as one article of commerce, of which each piece is only an aliquot part. And as a matter of fact, the value also of each single yard is but the materialized form of the same definite and socially fixed quantity of homogeneous human labour.

We see then, commodities are in love with money, but "the course of true love never did run smooth," The quantitative division of labour is brought about in exactly

the same spontaneous and accidental manner as its qualitative division. The owners of commodities, therefore, find out that the same division of labour that turns them into independent private producers also frees the social process of production and the relations of the individual producers to each other within that process from all dependence on the will of those producers, and that the seeming mutual independence of the individuals is supplemented by a system of general and mutual dependence through or by means of the products.

Marx, Capital, Vol. I, I, 3

37 The conversion of a sum of money into means of production and labour power is the first step taken by the quantum of value that is going to function as capital. This conversion takes place in the market, within the sphere of circulation. The second step, the process of production, is complete so soon as the means of production have been converted into commodities whose value exceeds that of their component parts, and, therefore, contains the capital originally advanced, plus a surplus value. These commodities must then be thrown into circulation. They must be sold, their value realized in money, this money converted afresh into capital, and so over and over again. This circular movement, in which the same phases are continually gone through in succession, forms the circulation of capital.

Marx, Capital, Vol. I, VII, Introduction

38 Modern industry has established the world market, for which the discovery of America paved the way. This market has given an immense development to

commerce, to navigation, to communication by land. This development has, in its turn, reacted on the extension of industry; and in proportion as industry, commerce, navigation, railways extended, in the same proportion the bourgeoisie developed, increased its capital, and pushed into the background every class handed down from the Middle Ages.

We see, therefore, how the modern bourgeoisie is itself the product of a long course of development, of a series of revolutions in the modes of production and of exchange.

Marx and Engels, Communist Manifesto, I

39 Modern bourgeois society with its relations of production, of exchange and of property, a society that has conjured up such gigantic means of production and of exchange, is like the sorcerer who is no longer able to control the powers of the nether world whom he has called up by his spells. For many a decade past the history of industry and commerce is but the history of the revolt of modern productive forces against modern conditions of production, against the property relations that are the conditions for the existence of the bourgeoisie and of its rule. It is enough to mention the commercial crises that by their periodical return put the existence of the entire bourgeois society on trial, each time more threateningly. In these crises a great part not only of the existing products, but also of the previously created productive forces, are periodically destroyed. In these crises there breaks out an epidemic that, in all earlier epochs, would have seemed an absurdity—the epidemic of over-production. Society suddenly finds itself put back into a state of momentary barbarism; it appears as if a famine, a

universal war of devastation had cut off the supply of every means of subsistence; industry and commerce seem to be destroyed. And why? Because there is too much civilization, too much means of subsistence, too much industry, too much commerce. The productive forces at the disposal of society no longer tend to further the development of the conditions of bourgeois property; on the contrary, they have become too powerful for these conditions, by which they are fettered, and no sooner do they overcome these fetters than they bring disorder into the whole of bourgeois society, endanger the existence of bourgeois property. The conditions of bourgeois society are too narrow to comprise the wealth created by them. And how does the bourgeoisie get over these crises? On the one hand by enforced destruction of a mass of productive forces; on the other, by the conquest of new markets and by the more thorough exploitation of the old ones. That is to say, by paving the way for more extensive and more destructive crises, and by diminishing the means whereby crises are prevented.

Marx and Engels, Communist Manifesto, I

- 40 The increase of the general riches of the world, when accompanied with freedom of commercial intercourse, improvements in navigation, and inland communication by roads, canals, or railways, tends to give increased productiveness to the labour of every nation in particular, by enabling each locality to supply with its special products so much larger a market, that a great extension of the division of labour in their production is an ordinary consequence.

Mill, Principles of Political Economy, Bk. 1, VIII, 6

41 The small capitalist, it is true, generally combines with the business of direction some portion of the details, which the other leaves to his subordinates: the small farmer follows his own plough, the small tradesman serves in his own shop, the small weaver plies his own loom. But in this very union of functions there is, in a great proportion of cases, a want of economy. The principal in the concern is either wasting, in the routine of a business, qualities suitable for the direction of it, or he is only fit for the former, and then the latter will be ill done. I must observe, however, that I do not attach, to this saving of labour, the importance often ascribed to it. There is undoubtedly much more labour expended in the superintendence of many small capitals than in that of one large capital. For this labour however the small producers have generally a full compensation, in the feeling of being their own masters, and not servants of an employer. It may be said, that if they value this independence they will submit to pay a price for it, and to sell at the reduced rates occasioned by the competition of the great dealer or manufacturer. But they cannot always do this and continue to gain a living. They thus gradually disappear from society. After having consumed their little capital in prolonging the unsuccessful struggle they either sink into the condition of hired labourers, or become dependent on others for support.

Mill, Principles of Political Economy, Bk. I, IX. I

42 Where competitors are so few, they always end by agreeing not to compete. They may run a race of cheapness to ruin a new candidate, but as soon as he has established his footing they come to terms with him.

When, therefore, a business of real public importance can only be carried on advantageously upon so large a scale as to render the liberty of competition almost illusory, it is an unthrifty dispensation of the public resources that several costly sets of arrangements should be kept up for the purpose of rendering to the community this one service. It is much better to treat it at once as a public function; and if it be not such as the government itself could beneficially undertake, it should be made over entire to the company or association which will perform it on the best terms for the public.

Mill, Principles of Political Economy, Bk. I, IX, 3

- 43 Every seller of goods is a buyer of money, and the goods he brings with him constitute his demand. The demand for money differs from the demand for other things in this, that it is limited only by the means of the purchaser. The demand for other things is for so much and no more; but there is always a demand for as much money as can be got. Persons may indeed refuse to sell, and withdraw their goods from the market, if they cannot get for them what they consider a sufficient price. But this is only when they think that the price will rise, and that they shall get more money by waiting. If they thought the low price likely to be permanent, they would take what they could get. It is always a *sine qua non* with a dealer to dispose of his goods.

Mill, Principles of Political Economy, Bk. III, VIII, 2

- 44 I confess I am not charmed with the ideal of life held out by those who think that the normal state of human beings is that of struggling to get on; that the trampling,

crushing, elbowing, and treading on each other's heels, which form the existing type of social life, are the most desirable lot of human kind, or anything but the disagreeable symptoms of one of the phases of industrial progress.

Mill, Principles of Political Economy, Bk. IV. VI, 2

45 Because a man has shop to mind
In time and place, since flesh must live,
Needs spirit lack all life behind,
All stray thoughts, fancies fugitive,
All loves except what trade can give?

Browning, Shop

46 October. This is one of the peculiarly dangerous months to speculate in stocks in. The others are July, January, September, April, November, May, March, June, December, August, and February.

Mark Twain, Pudd'nhead Wilson's Calendar, XIII

47 A man can fell trees better than a woman. A woman can knit stockings better than a man. Suppose the man can fell two trees whilst the woman is felling one; and that the woman can knit two pairs of stockings whilst the man is knitting one. Suppose further that the time occupied by the man in felling the two trees, and by the woman in knitting the two pairs of stockings is one hour. Now if each produces for himself and herself respectively, when the woman wants a tree to bum and a pair of stockings to wear, it will take her an hour to fell the tree, and half an hour to knit the stockings—one hour and a half in all. And the man, under the same necessity, will spend half an

hour in felling his tree, and one hour in knitting his stockings—also one hour and a half in all. It costs the man and woman three hours labor to supply themselves with fuel and hosiery. But they can save an hour of this by each working for the other. They require between them two trees and two pairs of stockings. The man can fell the two trees, and the woman knit the four stockings in an hour each. Let them do so, and exchange a tree against a pair of stockings. Each is now supplied as well as before, although they have only worked two hours instead of three. They have gained half an hour's leisure each, and neither has gained it at the expense of the other. The woman has worked half an hour for the man, and he has worked half an hour for her. This is the state of things which the Socialistic movement aims at establishing.

Shaw, Our Lost Honesty

- 48 What does one expect from business save that it should furnish money, to be used in turn for making more money and for support of self and family, for buying books and pictures, tickets to concerts which may afford culture, and for paying taxes, charitable gifts and other things of social and ethical value? How unreasonable to expect that the pursuit of business should be itself a culture of the imagination, in breadth and refinement; that it should directly, and not through the money which it supplies, have social service for its animating principle and be conducted as an enterprise in behalf of social organization!

Dewey, Democracy and Education, XVIII

11.6 Taxation

The texts quoted here are not offered as covering or even as touching on the technical intricacies of this difficult subject. However, they do represent a choice selection of key statements by the great authors concerning the purposes of taxation and the criteria for judging the fairness, as well as the effectiveness, with which taxes are levied.

That taxation, in some form, is necessary to defray costs of government is generally agreed upon by all; but the use of taxation for other purposes, such as the promotion of economic welfare by a governmental redistribution of wealth, is of such recent origin that it does not even appear in most of the books from which we are quoting.

There is one other point of general agreement, epitomized in the quotations from Burke and from Emerson: namely that, regardless of their necessity and their fairness, taxes are universally disliked by those who have to pay them.

■ ■ ■

1 Then Joseph said unto the people, Behold, I have bought you this day and your land for Pharaoh: lo, here is seed for you, and ye shall sow the land.

And it shall come to pass in the increase, that ye shall give the fifth part unto Pharaoh, and four parts shall be your own, for seed of the field, and for your food, and for them of your households, and for food for your little ones.

And they said, Thou hast saved our lives; let us find grace in the sight of my lord, and we will be Pharaoh's servants.

And Joseph made it a law over the land of Egypt unto this day, that Pharaoh should have the fifth part; except the land of the priests only, which became not Pharaoh's.

Genesis 47:23-26

2 *Athenian Stranger*. With a view to taxation, for various reasons, every man ought to have had his property valued: and the tribesmen should likewise bring a register of the yearly produce to the wardens of the country, that in this way there may be two valuations; and the public officers may use annually whichever on consideration they deem the best, whether they prefer to take a certain portion of the whole value, or of the annual revenue, after subtracting what is paid to the common tables.

Plato, Laws, XII, 955B

3 And it came to pass in those days, that there went out a decree from Caesar Augustus, that all the world should be taxed.

Luke 2:1

4 Cato . . . gave most general annoyance by retrenching people's luxury; for though (most of the youth being thereby already corrupted) it seemed almost impossible to take it away with an open hand and directly, yet going, as it were, obliquely around, he caused all dress carriages, women's ornaments, household furniture, whose price exceeded one thousand five hundred

drachmas, to be rated at ten times as much as they were worth; intending by thus making the assessments greater, to increase the taxes paid upon them. He also ordained that upon every thousand asses of property of this kind, three should be paid, so that people, burdened with these extra charges, and seeing others of as good estates, but more frugal and sparing, paying less into the public exchequer, might be tired out of their prodigality. And thus, on the one side, not only those were disgusted at Cato who bore the taxes for the sake of their luxury', but those, too, who on the other side laid by their luxury for fear of the taxes.

Plutarch, Marcus Cato

- 5 Repeated demands on the part of the people, who denounced the excessive greed of the revenue collectors, made Nero doubt whether he should not order the repeal of all indirect taxes, and so confer a most splendid boon on the human race. But this sudden impulse was checked by the senators, who having first heartily praised the grandeur of his conception, pointed out "that the dissolution of the empire must ensue if the revenues which supported the State were to be diminished; for as soon as the customs were swept away, there would follow a demand for the abolition of the direct taxes. Many companies for the collection of the indirect taxes had been formed by consuls and tribunes, when the freedom of the Roman people was still in its vigour, and arrangements were subsequently made to insure an exact correspondence between the amount of income and the necessary disbursements. Certainly some restraint, they admitted, must be put on the cupidity of the revenue collectors, that they might not by new

oppressions bring into odium what for so many years had been endured without a complaint."

Tacitus, Annals, XIII, 50

- 6 *Cloten*. Why tribute? why should we pay tribute? If Caesar can hide the sun from us with a blanket, or put the moon in his pocket, we will pay him tribute for light; else, sir, no more tribute, pray you now.

Shakespeare, Cymbeline, III, i, 42

- 7 *Queen Katharine*. The subjects' grief
Comes through commissions, which compel from each
The sixth part of his substance, to be levied
Without delay; and the pretence for this
Is named, your wars in France. This makes bold mouths.
Tongues spit their duties out, and cold hearts freeze
Allegiance in them.

Shakespeare, Henry VIII, I, ii, 55

- 8 The difficulty of raising money for the necessary uses of the Commonwealth, especially in the approach of war... ariseth from the opinion that every subject hath of a propriety in his lands and goods exclusive of the sovereign's right to the use of the same. From whence it cometh to pass that the sovereign power, which foreseeeth the necessities and dangers of the Commonwealth, finding the passage of money to the public treasury obstructed by the tenacity of the people, whereas it ought to extend itself, to encounter and prevent such dangers in their beginnings, contracteth itself as long as it can, and when it cannot longer, struggles with the people by stratagems of law to obtain little sums, which,

not sufficing, he is fain at last violently to open the way for present supply or perish; and, being put often to these extremities, at last reduceth the people to their due temper, or else the Commonwealth must perish.

Hobbes, Leviathan, II, 29

- 9 To equal justice appertaineth also the equal imposition of taxes; the equality whereof dependeth not on the equality of riches, but on the equality of the debt that every man oweth to the Commonwealth for his defence. It is not enough for a man to labour for the maintenance of his life; but also to fight, if need be, for the securing of his labour. They must either do as the Jews did after their return from captivity, in re-edifying the Temple, build with one hand and hold the sword in the other, or else they must hire others to fight for them. For the impositions that are laid on the people by the sovereign power are nothing else but the wages due to them that hold the public sword to defend private men in the exercise of several trades and callings. Seeing then the benefit that every one receiveth thereby is the enjoyment of life, which is equally dear to poor and rich, the debt which a poor man oweth them that defend his life is the same which a rich man oweth for the defence of his; saving that the rich, who have the service of the poor, may be debtors not only for their own persons, but for many more. Which considered, the equality of imposition consisteth rather in the equality of that which is consumed, than of the riches of the persons that consume the same. For what reason is there that he which laboureth much and, sparing the fruits of his labour, consumeth little should be more charged than he that, living idly, getteth little and spendeth all he gets;

seeing the one hath no more protection from the Commonwealth than the other?

Hobbes, Leviathan, II, 30

- 10 It is true governments cannot be supported without great charge, and it is fit everyone who enjoys his share of the protection should pay out of his estate his proportion for the maintenance of it. But still it must be with his own consent—that is, the consent of the majority, giving it either by themselves or their representatives chosen by them; for if anyone shall claim a power to lay and levy taxes on the people by his own authority, and without such consent of the people, he thereby invades the fundamental law of property, and subverts the end of government. For what property have I in that which another may by right take when he pleases to himself?

Locke, II Civil Government, XI, 140

- 11 I heard a very warm debate between two professors, about the most commodious and effectual ways and means of raising money without grieving the subject. The first affirmed, the justest method would be to lay a certain tax upon vices and folly; and the sum fixed upon every man, to be rated after the fairest manner, by a jury of his neighbours. The second was of an opinion directly contrary; to tax those qualities of body and mind for which men chiefly value themselves; the rate to be more or less according to the degrees of excelling; the decision whereof should be left entirely to their own breast. The highest tax was upon men, who are the greatest favourites of the other sex; and the assessments according to the number and natures of the favours they

have received; for which they are allowed to be their own vouchers. Wit, valour, and politeness were likewise proposed to be largely taxed, and collected in the same manner, by every person giving his own word for the quantum of what he possessed. But, as to honour, justice, wisdom and learning, they should not be taxed at all; because, they are qualifications of so singular a kind, that no man will either allow them in his neighbour, or value them in himself.

The women were proposed to be taxed according to their beauty and skill in dressing; wherein they had the same privilege with the men, to be determined by their own judgment. But constancy, chastity, good sense, and good nature were not rated, because they would not bear the charge of collecting.

Swift, Gulliver's Travels, III, 6

- 12 'Tis pleasant to observe, how free the present Age is in laying Taxes on the next.

Swift, Thoughts on Various Subjects

- 13 Inequality occurs likewise when the condition of the citizens differs with regard to taxes, which may happen in four different ways: when the nobles assume the privilege of paying none; when they commit frauds to exempt themselves; when they engross the public money, under pretence of rewards or appointments for their respective employments; in fine, when they render the common people tributary, and divide among their own body the profits arising from the several subsidies. This last case is very rare; an aristocracy so instituted would be the most intolerable of all governments.

Montesquieu, Spirit of Laws, V, 8

- 14 The *public revenues* are a portion that each subject gives of his property, in order to secure or enjoy the remainder. To fix these revenues in a proper manner, regard should be had both to the necessities of the state and to those of the subject. The real wants of the people ought never to give way to the imaginary wants of the state.

Montesquieu, Spirit of Laws, XIII, 1

- 15 The duties felt least by the people are those on merchandise, because they are not demanded of them in form. They may be so prudently managed that the people themselves shall hardly know they pay them. For this purpose it is of the utmost consequence that the person who sells the merchandise should pay the duty. He is very sensible that he does not pay it for himself; and the consumer, who pays it in the main, confounds it with the price.

Montesquieu, Spirit of Laws, XIII, 7

- 16 Taxes may be increased in most republics, because the citizen, who thinks he is paying himself, cheerfully submits to them, and moreover is generally able to bear their weight, from the nature of the government.

In a monarchy taxes may be increased, because the moderation of the government is capable of procuring opulence; it is a recompense, as it were, granted to the prince for the respect he shows to the laws. In despotic governments they cannot be increased, because there can be no increase of the extremity of slavery.

Montesquieu, Spirit of Laws, XIII, 13

17 The best taxes are such as are levied upon consumptions, especially those of luxury, because such taxes are least felt by the people. They seem in some measure voluntary, since a man may choose how far he will use the commodity which is taxed. They are paid gradually and insensibly; they naturally produce sobriety and frugality, if judiciously imposed; and being confounded with the natural price of the commodity, they are scarcely perceived by the consumers. Their only disadvantage is, that they are expensive in the levying.

Taxes upon possessions are levied without expense, but have every other disadvantage. Most states, however, are obliged to have recourse to them, in order to supply the deficiencies of the other.

But the most pernicious of all taxes are the arbitrary, They are commonly converted, by their management, into punishments on industry; and also, by their unavoidable inequality, are more grievous, than by the real burden which they impose. It is surprising, therefore, to see them have place among any civilized people.

In general, all poll-taxes, even when not arbitrary, which they commonly are, may be esteemed dangerous: because it is so easy for the sovereign to add a little more, and a little more, to the sum demanded, that these taxes are apt to become altogether oppressive and intolerable. On the other hand, a duty upon commodities checks itself; and a prince will soon find, that an increase of the impost is no increase of his revenue. It is not easy, therefore, for a people to be altogether ruined by such taxes.

Hume, Of Taxes

18 Every man, to be sure, is desirous of pushing off from himself the burden of any tax which is imposed, and of laying it upon others: but as every man has the same inclination, and is upon the defensive, no set of men can be supposed to prevail altogether in this contest.

Hume, Of Taxes

19 That taxes cannot be legitimately established except by the consent of the people or its representatives, is a truth generally admitted by all philosophers and jurists of any repute on questions of public right.

Rousseau, Political Economy

20 In order to levy taxes in a truly equitable and proportionate manner, the imposition ought not to be in simple ratio to the property of the contributors, but in compound ratio to the difference of their conditions and the superfluity of their possessions. This very important and difficult operation is daily made by numbers of honest clerks, who know their arithmetic; but a Plato or a Montesquieu would not venture to undertake it without the greatest diffidence, or without praying to Heaven for understanding and integrity.

Rousseau, Political Economy

21 Heavy taxes should be laid on servants in livery, on equipages, rich furniture, fine clothes, on spacious courts and gardens, on public entertainments of all kinds, on useless professions, such as dancers, singers, players, and in a word, on all that multiplicity of objects of luxury, amusement and idleness, which strike the eyes of all, and can the less be hidden, as their whole purpose is to be

seen, without which they would be useless. We need be under no apprehension of the produce of these taxes being arbitrary, because they are laid on things not absolutely necessary. They must know but little of mankind who imagine that, after they have been once seduced by luxury, they can ever renounce it; they would a hundred times sooner renounce common necessities, and had much rather die of hunger than of shame. The increase in their expense is only an additional reason for supporting them, when the vanity of appearing wealthy reaps its profit from the price of the thing and the charge of the tax. As long as there are rich people in the world, they will be desirous of distinguishing themselves from the poor, nor can the State devise a revenue less burdensome or more certain than what arises from this distinction.

Rousseau, Political Economy

- 22 Suppose the spirit of government was constantly to tax only the superfluities of the rich, one of two things must happen: either the rich would convert their superfluous expenses into useful ones, which would redound to the profit of the State, and thus the imposition of taxes would have the effect of the best sumptuary laws, the expenses of the State would necessarily diminish with those of individuals, and the treasury would not receive so much less as it would gain by having less to pay; or, if the rich did not become less extravagant, the exchequer would have such resources in the product of taxes on their expenditure as would provide for the needs of the State. In the first case the treasury would be the richer by what it would save, from having the less to do with its money;

and in the second, it would be enriched by the useless expenses of individuals.

Rousseau, Political Economy

23 It does not seem necessary that the expense of those public works should be defrayed from that public revenue, as it is commonly called, of which the collection and application is in most countries assigned to the executive power. The greater part of such public works may easily be so managed as to afford a particular revenue sufficient for defraying their own expense, without bringing any burden upon the general revenue of the society.

A highway, a bridge, a navigable canal, for example, may in most cases be both made and maintained by a small toll upon the carriages which make use of them: a harbour, by a moderate port-duty upon the tonnage of the shipping which load or unload in it. The coinage, another institution for facilitating commerce, in many countries, not only defrays its own expense, but affords a small revenue or seignorage to the sovereign. The post-office, another institution for the same purpose, over and above defraying its own expense, affords in almost all countries a very considerable revenue to the sovereign.

Adam Smith, Wealth of Nations, V, 1

24 Before I enter upon the examination of particular taxes, it is necessary to premise the four following maxims with regard to taxes in general.

The subjects of every state ought to contribute towards the support of the government, as nearly as possible, in proportion to their respective abilities; that is,

in proportion to the revenue which they respectively enjoy under the protection of the state. The expense of government to the individuals of a great nation is like the expense of management to the joint tenants of a great estate, who are all obliged to contribute in proportion to their respective interests in the estate. In the observation or neglect of this maxim consists what is called the equality or inequality of taxation. Every tax, it must be observed once for all, which falls finally upon one only of the three sorts of revenue above mentioned, is necessarily unequal in so far as it does not affect the other two. In the following examination of different taxes I shall seldom take much further notice of this sort of inequality, but shall, in most cases, confine my observations to that inequality which is occasioned by a particular tax falling unequally even upon that particular sort of private revenue which is affected by it.

The tax which each individual is bound to pay ought to be certain, and not arbitrary. The time of payment, the manner of payment, the quantity to be paid, ought all to be clear and plain to the contributor, and to every other person. Where it is otherwise, every person subject to the tax is put more or less in the power of the tax-gatherer, who can either aggravate the tax upon any obnoxious contributor, or extort, by the terror of such aggravation, some present or perquisite to himself. The uncertainty of taxation encourages the insolence and favours the corruption of an order of men who are naturally unpopular, even where they are neither insolent nor corrupt. The certainty of what each individual ought to pay is, in taxation, a matter of so great importance that a very considerable degree of inequality, it appears, 1

believe, from the experience of all nations, is not near so great an evil as a very small degree of uncertainty.

Every tax ought to be levied at the time, or in the manner, in which it is most likely to be convenient for the contributor to pay it, A tax upon the rent of land or of houses, payable at the same term at which such rents are usually paid, is levied at the time when it is most likely to be convenient for the contributor to pay; or, when he is most likely to have wherewithal to pay. Taxes upon such consumable goods as are articles of luxury' are all finally paid by the consumer, and generally in a manner that is very convenient for him. He pays them by little and little, as he has occasion to buy the goods. As he is at liberty, too, either to buy, or not to buy, as he pleases, it must be his own fault if he ever suffers any considerable inconveniency from such taxes.

Every tax ought to be so contrived as both to take out and to keep out of the pockets of the people as little as possible over and above what it brings into the public treasury of the state. A tax may either take out or keep out of the pockets of the people a great deal more than it brings into the public treasury, in the four following ways. First, the levying of it may require a great number of officers, whose salaries may eat up the greater part of the produce of the tax, and whose perquisites may impose another additional tax upon the people. Secondly, it may obstruct the industry of the people, and discourage them from applying to certain branches of business which might give maintenance and employment to great multitudes. While it obliges the people to pay, it may thus diminish, or perhaps destroy, some of the funds which might enable them more easily to do so. Thirdly, by the forfeitures and other penalties which those

unfortunate individuals incur who attempt unsuccessfully to evade the tax, it may frequently ruin them, and thereby put an end to the benefit which the community might have received from the employment of their capitals. An injudicious tax offers a great temptation to smuggling. But the penalties of smuggling must rise in proportion to the temptation. The law, contrary to all the ordinary principles of justice, first creates the temptation, and then punishes those who yield to it; and it commonly enhances the punishment, too, in proportion to the very circumstance which ought certainly to alleviate it, the temptation to commit the crime. Fourthly, by subjecting the people to the frequent visits and the odious examination of the tax-gatherers, it may expose them to much unnecessary trouble, vexation, and oppression; and though vexation is not, strictly speaking, expense, it is certainly equivalent to the expense at which every man would be willing to redeem himself from it. It is in some one or other of these four different ways that taxes are frequently so much more burdensome to the people than they are beneficial to the sovereign.

Adam Smith, Wealth of Nations, V, 2

- 25 While property remains in the possession of the same person, whatever permanent taxes may have been imposed upon it, they have never been intended to diminish or take away any part of its capital value, but only some part of the revenue arising from it. But when property changes hands, when it is transmitted either from the dead to the living, or from the living to the living, such taxes have frequently been imposed upon it as necessarily take away some part of its capital value.

Adam Smith, Wealth of Nations, V, 2

26 Those modes of taxation, by stamp-duties and by duties upon registration, are of very modern invention. In the course of little more than a century, however, stamp-duties have, in Europe, become almost universal, and duties upon registration extremely common. There is no art which one government sooner learns of another than that of draining money from the pockets of the people.

Adam Smith, Wealth of Nations, V, 2

27 As the wages of labour are everywhere regulated, partly by the demand for it, and partly by the average price of the necessary articles of subsistence, whatever raises this average price must necessarily raise those wages so that the labourer may still be able to purchase that quantity of those necessary articles which the state of the demand for labour, whether increasing, stationary, or declining, requires that he should have. A tax upon those articles necessarily raises their price somewhat higher than the amount of the tax, because the dealer, who advances the tax, must generally get it back with a profit. Such a tax must, therefore, occasion a rise in the wages of labour proportionable to this rise of price.

It is thus that a tax upon the necessaries of life operates exactly in the same manner as a direct tax upon the wages of labour. The labourer, though he may pay it out of his hand, cannot, for any considerable time at least, be properly said even to advance it. It must always in the long-run be advanced to him by his immediate employer in the advanced rate of his wages. His employer, if he is a manufacturer, will charge upon the price of his goods this rise of wages, together with a

profit; so that the final payment of the tax together with this overcharge, will fall upon the consumer. If his employer is a farmer, the final payment, together with a like overcharge, will fall upon the rent of the landlord.

Adam Smith, Wealth of Nations, V, 2

28 High taxes, sometimes by diminishing the consumption of the taxed commodities, and some-times by encouraging smuggling, frequently afford a smaller revenue to government than what might be drawn from more moderate taxes.

When the diminution of revenue is the effect of the diminution of consumption there can be but one remedy, and that is the lowering of the tax.

When the diminution of the revenue is the effect of the encouragement given to smuggling, it may perhaps be remedied in two ways; either by diminishing the temptation to smuggle, or by increasing the difficulty of smuggling. The temptation to smuggle can be diminished only by the lowering of the tax, and the difficulty of smuggling can be increased only by establishing that system of administration which is most proper for preventing it.

Adam Smith, Wealth of Nations, V, 2

29 The finances of the state demanded the most vigilant care of the emperor. Though every measure of injustice and extortion had been adopted, which could collect the property of the subject into the coffers of the prince; the rapaciousness of Commodus had been so very inadequate to his extravagance, that, upon his death, no more than eight thousand pounds were found in the

exhausted treasury, to defray the current expenses of government, and to discharge the pressing demand of a liberal donative, which the new emperor had been obliged to promise to the Praetorian guards. Yet under these distressed circumstances, Pertinax had the generous firmness to remit all the oppressive taxes invented by Commodus, and to cancel all the unjust claims of the treasury; declaring, in a decree of the senate, "that he was better satisfied to administer a poor republic with innocence, than to acquire riches by the ways of tyranny and dishonour." Economy and industry he considered as the pure and genuine sources of wealth; and from them he soon derived a copious supply for the public necessities.

Gibbon, Decline and Fall of the Roman Empire,

- 30 Of the several impositions introduced by Augustus, the twentieth on inheritances and legacies was the most fruitful, as well as the most comprehensive. As its influence was not confined to Rome or Italy, the produce continually increased with the gradual extension of the ROMAN CITY. The new citizens, though charged, on equal terms, with the payment of new taxes, which had not affected them as subjects, derived an ample compensation from the rank they obtained, the privileges they acquired, and the fair prospect of honours and fortune that was thrown open to their ambition.

Gibbon, Decline and Fall of the Roman Empire, VI

- 31 Several of his sayings are preserved. One of them in particular discovers a deep insight into the constitution of government. "The authority of the prince," said

Artaxerxes, "must be defended by a military force; that force can only be maintained by taxes; all taxes must, at last, fall upon agriculture; and agriculture can never flourish except under the protection of justice and moderation."

Gibbon, Decline and Fall of the Roman Empire, VIII

- 32 The obscure millions of a great empire have much less to dread from the cruelty than from the avarice of their masters; and *their* humble happiness is principally affected by the grievance of excessive taxes, which, gently pressing on the wealthy, descend with accelerated weight on the meaner and more indigent classes of society.

Gibbon, Decline and Fall of the Roman Empire, XVII

- 33 The noblest monument of a conqueror's fame, and of the terror which he inspired, is the Saladin tenth, a general tax, which was imposed on the laity and even the clergy of the Latin church for the service of the holy war. The practice was too lucrative to expire with the occasion; and this tribute became the foundation of all the tithes and tenths on ecclesiastical benefices which have been granted by the Roman pontiffs to Catholic sovereigns, or reserved for the immediate use of the apostolic see.

Gibbon, Decline and Fall of the Roman Empire, LIX

- 34 This extraordinary man, then Chancellor of the Exchequer, found himself in great straits. To please universally was the object of his life; but to tax and to please, no more than to love and to be wise, is not given to men. However, he attempted it.

Burke, Speech on American Taxation (1774)

35 The sovereign, as undertaker of the duty of the people, has the right to tax them for purposes essentially connected with their own preservation. Such are, in particular, the relief of the poor, foundling asylums, and ecclesiastical establishments, otherwise designated charitable or pious foundations.

Kant, Science of Right, 49

36 As regards the cost of maintaining the ecclesiastical establishment, for similar reasons this must be derived not from the public funds of the state, but from the section of the people who profess the particular faith of the church; and thus only ought it to fall as a burden on the community.

Kant, Science of Right, 49

37 Every proposal for a specific tax is sure to meet with opposition. It has been objected to a poll tax at a fixed rate that it will be unequal, and the rich will pay no more than the poor. In the form in which it has been offered in these papers, the poor, properly speaking, are not comprehended, though it is true that beyond the exclusion of the indigent the tax has no reference to the proportion of property; but it should be remembered that it is impossible to devise any specific tax that will operate equally on the whole community. It must be the province of the legislature to hold the scales with a judicious hand and balance one by another. The rich must be made to pay for their luxuries, which is the only proper way of taxing their superior wealth.

Hamilton, Continentalist 6

- 30 Do we imagine that our assessments operate equally?
Nothing can be more contrary to the fact. Wherever a discretionary power is lodged in any set of men over the property of their neighbors, they will abuse it; their passions, prejudices, partialities, dislikes will have the principal lead in measuring the abilities of those over whom their power extends; and assessors will ever be a set of petty tyrants, too unskillful, if honest, to be possessed of so delicate a trust, and too seldom honest to give them the excuse of want of skill.

Hamilton, Continentalist 6

- 39 There is, perhaps, nothing more likely to disturb the tranquillity of nations than their being bound to mutual contributions for any common object that does not yield an equal and coincident benefit. For it is an observation, as true as it is trite, that there is nothing men differ so readily about as the payment of money.

Hamilton, Federalist 7

- 40 the popular system of administration inherent in the nature of popular government, coinciding with the real scarcity of money incident to a languid and mutilated state of trade, has hitherto defeated every experiment for extensive collections, and has at length taught the different legislatures the folly of attempting them.

No person acquainted with what happens in other countries will be surprised at this circumstance. In so opulent a nation as that of Britain, where direct taxes from superior wealth must be much more tolerable, and, from the vigour of the government, much more

practicable, than in America, far the greatest part of the national revenue is derived from taxes of the indirect kind, from imposts, and from excises. Duties on imported articles form a large branch of this latter description.

In America, it is evident that we must a long time depend for the means of revenue chiefly on such duties. In most parts of it, excises must be confined within a narrow compass. The genius of the people will ill brook the inquisitive and peremptory spirit of excise laws. The pockets of the farmers, on the other hand, will reluctantly yield but scanty supplies, in the unwelcome shape of impositions on their houses and lands; and personal property is too precarious and invisible a fund to be laid hold of in any other way than by the imperceptible agency of taxes on consumption.

Hamilton, Federalist 12

41 Money is, with propriety, considered as the vital principle of the body politic; as that which sustains its life and motion, and enables it to perform its most essential functions. A complete power, therefore, to procure a regular and adequate supply of it, as far as the resources of the community will permit, may be regarded as an indispensable ingredient in every constitution. From a deficiency in this particular, one of two evils must ensue; either the people must be subjected to continual plunder, as a substitute for a more eligible mode of supplying the public wants, or the government must sink into a fatal atrophy, and, in a short course of time, perish.

Hamilton, Federalist 30

42 What are the chief sources of expense in every government? What has occasioned that enormous accumulation of debts with which several of the European nations are oppressed? The answer plainly is, wars and rebellions; the support of those institutions which are necessary to guard the body politic against these two most mortal diseases of society. The expenses arising from those institutions which are relative to the mere domestic police of a State, to the support of its legislative, executive, and judicial departments, with their different appendages, and to the encouragement of agriculture and manufactures (which will comprehend almost all the objects of state expenditure), are insignificant in comparison with those which relate to the national defence.

Hamilton, Federalist 34

43 A just security to property is not afforded by that government under which unequal taxes oppress one species of property and reward another species; where arbitrary taxes invade the domestic sanctuaries of the rich and excessive taxes grind the faces of the poor; where the keenness and competitions of want are deemed an insufficient spur to labor, and taxes are again applied by an unfeeling policy as another spur; in violation of that sacred property which heaven, in decreeing man to earn his bread by the sweat of his brow kindly reserved to him in the small repose that could be spared from the supply of his necessities.

Madison, Property

44 Services are now almost entirely reduced to money payments, and military service is now almost the only personal one exacted. In the past, far more claims were made directly on a man's own person, and he used to be called upon for work according to his ability. In our day, the state purchases what it requires. This may at first sight seem an abstract, heartless, and dead state of affairs, and for the state to be satisfied with indirect services may also look like decadence in the state. But the principle of the modern state requires that the whole of an individual's activity shall be mediated through his will. By means of money, however, the justice of equality can be achieved much more efficiently. Otherwise, if assessment depended on concrete ability, a talented man would be more heavily taxed than an untalented one.

Hegel, Philosophy of Right, Additions, Par. 299

45 Of all debts men are least willing to pay the taxes. What a satire is this on government! Everywhere they think they get their money's worth, except for these.

Emerson, Politics

46 If I deny the authority of the State when it presents its tax-bill, it will soon take and waste all my property, and so harass me and my children without end. This is hard. This makes it impossible for a man to live honestly, and at the same time comfortably, in outward respects.

Thoreau, Civil Disobedience

47 I have paid no poll-tax for six years. I was put into a jail once on this account, for one night; and, as I stood considering the walls of solid stone, two or three feet

thick, the door of wood and iron, a foot thick, and the iron grating which strained the light, I could not help being struck with the foolishness of that institution which treated me as if I were mere flesh and blood and bones, to be locked up. I wondered that it should have concluded at length that this was the best use it could put me to, and had never thought to avail itself of my services in some way. I saw that, if there was a wall of stone between me and my townsmen, there was a still more difficult one to climb or break through before they could get to be as free as I was. I did not for a moment feel confined, and the walls seemed a great waste of stone and mortar. I felt as if I alone of all my townsmen had paid my tax. They plainly did not know how to treat me but behaved like persons who are underbred. In every threat and in every compliment there was a blunder; for they thought that my chief desire was to stand the other side of that stone wall. I could not but smile to see how industriously they locked the door on my meditations, which followed them out again without let or hindrance, and *they* were really all that was dangerous. As they could not reach me, they had resolved to punish my body; just as boys, if they cannot come at some person against whom they have a spite, will abuse his dog. I saw that the State was half-witted, that it was timid as a lone woman with her silver spoons, and that it did not know its friends from its foes, and I lost all my remaining respect for it, and pitied it.

Thoreau, Civil Disobedience

48 I have never declined paying the highway tax, because I am as desirous of being a good neighbor as I am of being a bad subject; and as for supporting schools, I am doing my part to educate my fellow-countrymen now. It is for no

particular item in the tax-bill that I refuse to pay it. I simply wish to refuse allegiance to the State, to withdraw and stand aloof from it effectually. I do not care to trace the course of my dollar, if I could, till it buys a man or a musket to shoot one with—the dollar is innocent—but I am concerned to trace the effects of my allegiance.

Thoreau, Civil Disobedience

49 As the national debt finds its support in the public revenue, which must cover the yearly payments for interest, etc., the modern system of taxation was the necessary complement of the system of national loans. The loans enable the government to meet extraordinary expenses, without the taxpayers feeling it immediately, but they necessitate, as a consequence, increased taxes. On the other hand, the raising of taxation, caused by the accumulation of debts contracted one after another, compels the government always to have recourse to new loans for new extraordinary' expenses. Modern fiscality, whose pivot is formed by taxes on the most necessary means of subsistence (thereby increasing their price), thus contains within itself the germ of automatic progression. Over-taxation is not an incident, but rather a principle.

Marx, Capital, Vol. I, VIII, 31

50 A just distribution of burthens, by holding up to every citizen an example of morality and good conscience applied to difficult adjustments, and an evidence of the value which the highest authorities attach to them, tends in an eminent degree to educate the moral sentiments of the community, both in respect of strength and of

discrimination. Such a mode of levying the taxes as does not impede the industry, or unnecessarily interfere with the liberty, of the citizen, promotes, not the preservation only, but the increase of the national wealth, and encourages a more active use of the individual faculties. And *vice versa*, all errors in finance and taxation which obstruct the improvement of the people in wealth and morals tend also, if of sufficiently serious amount, positively to impoverish and demoralise them.

Mill, Representative Government, II

- 51 It is... important that the assembly which votes the taxes, either general or local, should be elected exclusively by those who pay something towards the taxes imposed. Those who pay no taxes, disposing by their votes of other people's money, have every motive to be lavish and none to economise. As far as money matters are concerned, any power of voting possessed by them is a violation of the fundamental principle of free government; a severance of the power of control from the interest in its beneficial exercise. It amounts to allowing them to put their hands into other people's pockets for any purpose which they think fit to call a public one.

Mill, Representative Government, VIII

- 52 It is essential, as it is on many other accounts desirable, that taxation, in a visible shape, should descend to the poorest class. In this country, and in most others, there is probably no labouring family which does not contribute to the indirect taxes, by the purchase of tea, coffee, sugar, not to mention narcotics or stimulants. But this mode of defraying a share of the public expenses is

hardly felt. ... It would be better that a direct tax, in the simple form of a capitation, should be levied on every grown person in the community; or that every such person should be admitted an elector on allowing himself to be rated *extra ordinem* to the assessed taxes; or that a small annual payment, rising and falling with the gross expenditure of the country, should be required from every registered elector; that so everyone might feel that the money which he assisted in voting was partly his own, and that he was interested in keeping down its amount.

Mill, Representative Government, VIII

53 How many... and how irreconcilable, are the standards of justice to which reference is made in discussing the repartition of taxation. One opinion is, that payment to the State should be in numerical proportion to pecuniary means. Others think that justice dictates what they term graduated taxation; taking a higher percentage from those who have more to spare. In point of natural justice a strong ease might be made for disregarding means altogether, and taking the same absolute sum (whenever it could be got) from everyone: as the subscribers to a mess, or to a club, all pay the same sum for the same privileges, whether they can all equally afford it or not. Since the protection (it might be said) of law and government is afforded to, and is equally required by all, there is no injustice in making all buy it at the same price. It is reckoned justice, not injustice, that a dealer should charge to all customers the same price for the same article, not a price varying according to their means of payment. This doctrine, as applied to taxation, finds no advocates, because it conflicts so strongly with man's

feelings of humanity and of social expediency; but the principle of justice which it invokes is as true and as binding as those which can be appealed to against it. Accordingly it exerts a tacit influence on the line of defence employed for other modes of assessing taxation. People feel obliged to argue that the State does more for the rich than for the poor, as a justification for its taking more from them: though this is in reality not true, for the rich would be far better able to protect themselves, in the absence of law or government, than the poor, and indeed would probably be successful in converting the poor into their slaves. Others, again, so far defer to the same conception of justice, as to maintain that all should pay an equal capitation tax for the protection of their persons (these being of equal value to all), and an unequal tax for the protection of their property, which is unequal. To this others reply, that the all of one man is as valuable to him as the all of another. From these confusions there is no other mode of extrication than the utilitarian.

Mill, Utilitarianism, V

- 54 What is taken from the rich in taxes, would, if not so taken, have been saved and converted into capital, or even expended in the maintenance and wages of servants or of any class of unproductive labourers, to that extent the demand for labour is no doubt diminished, and the poor injuriously affected, by the tax on the rich.

Mill, Principles of Political Economy, Bk. I, V, 10

- 55 Equality of taxation ... as a maxim of politics, means equality of sacrifice. It means apportioning the contribution of each person towards the expenses of

government, so that he shall feel neither more nor less inconvenience from his share of the payment than every other person experiences from his. This standard, like other standards of perfection, cannot be completely realized; but the first object in every practical discussion should be to know what perfection is.

Mill, Principles of Political Economy, Bk. V, 11, 2

56 To tax the larger incomes at a higher percentage than the smaller, is to lay a tax on industry and economy; to impose a penalty on people for having worked harder and saved more than their neighbours. It is not the fortunes which are earned, but those which are unearned, that it b for the public good to place under limitation.

Mill, Principles of Political Economy, Bk. V, II,3

Chapter 12

LAW and JUSTICE

Chapter 12 is divided into four sections: 12.1 Law and Lawyers, 12.2 Justice and Injustice, 12.3 Rights—Natural and Civil, and 12.4 Crime and Punishment.

This chapter, like Chapters 13 and 14, is closely related to Chapter 10 on Politics; though insofar as some of its passages discuss economic justice and economic rights, it also touches on matters treated in Chapter 11 on Economics.

The discussion of law in Section 12.1 deals mainly with man-made law, the law of the state, sometimes also referred to as "civil law" or "positive law." The passages collected in this section, therefore, tend to overlap passages in Section 10.3 on Government: Its Nature, Necessity, and Forms.

Section 12.2 goes beyond the consideration of justice in relation to law; it contains quotations that also discuss the justice of political, economic, and social institutions or arrangements. It is followed by Section 12.3, which introduces considerations intimately involved in the theory of justice.

The chapter closes with a section—12.4— that involves the notions of law, justice, and rights. The quotations collected here consider the kinds, causes, and prevention of crime, and debate the issues concerning the purposes and justifications of punishment.

...

12.1 Law and Lawyers

Among the quotations collected here, the reader will find a number that distinguish different kinds of law; divine law and man-made law, natural law and positive law, and the moral law and the law of the state. All of the kinds mentioned share in the property that distinguishes statements of law from other pronouncements: laws are commands or prohibitions that prescribe how people ought or ought not to behave; laws are violable rules of conduct. The so-called "laws of nature" discovered and formulated by natural scientists, being inviolable, are not laws in this sense at all.

This section concentrates mainly on one kind of law: positive law, the man-made laws that are one of the principal instruments of government. The reader will find the treatment of the natural moral law and the divine law in Section 9.3. The reader will also find matters closely related to the discussion of law in Section 12.2 and Section 12.3.

The passages assembled here discuss most of the critical questions that have been raised about the nature and operation of positive law: the difference between a constitution as the fundamental law of the state and the laws enacted by the legislative assemblies set up by the constitution; coercive force as an essential property of law; the educative influence of law; the difference between the written and the unwritten law, or between legislative enactments and customary law; the distinction between a

government of laws and a government of men; the role of courts and judges in the application of law, and the need for equity to prevent injustice in the application of a just law to a particular case not foreseen by the lawmaker; the considerations favoring or disfavoring the change of laws; and the settlement of disputes by laws and courts instead of by force and fighting as indispensable to the maintenance of peace.

One issue, more fundamental than all the others, is disputed in a number of quotations. On the one hand, the reader will find an expression of the view that laws represent the sovereign's will; or as Ulpian, a Roman jurist, put it, "whatever pleases the prince has the force of law." According to this view, justice consists solely in obedience to law; the laws themselves cannot be said either to be just or unjust; being the ultimate standard of justice, they cannot be measured by it. On the other hand, the reader will find passages expressing the diametrically opposite view that justice is the standard by which the goodness of laws is measured. According to this view, an unjust law is a law in name only, not binding on the conscience of those who are subject to it.

Included here also are diatribes against law and lawyers, akin to the attacks on physicians that the reader will find in Section 18.2. On the other side of the balance are eulogiums in praise of great lawgivers, such as Solon and Lycurgus, together with the honoring of law as basic to civilized life.

■ ■ ■

- 1 Ye shall have one manner of law, as well for the stranger,
as for one of your own country.

Leviticus 24:22

- 2 *Menelaus*. Laws will never be rightly kept in a city
That knows no fear or reverence.

Sophocles, Ajax, 1073

- 3 *Aethra*. The power that keeps cities of men together
Is noble preservation of the laws.

Euripides, Suppliant Women, 312

- 4 *Cleon*. Bad laws which are never changed are better for a
city than good ones that have no authority.

Thucydides, Peloponnesian War, III, 37

- 5 *Socrates*. Then consider the matter in this way:—Imagine
that I am about to play truant (you may call the
proceeding by any name which you like), and the laws
and the government come and interrogate me: "Tell us,
Socrates," they say; "what are you about? are you not
going by an act of yours to overturn us—the laws, and the
whole state, as far as in you lies? Do you imagine that a
state can subsist and not be overthrown, in which the
decisions of law have no power, but are set aside and
trampled upon by individuals?" What will be our answer,
Crito, to these and the like words? Any one, and
especially a rhetorician, will have a good deal to say on
behalf of the law which requires a sentence to be carried
out. He will argue that this law should not be set aside;
and shall we reply, "Yes; but the state has injured us and
given an unjust sentence." Suppose I say that?

Crito. Very good, Socrates.

Soc. "And was that our agreement with you?" the law would answer; "or were you to abide by the sentence of the state?" And if I were to express my astonishment at their words, the law would probably add: "Answer, Socrates, instead of opening your eyes—you are in the habit of asking and answering questions. Tell us,—What complaint have you to make against us which justifies you in attempting to destroy us and the state? In the first place did we not bring you into existence? Your father married your mother by our aid and begat you. Say whether you have any objection to urge against those of us who regulate marriage?" None, I should reply. "Or against those of us who after birth regulate the nurture and education of children, in which you also were trained? Were not the law's, which have the charge of education, right in commanding your father to train you in music and gymnastic?" Right, I should reply. "Well then, since you were brought into the world and nurtured and educated by us, can you deny in the first place that you are our child and slave, as your fathers were before you? And if this is true you are not on equal terms with us; nor can you think that you have a right to do to us what we are doing to you. Would you have any right to strike or revile or do any other evil to your father or your master, if you had one, because you have been struck or reviled by him, or received some other evil at his hands?—you would not say this? And because we think right to destroy you, do you think that you have any right to destroy us in return, and your country as far as in you lies? Will you, O professor of true virtue, pretend that you are justified in this? Has a philosopher like you failed to discover that our country is more to be valued and higher

and holier far than mother or father or any ancestor, and more to be regarded in the eyes of the gods and of men of understanding? also to be soothed, and gently and reverently entreated when angry, even more than a father, and either to be persuaded, or if not persuaded, to be obeyed? And when we are punished by her, whether with imprisonment or stripes, the punishment is to be endured in silence: and if she leads us to wounds or death in battle, thither we follow as is right; neither may any one yield or retreat or leave his rank, but whether in battle or in a court of law, or in any other place, he must do what his city and his country order him; or he must change their view of what is just: and if he may do no violence to his father or mother, much less may he do violence to his country." What answer shall we make to this, Crito? Do the laws speak truly, or do they not?

Cr. I think that they do.

Plato, Crito, 50A

6 *Athenian Stranger.* Consider, then, to whom our state is to be entrusted. For there is a thing which has occurred times without number in states

Cleinias. What thing?

Ath. That when there has been a contest for power, those who gain the upper hand so entirely monopolize the government, as to refuse all share to the defeated party and their descendants—they live watching one another, the ruling class being in perpetual fear that some one who has a recollection of former wrongs will come into power and rise up against them. Now, according to our view, such governments are not polities at all, nor are laws right which are passed for the good of particular classes and not for the good of the whole state.

States which have such laws are not polities but parties, and their notions of justice are simply unmeaning. I say this, because I am going to assert that we must not entrust the government in your state to any one because he is rich, or because he possesses any other advantage, such as strength, or stature, or again birth: but he who is most obedient to the laws of the state, he shall win the palm; and to him who is victorious in the first degree shall be given the highest office and chief ministry of the gods; and the second to him who bears the second palm; and on a similar principle shall all the other offices be assigned to those who come next in order. And when I call the rulers servants or ministers of the law, I give them this name not for the sake of novelty, but because I certainly believe that upon such service or ministry depends the well- or ill-being of the state. For that state in which the law is subject and has no authority, I perceive to be on the highway to ruin; but I see that the state in which the law is above the rulers, and the rulers are the inferiors of the law, has salvation, and every blessing which the Gods can confer.

Plato, Laws, IV, 715A

- 7 *Athenian Stranger*. Laws are partly framed for the sake of good men, in order to instruct them how they may live on friendly terms with one another, and partly for the sake of those who refuse to be instructed, whose spirit cannot be subdued, or softened, or hindered from plunging into evil.

Plato, Laws, IX, 880B

- 8 The equitable is just, but not the legally just but a correction of legal justice. The reason is that all law is

universal but about some things it is not possible to make a universal statement which shall be correct. In those cases, then, in which it is necessary to speak universally, but not possible to do so correctly, the law takes the usual case, though it is not ignorant of the possibility of error. And it is none the less correct; for the error is not in the law nor in the legislator but in the nature of the thing, since the matter of practical affairs is of this kind from the start. When the law speaks universally, then, and a case arises on it which is not covered by the universal statement, then it is right, where the legislator fails us and has erred by over-simplicity, to correct the omission—to say what the legislator himself would have said had he been present, and would have put into his law if he had known. Hence the equitable is just, and better than one kind of justice—not better than absolute justice but better than the error that arises from the absoluteness of the statement. And this is the nature of the equitable, a correction of law where it is defective owing to its universality.

Aristotle, Ethics, 1137b11

- 9 It is difficult to get from youth up a right training for virtue if one has not been brought up under right laws; for to live temperately and hardily is not pleasant to most people, especially when they are young. For this reason their nurture and occupations should be fixed by law; for they will not be painful when they have become customary. But it is surely not enough that when they are young they should get the right nurture and attention; since they must, even when they are grown up, practise and be habituated to them, we shall need laws for this as well, and generally speaking to cover the whole of life; for

most people obey necessity rather than argument, and punishments rather than the sense of what is noble.

This is why some think that legislators ought to stimulate men to virtue and urge them forward by the motive of the noble, on the assumption that those who have been well advanced by the formation of habits will attend to such influences; and that punishments and penalties should be imposed on those who disobey and are of inferior nature, while the incurably bad should be completely banished. A good man (they think), since he lives with his mind fixed on what is noble submit to argument, while a bad man, whose desire is for pleasure, is corrected by pain like a beast of burden. This is, too, why they say the pains inflicted should be those that are most opposed to the pleasures such men love.

However that may be, if (as we have said) the man who is to be good must be well trained and habituated, and go on to spend his time in worthy occupations and neither willingly nor unwillingly do bad actions, and if this can be brought about if men live in accordance with a sort of reason and right order, provided this has force,—if this be so, the paternal command indeed has not the required force or compulsive power (nor in general has the command of one man, unless he be a king or something similar), but the law *has* compulsive power, while it is at the same time a rule proceeding from a sort of practical wisdom and reason. And while people hate *men* who oppose their impulses, even if they oppose them rightly, the law in its ordaining of what is good is not burdensome.

Aristotle, Ethics, 1179b31

10 The habit of lightly changing the laws is an evil, and, when the advantage is small, some errors both of lawgivers and rulers had better be left; the citizen will not gain so much by making the change as he will lose by the habit of disobedience- The analogy of the arts is false; a change in a law is a very different thing from a change in an art. For the law has no power to command obedience except that of habit, which can only be given by time, so that a readiness to change from old to new laws enfeebles the power of the law.

Aristotle, Politics, 1269a15

11 He who bids the law rule may be deemed to bid God and Reason alone rule, but he who bids man rule adds an element of the beast; for desire is a wild beast, and passion perverts the minds of rulers, even when they are the best of men. The law is reason unaffected by desire.

Aristotle, Politics, 1287a28

12 Good laws, if they are not obeyed, do not constitute good government. Hence there are two parts of good government; one is the actual obedience of citizens to the laws, the other part is the goodness of the laws which they obey; they may obey bad laws as well as good. And there may be a further subdivision; they may obey either the best laws which are attainable to them, or the best absolutely.

Aristotle, Politics, 1294a4

13 In all well-tempered governments there is nothing which should be more jealously maintained than the spirit of obedience to law, more especially in small

matters; for transgression creeps in unperceived and at last ruins the state, just as the constant recurrence of small expenses in time eats up a fortune.

Aristotle, Politics, 1307b30

- 14 Particular law is that which each community lays down and applies to its own members: this is partly written and partly unwritten. Universal law is the law of Nature. For there really is, as every one to some extent divines, a natural justice and injustice that is binding on all men, even on those who have no association or covenant with each other.

Aristotle, Rhetoric, 1373b4

- 15 Law is only a principle of right derived from the will of the gods. It commands what is decent and forbids the opposite.

Cicero, Philippics, XI, 12

- 16 Injustice often comes about through trickery, in other words, through an over-subtle or perhaps fraudulent construction of law. This is the origin of the familiar proverb, "More law, less justice."

Cicero, De Officiis, I, 10

- 17 We should never prosecute the innocent. But we need have no scruples about undertaking the defense of a guilty person, so long as he is not utterly depraved and evil. People expect it; custom sanctions it; and humanity condones it. It is, after all, the business of the judge in a trial to find out the truth.

Cicero, De Officiis, II, 14

- 18 The fairness of a law does not consist in its effect being actually felt by all alike, but in its having been laid down for all alike.

Seneca, Letters to Lucilius, 107

- 19 Woe unto you also, ye lawyers! for ye lade men with burdens grievous to be borne, and ye yourselves touch not the burdens with one of your fingers.

Luke 11:46

- 20 Lycurgus would never reduce his laws into writing.... For he thought that the most material points, and such as most directly tended to the public welfare, being imprinted on the hearts of their youth by a good discipline, would be sure to remain, and would find a stronger security, than any compulsion would be, in the principles of action formed in them by their best lawgiver, education. And as for things of lesser importance, as pecuniary contracts, and such like, the forms of which have to be changed as occasion requires, he thought it the best way to prescribe no positive rule or inviolable usage in such cases, willing that their manner and form should be altered according to the circumstances of time, and determinations of men of sound judgment. Every end and object of law and enactment it was his design education should effect.

Plutarch, Lycurgus

- 21 When he perceived that his more important institutions had taken root in the minds of his countrymen, that custom had rendered them familiar and easy', that his commonwealth was now grown up and able to go alone,

then, as Plato somewhere tells us, the Maker of the world, when first he saw it existing and beginning its motion, felt joy, even so Lycurgus, viewing with joy and satisfaction the greatness and beauty of his political structure, now fairly at work and in motion, conceived the thought to make it immortal too, and, as far as human forecast could reach, to deliver it down unchangeable to posterity. He called an extraordinary assembly of all the people, and told them that he now thought everything reasonably well established, both for the happiness and the virtue of the state; but that there was one thing still behind, of the greatest importance, which he thought not fit to impart until he had consulted the oracle; in the meantime, his desire was that they would observe the laws without any the least alteration until his return, and then he would do as the god should direct him. They all consented readily, and bade him hasten his journey; but, before he departed, he administered an oath to the two kings, the senate, and the whole commons, to abide by and maintain the established form of polity until Lycurgus should be come back.

This done, he set out for Delphi, and, having sacrificed to Apollo, asked him whether the laws he had established were good, and sufficient for a people's happiness and virtue. The oracle answered that the laws were excellent, and that the people, while it observed them, should live in the height of renown. Lycurgus took the oracle in writing, and sent it over to Sparta; and, having sacrificed the second time to Apollo, and taken leave of his friends and his son, he resolved that the Spartans should not be released from the oath they had taken, and that he would, of his own act, close his life where he was.

Plutarch, Lycurgus

22 This... is a property of the rational soul, love of one's neighbour, and truth and modesty, and to value nothing more than itself, which is also the property of Law. Thus then right reason differs not at all from the reason of justice.

Marcus Aurelius, Meditations, XI, 1

23 The heavenly city, or rather the part of it which sojourns on earth and lives by faith... while it sojourns on earth, calls citizens out of all nations and gathers together a society of pilgrims of all languages, not scrupling about diversities in the manners, laws, and institutions whereby earthly peace is secured and maintained, but recognizing that, however various these are, they all tend to one and the same end of earthly peace.

Augustine, City of God, XIX, 17

24 A private person cannot lead another to virtue efficaciously; for he can only advise, and if his advice be not taken, it has no coercive power, such as the law should have, in order to prove an efficacious inducement to virtue. . . , But this coercive power is vested in the whole people or in some public personage, to whom it belongs to inflict penalties,

Aquinas, Summa Theologica, I-II, 90, 3

25 A law is imposed on others by way of a rule and measure. Now a rule or measure is imposed by being applied to those who are to be ruled and measured by it. Therefore, in order that a law obtain the binding force which is proper to a law, it must be applied to the men who have

to be ruled by it. Such application is made by its being notified to them by promulgation. Therefore promulgation is necessary for the law to obtain its force.

Thus... the definition of law may be gathered; and it is nothing other than an ordinance of reason for the common good, made by him who has care of the community, and promulgated,

Aquinas, Summa Theologica, I-II, 90, 4

26 Man has a natural aptitude for virtue; but the perfection itself of virtue must be acquired by man by means of some kind of training. Thus we observe that man is helped by industry in his necessities, for instance, in food and clothing. Certain beginnings of these he has from nature, that is, his reason and his hands; but he has not the full complement, as other animals have, to whom nature has given sufficient covering and food. Now it is difficult to see how man could suffice for himself in the matter of this training; for the perfection of virtue consists chiefly in withdrawing man from undue pleasures, to which above all man is inclined, and especially the young, who are more capable of being trained. Consequently a man needs to receive this training from another, through which to arrive at the perfection of virtue. And as to those young people who are inclined to acts of virtue by their good natural disposition, or by custom, or rather by the gift of God, paternal training suffices, which is by admonitions. But since some are found to be depraved, and prone to vice, and not easily amenable to words, it was necessary for such to be restrained from evil by force and fear, in order that at least they might cease from evil-doing and leave others in peace, and that they themselves, by being

accustomed in this way, might be brought to do willingly what hitherto they did from fear, and thus become virtuous. Now this kind of training, which compels through fear of punishment, is the discipline of laws. Therefore, in order that man might have peace and virtue, it was necessary for laws to be framed. ... As the Philosopher [Aristotle] says, "it is better that all things be regulated by law than left to be decided by judges," and this for three reasons. First, because it is easier to find a few wise men competent to frame right laws than to find the many who would be necessary to judge rightly of each single case. Secondly, because those who make laws consider long beforehand what laws to make; but judgment on each single case has to be pronounced as soon as it arises. And it is easier for man to see what is right by taking many instances into consideration, than by considering one solitary fact. Thirdly, because lawgivers judge universally and of future events, while those who sit in judgment judge of things present, towards which they are affected by love, hatred, or some kind of cupidity, so that their judgment is perverted.

Since then the animated justice of the judge is not found in every man, and since it can be deflected, therefore it was necessary, whenever possible, for the law to determine how to judge, and for very few matters to be left to the decision of men.

Aquinas, Summa Theologica, I-II, 95,1

- 27 The common principles of the natural law cannot be applied to all men in the same way on account of the great variety of human affairs, and from this arises the diversity of positive laws among various people.

Aquinas, Summa Theologica, I-II, 95,2

28 The purpose of human law is to lead men to virtue not suddenly, but gradually. Therefore it does not lay upon the multitude of imperfect men the burdens of those who are already virtuous, namely, that they should abstain from all evil. Otherwise these imperfect ones, being unable to bear such precepts, would break out into yet greater evils.

Aquinas, Summa Theologica, I-II, 96, 2

29 Laws may be unjust in two ways. First, by being contrary to human good ... as when an authority imposes on his subjects burdensome laws, conducive not to the common good but rather to his own cupidity or vainglory; or...as when a man makes a law that goes beyond the power committed to him; or . . . as when burdens are imposed unequally on the community, although with a view to the common good. The like are acts of violence rather than laws....

Secondly, laws may be unjust through being opposed to the Divine good. Such are the laws of tyrants inducing to idolatry, or to anything else contrary to the Divine law; and laws of this kind must in no way be observed.

Aquinas, Summa Theologica, I-II, 96, 4

30 The notion of law contains two things: first, that it is a rule of human acts; secondly, that it has coercive power. Hence a man may be subject to law in two ways. First, as the regulated is subject to the regulator, and in this way whoever is subject to a power is subject to the law framed by that power. But it may happen in two ways that one is not subject to a power. In one way, by being altogether

free from its authority. Hence the subjects of one city or kingdom are not bound by the laws of the sovereign of another city or kingdom, since they are not subject to his authority. In another way by being under a yet higher law. Thus the subject of a proconsul should be ruled by his command, but not in those matters in which the subject receives his orders from the emperor; for in these matters he is not bound by the mandate of the lower authority, since he is directed by that of a higher. In this way, one who is subject absolutely to a law may not be subject to it in certain matters, in respect of which he is ruled by a higher law.

Secondly, a man is said to be subject to a law as the coerced is subject to the coercer. In this way the virtuous and the just are not subject to the law, but only the wicked. Because coercion and violence are contrary to the will; but the will of the good is in harmony with the law, while the will of the wicked is discordant from it. Therefore in this sense the good are not subject to the law, but only the wicked.

Aquinas, Summa Theologica, I-II, 96, 5

31 Human law is a dictate of reason, by which human acts are directed. Thus there may be two causes for the just change of human law: one on the part of reason; the other on the part of man whose acts are regulated by law. The cause on the part of reason is that it seems natural to human reason to advance gradually from the imperfect to the perfect....

On the part of man, whose acts are regulated by law, the law can be rightly changed on account of the changed condition of man, to whom different things are expedient according to the difference of his condition.

Aquinas, Summa Theologica, I-II, 97, 1

32 Human law is rightly changed in so far as such change is conducive to the common weal. But, to a certain extent, the mere change of law is of itself prejudicial to the common good, because custom avails much for the observance of laws, seeing that what is done contrary to general custom, even in slight matters, is looked upon as grave. Consequently, when a law is changed, the binding power of the law is diminished, in so far as custom is abolished. Therefore human law should never be changed, unless, in some way or other, the common welfare be compensated according to the extent of the harm done in this respect.

Aquinas, Summa Theologica, I—II, 97, 2

33 For such law as man gives to other wight.
He should himself submit to it, by right.

Chaucer, Canterbury Tales: Man of Law's Prologue, Intro.

34 The chief foundations of all states, new as well as old or composite, are good laws and good arms; and as there cannot be good laws where the state is not well armed, it follows that where they are well armed they have good laws.

Machiavelli, Prince, XII

35 There are two ways of contesting, the one by the law, the other by force; the first method is proper to men, the second to beasts; but because the first is frequently not sufficient, it is necessary to have recourse to the second.

Machiavelli, Prince, XVIII

36 For as good habits of the people require good laws to support them, so laws, to be observed, need good habits on the part of the people.

Machiavelli, Discourses, I, 18

37 The strictest right is the greatest wrong, and therefore equity is necessary. This is not a rash relaxation of laws and discipline. It is, rather, an interpretation of laws which in some crises finds mitigating circumstances, especially in cases in which the law doesn't decide on principle. According to the circumstances equity weighs for or against. But the weighing must be of such kind that the law isn't undermined, for no undermining of natural law and divine law must be allowed.

Luther, Table Talk, 4178

38 The law is a silent magistrate, and a magistrate a speaking law.

Calvin, Institutes of the Christian Religion, IV, 20

39 It is very doubtful whether there can be such evident profit in changing an accepted law, of whatever sort it be, as there is harm in disturbing it; inasmuch as a government is like a structure of different parts joined together in such a relation that it is impossible to budge one without the whole body feeling it.

Montaigne, Essays, I, 23, Of Custom

40 There is little relation between our actions, which are in perpetual mutation, and fixed and immutable laws. The most desirable laws are those that are rarest, simplest, and most general; and I even think that it would be

better to have none at all than to have them in such numbers as we have.

Montaigne, Essays, III, 13, Of Experience

41 Now laws remain in credit not because they are just, but because they are laws. That is the mystic foundation of their authority; they have no other. And that is a good thing for them. They are often made by fools, more often by people who, in their hatred of equality, are wanting in equity; but always by men, vain and irresolute authors.

There is nothing so grossly and widely and ordinarily faulty as the laws. Whoever obeys them because they are just, does not obey them for just the reason he should.

Montaigne, Essays, III, 13, Of Experience

42 *Dick the Butcher.* The first thing we do, let's kill all the lawyers.

John Cade. Nay, that I mean to do. Is not this a lamentable thing, that of the skin of an innocent lamb should be made parchment? that parchment, being scribbled o'er, should undo a man? Some say the bee stings: but I say, 'tis the bee's wax; for I did but seal once to a thing, and I was never mine own man since.

Shakespeare, II Henry VI, IV, ii, 82

43 Reason is the life of the Law. Nay the Common Law itselfe is nothing else but reason; which is to be understood of an artificial! perfection of reason, gotten by long study, observation, and experience, and not of every man's naturall reason.

Sir Edward Coke, Commentary Upon Littleton, 138

44 The most obvious and natural way of discovering the truth is by referring to laws, which derive their force and efficacy from the general consent of mankind; so that if a law rests upon the presumption of any fact, which in reality has no existence, such a law is not binding. For when no evidence of the fact can be produced, the entire foundation, on which that law rests must fail.

Grotius, Rights of War and Peace, Bk. II, XI, 6

45 As men, for the attaining of peace and conservation of themselves thereby, have made an artificial man, which we call a *Commonwealth*; so also have they made artificial chains, called civil laws, which they themselves, by mutual covenants, have fastened at one end to the lips of that man, or assembly, to whom they have given the sovereign power, and at the other end to their own ears. These bonds, in their own nature but weak, may nevertheless be made to hold, by the danger, though not by the difficulty of breaking them.

Hobbes, Leviathan, II, 21

46 Of positive laws some are *human*, some *divine*: and of human positive laws, some are *distributive*, some *penal*. *Distributive* are those that determine the rights of the subjects, declaring to every man what it is by which he acquireth and holdeth a propriety in lands or goods, and a right or liberty of action: and these speak to all the subjects. *Penal* are those which declare what penalty shall be inflicted on those that violate the law; and speak to the ministers and officers ordained for execution. For though every one ought to be informed of the punishments ordained beforehand for their transgression;

nevertheless the command is not addressed to the delinquent (who cannot be supposed will faithfully punish himself), but to public ministers appointed to see the penalty executed. And these penal laws are for the most part written together with the laws distributive, and are sometimes called *judgements*. For all laws are general judgements, or sentences of the legislator; as also every particular judgement is a law to him whose case is judged.

Hobbes, Leviathan, II, 26

47 To the care of the sovereign belongeth the making of good laws. But what is a good law? By a *good law*, I mean not a just law: for no law can be unjust. The law is made by the sovereign power, and all that is done by such power is warranted and owned by every one of the people; and that which every man will have so, no man can say is unjust. It is in the laws of a Commonwealth, as in the laws of gaming: whatsoever the gamesters all agree on is injustice to none of them. A good law is that which is needful, for the good of the people, and withal perspicuous.

For the use of laws (which are but rules authorized) is not to bind the people from all voluntary actions, but to direct and keep them in such a motion as not to hurt themselves by their own impetuous desires, rashness, or indiscretion; as hedges are set, not to stop travellers, but to keep them in the way. And therefore a law that is not needful, having not the true end of a law, is not good. A law may be conceived to be good when it is for the benefit of the sovereign, though it be not necessary for the people, but it is not so. For the good of the sovereign and people cannot be separated.

Hobbes, Leviathan, II, 30

48 Let not the Law of thy Country be the non ultra of thy Honesty; nor think that always good enough which the law will make good.

Sir Thomas Browne, Christian Morals, I, II

49 I look at the law which they [the Jews] boast of having obtained from God, and I find it admirable. It is the first law of all and is of such a kind that, even before the term law was in currency among the Greeks, it had, for nearly a thousand years earlier, been uninterruptedly accepted and observed by the Jews. I likewise think it strange that the first law of the world happens to be the most perfect; so that the greatest legislators have borrowed their laws from it, as is apparent from the law of the Twelve Tables at Athens, afterwards taken by the Romans, and as it would be easy to prove, if Josephus and others had not sufficiently dealt with this subject.

Pascal, Pensées, IX, 619

50 We cannot even conceive, that every citizen should be allowed to interpret the commonwealth's decrees or laws. For were every citizen allowed this, he would thereby be his own judge, because each would easily be able to give a colour of right to his own deeds, which ... is absurd.

Spinoza, Political Treatise, III, 4

51 Civil jurisprudence depends on the mere decree of the commonwealth, which is not bound to please any but itself, nor to hold anything to be good or bad, but what it judges to be such for itself. And, accordingly, it has not merely the right to avenge itself, or to lay down and

interpret laws, but also to abolish the same, and to pardon any guilty person out of the fulness of its power.

Spinoza, Political Treatise, IV, 5

52 The obligations of the law of Nature cease not in society, but only in many cases are drawn closer, and have, by human laws, known penalties annexed to them to enforce their observation. Thus the law of Nature stands as an external rule to all men, legislators as well as others. The rules that they make for other men's actions must, as well as their own and other men's actions, be conformable to the law of Nature— i.e., to the will of God, of which that is a declaration, and the fundamental law of Nature being the preservation of mankind, no human sanction can be good or valid against it.

Locke, II Civil Government, XI, 135

53 These are the bounds which the trust that is put in them by the society and the law of God and Nature have set to the legislative power of every commonwealth, in all forms of government. First: They are to govern by promulgated established laws, not to be varied in particular cases, but to have one rule for rich and poor, for the favourite at Court, and the countryman at plough. Secondly: These laws also ought to be designed for no other end ultimately but the good of the people.

Locke, II Civil Government, XI, 142

54 First, the law of God; secondly, the law of politic societies; thirdly, the law of fashion, or private censure, are those to which men variously compare their actions: and it is by their conformity to one of these laws that they

take their measures, when they would judge of their moral rectitude, and denominate their actions good or bad.

*Locke, Concerning Human Understanding, Bk. II, XXVIII,
13*

55 I said that those who made profession of this science [law] were exceedingly multiplied, being almost equal to the caterpillars in number; that they were of diverse degrees, distinctions, and denominations. The numerousness of those that dedicated themselves to this profession were such that the fair and justifiable advantage and income of the profession was not sufficient for the decent and handsome maintenance of multitudes of those who followed it. Hence it came to pass that it was found needful to supply that by artifice and cunning, which could not be procured by just and honest methods: the better to bring which about, very many men among us were bred up from their youth in the art of proving by words multiplied for the purpose that *white is black, and black is white*, according as they are paid. The greatness of these mens assurance and the boldness of their pretensions gained upon the opinion of the vulgar, whom in a manner they made slaves of, and got into their hands much the largest share of the practice of their profession. These practitioners were by men of discernment called *pettifoggers*, (that is, *confounders*, or rather, *destroyers of right*).

Swift, Gulliver's Travels, IV, 5

56 Law, in a free Country, is, or ought to be, the Determination of the Majority of those who have Property

in Land.

Swift, Thoughts on Various Subjects

57 Laws are like cobwebs, which may catch small flies, but let wasps and hornets break through.

Swift, A Trritical Essay Upon the Faculties of the Mind

58 The hungry Judges soon the sentence sign.
And wretches hang that jury-men may dine.

Pope, The Rape of the Lock, III, 21

59 An attorney may feel all the miseries and distresses of his fellow-creatures, provided he happens not to be concerned against them.

Fielding, Tom Jones, XII, 10

60 Before laws were made, there were relations of possible justice. To say that there is nothing just or unjust but what is commanded or forbidden by positive laws, is the same as saying that before the describing of a circle all the radii were not equal.

Montesquieu, Spirit of Laws, I, 1

61 If it be true that the temper of the mind and the passions of the heart are extremely different in different climates, the laws ought to be in relation both to the variety of those passions and to the variety of those tempers.

Montesquieu, Spirit of Laws, XIV, 1

62 I am told that there are laws among thieves, and also laws of war. I ask what are these laws of war, I learn that they mean hanging a brave officer who has held fast in a

bad post without cannon against a royal army; that they mean having a prisoner hanged, if the enemy has hanged one of yours; that they mean putting to the fire and the sword villages which have not brought their sustenance on the appointed day, according to the orders of the gracious sovereign of the district. "Good," say I, "that is the 'Spirit of the Laws.' "

It seems to me that most men have received from nature enough common sense to make laws, but that everyone is not just enough to make good laws.

Voltaire, Philosophical Dictionary: Laws

63 The first and most important rule of legitimate or popular government, that is to say, of government whose object is the good of the people, is ... to follow in everything the general will. But to follow this will it is necessary to know it, and above all to distinguish it from the particular will, beginning with one's self: this distinction is always very difficult to make, and only the most sublime virtue can afford sufficient illumination for it. As, in order to will, it is necessary to be free, a difficulty no less great than the former arises—that of preserving at once the public liberty and the authority of government. Look into the motives which have induced men, once united by their common needs in a general society, to unite themselves still more intimately by means of civil societies: you will find no other motive than that of assuring the property, life and liberty of each member by the protection of all. But can men be forced to defend the liberty of any one among them, without trespassing on that of others? And how can they provide for the public needs, without alienating the individual property of those who are forced to contribute to them? With whatever sophistry all this

may be covered over, it is certain that if any constraint can be laid on my will, I am no longer free, and that I am no longer master of my own property, if any one else can lay a hand on it. This difficulty, which would have seemed insurmountable, has been removed, like the first, by the most sublime of all human institutions, or rather by a divine inspiration, which teaches mankind to imitate him below the unchangeable decrees of the Deity. By what inconceivable art has a means been found of making men free by making them subject; of using in the service of the State the properties, the persons and even the lives of all its members, without constraining and without consulting them; of confining their will by their own admission; of overcoming their refusal by that consent, and forcing them to punish themselves, when they act against their own will? How can it be that all should obey, yet nobody take upon him to command, and that all should serve, and yet have no masters, but be the more free, as, in apparent subjection, each loses no part of his liberty but what might be hurtful to that of another? These wonders are the work of law. It is to law alone that men owe justice and liberty. It is this salutary organ of the will of all which establishes, in civil right, the natural equality between men. It is this celestial voice which dictates to each citizen the precepts of public reason, and teaches him to act according to the rules of his own judgment, and not to behave inconsistently with himself. It is with this voice alone that political rulers should speak when they command; for no sooner does one man, setting aside the law, claim to subject another to his private will, than he departs from the state of civil society, and confronts him face to face in the pure state

of nature, in which obedience is prescribed solely by necessity.

Rousseau, Political Economy

64 I mean to inquire if, in the civil order, there can be any sure and legitimate rule of administration, men being taken as they are and laws as they might be.

Rousseau, Social Contract, I, Introduction

65 If there is, in each State, only one good system, the people that is in possession of it should hold fast to this; but if the established order is bad, why should laws that prevent men from being good be regarded as fundamental? Besides, in any case, a people is always in a position to change its laws, however good; for, if it choose to do itself harm, who can have a right to stop it?

Rousseau, Social Contract, II, 12

66 Why . . . , is so much respect paid to old laws? For this very reason. We must believe that nothing but the excellence of old acts of will can have preserved them so long: if the Sovereign had not recognised them as throughout salutary, it would have revoked them a thousand times. This is why, so far from growing weak, the laws continually gain new strength in any well constituted State; the precedent of antiquity makes them daily more venerable: while wherever the laws grow weak as they become old, this proves that there is no longer a legislative power, and that the State is dead.

Rousseau, Social Contract, III, II

67 A lawyer has no business with the justice or injustice of the cause which he undertakes unless his client asks his opinion, and then he is bound to give it honestly. The justice or injustice of the cause is to be decided by the judge.

Johnson, Tour of the Western Islands of Scotland (Aug. 15, 1773)

68 *Johnson*. It is sufficient for our purpose that every just law is dictated by reason; and that the practice of every legal Court is regulated by equity. It is the quality of reason to be invariable and constant; and of equity, to give to one man what, in the same case, is given to another. The advantage which humanity derives from law is this: that the law gives every man a rule of action, and prescribes a mode of conduct which shall entitle him to the support and protection of society. That the law may be a rule of action, it is necessary that it be known; it is necessary that it be permanent and stable. The law is the measure of civil right; but if the measure be changeable, the extent of the thing measured never can be settled.

Boswell, Life of Johnson (1772)

69 The laws of a nation form the most instructive portion of its history.

Gibbon, Decline and Fall of the Roman Empire, XLIV

70 People, crushed by law, have no hopes but from power. If laws are their enemies, they will be enemies to laws; and those who have much to hope and nothing to lose, will always be dangerous, more or less.

Burke, Letter to Charles James Fox (Oct 8, 1777)

71 Bad laws are the worst sort of tyranny.

Burke, Speech at Bristol (1780)

72 In the making of a new law it is undoubtedly the duty of the legislator to see that no injustice be done even to an individual: for there is then nothing to be unsettled, and the matter is under his hands to mould it as he pleases; and if he finds it untractable in the working, he may abandon it without incurring any new inconvenience. But in the question concerning the repeal of an old one, the work is of more difficulty; because laws, like houses, lean on one another, and the operation is delicate, and should be necessary: the objection, in such a case, ought not to arise from the natural infirmity of human institutions, but from substantial faults which contradict the nature and end of law itself,—faults not arising from the imperfection, but from the misapplication and abuse of our reason.

Burke, Tract on the Popery Laws, I, 3

73 The general object which all laws have, or ought to have, in common, is to augment the total happiness of the community; and therefore, in the first place, to exclude, as far as may be, every thing that tends to subtract from that happiness: in other words, to exclude mischief.

Bentham, Principles of Morals and Legislation, XIII, 1

74 Laws are a dead letter without courts to expound and define their true meaning and operation.

Hamilton, Federalist 22

75 Nations pay little regard to rules and maxims calculated in their very nature to run counter to the necessities of society. Wise politicians will be cautious about fettering the government with restrictions that cannot be observed, because they know' that every breach of the fundamental laws, though dictated by necessity, impairs that sacred reverence which ought to be maintained in the breast of rulers towards the constitution of a country, and forms a precedent for other breaches where the same plea of necessity does not exist at all, or is less urgent and palpable.

Hamilton, Federalist 25

76 It will be of little avail to the people that the laws are made by men of their own choice, if the laws be so voluminous that they cannot be read, or so incoherent that they cannot be understood; if they be repealed or revised before they are promulgated, or undergo such incessant changes that no man, who knows what the law is to-day, can guess what it will be to-morrow. Law is defined to be a rule of action; but how can that be a rule which is little known and less fixed?

Hamilton or Madison, Federalist 62

77 One Law for the Lion and Ox is Oppression.

Blake, Marriage of Heaven and Hell, 24

78 The hatred of law, of right made determinate in law, is the shibboleth whereby fanaticism, flabby-mindedness, and the hypocrisy of good intentions are clearly and infallibly recognized for what they are, disguise themselves as they may.

79 Laws are of two kinds—laws of nature and laws of the land. The laws of nature simply are what they are and are valid as they are; they are not liable to encroachment, though in certain cases man may transgress them. To know the law of nature, we must learn to know nature, since its laws are rigid and it is only our ideas about them that can be false. The measure of these laws is outside us; knowing them adds nothing to them and does not assist their operation; our knowledge of them can expand, that is all. Knowledge of the laws of the land is in one way similar, but in another way not. These laws too we learn to know just as they exist; the citizen's knowledge of them is more or less of this sort, and the student of positive law equally stops at What is given. But the difference in the case of laws of the land is that they arouse the spirit of reflection, and their diversity at once draws attention to the fact that they are not absolute. Positive laws are something posited, something originated by men. Between what is so originated and man's inner voice there may be an inevitable clash or there may be agreement. Man does not stop short at the existent, but claims to have in himself the measure of what is right. He may be subjected to the compulsion and dominion of an external authority, though never as he is to the compulsion of nature, because his inner self always tells him how things ought to be and he finds within himself the confirmation or denial of what passes as valid. In nature, the highest truth is that there is a *law*; in the law of the land, the thing is not valid simply because it exists; on the contrary, everyone demands that it shall comply with his private criterion. Here then an

antagonism is possible between what ought to be and what is, between the absolutely right which stands unaltered and the arbitrary determination of what is to be recognized as right. A schism and a conflict of this sort is to be found only in the territory of mind, and because mind's privilege seems therefore to lead to discontent and unhappiness, men are often thrown back from the arbitrariness of life to the contemplation of nature and set themselves to take nature as an example. But it is precisely in these clashes between what is absolutely right and what arbitrariness makes pass as right that there lies the need for studying the fundamentals of right. In the right, man must meet with his own reason; consequently, he must consider the rationality of the right, and this is the task of our science in contrast with the positive study of law which often has to do only with contradictions.

Hegel, Philosophy of Right, Additions, Preface

80 The law is only a memorandum. We are superstitious, and esteem the statute somewhat: so much life as it has in the character of living men is its force. The statute stands there to say, Yesterday we agreed so and so, but how feel ye this article to-day? Our statute is a currency which we stamp with our own portrait: it soon becomes unrecognizable, and in process of time will return to the mint.

Emerson, Politics

81 Good men must not obey the laws too well.

Emerson, Politics

82 The less government we have the better—the fewer laws, and the less confided power.

Emerson, Politics

83 *Mr. Brownlow.* "You were present on the occasion of the destruction of these trinkets, and indeed are the more guilty of the two, in the eye of the law; for the law supposes that your wife acts under your direction."

"If the law supposes that," said Mr. Bumble squeezing his hat emphatically in both hands, "the law is a ass—a idiot."

Dickens, Oliver Twist, LI

84 Law never made men a whit more just; and, by means of their respect for it, even the well-disposed are daily made the agents of injustice.

Thoreau, Civil Disobedience

85 Unjust laws exist: shall we be content to obey them, or shall we endeavor to amend them, and obey' them until we have succeeded, or shall we transgress them at once? Men generally, under such a government as this, think that they ought to wait until they have persuaded the majority to alter them. They think that, if they should resist, the remedy would be worse than the evil. But it is the fault of the government itself that the remedy is worse than the evil.

Thoreau, Civil Disobedience

86 The laws of most countries are far worse than the people who execute them, and many of them are only able to remain laws by being seldom or never carried into effect.

Mill, Subjection of Women, II

87 Laws never would be improved, if there were not numerous persons whose moral sentiments are better than the existing laws.

Mill, Subjection of Women, II

12.2 Justice and Injustice

Justice is traditionally classified as one of the four cardinal virtues, along with temperance, fortitude, and prudence; and it is usually distinguished from the others as being the virtue whereby a man is disposed to act rightly or righteously in relation to other men or to the community in which he lives. A man of goodwill toward others, a man who habitually avoids injuring others and renders to others what is their due, is said to be a just man. Justice in this sense—as a moral quality or an aspect of moral character—is discussed in Chapter 9 on Ethics, Section 9.7 on Right and Wrong, as well as here. The reader is advised to read that section in conjunction with this one for a comprehensive view of justice as an attribute of the morally good man and as a property of conduct that is rightful or righteous. The reader should also examine relevant passages in Section 9.10 on Virtue and Vice. The treatment of injustice and wrongdoing is, of course, to be found in the same contexts.

There is another application of the terms "justice" and "injustice"—to human institutions and arrangements, to states, constitutions, laws, social practices, and economic systems or transactions. It is this application that gives rise to the discussion of political or legal justice, social justice,

and economic justice. Justice in these various senses is mainly treated here and not in Chapter 9 on Ethics; however, closely related and even overlapping matters will be found in Section 12.1 on Law and Lawyers, in Section 13.3 on Equality, in Section 11.1 on Property, and in many of the sections of Chapter 10 on Politics, especially Sections 10.4, 10.6, 10.7, and 10.9.

The passages collected here offer diverse definitions of justice, distinguish between distributive and commutative or remedial justice, deal with the issues of right vs. might and of justice vs. expediency, discuss the relation of justice to equity, argue for and against the proposition that human society cannot long endure without justice, and attempt to answer the question whether it is preferable to do or to suffer injustice.

Considerations of justice are to be found in other sections of this chapter: not only in Section 12.1 on Law and Lawyers, but also in Section 12.3 on Rights—Natural and Civil, and in Section 12.4 on Crime and Punishment. The discussion of human rights and the discussion of justice are so integrally related that the reader would do well to make his own synthesis of the quotations dealing with these two subjects.

■ ■ ■

1 If a man destroy the eye of another man, they shall destroy his eye.

Hammurabi, Code of Hammurabi, 196

2 And if any mischief follow, than thou shalt give life for life,

Eye for eye, tooth for tooth, hand for hand, foot for foot,

Burning for burning, wound for wound, stripe for stripe.

Exodus 21:23-25

3 *Chorus*. It has been made long since and grown old among men,

this saying: human wealth
grown to fulness of stature
breeds again nor dies without issue.
From high good fortune in the blood
blossoms the quenchless agony.
Far from others I hold my own
mind; only the act of evil
breeds others to follow,
young sins in its own likeness.
Houses dear in their right are given
children in all loveliness.

But Crime aging is made
in men's dark actions
ripe with the young pride
late or soon when the dawn of destiny
comes and birth is given
to the spirit none may fight nor beat down,
sinful Daring; and in those halls
the black visaged Disasters stamped
in the likeness of their fathers.

And Righteousness is a shining in
the smoke of mean houses.
Her blessing is on the just man.

From high halls starred with gold by reeking hands
she turns back
with eyes that glance away to the simple in heart,
spurning the strength of gold
stamped false with flattery.
And all things she steers to fulfilment.

Aeschylus, Agamemnon, 750

- 4 *Protagoras*. Hermes asked Zeus how he should impart justice and reverence among men:—Should he distribute them as the arts are distributed; that is to say, to a favoured few only, one skilled individual having enough of medicine or of any other art for many unskilled ones? "Shall this be the manner in which I am to distribute justice and reverence among men, or shall I give them to all?" "To all," said Zeus; "I should like them all to have a share; for cities cannot exist, if a few only share in the virtues, as in the arts. And further, make a law by my order, that he who has no part in reverence and justice shall be put to death, for he is a plague of the state."

Plato, Protagoras, 322B

- 5 *Socrates*. Not only custom but nature also affirms that to do is more disgraceful than to suffer injustice, and that justice is equality.

Plato, Gorgias, 489A

- 6 *Socrates*. Tell me then, O thou heir of the argument, what did Simonides say, and according to you truly say, about justice?

Polemarchus. He said that the repayment of a debt is just, and in saying so he appears to me to be right.

I should be sorry to doubt the word of such a wise and inspired man, but his meaning, though probably clear to you, is the reverse of clear to me. For he certainly does not mean, as we were just now saying, that I ought to return a deposit of arms or of anything else to one who asks for it when he is not in his right senses; and yet a deposit cannot be denied to be a debt.

True.

Then when the person who asks me is not in his right mind I am by no means to make the return?

Certainly not.

When Simonides said that the repayment of a debt was justice, he did not mean to include that case?

Certainly not; for he thinks that a friend ought always to do good to a friend and never evil.

You mean that the return of a deposit of gold which is to the injury of the receiver, if the two parties are friends, is not the repayment of a debt—that is what you would imagine him to say?

Yes.

And are enemies also to receive what we owe to them?

To be sure, he said, they are to receive what we owe them, and an enemy, as I take it, owes to an enemy that which is due and proper to him that is to say, evil,

Simonides, then, after the manner of poets, would seem to have spoken darkly of the nature of justice; for he really meant to say that justice is the giving to each man what is proper to him, and this he termed a debt.

Plato, Republic, I, 331B

7 *Socrates.* Thrasymachus, as any one might see, was in reality eager to speak; for he thought that he had an excellent answer, and would distinguish himself. But at

first he affected to insist on my answering; at length he consented to begin. Behold, he said, the wisdom of Socrates; he refuses to teach himself, and goes about learning of others, to whom he never even says Thank you.

That I learn of others, I replied, is quite true; but that I am ungrateful I wholly deny. Money I have none, and therefore I pay in praise, which is all I have; and how ready I am to praise any one who appears to me to speak well you will very soon find out when you answer; for I expect that you will answer well.

Listen, then, he said; I proclaim that justice is nothing else than the interest of the stronger. And now why do you not praise me? But of course you won't.

Let me first understand you, I replied. Justice, as you say, is the interest of the stronger. What, Thrasymachus, is the meaning of this? You cannot mean to say that because Polydamas, the pancratiast, is stronger than we are, and finds the eating of beef conducive to his bodily strength, that to eat beef is therefore equally for our good who are weaker than he is, and right and just for us?

That's abominable of you, Socrates; you take the words in the sense which is most damaging to the argument.

Not at all, my good sir, I said; I am trying to understand them; and I wish that you would be a little clearer.

Well, he said, have you never heard that forms of government differ; there are tyrannies, and there are democracies, and there are aristocracies?

Yes, I know.

And the government is the ruling power in each state? Certainly.

And the different forms of government make laws democratical, aristocrat!cal, tyrannical, with a view to their several interests; and these laws, which are made by them for their own interests, are the justice which they deliver to their subjects, and him who transgresses them they punish as a breaker of the law, and unjust. And that is what I mean when I say that in all states there is the same principle of justice, which is the interest of the government; and as the government must be supposed to have power, the only reasonable conclusion is, that everywhere there is one principle of justice, which is the interest of the stronger.

Plato, Republic, I, 338A

8 *Thrasymachus*. The just is always a loser in comparison with the unjust. First of all, in private contracts: wherever the unjust is the partner of the just you will find that, when the partnership is dissolved, the unjust man has always more and the just less. Secondly, in their dealings with the State: when there is an income-tax, the just man will pay more and the unjust less on the same amount of income; and when there is anything to be received the one gains nothing and the other much. Observe also what happens when they take an office; there is the just man neglecting his affairs and perhaps suffering other losses, and getting nothing out of the public, because he is just; moreover he is hated by his friends and acquaintance for refusing to serve them in unlawful ways. But all this is reversed in the case of the unjust man.

Plato, Republic, I, 343B

9 *Socrates*. We have already shown that the just are clearly wiser and better and abler than the unjust, and that the unjust are incapable of common action; nay more, that to speak as we did of men who are evil acting at any time vigorously together, is not strictly true, for if they had been perfectly evil, they would have laid hands upon one another; but it is evident that there must have been some remnant of justice in them, which enabled them to combine; if there had not been they would have injured one another as well as their victims; they were but half-villains in their enterprises; for had they been whole villains, and utterly unjust, they would have been utterly incapable of action.

Plato, Republic, I, 352A

10 *Socrates*. Why, my good sir, at the beginning of our enquiry, ages ago, there was justice tumbling out at our feet, and we never saw her; nothing could be more ridiculous. Like people who go about looking for what they have in their hands—that was the way with us—we looked not at what we were seeking, but at what was far off in the distance; and therefore, I suppose, we missed her.

Glaucon. What do you mean?

I mean to say that in reality for a long time past we have been talking of justice, and have failed to recognise her.

I grow impatient at the length of your exordium.

Well then, tell me, I said, whether I am right or not: You remember the original principle which we were always laying down at the foundation of the State, that one man should practise one thing only, the thing to which his

nature was best adapted—now justice is this principle or a part of it.

Yes, we often said that one man should do one thing only.

Further, we affirmed that justice was doing one's own business, and not being a busybody; we said so again and again, and many others have said the same to us.

Yes, we said so.

Then to do one's own business in a certain way may be assumed to be justice. Can you tell me whence I derive this inference?

I cannot, but I should like to be told.

Because I think that this is the only virtue which remains in the State when the other virtues of temperance and courage and wisdom are abstracted; and, that this is the ultimate cause and condition of the existence of all of them, and while remaining in them is also their preservative; and we were saying that if the three were discovered by us, justice would be the fourth or remaining one.

That follows of necessity.

If we are asked to determine which of these four qualities by its presence contributes most to the excellence of the State, whether the agreement of rulers and subjects, or the preservation in the soldiers of the opinion which the law ordains about the true nature of dangers, or wisdom and watchfulness in the rulers, or whether this other which I am mentioning, and which is found in children and women, slave and freeman, artisan, ruler, subject—the quality, I mean, of every one doing his own work, and not being a busybody, would claim the palm—the question is not so easily answered.

Certainly, he replied, there would be a difficulty in saying which.

Then the power of each individual in the State to do his own work appears to compete with the other political virtues, wisdom, temperance, courage.

Yes, he said.

And the virtue which enters into this competition is justice?

Exactly.

Let us look at the question from another point of view; are not the rulers in a State those to whom you would entrust the office of determining suits at law?

Certainly.

And are suits decided on any other ground but that a man may neither take what is another's, nor be deprived of what is his own?

Yes; that is their principle.

Which is a just principle?

Yes.

Then on this view also justice will be admitted to be the having and doing what is a man's own, and belongs to him?

Very true.

Think, now, and say whether you agree with me or not. Suppose a carpenter to be doing the business of a cobbler, or a cobbler of a carpenter; and suppose them to exchange their implements or their duties, or the same person to be doing the work of both, or whatever be the change; do you think that any great harm would result to the State?

Not much.

But when the cobbler or any other man whom nature designed to be a trader, having his heart lifted up by

wealth or strength or the number of his followers, or any like advantage, attempts to force his way into the class of warriors, or a warrior into that of legislators and guardians, for which he is unfitted, and either to take the implements or the duties of the other; or when one man is trader, legislator, and warrior all in one, then I think you will agree with me in saying that this interchange and this meddling of one with another is the ruin of the State.

Most true.

Seeing then, I said, that there are three distinct classes, any meddling of one with another, or the change of one into another, is the greatest harm to the State, and may be most justly termed evil-doing?

Precisely.

And the greatest degree of evil-doing to one's own city would be termed by you injustice?

Certainly.

This then is injustice; and on the other hand when the trader, the auxiliary, and the guardian each do their own business, that is justice, and will make the city just.

I agree with you,

Plato, Republic, IV, 432B

- 11 This ... is what the just is—the proportional; the unjust is what violates the proportion. Hence one term becomes too great, the other too small, as indeed happens in practice; for the man who acts unjustly has too much, and the man who is unjustly treated too little, of what is good. In the case of evil the reverse is true; for the lesser evil is reckoned a good in comparison with the greater evil, since the lesser evil is rather to be chosen than the

greater, and what is worthy of choice is good, and what is worthier of choice a greater good.

This, then, is one species of the just.

Aristotle, Ethics, 1131b17

- 12 The justice of a master and that of a father are not the same as the justice of citizens, though they are like it; for there can be no injustice in the unqualified sense towards things that are one's own, but a man's chattel, and his child until it reaches a certain age and sets up for itself, are as it were part of himself, and no one chooses to hurt himself (for which reason there can be no injustice towards oneself). Therefore the justice or injustice of citizens is not manifested in these relations.

Aristotle, Ethics, 1134b8

- 13 When men are friends they have no need of justice, while when they are just they need friendship as well, and the truest form of justice is thought to be a friendly quality.

Aristotle, Ethics, 1155a26

- 14 Justice is the bond of men in states, for the administration of justice, which is the determination of what is just, is the principle of order in political society.

Aristotle, Politics, 1253a36

- 15 In all sciences and arts the end is a good, and the greatest good and in the highest degree a good in the most authoritative of all—this is the political science of which the good is justice, in other words, the common interest.

Aristotle, Politics, 1282b15

16 Justice is a contract of expediency, entered upon to prevent men harming or being harmed.

Epicurus, Aphorism

17 There is no more ridiculous opinion than to believe that all customs and laws of nations are inherently just. Would one think such a thing of the decrees of dictators? Had the notorious Thirty Tyrants decided to enact a code of laws for Athens, or if all the citizens of Athens were happy with the tyrants' laws, would such a circumstance indicate that those laws were just? It would hardly be considered a just law if some Roman regent had decreed that any dictator could be put to death with impunity by any citizen, without even going to trial. Justice is integral. It binds society together and is based on the one law of right reason applied to commands and prohibitions. Whoever is not acquainted with this law, whether it has been put in writing or not, does not know justice.

If, as some people insist, justice is nothing more than a conformity to written laws and national traditions, and if everything is based on a standard of expediency, then anyone who sees some thing in it for himself will go ahead and break the law. If this were our point of view, we could only conclude that there is no justice- For if it does not exist in nature, and if simple expediency can overthrow it, there is no justice. If nature is not based on justice, then are the principles on which society is founded destroyed. What would be the use of generosity, patriotism, loyalty, of service to each other and gratitude for favors done? Such virtues have their origin in our natural propensity to love our fellow human beings. This is the foundation of justice. If this is not true, then the consideration we show to each other, as well as our

religious rites and piety towards the gods, are swept away. But such rites ought to be kept, and not out of fear, but out of the close relationship between man and God.

Were the basis of justice in the decrees of the people, the rulings of kings, or in decisions of judges, then justice would permit theft, adultery, even forgery of wills, if a majority of the populace voted for them. But if such a power resides in the decisions and decrees of fools who are sure natural law can be altered by votes, then why do they not decide that what is bad and harmful shall be considered good and worthwhile?

In fact, we can tell the difference between good and bad laws only on the basis of nature. Nature not only distinguishes between the just and the unjust, but also between what is honorable and dishonorable. Since our common sense helps us to understand and conceptualise things, we do ascribe honorable actions to virtue and dishonorable ones to vice. Only a lunatic would assert that these judgments of ours are merely opinions and not based on natural law. Even what we mistakenly call the "virtue" of a tree or of a horse is not just a matter of opinion, but is based on nature. If that IS true, then good and bad actions can also be distinguished according to nature. If the concept of virtue is to be tested by opinion, then specific virtues must also be tested. Who would judge a man of prudence and common sense by some external state and not by his character? Virtue is fully matured reason. Since this is natural, then everything honorable is also natural.

Cicero, Laws, I, 15-16

- 18 We are confronted with three choices: to do injustice but not to suffer it; both to do it and to suffer it; or neither to

do it nor to suffer it. The most fortuitous choice is to do it with impunity. The second best alternative would be neither to do it nor to suffer it. The worst choice is to have to live ones life in a perpetual struggle between doing and suffering injustice.

Cicero, Republic, III, 13

19 Ye have heard that it hath been said, An eye for an eye, and a tooth for a tooth:

But I say unto you, That ye resist not evil: but whosoever shall smite thee on thy right cheek, turn to him the other also.

And if any man will sue thee at the law, and take away thy coat, let him have thy cloke also.

And whosoever shall compel thee to go a mile, go with him twain.

Give to him that asketh thee, and from him that would borrow of thee turn not thou away.

Ye have heard that it hath been said. Thou shalt love thy neighbour, and hate thine enemy.

But I say unto you. Love your enemies, bless them that curse you, do good to them that hate you, and pray for them which despitefully use you, and persecute you;

That ye may be the children of your Father which is in heaven: for he maketh his sun to rise on the evil and on the good, and sendeth rain on the just and on the unjust.

Matthew 5:38-45

20 Be ye therefore merciful, as your Father also is merciful.

Judge not, and ye shall not be judged: condemn not, and ye shall not be condemned: forgive, and ye shall be forgiven:

Give, and it shall be given unto you; good measure, pressed down, and shaken together, and running over, shall men give into your bosom. For with the same measure that ye mete withal it shall be measured to you again.

Luke 6:36-38

- 21 Justice is unstable and changeable? No, but the times over which justice presides are not alike, for they are times.

Augustine, Confessions, III, 7

- 22 Justice being taken away, then what are kingdoms but great robberies? For what are robberies themselves, but little kingdoms? The band itself is made up of men; it is ruled by the authority of a prince, it is knit together by the pact of the confederacy; the booty is divided by the law agreed on. If, by the admittance of abandoned men, this evil increases to such a degree that it holds places, fixes abodes, takes possession of cities, and subdues peoples, it assumes the more plainly the name of a kingdom, because the reality is now manifestly conferred on it, not by the removal of covetousness, but by the addition of impunity. Indeed, that was an apt and true reply which was given to Alexander the Great by a pirate who had been seized. For when that king had asked the man what he meant by keeping hostile possession of the sea, he answered with bold pride, "What thou meanest by seizing the whole earth; but because I do it with a petty ship, I am called a robber, whilst thou who dost it with a great fleet art styled emperor."

Augustine, City of God, IV, 4

23 There are two kinds of justice. The one consists in mutual giving and receiving, as in buying and selling, and other kinds of intercourse and exchange. This the Philosopher [Aristotle] calls commutative justice, that directs exchange and the intercourse of business. This does not belong to God, since, as the Apostle says: *Who hath first given to Him, and recompense shall be made him?* The other consists in distribution, and is called distributive justice, whereby a ruler or a steward gives to each what his rank deserves. As then the proper order displayed in ruling a family or any kind of multitude evinces justice of this kind in the ruler, so the order of the universe, which is seen both in things of nature and in things of will, shows forth the justice of God. Hence Dionysius says: "We must see that God is truly just, in seeing how He gives to all existing things what is proper to the condition of each, and preserves the nature of each one in the order and with the powers that properly belong to it."

Aquinas, Summa Theologica, I, 21, 1

24 The matter of justice is an external operation, in so far as either it or the thing we use by it is made proportionate to some other person to whom we are related by justice. Now each man's own is that which is due to him according to equality of proportion. Therefore the proper act of justice is nothing else than to render to each one his own.

Aquinas, Summa Theologica, II-II, 58, 11

25 Retaliation { *contrapassum*) denotes equal passion repaid for previous action; and the expression applies most properly to injurious passions and actions, whereby a

man harms the person of his neighbor; for instance if a man strike, that he be struck back. This kind of just is laid down in the Law; *He shall render life for life, eye for eye*, etc. And since also to take away what belongs to another is to do an unjust thing, it follows that secondly retaliation consists in this also, that whosoever causes loss to another, should suffer loss in his belongings. This just loss is also found in the Law: *If any man steal an ox or a sheep, and kill or sell it, he shall restore five oxen for one ox and four sheep for one sheep*. Thirdly retaliation is transferred to voluntary commutations, where action and passion are on both sides, although voluntariness detracts from the nature of passion.

In all these cases, however, repayment must be made on a basis of equality according to the requirements of commutative justice, namely that the meed of passion be equal to the action. Now there would not always be equality if passion were in the same species as the action. Because, in the first place, when a person injures the person of one who is greater, the action surpasses any passion of the same species that he might undergo, wherefore he that strikes a prince, is not only struck back, but is much more severely punished.

In like manner when a man despoils another of his property against the latter's will, the action surpasses the passion if he be merely deprived of that thing, because the man who caused another's loss, himself would lose nothing, and so he is punished by making restitution several times over, because not only did he injure a private individual, but also the common weal, the security of whose protection he has infringed. Nor again would there be equality of passion in voluntary commutations, were one always to exchange one's

chattel for another man's, because it might happen that the other man's chattel is much greater than our own: so that it becomes necessary to equalize passion and action in commutations according to a certain proportionate commensuration, for which purpose money was invented. Hence retaliation is in accordance with commutative Justice: but there is no place for it in distributive justice, because in distributive justice we do not consider the equality between thing and thing or between passion and action (whence the expression *contrapassum*), but according to proportion between things and persons.

Aquinas, Summa Theologica, II-II, 61,4

- 26 It is acting a most perverse part, to set up the measure of human justice as the standard by which to measure the justice of God.

Calvin, Institutes of the Christian Religion, III, 24

- 27 Since the ethical laws, which concern the individual duty of each man in himself, are so hard to frame, as we see they are, it is no wonder if those that govern so many individuals are more so. Consider the form of this justice that governs us: it is a true testimony of human imbecility, so full it is of contradiction and error. What we find to be leniency and severity in justice—and we find so much of them that I do not know whether the mean between them is met with as often—are sickly parts and unjust members of the very body and essence of justice.

Montaigne, Essays, III, 13, Of Experience

- 28 *Polonius*. My lord, I will use them according to their desert.

Hamlet. God's bodykins, man, much better. Use every man after his desert, and who should 'scape whipping? Use them after your own honour and dignity; the less they deserve, the more merit is in your bounty.

Shakespeare, Hamlet, II, ii, 552

29 *Lear.* What, art mad? A man may see bow this world goes with no eyes. Look with thine cars: see how yond justice rails upon yond simple thief. Hark, in thine ear: change places; and, handy-dandy, which is the justice, which is the thief?

Shakespeare, Lear, IV, vi, 153

30 *Edgar.* Let's exchange charity.
I am no less in blood than thou art, Edmund;
If more, the more thou hast wrong'd me.
My name is Edgar, and thy father's son.
The gods are just, and of our pleasant vices
Make instruments to plague us.
The dark and vicious place where thee he got
Cost him his eyes.

Edmund. Thou hast spoken right, 'tis true;
The wheel is come full circle; I am here,

Shakespeare, Lear, V, iii, 166

31 While they sat refreshing themselves, a young Lad, travelling that way, observ'd them, and, looking earnestly on the whole Company, ran suddenly and fell down before Don *Quixote*, addressing him in a very doleful Manner. Alas, good Sir, said he, don't you know me? don't you remember poor *Andrew* whom you caus'd to be unty'd from the Tree? With that the Knight knew him; and

raising him up, turn'd to the Company, That you may all know, said he, of how great Importance, to the redressing of Injuries, punishing Vice, and the universal Benefit of Mankind, the Business of Knight-Errantry may be, you must understand, that riding through a Desart some Days ago, I heard certain lamentable Screeks and Out-cries: Prompted by the Misery of the Afflicted, and borne away by the Zeal of my Profession I follow'd the Voice, and found this Boy, whom you all see, bound to a great Oak; I'm glad he's present, because he can attest the Truth of my Relation. I found him as I told you, bound to an Oak, naked from the Waste upwards, and a bloody-minded Peasant scourging his Back unmercifully with the Reins of a Bridle. I presently demanded the Cause of his severe Chastisement? The rude Fellow answer'd, that he had Liberty to punish his own Servant, whom he thus us'd for some Faults that argu'd him more Knave than Fool. Good Sir, said the Boy, he can lay nothing to my Charge, but demanding my Wages. His Master made some Reply, which I would not allow as a just Excuse, and order'd him immediately to unbind the Youth, and took his Oath that he would lake him home and pay him all his Wages upon the Nail, in good and lawful Coin. Is not this literally true, *Andrew*? Did you not mark besides, with what Face of Authority I commanded, and with how much Humility he promis'd to obey all I impos'd, commanded and desir'd? Answer me, Boy, and tell boldly all that pass'd of this worthy Company, that it may appear how necessary the Vocation of Knights-Errant is up and down the high Roads.

AH you have said is true enough, answer'd Andraw, but the Business did not end after that Manner you and I hop'd it would. How? said the Knight, has not the Peasant

paid you? Ay, he has paid me with a Vengeance, said the Boy, for no sooner was your Back turn'd, but he ty'd me again to the same Tree, and lash'd me so cursedly, that I look'd like St *Bartholomew* flea'd alive; and at every Blow he had some Joke or another to laugh at you; and had he not laid me on as he did, I fancy I could not have help'd laughing myself. At last he left me in so pitiful Case, that I was forc'd to crawl to an Hospital, where I have lain ever since to get cur'd, so wofully the Tyrant had lash'd me. And now I may thank You for this, for had you rid on your Journey, and neither meddl'd nor made, seeing no Body sent for you, and 'twas none of your Business, my Master, perhaps, had been satisfy'd with giving me ten or twenty' leashes, and after that would have paid me what he ow'd me; but you was so huffy, and call'd him so many Names, that it made him mad, and so he vented all his Spite against You upon My poor Back, as soon as yours was turn'd, insomuch that I fear I shall never be my own Man again. The Miscarriage, answer'd the Knight, is only chargeable on my Departure before I saw my Orders executed; for I might, by Experience, have remembered, that the Word of a Peasant is regulated, not by Honour, but Profit.

Cervantes, Don Quixote, I, 31

32 Revenge is a kind of wild justice; which the more man's nature runs to, the more ought law to weed it out.

Bacon, Of Revenge

33 From that law of nature by which we are obliged to transfer to another such rights as, being retained, hinder the peace of mankind, there followeth a third; which is

this: *that men perform their covenants made*; without which covenants are in vain, and but empty words; and the right of all men to all things remaining, we are still in the condition of war.

And in this law of nature consisteth the fountain and original of *justice*. For where no covenant hath preceded, there hath no right been transferred, and every man has right to everything; and consequently, no action can be unjust. But when a covenant is made, then to break it is unjust: and the definition of *injustice* is no other than *the not performance of covenant*. And whatsoever is not unjust is just.

Hobbes, Leviathan, I, 15

34 Before the names of *just* and *unjust* can have place, there must be some coercive power to compel men equally to the performance of their covenants, by the terror of some punishment greater than the benefit they expect by the breach of their covenant, and to make good that propriety which by mutual contract men acquire in recompense of the universal right they abandon: and such power there is none before the erection of a Commonwealth. And this is also to be gathered out of the ordinary definition of justice in the Schools, for they say that *justice is the constant will of giving to every man his own*. And therefore when there is no own, that is, no propriety, there is no injustice; and where there is no coercive power erected, that is, where there is no Commonwealth, there is no propriety, all men having right to all things: therefore where there is no Commonwealth, there nothing is unjust. So that the nature of justice consisteth in keeping of valid covenants, but the validity of covenants begins not but with the

constitution of a civil power sufficient to compel men to keep them.

Hobbes, Leviathan, I, 15

35 On what shall man found the order of the world which he would govern? Shall it be on the caprice of each individual? What confusion! Shall it be on justice? Man is ignorant of it.

Certainly, had he known it, he would not have established this maxim, the most general of all that obtain among men, that each should follow the custom of his own country. The glory of true equity would have brought all nations under subjection, and legislators would not have taken as their model the fancies and caprice of Persians and Germans instead of this unchanging justice. We would have seen it set up in all the States on earth and in all times; whereas we see neither justice nor injustice which does not change its nature with change in climate. Three degrees of latitude reverse all jurisprudence; a meridian decides the truth. Fundamental laws change after a few years of possession; right has its epochs; the entry of Saturn into the Lion marks to us the origin of such and such a crime. A strange justice that is bounded by a river! Truth on this side of the Pyrenees, error on the other side,

Pascal, Pensées, V, 294

36 It is right that what is just should be obeyed; it is necessary that what is strongest should be obeyed. Justice without might is helpless; might without justice is tyrannical. Justice without might is gainsaid, because there are always offenders; might without justice is

condemned. We must then combine justice and might and, for this end, make what is just strong, or what is strong just.

Justice is subject to dispute; might is easily recognised and is not disputed. So we cannot give might to justice, because might has gainsaid justice and has declared that it is she herself who is just. And thus, being unable to make what is just strong, we have made what is strong just.

Pascal, Pensées, V, 298

37 No doubt equality of goods is just; but, being unable to cause might to obey justice, men have made it just to obey might. Unable to strengthen justice, they have justified might; so that the just and the strong should unite, and there should be peace, which is the sovereign good.

Pascal, Pensees, V, 299

38 It is dangerous to tell the people that the laws are unjust; for they obey them only because they think them just. Therefore it is necessary to tell them at the same time that they must obey them because they are laws, just as they must obey superiors, not because they are just, but because they are superiors. In this way all sedition is prevented, if this can be made intelligible and it be understood what is the proper definition of justice.

Pascal, Pensees, V, 326

39 I have passed a great part of my life believing that there was justice, and in this I was not mistaken; for there is justice according as God has willed to reveal it to us. But I

did not take it so, and this is where I made a mistake; for I believed that our Justice was essentially just, and that I had that whereby to know and Judge of it. But I have so often found my right judgement at fault, that at last I have come to distrust myself and then others. I have seen changes in all nations and men, and thus, after many changes of judgement regarding true justice, I have recognised that our nature was but in continual change, and I have not changed since; and if I changed, I would confirm my opinion.

Pascal, Pensées, VI, 375

40 I had another reason which made me less forward to enlarge his Majesty's dominions by my discoveries: to say the truth, I had conceived a few scruples with relation to the distributive justice of princes upon those occasions. For instance, a crew of pyrates are driven by a storm they know not whither; at length a boy discovers land from the top-mast; they go on shoar to rob and plunder; they see an harmless people, are entertained with kindness, they give the country a new name, they take formal possession of it for the king, they set up a rotten plank or a stone for a memorial, they murder two or three dozen of the natives, bring away a couple more by force for a sample, return home, and get their pardon. Here commenceth a new dominion acquired with a title by divine right. Ships are sent with the first opportunity; the natives driven out or destroyed, their princes tortured to discover their gold; a free licence given to all acts of inhumanity and lust, the earth reeking with the blood of its inhabitants: and this execrable crew of butchers employed in so pious an expedition, is a *modern colony*

sent to convert and civilize an idolatrous and barbarous people.

Swift, Gulliver's Travels, IV, 12

- 41 The rules of equity or justice depend entirely on the particular state and condition in which men are placed, and owe their origin and existence to that UTILITY, which results to the public from their strict and regular observance.

Hume, Concerning Principles of Morals, III

- 42 Commerce and manufactures can seldom flourish long in any state which does not enjoy a regular administration of justice, in which the people do not feel themselves secure in the possession of their property, in which the faith of contracts is not supported by law, and in which the authority of the state is not supposed to be regularly employed in enforcing the payment of debts from all those who are able to pay. Commerce and manufactures, in short, can seldom flourish in any state in which there is not a certain degree of confidence in the justice of government.

Adam Smith, Wealth of Nations, V, 3

- 43 Justice itself is the great standing policy of civil society; and any eminent departure from it, under any circumstances, lies under the suspicion of being no policy at all.

Burke, Reflections on the Revolution in France

- 44 If justice and righteousness perish, human life would no longer have any value in the world.

Kant, Science of Right, 49

45 Justice is the end of government. It is the end of civil society. It ever has been and ever will be pursued until it be obtained, or until liberty be lost in the pursuit. In a society under the forms of which the stronger faction can readily unite and oppress the weaker, anarchy may as truly be said to reign as in a state of nature, where the weaker individual is not secured against the violence of the stronger; and as, in the latter state, even the stronger individuals are prompted, by the uncertainty of their condition, to submit to a government which may protect the weak as well as themselves; so, in the former state, will the more powerful factions or parties be gradually induced, by a like motive, to wish for a government which will protect all parties, the weaker as well as the more powerful.

Hamilton or Madison, Federalist 51

46 An integral part of justice is the confidence which citizens have in it, and it is this which requires that proceedings shall be public. The right of publicity depends on the fact that (i) the aim of the court is justice, which as universal falls under the cognizance of everyone, and (ii) it is through publicity that the citizens become convinced that the judgement was actually just.

Hegel, Philosophy of Right, Additions, Par. 224

47 Foolish men imagine that because judgement for an evil thing is delayed, there is no justice, but an accidental one, here below. Judgement for an evil thing is many times delayed some day or two, some century or two, but it is sure as life, it is sure as death!

Carlyle, Past and Present, I, 2

48 After all, the practical reason why, when the power is once in the hands of the people, a majority are permitted, and for a long period continue, to rule is not because they are most likely to be in the right, nor because this seems fairest to the minority, but because they are physically the strongest. But a government in which the majority rule in all cases cannot be based on justice, even as far as men understand it.

Thoreau, Civil Disobedience

49 Under a government which imprisons any unjustly, the true place for a just man is also a prison,

Thoreau, Civil Disobedience

50 Let us have faith that right makes might, and in that faith, let us, to the end, dare to do our duty as we understand it.

Lincoln, Address at Cooper Institute

51 Why should there not be a patient confidence in the ultimate justice of the people? Is there any better, or equal, hope in the world?

Lincoln, First Inaugural Address

52 The two essential ingredients in the sentiment of justice are, the desire to punish a person who has done harm, and the knowledge or belief that there is some definite individual or individuals to whom harm has been done.

Mill, Utilitarianism, V

53 Justice is a name for certain moral requirements, which, regarded collectively, stand higher in the scale of social utility, and are therefore of more paramount obligation, than any others; though particular cases may occur in which some other social duty is so important, as to overrule any one of the general maxims of justice. Thus, to save a life, it may not only be allowable, but a duty, to steal, or take by force, the necessary food or medicine, or to kidnap, and compel to officiate, the only qualified medical practitioner. In such cases, as we do not call anything justice which is not a virtue, we usually say, not that justice must give way to some other moral principle, but that what is just in ordinary cases is, by reason of that other principle, not just in the particular case. By this useful accommodation of language, the character of indefeasibility attributed to justice is kept up, and we are saved from the necessity of maintaining that there can be laudable injustice.

The considerations which have now been adduced resolve, I conceive, the only real difficulty in the utilitarian theory of morals. It has always been evident that all cases of justice are also cases of expediency: the difference is in the peculiar sentiment which attaches to the former, as contradistinguished from the latter. If this characteristic sentiment has been sufficiently accounted for; if there is no necessity to assume for it any peculiarity of origin; if it is simply the natural feeling of resentment, moralised by being made coextensive with the demands of social good; and if this feeling not only does but ought to exist in all the classes of cases to which the idea of justice corresponds; that idea no longer presents itself as a stumbling-block to the utilitarian ethics.

Justice remains the appropriate name for certain social utilities which are vastly more important, and therefore more absolute and imperative, than any others are as a class (though not more so than others may be in particular cases); and which, therefore, ought to be, as well as naturally are, guarded by a sentiment not only different in degree, but also in kind; distinguished from the milder feeling which attaches to the mere idea of promoting human pleasure or convenience, at once by the more definite nature of its commands, and by the sterner character of its sanctions.

Mill, Utilitarianism, V

12.3 Rights—Natural and Civil

When the word "right" is used in the singular, or when it is paired with its antonym "wrong," it signifies the moral quality of conduct that is lawful, just, or worthy of approbation. Right and wrong in that sense are discussed in Section 9.7 of Chapter 9 on Ethics; and related matters are discussed in this chapter, in Section 12.2 on Justice and Injustice. But when, as here, the word "rights" is used in the plural, it signifies the claims that a man can rightfully make concerning the things that belong to him, that are proper to him, that are his due. Some of the writers quoted here—Locke, for example—use the word "property" to stand for what other authors call "rights." Where the Declaration of Independence speaks of man's natural and unalienable rights, foremost among which are the rights to life, liberty, and the pursuit of happiness, Locke says that the ultimate objective of a just government is to protect and preserve

the property of its subjects, their property consisting chiefly in their lives, their liberties, and their estates.

As in the case of law, the fundamental distinction here is between natural and civil rights: on the one hand, the rights inherent in the very nature of man, and therefore equally possessed by or proper to every human being; on the other hand, the rights granted to its subjects by civil government. The latter are at the disposal of government to rescind as well as to confer; but the former, being antecedent to the institutions of government and to society itself, are deemed unalienable. Not being conferred by government, they cannot rightfully be rescinded by government, and according to the theory of natural rights, the justice of a government and of its laws, of other institutions, and of the conduct of one man toward another, consists in respecting the natural rights of every human being. Injustice occurs with the violation of these rights, taking away from a man that which is by nature his.

The reader will find all these points made, argued, and disputed in the quotations included here—both affirmations and denials of unalienable, natural rights; different enumerations of these rights; and applications of the doctrine of natural rights to economic and social as well as to political institutions. The reader will find questions about the equality of rights, questions about which is the most fundamental of all rights, and questions about the relation of natural rights to natural law. For the discussion of related matters, the reader should turn in this chapter to Section 12.1 on Law and Lawyers and Section 12.2 on Justice and Injustice in other chapters, the reader should examine Section 11.1 on Property, Section 10.4 on Government of and by the People: Republic and Democracy, Section 10.6 on Despotism and Tyranny, Section 10.7 on Slavery, Section

13.3 on Equality, and Section 14.1 on Warfare and the State of War.

■ ■ ■

- 1 *Athenians*. Right, as the world goes, is only in question between equals in power, while the strong do what they can and the weak suffer what they must.

Thucydides, Peloponnesian War, V, 89

- 2 A mere law to give all men equal rights is but useless, if the poor must sacrifice those rights to their debts, and, in the very seats and sanctuaries of equality, the courts of justice, the offices of state, and the public discussions, be more than anywhere at the beck and bidding of the rich.

Plutarch, Poplicola and Solon Compared

- 3 The people... is an assemblage associated by a common acknowledgment of right and by a community of interests.... Where, . . . there is no true justice there can be no right. For that which is done by right is justly done, and what is unjustly done cannot be done by right. For the unjust inventions of men are neither to be considered nor spoken of as rights; for even they themselves say that right is that which flows from the fountain of justice, and deny the definition which is commonly given by those who misconceive the matter, that right is that which is useful to the stronger party. Thus, where there is not true justice there can be no assemblage of men associated by a common acknowledgment of right, and therefore there can be no people.

Augustine, City of God, XIX, 21

4 The *right* or the *just* is a work that is adjusted to another person according to some kind of equality. Now a thing can be adjusted to a man in two ways: first by its very nature, as when a man gives so much that he may receive equal value in return, and this is called *natural right*. In another way a thing is adjusted or commensurated to another person, by agreement, or by common consent, when, to wit, a man deems himself satisfied, if he receive so much. This can be done in two ways: first by private agreement, as that which is confirmed by an agreement between private individuals; secondly, by public agreement, as when the whole community agrees that something should be deemed as though it were adjusted and commensurated to another person, or when this is decreed by the prince who is placed over the people, and acts in its stead, and this is called positive right.

Aquinas, Summa Theologica, II—II, 57, 2

5 If ... a thing is, of itself, contrary to natural right, the human will cannot make it just, for instance by decreeing that it is lawful to steal or to commit adultery.

Aquinas, Summa Theologica, II—II, 57, 2

6 The natural right or just is that which by its very nature is adjusted to or commensurate with another person. Now this may happen in two ways; first, according as it is considered absolutely: thus a male by its very nature is commensurate with the female to beget offspring by her, and a parent is commensurate with the offspring to nourish it. Secondly a thing is naturally commensurate

with another person, not according as it is considered absolutely, but according to something resultant from it, for instance the possession of property. For if a particular piece of land be considered absolutely, it contains no reason why it should belong to one man more than to another, but if it be considered in respect of its adaptability to cultivation, and the unmolested use of the land, it has a certain commensuration to be the property of one and not of another man.

Aquinas, Summa Theologica, II—II, 57,3

7 *Right* is a moral quality annexed to the person, justly entitling him to possess some particular privilege, or to perform some particular act. This right is annexed to the person, although it sometimes follows the things, as the services of lands, which are called *Real Rights*, in opposition to those merely *Personal*. Not because these rights are not annexed to persons, but the distinction is made, because they belong to the persons only who possess some particular things.

Grotius, Rights of War and Peace, Bk. I, I, 4

8 Natural right is the dictate of right reason, shewing the moral turpitude, or moral necessity, of any act from its agreement or disagreement with a rational nature, and consequently that such an act is either forbidden or commanded by God, the author of nature.

Grotius, Rights of War and Peace, Bk. I, I, 10

9 God has given life to man, not to destroy, but to preserve it; assigning to him for this purpose a right to the free

enjoyment of personal liberty, reputation, and the control over his own actions.

Grotius, Rights of War and Peace, Bk. 11, XVII, 2

10 The *right of nature*, which writers commonly call *jus naturale*, is the liberty each man hath to use his own power as he will himself for the preservation of his own nature; that is to say, of his own life; and consequently, of doing anything which, in his own judgement and reason, he shall conceive to be the aptest means thereunto....

A *law of nature*, *lex naturalis*, is a precept, or general rule, found out by reason, by which a man is forbidden to do that which is destructive of his life, or taketh away the means of preserving the same, and to omit that by which he thinketh it may be best preserved. For though they that speak of this subject use to confound *jus* and *lex*, *right* and *law*, yet they ought to be distinguished, because right consisteth in liberty to do, or to forbear; whereas *law* determineth and bindeth to one of them: so that law and right differ as much as obligation and liberty, which in one and the same matter are inconsistent.

And because the condition of man (as hath been declared in the precedent chapter) is a condition of war of every one against every one, in which case every one is governed by his own reason, and there is nothing he can make use of that may not be a help unto him in preserving his life against his enemies; it followeth that in such a condition every man has a right to every thing, even to one another's body. And therefore, as long as this natural right of every man to every thing endureth, there can be no security to any man, how strong or wise soever he be, of living out the time which nature ordinarily

alloweth men to live. And consequently it is a precept, or general rule of reason: *that every man ought to endeavour peace, as far as he has hope of obtaining it; and when he cannot obtain it, that he may seek and use all helps and advantages of war.* The first branch of which rule containeth the first and fundamental law of nature, which is: *to seek peace and follow it.* The second, the sum of the right of nature, which is: *by all means we can to defend ourselves.*

From this fundamental law of nature, by which men are commanded to endeavour peace, is derived this second law: *that a man be willing, when others are so too, as far forth as for peace and defence of himself he shall think it necessary, to lay down this right to all things; and be contented with so much liberty against other men as he would allow other men against himself.* For as long as every man holdeth this right, of doing anything he liketh; so long are all men in the condition of war. But if other men will not lay down their right, as well as he, then there is no reason for anyone to divest himself of his: for that were to expose himself to prey, which no man is bound to, rather than to dispose himself to peace. This is that law of gospel: *Whatsoever you require that others should do to you, that do ye to them.* And that law of all men, *quod tibi fieri non vis, alteri ne feceris.*

To lay down a man's right to anything is to divest himself of the liberty of hindering another of the benefit of his own right to the same. For he that renounceth or passeth away his right giveth not to any other man a right which he had not before, because there is nothing to which every man had not right by nature, but only standeth out of his way that he may enjoy his own original right without hindrance from him, not without

hindrance from another. So that the effect which redoundeth to one man by another man's defect of right is but so much diminution of impediments to the use of his own right original.

Right is laid aside, either by simply renouncing it, or by transferring it to another. By simply *renouncing*, when he cares not to whom the benefit thereof redoundeth. By *transferring*, when he intendeth the benefit thereof to some certain person or persons. And when a man hath in either manner abandoned or granted away his right, then is he said to be *obliged*, or *bound*, not to hinder those to whom such right is granted, or abandoned, from the benefit of it: and that he *ought*, and it is his *duty*, not to make void that voluntary act of his own: and that such hindrance is *injustice*, and *injury* as being *sine jure*; the right being before renounced or transferred. So that *injury*, or *injustice*, in the controversies of the world, is somewhat like to that which in the disputations of scholars is called *absurdity*. For as it is there called an absurdity to contradict what one maintained in the beginning; so in the world it is called *injustice*, and *injury* voluntarily to undo that which from the beginning he had voluntarily done. The way by which a man either simply renounceth or transferreth his right is a declaration, or signification, by some voluntary and sufficient sign, or signs, that he doth so renounce or transfer, or hath so renounced or transferred the same, to him that accepteth it. And these signs are either words only, or actions only; or as it happeneth most often, both words and actions. And the same are the *bonds*, by which men are bound and obliged: bonds that have their strength, not from their own nature (for nothing is more easily broken than a

man's word), but from fear of some evil consequence upon the rupture.

Whensoever a man transferreth his right, or renounceth it, it is either in consideration of some right reciprocally transferred to himself, or for some other good he hopeth for thereby. For it is a voluntary act: and of the voluntary acts of every man, the object is some good to himself. And therefore there be some rights which no man can be understood by any words, or other signs, to have abandoned or transferred. As first a man cannot lay down the right of resisting them that assault him by force to take away his life, because he cannot be understood to aim thereby at any good to himself. The same may be said of wounds, and chains, and imprisonment, both because there is no benefit consequent to such patience, as there is to the patience of suffering another to be wounded or imprisoned, as also because a man cannot tell when he seeth men proceed against him by violence whether they intend his death or not. And lastly the motive and end for which this renouncing and transferring of right is introduced is nothing else but the security of a man's person, in his life, and in the means of so preserving life as not to be weary of it. And therefore if a man by words, or other signs, seem to despoil himself of the end for which those signs were intended, he is not to be understood as if he meant it, or that it was his will, but that he was ignorant of how such words and actions were to be interpreted.

The mutual transferring of right is that which men call *contract*.

Hobbes, Leviathan, I, 14

- 11 Anything that exists in nature which we judge to be evil or able to hinder us from existing and enjoying a rational life, we are allowed to remove from us in that way which seems the safest; and whatever, on the other hand, we judge to be good or to be profitable for the preservation of our being or the enjoyment of a rational life, we are permitted to take for our use and use in any way we may think proper; and absolutely, every one is allowed by the highest right of nature to do that which he believes contributes to his own profit.

Spinoza, Ethics, IV, Appendix VIII

- 12 By natural right I understand the very laws or rules of nature, in accordance with which everything takes place, in other words, the power of nature itself. And so the natural right of universal nature, and consequently of every individual thing, extends as far as its power: and accordingly, whatever any man does after the laws of his nature, he does by the highest natural right, and he has as much right over nature as he has power.

Spinoza, Political Treatise, II, 4

- 13 It will, perhaps, be objected to this, that if gathering the acorns or other fruits of the earth, etc., makes a right to them, then any one may engross as much as he will. To which I answer. Not so. The same law of Nature that does by this means give us property, does also bound that property too. "God has given us all things richly." Is the voice of reason confirmed by inspiration? But how far has He given it us—"to enjoy"? As much as any one can make use of to any advantage of life before it spoils, so much he may by his labour fix a property in. Whatever is

beyond this is more than his share, and belongs to others. Nothing was made by God for man to spoil or destroy.

Locke, II Civil Government, V, 30

- 14 A man, as has been proved, cannot subject himself to the arbitrary power of another; and having, in the state of Nature, no arbitrary power over the life, liberty, or possession of another, but only so much as the law of Nature gave him for the preservation of himself and the rest of mankind, this is all he doth, or can give up to the commonwealth, and by it to the legislative power, so that the legislative can have no more than this. Their power in the utmost bounds of it is limited to the public good of the society. It is a power that hath no other end but preservation, and therefore can never have a right to destroy, enslave, or designedly to impoverish the subjects.

Locke, II Civil Government, XI, 135

- 15 The supreme power cannot take from any man any part of his property without his own consent. For the preservation of property being the end of government, and that for which men enter into society, it necessarily supposes and requires that the people should have property, without which they must be supposed to lose that by entering into society which was the end for which they entered into it; too gross an absurdity for any man to own. Men, therefore, in society having property, they have such a right to the goods, which by the law of the community are theirs, that nobody hath a right to take them, or any part of them, from them without their own consent; without this they have no property at all. For I

have truly no property in that which another can by right take from me when he pleases against my consent. Hence it is a mistake to think that the supreme or legislative power of any commonwealth can do what it will, and dispose of the estates of the subject arbitrarily, or take any part of them at pleasure. This is not much to be feared in governments where the legislative consists wholly or in part in assemblies which are variable, whose members upon the dissolution of the assembly are subjects under the common laws of their country, equally with the rest. But in governments where the legislative is in one lasting assembly, always in being, or in one man as in absolute monarchies, there is danger still, that they will think themselves to have a distinct interest from the rest of the community, and so will be apt to increase their own riches and power by taking what they think fit from the people. For a man's property is not at all secure, though there be good and equitable laws to set the bounds of it between him and his fellow-subjects, if he who commands those subjects have power to take from any private man what part he pleases of his property, and use and dispose of it as he thinks good.

Locke, II Civil Government, XI, 138

- 16 He that is master of himself and his own life has a right, too, to the means of preserving it-

Locke, II Civil Government, XV, 172

- 17 Every man is born with a double right. First, a right of freedom to his person, which no other man has a power over, but the free disposal of it lies in himself. Secondly, a

right before any other man, to inherit, with his brethren, his father goods.

By the first of these, a man is naturally free from subjection to any government, though he be born in a place under its jurisdiction. But if he disclaim the lawful government of the country he was born in, he must also quit the right that belonged to him, by the law's of it, and the possessions there descending to him from his ancestors if it were a government made by their consent.

Locke, II Civil Government, XVI, 190-191

- 18 Puffendorf says that we may divest ourselves of our liberty in favour of other men, just as we transfer our property from one to another by contracts and agreements. But this seems a very weak argument. For in the first place, the property I alienate becomes quite foreign to me, nor can I suffer from the abuse of it; but it very nearly concerns me that my liberty should not be abused, and I cannot without incurring the guilt of the crimes I may be compelled to commit, expose myself to become an instrument of crime. Besides, the right of property being only a convention of human institution, men may dispose of what they possess as they please: but this is not the case with the essential gifts of nature, such as life and liberty, which every man is permitted to enjoy, and of which it is at least doubtful whether any have a right to divest themselves. By giving up the one, we degrade our being; by giving up the other, we do our best to annul it; and, as no temporal good can indemnify us for the loss of either, it would be an offence against both reason and nature to renounce them at any price whatsoever.

Rousseau, Origin of Inequality, II

19 The State, in relation to its members, is master of all their goods by the social contract, which, within the State, is the basis of all rights; but, in relation to other powers, it is so only by the right of the first occupier, which it holds from its members.

The right of the first occupier, though more real than the right of the strongest, becomes a real right only when the right of property has already been established. Every man has naturally a right to everything he needs; but the positive act which makes him proprietor of one thing excludes him from everything else. Having his share, he ought to keep to it, and can have no further right against the community. This is why the right of the first occupier, which in the state of nature is so weak, claims the respect of every man in civil society. In this right we are respecting not so much what belongs to another as what does not belong to ourselves.

Rousseau, Social Contract, I, 9

20 We hold these truths to be self-evident, that all men are created equal: that they are endowed by their Creator with certain unalienable rights; that among these are life, liberty, and the pursuit of happiness. That, to secure these rights, governments are instituted among men, deriving their just powers from the consent of the governed; that, whenever any form of government becomes destructive of these ends, it is the right of the people to alter or to abolish it, and to institute a new government, laying its foundation on such principles, and organizing its powers in such form, as to them shall seem most likely to effect their safety and happiness.

Jefferson, Declaration of Independence

- 21 In the state of nature every man has a right to defend, by force of arms, his person and his possessions; to repel, or even to prevent, the violence of his enemies, and to extend his hostilities to a reasonable measure of satisfaction and retaliation.

Gibbon, Decline and Fall of the Roman Empire, L

- 22 The system of rights, viewed as a scientific system of doctrines, is divided into natural right and positive right. Natural right rests upon pure rational principles *a priori*; positive or statutory right is what proceeds from the will of a legislator.

The system of rights may again be regarded in reference to the implied powers of dealing morally with others as bound by obligations, that is, as furnishing a legal title of action in relation to them. Thus viewed, the system is divided into innate right and acquired right. Innate right is that right which belongs to every one by nature, independent of all juridical acts of experience. Acquired right is that right which is founded upon such juridical acts.

Innate right may also be called the "internal mine and thine"; for external right must always be acquired.

Kant, Division of the Science of Right, B

- 23 Freedom is independence of the compulsory will of another; and in so far as it can coexist with the freedom of all according to a universal law, it is the one sole original, inborn right belonging to every man in virtue of his humanity.

Kant, Division of the Science of Right, B

24 The commonwealth is the people viewed as united altogether into a state. And thus it is not to be said that the individual in the state has sacrificed a part of his inborn external freedom for a particular purpose; but he has abandoned his wild lawless freedom wholly, in order to find all his proper freedom again entire and undiminished, but in the form of a regulated order of dependence, that is, in a civil state regulated by laws of right. This relation of dependence thus arises out of his own regulative law giving will.

Kant, Science of Right, 47

25 Those goods, or rather substantive characteristics, which constitute my own private personality and the universal essence of my self-consciousness are inalienable and my right to them is imprescriptible. Such characteristics are my personality as such, my universal freedom of will, my ethical life, my religion....

The right to what is in essence inalienable is imprescriptible, since the act whereby I take possession of my personality, of my substantive essence, and make myself a responsible being, capable of possessing rights and with a moral and religious life, takes away from these characteristics of mine just that externality which alone made them capable of passing into the possession of someone else. When I have thus annulled their externality, I cannot lose them through lapse of time or from any other reason drawn from my prior consent or willingness to alienate them. This return of mine into myself, whereby I make myself existent as Idea, as a person with rights and moral principles, annuls the

previous position and the wrong done to my concept and my reason by others and myself when the infinite embodiment of self-consciousness has been treated as something external, and that with my consent. This return into myself makes clear the contradiction in supposing that I have given into another's possession my capacity for rights, my ethical life and religious feeling; for either I have given up what I myself did not possess, or I am giving up what, so soon as I possess it, exists in essence as mine alone and not as something external.

Hegel, Philosophy of Right, 66

26 After the general idea of virtue, I know no higher principle than that of right; or rather these two ideas are united in one. The idea of right is simply that of virtue introduced into the political world. It was the idea of right that enabled men to define anarchy and tyranny, and that taught them how to be independent without arrogance and to obey without servility. The man who submits to violence is debased by his compliance; but when he submits to that right of authority which he acknowledges in a fellow creature, he rises in some measure above the person who gives the command. There are no great men without virtue; and there are no great nations—it may almost be added, there would be no society—without respect for right; for what is a union of rational and intelligent beings who are held together only by the bond of force?

Tocqueville, Democracy in America, I, 14

27 One man is superior to another physically or mentally and so supplies more labour in the same time, or can

labour for a longer time; and labour, to serve as a measure, must be defined by its duration or intensity, otherwise it ceases to be a standard of measurement. This *equal* right is an unequal right for unequal labour. It recognises no class differences, because everyone is only a worker like everyone else; but it tacitly recognises unequal individual endowment and thus productive capacity as natural privileges. *It is therefore a right of inequality in its content, like every right.* Right by its very nature can only consist in the application of an equal standard; but unequal individuals (and they would not be different individuals if they were not unequal) are only measurable by an equal standard in so far as they are brought under an equal point of view, are taken from one *definite* side only, e.g., in the present case are regarded *only as workers*, and nothing more seen in them, everything else being ignored. Further, one worker is married, another not; one has more children than another and so on and so forth. Thus with an equal output, and hence an equal share in the social consumption fund, one will in fact receive more than another, one will be richer than another, and so on. To avoid all these defects, right, instead of being equal, would have to be unequal.

But these defects are inevitable in the first phase of communist society as it is when it has just emerged after prolonged birth pangs from capitalist society. Right can never be higher than the economic structure of society and the cultural development thereby determined.

In a higher phase of communist society, after the enslaving subordination of individuals under division of labour, and therewith also the antithesis between mental and physical labour, has vanished; after labour, from a mere means of life, has itself become the prime necessity

of life; after the productive forces have also increased with the all-round development of the individual, and all the springs of co-operative wealth flow more abundantly —only then can the narrow horizon of bourgeois right be fully left behind and society inscribe on its banners: from each according to his ability, to each according to his needs!

Marx, Critique of the Gotha Programme

28 To have a right... is, I conceive, to have something which society ought to defend me in the possession of. If the objector goes on to ask, why it ought? I can give him no other reason than general utility. If that expression does not seem to convey a sufficient feeling of the strength of the obligation, nor to account for the peculiar energy of the feeling, it is because there goes to the composition of the sentiment, not a rational only, but also an animal element, the thirst for retaliation; and this thirst derives its intensity, as well as its moral justification, from the extraordinarily important and impressive kind of utility which is concerned. The interest involved is that of security, to every one's feelings the most vital of all interests. All other earthly benefits are needed by one person, not needed by another; and many of them can, if necessary, be cheerfully foregone, or replaced by something else; but security no human being can possibly do without; on it we depend for all our immunity from evil, and for the whole value of all and every good, beyond the passing moment; since nothing but the gratification of the instant could be of any worth to us, if we could be deprived of anything the next instant by whoever was momentarily stronger than ourselves.

Mill, Utilitarianism, V

- 29 The order of castes, *order of rank*, only formulates the supreme law of life itself; the separation of the three types is necessary for the preservation of society, for making possible higher and higher types —*inequality* of rights is the condition for the existence of rights at all.—A right is a privilege.

Nietzsche, Antichrist, LVII

- 30 If men have rights by birth, these rights must hold against their fellow-men and must mean that somebody else is to spend his energy to sustain the existence of the persons so born. What then becomes of the natural rights of the one whose energies are to be diverted from his own interests? If it be said that we should all help each other, that means simply that the race as a whole should advance and expand as much and as fast as it can in its career on earth; and the experience on which we are now acting has shown that we shall do this best under liberty and under the organization which we are now developing, by leaving each to exert his energies for his own success. The notion of natural rights is destitute of sense, but it is captivating, and it is the more available on account of its vagueness. It lends itself to the most vicious kind of social dogmatism, for if a man has natural rights, then the reasoning is clear up to the finished socialistic doctrine that a man has a natural right to whatever he needs, and that the measure of his claims is the wishes which he wants fulfilled. If, then, he has a need, who is bound to satisfy it for him? Who holds the obligation corresponding to his right? It must be the one who possesses what will satisfy that need, or else the

state which can take the possession from those who have earned and saved it, and give it to him who needs it and who, by the hypothesis, has not earned and saved it.

W. G. Sumner, Challenge of Facts

- 31 While admitting the abstract right of the community to interfere with its members in order to secure the biological necessities to all, I cannot admit its right to interfere in matters where what one man possesses is not obtained at the expense of another. I am thinking of such things as opinion and knowledge and art. The fact that the majority of a community dislikes an opinion gives it no right to interfere with those who hold it. And the fact that the majority of a community wishes not to know certain facts gives it no right to imprison those who wish to know them.

Russell, Sceptical Essays, XIII

- 32 The obstacles to freedom, as we saw, are of two sorts, social and physical. Given a social and a physical obstacle which cause the same direct loss of liberty, the social obstacle is more harmful, because it causes resentment. If a boy wants to climb a tree and you forbid him, he will be furious; if he finds that he cannot climb it, he will acquiesce in the physical impossibility.

Russell, Sceptical Essays, XIII

- 33 If we are not to fall into Utopianism, we cannot imagine that, having overthrown capitalism, people will at once learn to work for society *without any standards of right*; indeed, the abolition of capitalism *does not immediately* lay the economic foundations for such a change.

And there is no other standard yet than that of "bourgeois right." To this extent, therefore, a form of state is still necessary, which, while maintaining public ownership of the means of production, would preserve the equality of labour and equality in the distribution of products.

The state is withering away in so far as there are no longer any capitalists, any classes, and, consequently, no *class* can be suppressed.

But the state has not yet altogether withered away, since there still remains the protection of "bourgeois right" which sanctifies actual inequality. For the complete extinction of the state, complete Communism is necessary.

Lenin, State and Revolution, V, 3

- 34 The fundamental rights, like the right to existence and life; the right to personal freedom or to conduct one's own life as master of oneself and of one's acts, responsible for them before God and the law of the community; the right to the pursuit of the perfection of moral and rational human life; the right to the pursuit of eternal good (without this pursuit there is no true pursuit of happiness); the right to keep one's body whole; the right to private ownership of material goods, which is a safeguard of the liberties of the individual; the right to many according to one's choice and to raise a family which will be assured of the liberties due it; the right of association, the respect for human dignity in each individual, whether or not he represents an economic value for society— all these rights are rooted in the vocation of the person (a spiritual and free agent) to the order of absolute values and to a destiny superior to time.

Maritain, Rights of Man and Natural Law, II

- 35 *With respect to God and truth*, one has not the right to choose according to his own whim any path whatsoever, he must choose the true path, in so far as it is in his power to know it. But *with respect to the State, to the temporal community and to the temporal power*, he is free to choose his religious path at his own risk, his freedom of conscience is a natural, inviolable right.

Maritain, Rights of Man and Natural Law, II

- 36 If it is true that political authority has as its essential function the direction of free men towards the common good, it is normal for these free men to choose by themselves those who have the function of leading them: this is the most elementary form of active participation in political life. That is why universal suffrage, by means of which every adult human person has, as such, the right to make his opinion felt regarding the affairs of the community by casting his vote in the election of the people's representatives and the officers of the State—that is why universal suffrage has a wholly fundamental political and human value and is one of those rights which a community of free men can never give up.

Maritain, Rights of Man and Natural Law, II

- 37 Freedom of investigation is a fundamental natural right, for man's very nature is to seek the truth.

Maritain, Rights of Man and Natural Law, II

12.4 Crime and Punishment

Two main subjects are treated in this section: on the one hand, the nature, causes, and varieties of crime; on the other, the purposes, justifications, and kinds of punishment. The first of these subjects is closely related to matters treated in Section 12.1 on Law and Lawyers and also in Section 9.7 on Right AND Wrong, as well as in Section 9.10 on Virtue and Vice; in addition, the reader will find some overlapping between the discussion of crime here and of sin in Section 20.13 of Chapter 20 on Religion. Section 12.1 on Law and Lawyers is also relevant to the second subject, but even more so is Section 12.2 on Justice AND Injustice. For example, the reader will find passages dealing with the *lex talionis*—an eye for an eye, a tooth for a tooth—both here, as relevant to punishment, and in the section on justice.

The central issue concerning punishment arises from the question whether it should be entirely utilitarian in purpose, aiming to deter potential criminal offenders as well as to reform those who have committed criminal acts, or it should be purely retributive in aim, righting the wrong and thus restoring the balance of justice. Those who take the latter view attempt to draw a sharp line between retribution and revenge. Those who take the former view tend to regard retribution as nothing but vengeance. Regarding punishment as remedial or therapeutic, the utilitarian view justifies a particular type of punishment in a particular case by the degree to which it serves the purposes of deterrence and reform. Regarding it as an act of justice, the retributive view justifies the severity of the punishment by its proportionality to the gravity of the crime being punished.

These considerations raise further questions, such as whether only the guilty should be punished and whether everyone who is guilty of criminal behavior should be punished; as well as questions about the justice of capital

punishment, about the inhumanity of cruel and unusual punishments, about the mitigation or attenuation of punishment in particular cases, and about the desire for punishment on the part of those who are plagued by their sense of guilt.

It has already been pointed out that sin as violation of the divine law, is discussed in Section 20.13; it should be pointed out that divine justice in a purely retributive manner, as discussed in Section 20.15.

- 1 Whoso sheddeth man's blood, by man shall his blood be shed: for in the image of God made he man.

Genesis 9:6

- 2 The fathers shall not be put to death for the children, neither shall the children be put to death for the fathers: every man shall be put to death for his own sin.

Deuteronomy 24:16

- 3 Withhold not correction from the child: for if thou beatest him with the rod, he shall not die.

Thou shalt beat him with the rod, and shalt deliver his soul from hell.

Proverbs 23:13-14

- 4 *Chorus.* It is but law that when the red drops have been spilled upon the ground they cry aloud for fresh blood.

For the death act calls out on Fury to bring out of those
who were slain before new ruin on ruin accomplished.

Aeschylus, Libation Bearers, 400

- 5 *Chorus*. Here is overthrow of all
the young laws, if the claim
of this matricide shall stand
good, his crime be sustained.
Should this be, every man will find a way
to act at his own caprice;
over and over again in time
to come, parents shall await
the deathstroke at their children's hands.

Aeschylus, Eumenides, 490

- 6 *Tyndareus*. Suppose a wife murders her husband.
Her son then follows suit by killing her,
and his son then must have his murder too
and so on.

Where, I want to know, can this chain
of murder end? Can it ever end, in fact,
since the last to kill is doomed to stand
under permanent sentence of death by revenge?
No, our ancestors handled these matters well
by banning their murderers from public sight,
forbidding them to meet or speak to anyone.
But the point is this: they purged their guilt
by banishment, not death. And by so doing,
they stopped that endless vicious cycle
of murder and revenge.

Do not mistake me.
I despise adultery and unfaithful wives,

and my daughter Clytemnestra, an adulteress
and murders to boot, most of all.
As for your wife Helen, I loathe her too
and never wish to speak to her again.
Nor, I might add, do I envy you
your trip to Troy to bring your whore back home.
No sir, not my daughters, but the law:
that is my concern. There I take my stand,
defending it with all my heart and strength
against the brutal and inhuman spirit of murder
that corrupts our cities and destroys this country.

Euripides, Orestes, 507

- 7 *Socrates*. The proper office of punishment is twofold: he who is rightly punished ought either to become better and profit by it, or he ought to be made an example to his fellows, that they may see what he suffers, and fear and become better. Those who are improved when they are punished by gods and men, are those whose sins are curable; and they are improved, as in this world so also in another, by pain and suffering; for there is no other way in which they can be delivered from their evil. But they who have been guilty of the worst crimes, and are incurable by reason of their crimes, are made examples; for, as they are incurable, the time has passed at which they can receive any benefit. They get no good themselves, but others get good when they behold them enduring for ever the most terrible and painful and fearful sufferings as the penalty of their sins.

Plato, Gorgias, 525A

8 *Athenian Stranger*. A man may very likely commit... crimes, either in a state of madness or when affected by disease, or under the influence of extreme old age, or in a fit of childish wantonness, himself no better than a child. And if this be made evident to the judges elected to try the cause, on the appeal of the criminal or his advocate, and he be judged to have been in this state when he committed the offence, he shall simply pay for the hurt which he may have done to another; but he shall be exempt from other penalties, unless he have slain some one, and have on his hands the stain of blood.

Plato, Laws, IX, 864B

9 *Athenian Stranger*. The law, like a good archer, should aim at the right measure of punishment, and in all cases at the deserved punishment.

Plato, Laws, XI, 934A

10 *Athenian Stranger*. If a man steal anything belonging to the public, whether that which he steals be much or little, he shall have the same punishment. For he who steals a little steals with the same wish as he who steals much, but with less power, and he who takes up a greater amount, not having deposited it, is wholly unjust. Wherefore the law is not disposed to inflict a less penalty on the one than on the other because his theft is less, but on the ground that the thief may possibly be in one case still curable, and may in another case be incurable. If any one convict in a court of law a stranger or a slave of a theft of public property, let the court determine what punishment he shall suffer, or what penalty he shall pay, bearing in mind that he is probably not incurable. But the

citizen who has been brought up as our citizens will have been, if he be found guilty of robbing his country by fraud or violence, whether he be caught in the act or not, shall be punished with death; for he is incurable.

Plato, Laws, XII, 941B

- 11 If the virtues are concerned with actions and passions, and every passion and every action is accompanied by pleasure and pain, for this reason also virtue will be concerned with pleasures and pains. This is indicated also by the fact that punishment is inflicted by these means; for it is a kind of cure, and it is the nature of cures to be effected by contraries.

Aristotle, 1104b13

- 12 There are crimes of which the motive is want.... But want is not the sole incentive to crime; men also wish to enjoy themselves and not to be in a state of desire—they wish to cure some desire, going beyond the necessities of life, which preys upon them; nay, this is not the only reason—they may desire superfluities in order to enjoy pleasures unaccompanied with pain, and therefore they commit crimes.

Now what is the cure of these three disorders? Of the first, moderate possessions and occupation; of the second, habits of temperance; as to the third, if any desire pleasures which depend on themselves, they will find the satisfaction of their desires nowhere but in philosophy; for all other pleasures we are dependent on others. The fact is that the greatest crimes are caused by excess and not by necessity. Men do not become tyrants in order that they may not suffer cold; and hence great is

the honour bestowed, not on him who kills a thief, but on him who kills a tyrant.

Aristotle, Politics, 1267a3

- 13 There is in life a dread of punishment for evil deeds, signal as the deeds are signal, and for atonement of guilt, the prison and the frightful hurling down from the rock, scourgings, executioners, the dungeon of the doomed, the pitch, the metal plate, torches; and even though these are wanting, yet the conscience-stricken mind through boding fears applies to itself goads and frightens itself with whips, and sees not meanwhile what end there can be of ills or what limit at last is to be set to punishments, and fears lest these very evils be enhanced after death. The life of fools at length becomes a hell here on earth.

Lucretius, Nature of Things, III

- 14 There are some duties we owe even to those who have wronged us. There is, after all, a limit to retribution and punishment. Or rather, may I say that it is enough to get a wrong-doer to repent of his misdeed, so that he may not repeat the offense, and also as a means of deterring others from doing wrong.

Cicero, De Officiis, 1,11

- 15 They lie below, on golden beds display'd;
And genial feasts with regal pomp are made.
The Queen of Furies by their sides is set,
And snatches from their mouths th' untasted meat,
Which if they touch, her hissing snakes she rears,
Tossing her torch, and thund'ring in their ears.

Then they, who brothers' better claim disown,
Expel their parents, and usurp the throne;
Defraud their clients, and, to lucre sold,
Sit brooding on unprofitable gold;
Who dare not give, and e'en refuse to lend
To their poor kindred, or a wanting friend.
Vast is the throng of these; nor less the train
Of lustful youths, for foul adult'ry slain:
Hosts of deserters, who their honor sold,
And basely broke their faith for bribes of gold.
All these within the dungeon's depth remain,
Despairing pardon, and expecting pain.
Ask not what pains; nor farther seek to know
Their process, or the forms of law below.
Some roll a weighty stone; some, laid along,
And bound with burning wires, on spokes of wheels are
hung.
Unhappy Theseus, doom'd for ever there,
Is fix'd by Fate on his eternal chair;
And wretched Phlegyas warns the world with cries
(Could warning make the world more just or wise):
'Learn righteousness, and dread th' avenging deities.'
To tyrants others have their country sold,
Imposing foreign lords, for foreign gold;
Some have old laws repeal'd, new statutes made,
Not as the people pleas'd, but as they paid;
With incest some their daughters' bed profan'd;
All dar'd the worst of ills, and, what they dar'd, attain'd.
Had I a hundred mouths, a hundred tongues,
And throats of brass, inspir'd with iron lungs,
I could not half those horrid crimes repeat.
Nor half the punishments those crimes have met.

Virgil, Aeneid, VI

- 16 Draco's laws were written not with ink but blood; and he, himself, being once asked why he made death the punishment of most offences, replied, "Small ones deserve that, and I have no higher for the greater crimes."

Plutarch, Solon

- 17 Any performance that sets an evil example displeases
Even its author himself: to begin with, punishment lies
In the fact that no man, if guilty, is ever acquitted
With himself as judge, though he may have won in the
courtroom
Bribing the praetor in charge, or stuffing the urn with
false ballots.

Juvenal, Satire XIII

- 18 The fates of criminals differ.
One gets the cross, another the crown, for the same
misdemeanor.

Juvenal, Satire XIII

- 19 If man were all of one piece—I mean, if he were nothing more than a made thing, acting and acted upon according to a fixed nature—he could be no more subject to reproach and punishment than the mere animals. But as the scheme holds, man is singled out for condemnation when he does evil; and this with justice. For he is no mere thing made to rigid plan; his nature contains a Principle apart and free.

Plotinus, Third Ennead, III, 4

20 Every disorder of the soul is its own punishment.

Augustine, Confessions, I, 12

21 Now when we ask why this or that particular evil act was done, it is normal to assume that it could not have been done save through the desire of gaining or the fear of losing some one of these lower goods. For they have their own charm and their own beauty, though compared with the higher values of heaven they are poor and mean enough. Such a man has committed a murder. Why? He wanted the other man's wife or his property; or he had chosen robbery as a means of livelihood; or he feared to lose this or that through his victim's act; or he had been wronged and was aflame for vengeance. Would any man commit a murder for no cause, for the sheer delight of murdering? The thing would be incredible. There is of course the case of the man [Catiline] who was said to be so stupidly and savagely cruel that he practised cruelty and evil even when he had nothing to gain by them. But even there a cause was stated—he did it, he said, lest through idleness his hand or his resolution should grow slack. And why did he want to prevent that? So that one day by the multiplication of his crimes the city should be his, and he would have gained honors and authority and riches, and would no longer be in fear of the law or in the difficulties that want of money and the awareness of his crimes had brought him. So that not even Catiline loved his crimes as crimes; he loved some other thing which was his reason for committing them.

Augustine, Confessions, II, 5

22 What shall I say of these judgments which men pronounce on men, and which are necessary in communities, whatever outward peace they enjoy? Melancholy and lamentable judgments they are, since the judges are men who cannot discern the consciences of those at their bar, and are therefore frequently compelled to put innocent witnesses to the torture to ascertain the truth regarding the crimes of other men. What shall I say of torture applied to the accused himself? He is tortured to discover whether he is guilty, so that, though innocent, he suffers most undoubted punishment for crime that is still doubtful, not because it is proved that he committed it, but because it is not ascertained that he did not commit it. Thus the ignorance of the judge frequently involves an innocent person in suffering- And what is still more unendurable—a thing, indeed, to be bewailed, and, if that were possible, watered with fountains of tears—is this, that when the judge puts the accused to the question, that he may not unwittingly put an innocent man to death, the HKult of this lamentable ignorance is that this very person, whom he tortured that he might not condemn him if innocent, is condemned to death both tortured and innocent. For if he has chosen, in obedience to the philosophical instructions to the wise man, to quit this life rather than endure any longer such tortures, he declares that he has committed the crime which in fact he has not committed. And when he has been condemned and put to death, the judge is still in ignorance whether he has put to death an innocent or a guilty person, though he put the accused to the torture for the very purpose of saving himself from condemning the innocent; and consequently he has both tortured an innocent man to discover his innocence and

has put him to death without discovering it. If such darkness shrouds social life, will a wise judge take his seat on the bench or no? Beyond question he will. For human society, which he thinks it a wickedness to abandon, constrains him and compels him to this duty. And he thinks it no wickedness that innocent witnesses are tortured regarding the crimes of which other men are accused; or that the accused are put to the torture, so that they are often overcome with anguish, and, though innocent, make false confessions regarding themselves, and are punished; or that, though they be not condemned to die, they often die during, or in consequence of, the torture; or that sometimes the accusers, who perhaps have been prompted by a desire to benefit society by bringing criminals to justice, are themselves condemned through the ignorance of the judge, because they are unable to prove the truth of their accusations though they are true, and because the witnesses lie, and the accused endures the torture without being moved to confession. These numerous and important evils he does not consider sins; for the wise judge does these things, not with any intention of doing harm, but because his ignorance compels him, and because human society claims him as a judge. But though we therefore acquit the judge of malice, we must none the less condemn human life as miserable. And if he is compelled to torture and punish the innocent because his office and his ignorance constrain him, is he a happy as well as guiltless man? Surely it were proof of more profound considerateness and finer feeling were he to recognize the misery of these necessities, and shrink from his own implication in that misery; and had he any

piety about him, he would cry to God "From my necessities deliver Thou me."

Augustine, City of God, XIX, 6

23 Man can be punished with a threefold punishment corresponding to the three orders to which the human will is subject. In the first place a man's nature is subjected to the order of his own reason; secondly, it is subjected to the order of another man who governs him either in spiritual or in temporal matters, as a member either of the state or of the household; thirdly, it is subjected to the universal order of the Divine government. Now each of these orders is disturbed by sin, for the sinner acts against his reason, and against human and Divine law. Hence he incurs a threefold punishment; one, inflicted by himself, namely remorse of conscience; another, inflicted by man; and a third, inflicted by God.

Aquinas, Summa Theologica, I-II, 87, 1

24 The punishment that is inflicted according to human laws is not always intended as a medicine for the one who is punished, but sometimes only for others; thus when a thief is hanged, this is not for his own amendment, but for the sake of others, that at least they may be deterred from crime through fear of the punishment.

Aquinas, Summa Theologica, I-II, 87, 3

25 A severe punishment is inflicted not only on account of the gravity of a fault, but also for other reasons. First, on account of the greatness of the sin, because a greater sin, other things being equal, deserves a greater punishment.

Secondly, on account of a habitual sin, since men are not easily cured of habitual sin except by severe punishments. Thirdly, on account of a great desire for or a great pleasure in the sin; for men are not easily deterred from such sins unless they be severely punished. Fourthly, on account of the facility of committing a sin and of concealing it; for such sins, when discovered, should be more severely punished in order to deter others from committing them.

Aquinas, Summa Theologica, I-II, 105, 2

- 26 Both Divine and human laws command... sinners to be put to death, [if] there is greater likelihood of their harming others than of their mending their ways. Nevertheless the judge puts this into effect not out of hatred for the sinners, but out of the love of charity, by reason of which he prefers the public good to the life of the individual. Moreover, the death inflicted by the judge profits the sinner, if he be converted, for the expiation of his crime; and if he be not converted, it profits so as to put an end to the sin, because the sinner is thus deprived of the power to sin any more.

Aquinas, Summa Theologica, II-II, 25, 6

- 27 *Saint* Francis afterwards, when I was dead, came for me: but one of the Black Cherubim said to him: 'Do not take him; wrong me not.

He must come down amongst my menials; because he gave the fraudulent counsel, since which I have kept fast by his hair:

for he who repents not, cannot be absolved; nor is it possible to repent and will *a thing* at the same time, the

contradiction not permitting it.'

O wretched me! how I started when he seized me, saying to me: 'May be thou didst not think that I was a logician!'

Dante, Inferno, XXVII, 112

28 When theft is punished by hanging, this occurs according to positive law on acceptable grounds, but not as in the case of the Draconian law which condemned every thief to hang, even if he stole only a chicken; this has no acceptable grounds and is contrary to nature. Consequently it was said that this law was written in blood. Yet the punishment must be applied more severely among more unbridled peoples.

Luther, Table Talk, 3911

29 Some peasants have just informed me hastily that a moment ago they left in a wood that belongs to me a man stabbed in a hundred places, who is still breathing, and who begged them for pity's sake to bring him some water and help him to get up. They say that they did not dare go near him, and ran away, for fear that the officers of the law would catch them there and hold them accountable for the accident—as is done with those who are found near a murdered man—to their total ruin, since they had neither ability nor money to defend their innocence. What could I say to them? It is certain that this act of humanity would have got them into trouble.

How many innocent people we have found to have been punished—I mean by no fault of their judges—and how many there have been that we have not found out about! Here is something that happened in my time.

Certain men are condemned to death for a murder, the sentence being, if not pronounced, at least decided and determined. At this point the judges are informed by the officers of an inferior court nearby that they have some prisoners who confess outright to this murder and throw a decisive light on the whole business. They deliberate whether because of this they should interrupt and defer the execution of the sentence passed upon the first accused. They consider the novelty of the case and the precedent it would set in suspending the execution of sentences; that the sentence has been passed according to law, and that the judges have no right to change their minds. In short, these poor devils are sacrificed to the forms of justice.

Philip, or some other, took care of a similar problem in this manner. He had sentenced a man, by a definitive judgment, to pay a heavy fine to another. The truth came to light some time after, and it turned out that he had decided unfairly. On one side were the rights of the case, on the other side the rights of judicial forms. He gave some satisfaction to both, letting the sentence stand and compensating the loss of the convicted man out of his own purse. But he was dealing with a reparable accident; my men were irreparably hanged. How many condemnations I have seen more criminal than the crime!

Montaigne, Essays, III, 13, Of Experience

30 *Hamlet*. Give me your pardon, sir. I've done you wrong;
But pardon't, as you are a gentleman.
This presence knows,
And you must needs have heard, how I am punish'd
With sore distraction. What I have done,
That might your nature, honour, and exception

Roughly awake, I here proclaim was madness.
Was't Hamlet wrong'd Laertes? Never Hamlet!
If Hamlet from himself be ta'en away,
And when he's not himself does wrong Laertes,
Then Hamlet does it not, Hamlet denies it.
Who does it, then? His madness.

Shakespeare, Hamlet, V, ii, 237

31 *Angelo*. Condemn the fault, and not the actor of it?
Why, every fault's condemn'd ere it be done.
Mine were the very cipher of a function,
To fine the faults whose fine stands in record,
And let go by the actor.

Shakespeare, Measure for Measure, II, ii, 37

32 *Isabella*. Good, good my lord, bethink you;
Who is it that hath died for this offence?
There's many have committed it.
Lucio. Ay, well said.
Angelo. The law hath not been dead, though it hath
slept.
Those many had not dared to do that evil,
If the first that did the edict infringe
Had answer'd for his deed. Now 'tis awake.
Takes a note of what is done; and, like a prophet
Looks in a glass that shows what future evils,
Either new, or by remissness new-conceived,
And so in progress to be hatch'd and born,
are now to have no successive degrees,
But, ere they live, to end.
Isab. Yet show some pity.

Ang. I show it most of ail when I show justice;
For then I pity those I do not know.
Which a dismiss'd offence would after gall;
And do him right that, answering one foul wrong.
Lives not to act another.

Shakespeare, Measure for Measure, II, ii, 87

33 My Lord, said he, a large River divides in two Parts one and the same Lordship. I beg your Honour to lend me your Attention, for 'tis a Case of great Importance, and some Difficulty—Upon this River there is a Bridge; at one End of which there stands a Gallon's, and a kind of Court of Justice, where four Judges use to sit, for the Execution of a certain Law made by the Lord of the Land and River, which runs thus.

Whoever intends to pass from one End of this Bridge to the other, must first upon his Oath declare whither he goes, and what his Business is. If he swear Truth, he may go on; but if he swear false, he shall be hanged, and die without Remission upon the Gibbet at the End of the Bridge.

After due Promulgation of this Law, many People, notwithstanding it's Severity, adventur'd to go over this Bridge, and as it appeared they swore true, the Judges permitted 'em to pass unmolested. It happen'd one Day that a certain Passenger being sworn, declar'd, that by the Oath he had taken, he was come to die upon that Gallows, and that was all his Business.

This put the Judges to a Nonplus; for, said they, If we let this Man pass freely, he is forsworn, and according to the Letter of the Law he ought to die: If we hang him, he has sworn Truth, seeing he swore he was to die on that

Gibbet; and then by the same Law we should let him pass.

Now your Lordship's Judgment is desir'd what the Judges ought to do with this Man? For they are still at a stand, not knowing what to determine in this Case; and having been inform'd of your sharp Wit, and great Capacity in resolving difficult Questions, they sent me to beseech your Lordship in their Names, to give your Opinion in so intricate and knotty a Case....

Well, hark you me, honest Man, said *Sancho*, either I am a Codshead, or there is as much Reason to put this same Person you talk of to Death as to let him live and pass the Bridge; for if the Truth saves him, the Lye condemns him. Now the Case stands thus, I would have you tell those Gentlemen that sent you to me, since there's as much Reason to bring him off, as to condemn him, that they e'en let him go free; for 'tis always more commendable to do Good than Hurt. And this I would give you under my own Hand, if I could write. Nor do I speak this of my own Head; but I remember one Precept, among many others, that my Master Don *Quixote* gave me the Night before I went to govern this Island, which was, that when the Scale of Justice is even, or a Case is doubtful, we should prefer Mercy before Rigour; and it has pleas'd God I should call it to Mind so luckily at this Juncture.

Cervantes, Don Quixotej II, 51

- 34 The house of every man is his castle, and if thieves come to a man's house to rob or murder, and the owner or his servants kill any of the thieves in defence of himself and his house, it is no felony and he lose nothing.

Sir Edward Coke, Cokers Reports, Semayne's Case

35 In causes of life and death, judges ought (as far as the law permitteth) in justice to remember mercy; and to cast a severe eye upon the example, but a merciful eye upon the person.

Bacon, Of Judicature

36 When a penalty is either annexed to the crime in the law itself, or hath been usually inflicted in the like cases, there the delinquent is excused from a greater penalty. For the punishment foreknown, if not great enough to deter men from the action, is an invitement to it: because when men compare the benefit of their injustice with the harm of their punishment, by necessity of nature they choose that which appeareth best for themselves: and therefore when they are punished more than the law had formerly determined, or more than others were punished for the same crime, it is the law that tempted and deceiveth them.

Hobbes, Leviathan, II, 27

37 If a man by the terror of present death be compelled to do a fact against the law, he is totally excused; because no law can oblige a man to abandon his own preservation. And supposing such a law were obligatory, yet a man would reason thus: "If I do it not, I die presently; if I do it, I die afterwards; therefore by doing it, there is time of life gained." Nature therefore compels him to the fact.

Hobbes, Leviathan, II, 27

38 To kill against the law is a greater crime than any other injury, life preserved.

And to kill with torment, greater than simply to kill.

And mutilation of a limb, greater than the spoiling a man of his goods.

And the spoiling a man of his goods by terror of death or wounds, than by clandestine surreption.

And by clandestine surreption, than by consent fraudulently obtained.

And the violation of chastity by force, greater than by flattery.

And of a woman married, than of a woman not married.

For all these things are commonly so valued; though some men are more, and some less, sensible of the same offence. But the law regardeth not the particular, but the general inclination of mankind.

Hobbes, Leviathan, II, 27

39 A *punishment* is an evil inflicted by public authority on him that hath done or omitted that which is judged by the same authority to be a transgression of the law, to the end that the will of men may thereby the better be disposed to obedience....

From the definition of punishment, I infer, first, that neither private revenges nor injuries of private men can properly be styled punishment, because they proceed not from public authority...

Thirdly, that the evil inflicted by public authority, without precedent public condemnation, is not to be styled by the name of punishment, but of a hostile act, because the fact for which a man is punished ought first

to be judged by public authority to be a transgression of the law.

Fourthly, that the evil inflicted by usurped power, and judges without authority from the sovereign, is not punishment, but an act of hostility, because the acts of power usurped have not for author the person condemned, and therefore are not acts of public authority.

Fifthly, that all evil which is inflicted without intention or possibility of disposing the delinquent or, by his example, other men to obey the laws is not punishment, but an act of hostility, because without such an end no hurt done is contained under that name....

Seventhly, if the harm inflicted be less than the benefit of contentment that naturally followeth the crime committed, that harm is not within the definition, and is rather the price of redemption than the punishment of a crime: because it is of the nature of punishment to have for end the disposing of men to obey the law; which end (if it be less than the benefit of the transgression) it attain-cth not, but worketh a contrary effect.

Hobbes, Leviathan, II, 28

- 40 Intemperance is naturally punished with diseases; rashness, with mischances; injustice, with the violence of enemies; pride, with ruin; cowardice, with oppression; negligent government of princes, with rebellion; and rebellion, with slaughter. For seeing punishments are consequent to the breach of laws, natural punishments must be naturally consequent to the breach of the laws of nature, and therefore follow them as their natural, not arbitrary, effects.

Hobbes, Leviathan, II, 31

41 To impress your minds with a deeper horror at homicide, remember that the first crime of fallen man was a murder, committed on the person of the first holy man; that the greatest crime was a murder, perpetrated on the person of the King of saints; and that, of all crimes, murder is the only one which involves in a common destruction the Church and the state, nature and religion.

Pascal, Provincial Letters, XIV

42 When the supreme authority, constrained by the desire of preserving peace, punishes a citizen who injures another, I do not say that it is indignant with the citizen, since it is not excited by hatred to destroy him, but punishes him from motives of piety.

Spinoza, Ethics, IV, Prop. 51, Schol.

43 In the state of nature, wrong-doing is impossible; or, if anyone does wrong, it is to himself, not to another. For no one by the law of nature is bound to please another, unless he chooses, nor to hold anything to be good or evil, but what he himself, according to his own temperament, pronounces to be so; and, to speak generally, nothing is forbidden by the law of nature, except what is beyond everyone's power. But wrong-doing is action, which cannot lawfully be committed. But if men by the ordinance of nature were bound to be led by reason, then all of necessity would be so led.

For the ordinances of nature are the ordinances of God, which God has instituted by the liberty, whereby he exists, and they follow, therefore, from the necessity of the divine nature, and, consequently, are eternal, and

cannot be broken. But men are chiefly guided by appetite, without reason; yet for all this they do not disturb the course of nature, but follow it of necessity. And, therefore, a man ignorant and weak of mind, is no more bound by natural law to order his life wisely, than a sick man is bound to be sound of body.

Therefore wrong-doing cannot be conceived of, but under dominion—that is, where, by the general right of the whole dominion, it is decided what is good and what evil, and where no one does anything rightfully, save what he does in accordance with the general decree or consent.

Spinoza, Political Treatise, II, 18-19

- 44 It is fit the ruler should have a power in many cases to mitigate the severity of the law, and pardon some offenders, since the end of government being the preservation of all as much as may be, even the guilty are to be spared where it can prove no prejudice to the innocent.

Locke, II Civil Government, XIV, 159

- 45 Since it would be utterly in vain to suppose a rule set to the free actions of men, without annexing to it some enforcement of good and evil to determine his will, we must, wherever we suppose a law, suppose also some reward or punishment annexed to that law. It would be in vain for one intelligent being to set a rule to the actions of another, if he had it not in his power to reward the compliance with, and punish deviation from his rule, by some good and evil, that is not the natural product and consequence of the action itself. For that, being a natural

convenience or inconvenience, would operate of itself, without a law. This, if I mistake not, is the true nature of all law, properly so called.

Locke, Concerning Human Understanding, Bk. II, XXVIII,

6

46 There are some laws and customs in this [the Lilliputians'] empire very peculiar; and if they were not so directly contrary to those of my own dear country, I should be tempted to say a little in their justification. It is only to be wished, that they were as well executed. The first I shall mention, relateth to informers. All crimes against the State, are punished here with the utmost severity; but if the person accused make his innocence plainly to appear upon his tryal, the accuser is immediately put to an ignominious death; and out of his goods or lands, the innocent person is quadruply recompensed for the loss of his time, for the danger he underwent, for the hardship of his imprisonment, and for all the charges he hath been at in making his defence. Or, if that fund be deficient, it is largely supplied by the Crown. The emperor doth also confer on him some publick mark of his favour; and proclamation is made of his innocence through the whole city.

Swift, Gulliver's Travels, I, 6

47 They [the Lilliputians] look upon fraud as a greater crime than theft, and therefore seldom fail to punish it with death: for, they alledge, that care and vigilance, with a very common understanding, may preserve a man's goods from thieves; but honesty hath no fence against superior cunning: and since it is necessary that there

should be a perpetual intercourse of buying and selling, and dealing upon credit; where fraud is permitted or connived at, or hath no law to punish it, the honest dealer is always undone, and the knave gets the advantage. I remember when I was once interceding with the king for a criminal who had wronged his master of a great sum of money, which he had received by order, and ran away with; and happening to tell his Majesty, by way of extenuation, that it was only a breach of trust; the emperor thought it monstrous in me to offer, as a defence, the greatest aggravation of the crime: and truly, I had little to say in return, farther than the common ans\vr, that different nations had different customs; for, I confess, I was heartily ashamed.

Swift, Gulliver's Travels, I, 6

- 48 Ingratitude is among them [the Lilliputians] a capital crime, as we read it to have been in some other countries: for they reason thus; that whoever makes ill returns to his benefactor, must needs be a common enemy to the rest of mankind, from whom they have received no obligation; and therefore such a man is not fit to live.

Swift, Gulliver's Travels, I, 6

- 49 Experience shouts that in countries remarkable for the lenity of their laws the spirit of the inhabitants is as much affected by slight penalties as in other countries by severer punishments.

If an inconvenience or abuse arises in the state, a violent government endeavours suddenly to redress it; and instead of putting the old laws in execution, it establishes some cruel punishment, which instantly puts

a stop to the evil. But the spring of government hereby loses its elasticity; the imagination grows accustomed to the severe as well as the milder punishment; and as the fear of the latter diminishes, they are soon obliged in every case to have recourse to the former. Robberies on the highway became common in some countries; in order to remedy this evil, they invented the punishment of breaking upon the wheel, the terror of which put a stop for a while to this mischievous practice. But soon after robberies on the highways became as common as ever....

Mankind must not be governed with too much severity; we ought to make a prudent use of the means which nature has given us to conduct them. If we inquire into the cause of all human corruptions, we shall find that they proceed from the impunity of criminals, and not from the moderation of punishments.

Montesquieu, Spirit of Laws, VI, 12

- 50 The lawfulness of putting a malefactor to death arises from this circumstance: the law by which he is punished was made for his security. A murderer, for instance, has enjoyed the benefit of the very law which condemns him; it has been a continual protection to him; he cannot, therefore, object to it.

Montesquieu, Spirit of Laws, XV, 2

- 51 When any man, even in political society, renders himself by his crimes obnoxious to the public, he is punished by the laws in his goods and person; that is, the ordinary rules of justice are, with regard to him, suspended for a moment; and it becomes equitable to inflict on him, for

the benefit of society, what otherwise he could not suffer without wrong or injury.

Hume, Concerning Principles of Morals, III

52 Let the punishments of criminals be useful. A hanged man is good for nothing, and a man condemned to public works still serves the country, and is a living lesson.

Voltaire, Philosophical Dictionary: Civil Laws

53 "And why was this admiral killed?" "Because," said they, "he did not kill men enough himself. He attacked the French admiral, and was found guilty of not being near enough to him." "But then, " said Candide, "was not the French admiral as far off from the English admiral, as he was from him?" "That is what cannot be doubted," replied they. "But in this country it is of very great service to kill an admiral now and then, in order to make the rest fight better."

Voltaire, Candide, XXIII

54 The power of the laws depends still more on their own wisdom than on the severity of their administrators, and the public will derives its greatest weight from the reason which has dictated it. Hence Plato looked upon it as a very necessary precaution to place at the head of all edicts a preamble, setting forth their justice and utility. In fact, the first of all laws is to respect the laws: the severity of penalties is only a vain resource, invented by little minds in order to substitute terror for that respect which they have no means of obtaining. It has constantly been observed that in those countries where legal punishments are most severe, they are also most

frequent; so that the cruelty of such punishments is a proof only of the multitude of criminals, and, punishing everything with equal severity, induces those who are guilty to commit crimes, in order to escape being punished for their faults.

Rousseau, Political Economy

55 It is not only upright men who know how to administer the laws; but at bottom only good men know how to obey them. The man who once gets the better of remorse, will not shrink before punishments which are less severe, and less lasting, and from which there is at least the hope of escaping: whatever precautions are taken, those who only require impunity in order to do wrong will not fail to find means of eluding the law, and avoiding its penalties.

Rousseau, Political Economy

56 Every malefactor, by attacking social rights, becomes on forfeit a rebel and a traitor to his country; by violating its laws he ceases to be a member of it; he even makes war upon it. In such a case the preservation of the State is inconsistent with his own, and one or the other must perish; in putting the guilty to death, we slay not so much the citizen as an enemy. The trial and the judgment are the proofs that he has broken the social treaty, and is in consequence no longer a member of the State. Since, then, he has recognised himself to be such by living there, he must be removed by exile as a violator of the compact, or by death as a public enemy; for such an enemy is not a moral person, but merely a man; and in such a case the right of war is to kill the vanquished.

Rousseau, Social Contract, II, 5

57 The frequency of capital punishments... rarely hinders the commission of a crime, but naturally and commonly prevents its detection, and is, if we proceed only upon prudential principles, chiefly for that reason to be avoided. Whatever may be urged by casuists or politicians, the greater part of mankind, as they can never think that to pick the pocket and to pierce the heart is equally criminal, will scarcely believe that two malefactors so different in guilt can be justly doomed to the same punishment.

Johnson, Rambler No. 114

58 He [Johnson] said to Sir William Scott, "The age is running mad after innovation; all the business of the world is to be done in a new way; men are to be hanged in a new way; Tyburn itself is not safe from the fury of innovation." It having been argued that this was an improvement,— "No, Sir, (said he, eagerly,) it is *not* an improvement; they object that the old method drew together a number of spectators. Sir, executions are intended to draw spectators. If they do not draw spectators they don't answer their purpose. The old method was most satisfactory to all parties; the publick was gratified by a procession; the criminal was supported by it. Why is all this to be swept away?" I perfectly agree with Dr. Johnson upon this head, and am persuaded that executions now, the solemn procession being discontinued, have not nearly the effect which they formerly had. Magistrates both in London, and elsewhere, have, I am afraid, in this had too much regard to their own ease.

Boswell, Life of Johnson (1783)

59 The right of administering punishment is the right of the sovereign as the supreme power to inflict pain upon a subject on account of a crime committed by him. The head of the state cannot therefore be punished; but his supremacy may be withdrawn from him.

Kant, Science of Right, 49

60 Judicial or juridical punishment is to be distinguished from natural punishment, in which crime as vice punishes itself, and does not as such come within the cognizance of the legislator. Juridical punishment can never be administered merely as a means for promoting another good either with regard to the criminal himself or to civil society, but must in all cases be imposed only because the individual on whom it is inflicted has committed a crime. For one man ought never to be dealt with merely as a means subservient to the purpose of another, nor be mixed up with the subjects of real right. Against such treatment his inborn personality has a right to protect him, even although he may be condemned to lose his civil personality. He must first be found guilty and punishable, before there can be any thought of drawing from his punishment any benefit for himself or his fellow-citizens. The penal law is a categorical imperative; and w'oc to him who creeps through the serpent-windings of utilitarianism to discover some advantage that may discharge him from the justice of punishment, or even from the due measure of it, according to the Pharisaic maxim: "It is better that one man should die than that the whole people should perish."

Kant, Science of Right, 49

61 Whoever has committed murder, must *die*. There is, in this case, no juridical substitute or surrogate, that can be given or taken for the satisfaction of justice. There is no *likeness* or proportion between life, however painful, and death; and therefore there is no equality between the crime of murder and the retaliation of it but what is judicially accomplished by the execution of the criminal. His death, however, must be kept free from all maltreatment that would make the humanity suffering in his person loathsome or abominable. Even if a civil society resolved to dissolve itself with the consent of all its members—as might be supposed in the case of a people inhabiting an island resolving to separate and scatter themselves throughout the whole world—the last murderer lying in the prison ought to be executed before the resolution was carried out. This ought to be done in order that every one may realize the desert of his deeds, and that blood-guiltiness may not remain upon the people; for otherwise they might all be regarded as participators in the murder as a public violation of justice.

The equalization of punishment with crime is therefore only possible by the cognition of the judge extending even to the penalty of death, according to the right of retaliation. This is manifest from the fact that it is only thus that a sentence can be pronounced over all criminals proportionate to their internal wickedness; as may be seen by considering the case when the punishment of death has to be inflicted, not on account of a murder, but on account of a political crime that can only be punished capitally.

Kant, Science of Rights, 49

62 The right of pardoning, viewed in relation to the criminal, is the right of mitigating or entirely remitting his punishment. On the side of the sovereign this is the most delicate of all rights, as it may be exercised so as to set forth the splendour of his dignity, and yet so as to do a great wrong by it. It ought not to be exercised in application to the crimes of the subjects against each other; for exemption from punishment would be the greatest wrong that could be done to them. It is only an occasion of some form of treason, as a lesion against himself, that the sovereign should make use of this right. And it should not be exercised even in this connection, if the safety of the people would be endangered by remitting such punishment. This right is the only one which properly deserves the name of a "right of majesty."

Kant, Science of Right, 49

63 Punishment is regarded as containing the criminal's right and hence by being punished he is honoured as a rational being. He does not receive this due of honour unless the concept and measure of his punishment are derived from his own act. Still less does he receive it if he is treated either as a harmful animal who has to be made harmless, or with a view to deterring and reforming him.

Hegel, Philosophy of Right, 100

64 It seems to be a contradiction that a crime committed in society appears more heinous and yet is punished more leniently. But while it would be impossible for society to leave a crime unpunished, since that would be to posit it as right, still since society is sure of itself, a crime must always be something idiosyncratic in comparison,

something unstable and exceptional. The very stability of society gives a crime the status of something purely subjective which seems to be the product rather of natural impulse than of a prudent will.

In this light, crime acquires a milder status, and for this reason its punishment too becomes milder. If society is still internally weak, then an example must be made by inflicting punishments, since punishment is itself an example over against the example of crime. But in a society which is internally strong, the commission of crime is something so feeble that its annulment must be commensurable with its feebleness. Harsh punishments, therefore, are not unjust in and by themselves; they are related to contemporary conditions. A criminal code cannot hold good for all time, and crimes are only shows of reality which may draw on themselves a greater or lesser degree of disavowal.

Hegel, Philosophy of Right, Additions, Par. 218

65 Crime and punishment grow out of one stem. Punishment is a fruit that unsuspected ripens within the flower of the pleasure which concealed it.

Emerson, Compensation

66 Commit a crime, and the earth is made of glass. Commit a crime, and it seems as if a coat of snow fell on the ground, such as reveals in the woods the track of every partridge and fox and squirrel and mole. You cannot recall the spoken word, you cannot wipe out the foot-track, you cannot draw up the ladder, so as to leave no inlet or clew. Some damning circumstance always transpires. The laws

and substances of nature—water, snow, wind, gravitation—become penalties to the thief.

Emerson, Compensation

67 There are some who say, that it is unjust to punish any one for the sake of example to others; that punishment is just, only when intended for the good of the sufferer himself. Others maintain the extreme reverse, contending that to punish persons who have attained years of discretion, for their own benefit, is despotism and injustice, since if the matter at issue is solely their own good, no one has a right to control their own judgment of it; but that they may justly be punished to prevent evil to others, this being the exercise of the legitimate right of self-defence. Mr. Owen, again, affirms that it is unjust to punish at all; for the criminal did not make his own character; his education, and the circumstances which surrounded him, have made him a criminal, and for these he is not responsible. All these opinions are extremely plausible; and so long as the question is argued as one of justice simply, without going down to the principles which lie under justice and are the source of its authority, I am unable to see how any of these reasoners can be refuted. For in truth every one of the three builds upon rules of justice confessedly true. The first appeals to the acknowledged injustice of singling out an individual, and making him a sacrifice, without his consent, for other people's benefit. The second relies on the acknowledged justice of self-defence, and the admitted injustice of forcing one person to conform to another's notions of what constitutes his good. The Owenite invokes the admitted principle, that it is unjust to punish any one for what he cannot help. Each is triumphant so long as he is

not compelled to take into consideration any other maxims of justice than the one he has selected; but as soon as their several maxims are brought face to face, each disputant seems to have exactly as much to say for himself as the others. No one of them can carry out his own notion of justice without trampling upon another equally binding.

These are difficulties; they have always been felt to be such; and many devices have been invented to turn rather than to overcome them. As a refuge from the last of the three, men imagined what they called the freedom of the will; fancying that they could not justify punishing a man whose will is in a thoroughly hateful state, unless it be supposed to have come into that state through no influence of anterior circumstances. To escape from the other difficulties, a favourite contrivance has been the fiction of a contract, whereby at some unknown period all the members of society engaged to obey the laws, and consented to be punished for any disobedience to them; thereby giving to their legislators the right, which it is assumed they would not otherwise have had, of punishing them, either for their own good or for that of society. This happy thought was considered to get rid of the whole difficulty, and to legitimate the infliction of punishment, in virtue of another received maxim of justice, *Volenti non fit injuria*; that is not unjust which is done with the consent of the person who is supposed to be hurt by it. I need hardly remark, that even if the consent were not a mere fiction, this maxim is not superior in authority to the others which it is brought in to supersede. It is, on the contrary, an instructive specimen of the loose and irregular manner in which supposed principles of justice grow up. This particular

one evidently came into use as a help to the coarse exigencies of courts of law, which are sometimes obliged to be content with very uncertain presumptions, on account of the greater evils which would often arise from any attempt on their part to cut finer. But even courts of law are not able to adhere consistently to the maxim, for they allow voluntary engagements to be set aside on the ground of fraud, and sometimes on that of mere mistake or misinformation.

Again, when the legitimacy of inflicting punishment is admitted, how many conflicting conceptions of justice come to light in discussing the proper apportionment of punishments to offences. No rule on the subject recommends itself so strongly to the primitive and spontaneous sentiment of justice, as the *lex talionis*, an eye for an eye and a tooth for a tooth. Though this principle of the Jewish and of the Mahometan law has been generally abandoned in Europe as a practical maxim, there is, I suspect, in most minds, a secret hankering after it; and when retribution accidentally falls on an offender in that precise shape, the general feeling of satisfaction evinced bears witness how natural is the sentiment to which this repayment in kind is acceptable. With many, the test of justice in penal infliction is that the punishment should be proportioned to the offence; meaning that it should be exactly measured by the moral guilt of the culprit (whatever be their standard for measuring moral guilt): the consideration, what amount of punishment is necessary to deter from the offence, having nothing to do with the question of justice, in their estimation: while there are others to whom that consideration is all in all; who maintain that it is not just, at least for man, to inflict on a fellow-creature, whatever

may be his offences, any amount of suffering beyond the least that will suffice to prevent him from repeating, and others from imitating, his misconduct.

Mill, Utilitarianism, V

68 "Why," began the elder, "all these sentences to exile with hard labour, and formerly with flogging also, reform no one, and what's more, deter hardly a single criminal, and the number of crimes does not diminish but is continually on the increase. You must admit that. Consequently the security of society is not preserved, for, although the obnoxious member is mechanically cut off and sent far away out of sight, another criminal always comes to take his place at once, and often two of them. If anything does preserve society, even in our time, and does regenerate and transform the criminal, it is only the law of Christ speaking in his conscience. It is only by recognising his wrong-doing as a son of a Christian society—that is, of the Church—that he recognises his sin against society—that is, against the Church. So that it is only against the Church, and not against the State, that the criminal of to-day can recognise that he has sinned. If society, as a Church, had jurisdiction, then it would know when to bring back from exclusion and to reunite to itself. Now the Church having no real jurisdiction, but only the power of moral condemnation, withdraws of her own accord from punishing the criminal actively. She does not excommunicate him but simply persists in motherly exhortation of him. What is more, the Church even tries to preserve all Christian communion with the criminal. She admits him to church services, to the holy sacrament, gives him alms, and treats him more as a captive than as a convict. And what would become of the criminal, O

Lord, if even the Christian society—that is, the Church—were to reject him even as the civil law rejects him and cuts him off? What would become of him if the Church punished him with her excommunication as the direct consequence of the secular law? There could be no more terrible despair, at least for a Russian criminal, for Russian criminals still have faith. Though, who knows, perhaps then a fearful thing would happen, perhaps the despairing heart of the criminal would lose its faith and then what would become of him? But the Church, like a tender, loving mother, holds aloof from active punishment herself, as the sinner is too severely punished already by the civil law, and there must be at least someone to have pity on him. The Church holds aloof, above all, because its judgment is the only one that contains the truth, and therefore cannot practically and morally be united to any other judgment even as a temporary compromise. She can enter into no compact about that. The foreign criminal, they say, rarely repents, for the very doctrines of to-day confirm him in the idea that his crime is not a crime, but only a reaction against an unjustly oppressive force. Society cuts him off completely by a force that triumphs over him mechanically and (so at least they say of themselves in Europe) accompanies this exclusion with hatred, forgetfulness, and the most profound indifference as to the ultimate fate of the erring brother."

Dostoevsky, Brothers Karamazov, Pt. I, II, 5

- 69 Remember particularly that you cannot be a judge of anyone. For no one can judge a criminal until he recognises that he is just such a criminal as the man standing before him, and that he perhaps is more than all

men to blame for that crime. When he understands that, he will be able to be a judge. Though that sounds absurd, it is true. If I had been righteous myself, perhaps there would have been no criminal standing before me. If you can take upon yourself the crime of the criminal your heart is judging, take it at once, suffer for him yourself, and let him go without reproach. And even if the law itself makes you his judge, act in the same spirit so far as possible, for he will go away and condemn himself more bitterly than you have done. If, after your kiss, he goes away untouched, mocking at you, do not let that be a stumbling-block to you. It shows his time has not yet come, but it will come in due course. And if it come not, no matter; if not he, then another in his place will understand and suffer, and judge and condemn himself, and the truth will be fulfilled. Believe that, believe it without doubt; for in that lies all the hope and faith of the saints.

Dostoevsky, Brothers Karamazov, Pt. II, VI, 3

70 Raskolnikov smiled again. He saw the point at once, and knew where they wanted to drive him. He decided to take up the challenge.

"That wasn't quite my contention," he began simply and modestly. "Yet I admit that you have stated it almost correctly; perhaps, if you like, perfectly so." (It almost gave him pleasure to admit this.) "The only difference is that I don't contend that extraordinary people are always bound to commit breaches of morals, as you call it. In fact, I doubt whether such an argument could be published. I simply hinted that an 'extraordinary' man has the right. . . that is not an official right, but an inner right to decide in his own conscience to overstep...

certain obstacles, and only in case it is essential for the practical fulfilment of his idea (sometimes, perhaps, of benefit to the whole of humanity). You say that my article isn't definite; I am ready to make it as clear as I can. Perhaps I am right in thinking you want me to; very well. I maintain that if the discoveries of Kepler and Newton could not have been made known except by sacrificing the lives of one, a dozen, a hundred, or more men, Newton would have had the right, would indeed have been in duty bound ... to *eliminate* the dozen or the hundred men for the sake of making his discoveries known to the whole of humanity. But it does not follow from, that that Newton had a right to murder people right and left and to steal every day in the market. Then, I remember, I maintain in my article that all . . . well, legislators and leaders of men, such as Lycurgus, Solon, Mahomet, Napoleon, and so on, were all without exception criminals, from the very fact that, making a new law, they transgressed the ancient one, handed down from their ancestors and held sacred by the people, and they did not stop short at bloodshed either, if that bloodshed—often of innocent persons fighting bravely in defence of ancient law— were of use to their cause. It's remarkable, in fact, that the majority, indeed, of these benefactors and leaders of humanity were guilty of terrible carnage. In short, I maintain that all great men or even men a little out of the common, that is to say capable of giving some new word, must from their very nature be criminals—more or less, of course. Otherwise it's hard for them to get out of the common rut; and to remain in the common rut is what they can't submit to, from their very nature again, and to my mind they ought not, indeed, to submit to it. You see that there is nothing

particularly new in all that The same thing has been printed and read a thousand times before. As for my division of people into ordinary and extraordinary, I acknowledge that it's somewhat arbitrary, but I don't insist upon exact numbers. I only believe in my leading idea that men are *in general* divided by a law of nature into two categories, inferior (ordinary), that is, so to say, material that serves only to reproduce its kind, and men who have the gift or the talent to utter *a new word*. There are, of course, innumerable sub-divisions, but the distinguishing features of both categories are fairly well marked. The first category, generally speaking, are men conservative in temperament and law-abiding; they live under control and love to be controlled. To my thinking it is their duty to be controlled, because that's their vocation, and there is nothing humiliating in it for them. The second category all transgress the law; they are destroyers or disposed to destruction according to their capacities. The crimes of these men are of course relative and varied; for the most part they seek in very varied ways the destruction of the present for the sake of the better. But if such a one is forced for the sake of his idea to step over a corpse or wade through blood, he can, I maintain, find within himself, in his conscience, a sanction for wading through blood—that depends on the idea and its dimensions, note that. It's only in that sense I speak of their right to crime in my article (you remember it began with the legal question). There's no need for such anxiety, however; the masses will scarcely ever admit this right, they punish them or hang them (more or less), and in doing so fulfil quite justly their conservative vocation. But the same masses set these criminals on a pedestal in the next generation and worship them (more

or less). The first category is always the man of the present, the second the man of the future. The first preserve the world and people it, the second move the world and lead it to its goal. Each class has an equal right to exist. In fact, all have equal rights with me—and *vive la guerre eternelle*—till the New Jerusalem, of course!"

Dostoevsky, Crime and Punishment, III, 5

71 Porfiry began gaily, looking with extraordinary simplicity at Raskolnikov (which startled him and instantly put him on his guard), "certainly quite right in laughing so wittily at our legal forms, he-he! Some of these elaborate psychological methods are exceedingly ridiculous and perhaps useless, if one adheres too closely to the forms. Yes ... I am talking of forms again. Well, if I recognise, or more strictly speaking, if I suspect some one or other to be a criminal in any case entrusted to me... you're reading for the law, of course, Rodion Romanovitch?"

"Yes, I was ..."

"Well, then it is a precedent for you for the future—though don't suppose I should venture to instruct you after the articles you publish about crime! No, I simply make bold to state it by way of fact, if I took this man or that for a criminal, why, I ask, should I worry' him prematurely, even though I had evidence against him? In one case I may be bound, for instance, to arrest a man at once, but another may be in quite a different position, you know, so why shouldn't I let him wsdk about the town a bit, he-he-he! But I see you don't quite understand, so I'll give you a clearer example. If I put him in prison too soon, I may very likely give him, so to speak, moral support, he-he! You're laughing?"

Raskolnikov had no idea of laughing. He was sitting with compressed lips, his feverish eyes fixed on Porfiry Petrovitch's.

"Yet that is the case, with some types especially, for men are so different. You say evidence. Well, there may be evidence. But evidence, you know, can generally be taken two ways. I am an examining lawyer and a weak man, I confess it. I should like to make a proof, so to say, mathematically clear, I should like to make a chain of evidence such as twice two are four, it ought to be a direct, irrefutable proof! And if I shut him up too soon—even though I might be convinced *he* was the man, I should very likely be depriving myself of the means of getting further evidence against him. And how? By giving him, so to speak, a definite position, I shall put him out of suspense and set his mind at rest, so that he will retreat into his shell. They say that at Sevastopol, soon after Alma, the clever people were in a terrible fright that the enemy would attack openly and take Sevastopol at once. But when they saw that the enemy preferred a regular siege, they were delighted, I am told and reassured, for the thing would drag on for two months at least. You're laughing, you don't believe me again? Of course, you're right, too. You're right, you're right. These are all special cases, I admit. But you must observe this, my dear Rodion Romanovitch, the general case, the case (or which all legal forms and rules are intended, for which they are calculated and laid down in books, does not exist at all, for the reason that every case, every crime for instance, so soon as it actually occurs, at once becomes a thoroughly special case and sometimes a case unlike any that's gone before. Very comic cases of that sort sometimes occur. If I leave one man quite alone, if I don't

touch him and don't worry him, but let him know or at least suspect every moment that I know all about it and am watching him day and night, and if he is in continual suspicion and terror, he'll be bound to lose his head. He'll come of himself, or maybe do something which will make it as plain as twice two are four—it's delightful. It may be so with a simple peasant, but with one of our sort, an intelligent man cultivated on a certain side, it's a dead certainty. For, my dear fellow, it's a very important matter to know on what side a man is cultivated. And then there are nerves, there are nerves, you have overlooked them! Why, they are all sick, nervous and irritable!... And then how they all suffer from spleen! That I assure you is a regular gold mine for us. And it's no anxiety to me, his running about the town free! Let him, let him walk about for a bit! I know well enough that I've caught him and that he won't escape me. Where could he escape to, he-he? Abroad, perhaps? A Pole will escape abroad, but not here, especially as I am watching and have taken measures. Will he escape into the depths of the country perhaps? But you know, peasants live there, real rude Russian peasants. A modern cultivated man would prefer prison to living with such strangers as our peasants. He-he! But that's all nonsense, and on the surface. It's not merely that he has nowhere to run to, he is *psychologically* unable to escape me, he-he! What an expression! Through a law of nature he can't escape me if he had anywhere to go. Have you seen a butterfly round a candle? That's how he will keep circling and circling round me. Freedom will lose its attractions. He'll begin to brood, he'll weave a tangle round himself, he'll worry himself to death! What's more he will provide me with a mathematical proof—if I only give him long enough

interval. . . And he'll keep circling round me, getting nearer and nearer and then— flop! He'll fly straight into my mouth and I'll swallow him, and that will be very amusing, he-he-he-he! You don't believe me?"

Dostoevsky, Crime and Punishment, IV, 5

72 When we do not at all understand the cause of an action, whether a crime, a good action, or even one that is simply nonmoral, we ascribe a greater amount of freedom to it. In the case of a crime we most urgently demand the punishment for such an act; in the case of a virtuous act we rate its merit most highly. In an indifferent case we recognize in it more individuality, originality, and independence. But if even one of the innumerable causes of the act is known to us we recognize a certain element of necessity and are less insistent on punishment for the crime, or the acknowledgment of the merit of the virtuous act, or the freedom of the apparently original action. That a criminal was reared among malefactors mitigates his fault in our eyes. The self-sacrifice of a father or mother, or self-sacrifice with the possibility of a reward, is more comprehensible than gratuitous self-sacrifice, and therefore seems less deserving of sympathy and less the result of free will. The founder of a sect or party, or an inventor, impresses us less when we know how or by what the way was prepared for his activity. If we have a large range of examples, if our observation is constantly directed to seeking the correlation of cause and effect in people's actions, their actions appear to us more under compulsion and less free the more correctly we connect the effects with the causes. If we examined simple actions and had a vast number of such actions under observation, our conception of their inevitability would

be still greater. The dishonest conduct of the son of a dishonest father, the misconduct of a woman who had fallen into bad company, a drunkard's relapse into drunkenness, and so on are actions that seem to us less free the better we understand their cause. If the man whose actions we are considering is on a very low stage of mental development, like a child, a madman, or a simpleton—then, knowing the causes of the act and the simplicity of the character and intelligence in question, we see so large an element of necessity and so little free will that as soon as we know the cause prompting the action we can foretell the result.

On these three considerations alone is based the conception of irresponsibility for crimes and the extenuating circumstances admitted by all legislative codes. The responsibility appears greater or less according to our greater or lesser knowledge of the circumstances in which the man was placed whose action is being judged, and according to the greater or lesser interval of time between the commission of the action and its investigation, and according to the greater or lesser understanding of the causes that led to the action.

Tolstoy, War and Peace, II Epilogue, IX

- 73 The lawyers defending a criminal are rarely artists enough to turn the beautiful terribleness of his deed to his advantage.

Nietzsche, Beyond Good and Evil, IV, 110

- 74 The criminal type is the type of the strong human being under unfavourable conditions, a strong human being made sick. What he lacks is the wilderness, a certain freer

and more perilous nature and form of existence in which all that is attack and defence in the instinct of the strong human being *comes into its own*.

Nietzsche, Twilight of the Idols: Expeditions of an Untimely Man

75 Criminals do not die by the hands of the law. They die by the hands of other men.

Shaw, Man and Superman, Maxims for Revolutionists

76 Assassination on the scaffold is the worst form of assassination, because there it is invested with the approval of society.

Shaw, Man and Superman, Maxims for Revolutionists

77 Grime is only the retail department of what, in wholesale, we call penal law.

Shaw, Alan and Superman, Maxims for Revolutionists

Chapter 13

LIBERTY and EQUALITY

Chapter 13 is divided into three sections: Section 13.1 Freedom in Society, Section 13.2 Freedom of Thought and Expression: Censorship, and 13.3 Equality.

This chapter, like Chapters 12 and 14, is closely related to Chapter 10 on Politics. Since economic considerations enter into the discussion of social freedom in Section 13.1 and into the discussion of social equality in Section 13.3, the chapter also touches on matters treated in Chapter 11 on Economics.

The terms "freedom" and "liberty" are interchangeable. Some authors prefer to use one, some the other, and some shift from one to the other. The freedom or liberty discussed in this chapter, and especially in Section 13.1, is the individual's freedom of action in society—the liberty of the individual in conduct affecting others. Other aspects of freedom are discussed in other contexts— moral freedom in Section 9.4 of the chapter on Ethics, and free will or free choice in Section 5.7 of the chapter on Mind.

Section 13.2 turns from the consideration of freedom in the sphere of action, and specifically of social conduct, to freedom in the sphere of thought and in the communication of thought. It is appropriate, therefore, to include there quotations dealing with the pros and cons of censorship, and other impediments to the communication of ideas and the expression of thought.

Equality—the subject of Section 13.3—is often discussed in relation to liberty, but it also has connections with other subjects treated elsewhere, such as justice and injustice (treated in Section 12.2) and man (treated in Chapter 1).

...

13.1 Freedom in Society

As the title of this section indicates, the subject treated is not freedom in general, nor liberty in all its diverse forms, but the individual's freedom of action within the social group and in relation to other individuals. This freedom is variously described, in the quotations assembled, as freedom from coercion, impediment, or duress; freedom to do as one pleases or wishes; the liberty to live or act as one chooses; or the liberty to act according to one's own rules or directions, not those of another.

The last of these formulations raises one of the central issues disputed by the authors represented here. On the one hand, there are those—for example, Montesquieu, Locke, and Rousseau—who maintain that just laws or laws made with the consent and suffrage of the governed in no way infringe or diminish individual freedom; freedom in society cannot be an unlimited freedom; it is a freedom regulated by law, and to act contrary to law is not liberty, but license. On the other hand, the reader will find passages from Hobbes, Bentham, and J. S. Mill setting forth the contrary view: that one has freedom of action only about matters concerning which the law is silent; and that as the sphere of law

enlarges, the sphere of liberty diminishes. Yet both groups of authors agree that freedom in society must be limited freedom, a liberty to do as one pleases only to the extent that one's actions cause no injury to others or do not have an adverse effect on the welfare of the community itself.

Other problems or issues are discussed: the relation of liberty and equality, the character of freedom in a democracy, the difference between freedom in a state of nature and freedom in civil society, and the relation of political liberty to moral freedom. For the consideration of moral freedom, which is quite a different thing from social or political freedom, the reader is referred to Section 9.4; and for the controversy over freedom of choice, or of the will, the reader is referred to Section 5.7. The discussion of subjects related to the materials covered here will also be found in Section 13.2 on Freedom of Thought and Expression: Censorship, Section 13.3 on Equality, Section 10.4 on Government of and by the People: Republic and Democracy, and Section 10.7 on Slavery.

■ ■ ■

1 Proclaim liberty throughout all the land unto all the inhabitants thereof.

Leviticus 25:10

2 *Pericles*. Our constitution... favours the many instead of the few; this is why it is called a democracy. If we look to the laws, they afford equal justice to all in their private differences; if no social standing, advancement in public life falls to reputation for capacity, class considerations

not being allowed to interfere with merit; nor again does poverty bar the way, if a man is able to serve the state, he is not hindered by the obscurity of his condition. The freedom which we enjoy in our government extends also to our ordinary life.

There, far from exercising a jealous surveillance over each other, we do not feel called upon to be angry with our neighbour for doing what he likes, or even to indulge in those injurious looks which cannot fail to be offensive, although they inflict no positive penalty. But all this ease in our private relations does not make us lawless as citizens. Against this fear is our chief safeguard, teaching us to obey the magistrates and the laws, particularly such as regard the protection of the injured, whether they are actually on the statute book, or belong to that code which, although unwritten, yet cannot be broken without acknowledged disgrace.

Thucydides, Peloponnesian War, II, 37

- 3 *Socrates*. The ruin of oligarchy is the ruin of democracy; the same disease magnified and intensified by liberty overmasters democracy—the truth being that the excessive increase of anything often causes a reaction in the opposite direction; and this is the case not only in the seasons and in vegetable and animal life, but above all in forms of government....

The excess of liberty, whether in States or individuals, seems only to pass into excess of slavery.

Plato, Republic, VIII, 563B

- 4 Every man should be responsible to others, nor should any one be allowed to do just as he pleases; for where

absolute freedom is allowed there is nothing to restrain the evil which is inherent in every man.

Aristotle, Politics, 1318b39

- 5 The measures which are taken by tyrants appear all of them to be democratic; such, for instance, as the licence permitted to slaves (which may be to a certain extent advantageous) and also that of women and children, and the allowing everybody to live as he likes. Such a government will have many supporters, for most persons would rather live in a disorderly than in a sober manner.

Aristotle, Politics, 1319b27

- 6 If the people are sovereign in a state and the government is run according to their will, it is called liberty. But it is really licence.

Cicero, Republic, III, 13

- 7 Where the Spirit of the Lord is, there is liberty.

II Corinthians 3:17

- 8 By *liberty* is understood... the absence of external impediments; which impediments may oft take away part of a man's power to do what he would, but cannot hinder him from using the power left him according as his judgement and reason shall dictate to him.

Hobbes, Leviathan, I, 14

- 9 Liberties. . . depend on the silence of the law. In cases where the sovereign has prescribed no rule, there the subject hath the liberty to do, or forbear, according to his own discretion. And therefore such liberty is in some

places more, and in some less; and in some times more, in other times less, according as they that have the sovereignty shall think most convenient.

Hobbes, Leviathan, II, 21

- 10 I did but prompt the age to quit their cloggs
By the known rules of antient libertie.
When strait a barbarous noise environs me
Of Owles and Cuckocs, Asses, Apes and Doggs.
As when those Hinds that were transform'd to Froggs
Raid at *Latona's* twin-born progenie
Which after held the Sun and Moon in fee.
But this is got by casting Pearl to Hoggs;
That bawle for freedom in their senceless mood,
And still revolt when truth would set them free.
Licence they mean when they cry libertie;
For who loves that, must first be wise and good;
But from that mark how far they roave we see
For all this wast of wealth, and loss of blood.

Milton, I did but prompt the age to quit their cloggs

- 11 None can love freedom heartily but good men; the rest love not freedom but license, which never hath more scope or more indulgence than under tyrants.

Milton, Tenure of Kings and Magistrates

- 12 The natural liberty of man is to be free from any superior power on earth, and not to be under the will or legislative authority of man, but to have only the law of Nature for his rule. The liberty of man in society is to be under no other legislative power but that established by consent in the commonwealth, nor under the dominion of any will,

or restraint of any law, but what that legislative shall enact according to the trust put in it. Freedom, then, is not what Sir Robert Filmer tells us: "A liberty for every one to do what he lists, to live as he pleases, and not to be tied by any laws"; but freedom of men under government is to have a standing rule to live by, common to every one of that society, and made by the legislative power erected in it. A liberty to follow my own will in all things where that rule prescribes not, not to be subject to the inconstant, uncertain, unknown, arbitrary will of another man, as freedom of nature is to be under no other restraint but the law of Nature.

Locke, II Civil Government, IV, 21

- 13 The freedom ... of man, and liberty of acting according to his own will, is grounded on his having reason, which is able to instruct him in that law he is to govern himself by, and make him know how far he is left to the freedom of his own will. To turn him loose to an unrestrained liberty, before he has reason to guide him, is not the allowing him the privilege of his nature to be free, but to thrust him out amongst brutes, and abandon him to a state as wretched and as much beneath that of a man as theirs.

Locke, II Civil Government, VI, 63

- 14 I think the question is not proper, *whether the will be free*, but *whether a man be free*. Thus, I think.

First, That so far as any one can, by the direction or choice of his mind, preferring the existence of any action to the non-existence of that action, and *vice versa*, make it to exist or not exist, so far he is free. For if I can, by a thought directing the motion of my finger, make it move

when it was at rest, or *vice versa*, it is evident, that in respect of that I am free: and if I can, by a like thought of my mind, preferring one to the other, produce either words or silence, I am at liberty to speak or hold my peace: and as far as this power reaches, of acting or not acting, by the determination of his own thought preferring either, so far is a man free. For how can we think any one freer, than to have the power to do what he will? And so far as any one can, by preferring any action to its not being, or rest to any action, produce that action or rest, so far can he do what he will. For such a preferring of action to its absence, is the willing of it: and we can scarce tell how to imagine any being freer, than to be able to do what he wills. So that in respect of actions within the reach of such a power in him, a man seems as free as it is possible for freedom to make him.

Locke, Concerning Human Understanding, Bk. II, XXI, 21

- 15 Is it worth the name of freedom to be at liberty to play the fool, and draw shame and misery upon a man's self? If to break loose from the conduct of reason, and to want that restraint of examination and judgment which keeps us from choosing or doing the worse, be liberty, true liberty, madmen and fools are the only freemen: but yet, I think, nobody would choose to be mad for the sake of such liberty, but he that is mad already.

Locke, Concerning Human Understanding, Bk. II, XXI, 51

- 16 He that has his chains knocked off, and the prison doors set open to him, is perfectly at liberty, because he may either go or stay, as he best likes; though his preference be determined to stay, by the darkness of the night, or

illness of the weather, or want of other lodging. He ceases not to be free; though the desire of some convenience to be had there absolutely determines his preference, and makes him stay in his prison.

*Locke, Concerning Human Understanding, Bk. 11, XXI,
51*

- 17 It is true that in democracies the people seem to act as they please; but political liberty does not consist in an unlimited freedom. In governments, that is, in societies directed by laws, liberty can consist only in the power of doing what we ought to will, and in not being constrained to do what we ought not to will.

We must have continually present to our minds the difference between independence and liberty. Liberty is a right of doing whatever the laws permit, and if a citizen could do what they forbid he would be no longer possessed of liberty, because all his fellow-citizens would have the same power.

Montesquieu, Spirit of Laws, XI, 3

- 18 Liberty consists principally in not being forced to do a thing, where the laws do not oblige: people are in this state only as they are governed by civil laws; and because they live under those civil laws, they are free.

Montesquieu, Spirit of Laws, XXVI, 20

- 19 Liberty ... is only and can be only the power to do what one will. That is what philosophy teaches us. But if one considers liberty in the theological sense, it is a matter so sublime that profane eyes dare not raise themselves to it.

Voltaire, Philosophical Dictionary: Free-Will

20 To renounce liberty is to renounce being a man, to surrender the rights of humanity and even its duties. For him who renounces everything no indemnity is possible. Such a renunciation is incompatible with man's nature; to remove all liberty from his will is to remove all morality from his acts.

Rousseau, Social Contract, I, 4

21 In order... that the social compact may not be an empty formula, it tacitly includes the undertaking, which alone can give force to the rest, that whoever refuses to obey the general will shall be compelled to do so by the whole body. This means nothing less than that he will be forced to be free; for this is the condition which, by giving each citizen to his country, secures him against all personal dependence. In this lies the key to the working of the political machine; this alone legitimises civil undertakings, which, without it, would be absurd, tyrannical, and liable to the most frightful abuses.

Rousseau, Social Contract, I, 7

22 What man loses by the social contract is his natural liberty and an unlimited right to everything he tries to get and succeeds in getting; what he gains is civil liberty and the proprietorship of all he possesses. If we are to avoid mistake in weighing one against the other, we must clearly distinguish natural liberty, which is bounded only by the strength of the individual, from civil liberty, which is limited by the general will; and possession, which is merely the effect of force or the right of the first occupier, from property, which can be founded only on a positive title.

We might, over and above all this, add, to what man acquires in the civil state, moral liberty, which alone makes him truly master of himself; for the mere impulse of appetite is slavery, while obedience to a law which we prescribe to ourselves is liberty.

Rousseau, Social Contract. I, 8

23 *Johnson*. We are all agreed as to our own liberty; we would have as much of it as we can get; but we are not agreed as to the liberty of others: for in proportion as we take, others must lose.

Boswell, Life of Johnson (Apr. 8, 1779)

24 In general, if any branch of trade, or any division of labour, be advantageous to the public, the freer and more general the competition, it will always be the more so.

Adam Smith, Wealth of Nations, II, 2

25 That degree of liberty which approaches to licentiousness can be tolerated only in countries where the sovereign is secured by a well-regulated standing army. It is in such countries only that the public safety does not require that the sovereign should be trusted with any discretionary power for suppressing even the impertinent wantonness of this licentious liberty.

Adam Smith, Wealth of Nations, V, I

26 The liberty, the only liberty, I mean is a liberty connected with order; that not only exists along with order and virtue, but which cannot exist at all without them. It inheres in good and steady government, as in its substance and vital principle.

Burke, Speech on Arrival at Bristol (Oct, 13, 1774)

- 27 The extreme of liberty (which is its abstract perfection, but its real fault) obtains nowhere, nor ought to obtain any-where; because extremes, as we all know, in every point which relates either to our duties or satisfactions in life, are destructive both to virtue and enjoyment. Liberty, too, must be limited in order to be possessed. The degree of restraint it is impossible in any case to settle precisely. But it ought to be the constant aim of every wise public counsel to find out by cautious experiments, and rational, cool endeavors, with how little, not how much, of this restraint the community can subsist: for liberty is a good to be improved, and not an evil to be lessened. It is not only a private blessing of the first order, but the vital spring and energy of the state itself, which has just so much life and vigor as there is liberty in it.

Burke, Letter to the Sheriffs of Bristol (Apr. 3, 1777)

- 28 The effect of liberty to individuals is, that they may do what they please: we ought to see what it will please them to do, before we risk congratulations, which may be soon turned into complaints.

Burke, Reflections on the Revolution in France

- 29 There is, indeed, an innate equality belonging to every man which consists in his right to be independent of being bound by others to anything more than that to which he may also reciprocally bind them. It is, consequently, the inborn quality of every man in virtue of which he ought to be his own master by right.

Kant, Division of the Science of Right, B

30 The liberty which the law ought to allow of, and leave in existence—leave uncoerced, unremoved—is the liberty which concerns those acts only, by which, if exercised, no damage would be done to the community as a whole; that is, either no damage at all, or none but what promises to be compensated by at least equal benefit. Accordingly, the exercise of the rights allowed to and conferred upon each individual, ought to have no other bounds set to it by law, than those which are necessary to enable it to maintain every other individual in the possession and exercise of such rights as...is consistent with the greatest good of the community.

Bentham, Anarchical Fallacies, 4

31 Liberty is to faction what air is to fire, an aliment without which it instantly expires. But it could not be less folly to abolish liberty, which is essential to political life, because it nourishes faction, than it would be to wish the annihilation of air, which is essential to animal life, because it imparts to fire its destructive agency.

Madison, Federalist 10

32 If a man has freedom enough to live healthy, and to work at his craft, he has enough; and so much all can easily obtain,

Goethe, Conversations with Eckermann (Jan. 18, 1827)

33 Me this unchartered freedom tires;
I feel the weight of chance-desires:
My hopes no more must change their name,
I long for a repose that ever is the same.

Wordsworth, Ode to Duty

34 Two Voices are there; one is of the sea.
One of the mountains; each a mighty Voice:
In both from age to age thou didst rejoice.
They were thy chosen music, Liberty!

*Wordsworth, Thought of a Briton on the Subjugation of
Switzerland*

35 Nuns fret not at their convent's narrow room;
And hermits are contented with their cells....
In truth the prison, into which we doom
Ourselves, no prison is: and hence for me,
In sundry moods, 't was pastime to be bound
Within the Sonnet's scanty plot of ground;
Pleased if some Souls (for such there needs must be)
Who have felt the weight of too much liberty.
Should find brief solace there, as I have found.

*Wordsworth, Nuns Fret Not at Their Convent's Narrow
Room*

36 Yet, Freedom, yet thy banner, torn but flying,
Streams like the thunder-storm against the wind.

Byron, Childe Harold's Pilgrimage, IV, 98

37 My very chains and I grew friends,
So much a long communion tends
To make us what we are:—even I
Regain'd my freedom with a sigh.

Byron, The Prisoner of Chillon, XIV, 389

38 The idea which people most commonly have of freedom is that it is arbitrariness—the mean, chosen by abstract reflection, between the will wholly determined by natural impulses, and the will free absolutely. If we hear it said that the definition of freedom is ability to do what we please, such an idea can only be taken to reveal an utter immaturity of thought, for it contains not even an inkling of the absolutely free will, of right, ethical life, and so forth. Reflection, the formal universality and unity of self-consciousness, is the will's abstract certainty of its freedom, but it is not yet the truth of freedom, because it has not yet got itself as its content and aim, and consequently the subjective side is still other than the objective; the content of this self-determination, therefore, also remains purely and simply finite. Instead of being the will in its truth, arbitrariness is more like the will as contradiction.

Hegel, Philosophy of Right, Introduction, 15

39 The conjunction of duty and right has a twofold aspect: what the state demands from us as a duty is *eo ipso* our right as individuals, since the state is nothing but the articulation of the concept of freedom. The determinations of the individual will are given an objective embodiment through the state and thereby they attain their truth and their actualization for the first time. The state is the one and only prerequisite of the attainment of particular ends and welfare.

Hegel, Philosophy of Right, Additions, Par. 261

40 Freedom is nothing but the recognition and adoption of such universal substantial objects as right and law, and

the production of a reality that is accordant with them—the state.

Hegel, Philosophy of History, Introduction, 3

41 Freedom has appeared in the world at different times and under various forms; it has not been exclusively bound to any social condition, and it is not confined to democracies. Freedom cannot, therefore, form the distinguishing characteristic of democratic ages. The peculiar and preponderant fact that marks those ages as its own is the equality of condition; the ruling passion of men in those periods is the love of this equality....

I think that democratic communities have a natural taste for freedom; left to themselves, they will seek it, cherish it, and view any privation of it with regret. But for equality their passion is ardent, insatiable, incessant, invincible; they call for equality in freedom; and if they cannot obtain that, they still call for equality in slavery. They will endure poverty, servitude, barbarism, but they will not endure aristocracy.

This is true at all times, and especially in our own day. All men and all powers seeking to cope with this irresistible passion will be overthrown and destroyed by it. In our age freedom cannot be established without it, and despotism itself cannot reign without its support.

Tocqueville, Democracy in America, Vol. II, II, 1

42 Nothing is more disgusting than the crowing about liberty by slaves, as most men are, and the flippant mistaking for freedom of some paper preamble like a Declaration of Independence or the statute right to vote, by those who have never dared to think or to act.

Emerson, Fate

- 43 Of old sat Freedom on the heights,
The thunders breaking at her feet;
Above her shook the starry lights;
She heard the torrents meet.

Tennyson, Of old sat Freedom on the heights

- 44 Pursue, keep up with, circle round and round your life, as a dog does his master's chaise. Do what you love. Know your own bone; gnaw it, bury it, unearth it, and gnaw it still. Do not be too moral. You may cheat yourself out of much life so. Aim above morality. Be not simply good; be good for something. All fables, indeed, have their morals; but the innocent enjoy the story. Let nothing come between you and the light. Respect men and brothers only. When you travel to the Celestial City, carry no letter of introduction. When you knock, ask to see God,—none of the servants. In what concerns you much, do not think that you have companions: know that you are alone in the world.

Thoreau, Letter to Mr. B (Mar. 27, 1848)

- 45 Why should we be in such desperate haste to succeed and in such desperate enterprises? If a man does not keep pace with his companions, perhaps it is because he hears a different drummer. Let him step to the music which he hears, however measured or far away. It is not important that he should mature as soon as an apple tree or an oak. Shall he turn his spring into summer? If the condition of things which we were made for is not yet, what were any reality which we can substitute?

Thoreau, Walden: Conclusion

46 The soul selects her own society
Then shuts the door.
On her divine majority
Obtrude no more.

Unmoved, she notes the chariots pausing
At her low gate.
Unmoved, an emperor is kneeling
Upon her mat.

I've known her from an ample nation
Choose one,
Then close the valves of her attention
Like stone.

Emily Dickinson, The Soul Selects

47 The world has never had a good definition of the word liberty, and the American people, just now, are much in want of one. We all declare for liberty; but in using the same word we do not all mean the same thing. With some the word liberty may mean for each man to do as he pleases with himself, and the product of his labor; while with others the same word may mean for some men to do as they please with other men, and the product of other men's labor. Here are two, not only different, but incompatible things, called by the same name—liberty. And it follows that each of the things is, by the respective parties, called by two different and incompatible names—liberty and tyranny.

Lincoln, Address at Sanitary Fair (Apr. 18, 1864)

48 The realm of freedom does not commence until the point is passed where labor under the compulsion of necessity and of external utility is required. In the very nature of things it lies beyond the sphere of material production in the strict meaning of the term. Just as the savage must wrestle with nature, in order to satisfy his wants, in order to maintain his life and reproduce it, so civilized man has to do it and he must do it in all forms of society and under all possible modes of production. With his development the realm of natural necessity expands, because his wants increase; but at the same time the forces of production increase by which these wants are satisfied.

Marx, Capital, Vol. III, VII, 48

49 In bourgeois society... the past dominates the present; in Communist society, the present dominates the past. In bourgeois society capital is independent and has individuality, while the living person is dependent and has no individuality.

And the abolition of this state of things is called by the bourgeois, abolition of individuality and freedom 1 And rightly so. The abolition of bourgeois individuality, bourgeois independence, and bourgeois freedom is undoubtedly aimed at.

By freedom is meant, under the present bourgeois conditions of production, free trade, free selling and buying.

But if selling and buying disappears, free selling and buying disappears also. This talk about free selling and buying, and all the other "brave words" of our bourgeoisie about freedom in general, have a meaning, if any, only in contrast with restricted selling and buying, with the fettered traders of the Middle Ages, but have no meaning

when opposed to the Communist abolition of buying and selling, of the bourgeois conditions of production, and of the bourgeoisie itself.

Marx and Engels, Communist Manifesto, II

50 What the proletarian needs, he can obtain only from this bourgeoisie, which is protected in its monopoly by the power of the State. The proletarian is, therefore, in law and in fact, the slave of the bourgeoisie, which can decree his life or death. It offers him the means of living, but only for an "equivalent" for his work. It even lets him have the appearance of acting from a free choice, of making a contract with free, unconstrained consent, as a responsible agent who has attained his majority.

Fine freedom, where the proletarian has no other choice than that of either accepting the conditions which the bourgeoisie offers him, or of starving, of freezing to death, of sleeping naked among the beasts of the forests! A fine "equivalent" valued at pleasure by the bourgeoisie. And if one proletarian is such a fool as to starve rather than to agree to the equitable propositions of the bourgeoisie, his "natural superiors," another is easily found in his place; there are proletarians enough in the world, and not all so insane as to prefer dying to living,

Engels, The Condition of the Working-Class in England in 1844, III

51 The state is the sum of all the negations of the individual liberty of all its members; or rather that of the sacrifices which all its members make, in renouncing one portion of their liberty to the profit of the common good. We have seen that, according to the individualist theory, the

liberty of each is the limit or rather the natural negation of the liberty of all the others. Well! this absolute limitation, this negation of the liberty of each in the name of the liberty of all or of the common right—that is the State. Thus, where the State begins, individual liberty ceases, and vice versa.

Bakunin, Philosophical Considerations

52 The sole end for which mankind are warranted, individually or collectively, in interfering with the liberty of action of any of their number, is self-protection. . . , The only purpose for which power can be rightfully exercised over any member of a civilised community, against his will, is to prevent harm to others.

Mill, On Liberty, I

53 As it is useful that while mankind are imperfect there should be different opinions, so it is that there should be different experiments of living; that free scope should be given to varieties of character, short of injur>» to others; and that the worth of different modes of life should be proved practically, when any one thinks fit to try them. It is desirable, in short, that in things which do not primarily concern others, individuality should assert itself.

Mill, On Liberty, III

54 There is no reason that all human existence should be constructed on some one or some small number of patterns. If a person possesses any tolerable amount of common sense and experience, his own mode of laying out his existence is the best, not because it is the best in itself, but because it is his own mode. Human beings are

not like sheep.... The same things which are helps to one person towards the cultivation of his higher nature are hindrances to another. The same mode of life is a healthy excitement to one, keeping all his faculties of action and enjoyment in their best order, while to another it is a distracting burthen, which suspends or crushes all internal life. Such are the differences among human beings in their sources of pleasure, their susceptibilities of pain, and the operation on them of different physical and moral agencies, that unless there is a corresponding diversity in their modes of life, they neither obtain their fair share of happiness, nor grow up to the mental, moral, and aesthetic stature of which their nature is capable.

Mill, On Liberty, III

55 As soon as any part of a person's conduct affects prejudicially the interests of others, society has jurisdiction over it, and the question whether the general welfare will or will not be promoted by interfering with it, becomes open to discussion. But there is no room for entertaining any such question when a person's conduct affects the interests of no persons besides himself, or needs not affect them unless they like (all the persons concerned being of full age, and the ordinary amount of understanding). In all such cases, there should be perfect freedom, legal and social, to do the action and stand the consequences.

Mill, On Liberty, IV

56 The preventive function of government... is far more liable to be abused, to the prejudice of liberty, than the punitive function. ... If either a public officer or any one

else saw a person attempting to cross a bridge which had been ascertained to be unsafe, and there were no time to warn him of his danger, they might seize him and turn him back, without any real infringement of his liberty; for liberty consists in doing what one desires, and he does not desire to fall into the river. Nevertheless, when there is not a certainty, but only a danger of mischief, no one but the person himself can judge of the sufficiency of the motive which may prompt him to incur the risk: in this case, therefore (unless he is a child, or delirious, or in some state of excitement or absorption incompatible with the full use of the reflecting faculty), he ought, I conceive, to be only warned of the danger; not forcibly prevented from exposing himself to it.

Mill, On Liberty, V

57 First and foremost of the necessary means towards man's civilisation we must name *expansion*. The need of expansion is as genuine an instinct in man as the need in plants for the light, or the need in man himself for going upright. All the conveniences of life by which man has enlarged and secured his existence—railroads and the penny post among the number—are due to the working in man of this force or instinct of expansion....

The love of liberty is simply the instinct in man for expansion. Not only to find oneself tyrannised over and outraged is a defeat to this instinct, but in general, to feel oneself over-tutored, over-governed, *sate upon* (as the popular phrase is) by authority, is a defeat to it.

Arnold, Mixed Essays, Pref.

58 It is by the goodness of God that in our country we have those three unspeakably precious things: freedom of speech, freedom of conscience, and the prudence never to practise either of them.

Mark Twain, Pudd'nhead Wilson's New Calendar, XX

59 Freedom means that the manly instincts that delight in war and victory have gained mastery over the other instincts—for example, over the instinct for 'happiness'. The man *who has become free* -and how much more the *mind* that has become free— spurns the contemptible sort of well-being dreamed of by shopkeepers, Christians, cows, women, Englishmen and other democrats.

Nietzsche, Twilight of the Idols: Expeditions of an Untimely Man

60 Liberty means responsibility. That is why most men dread it.

Shaw, Man and Superman, Maxims for Revolutionists

61 "Freedom" in its most abstract sense means the absence of external obstacles to the realization of desires. Taken in this abstract sense, freedom may be increased either by maximizing power or by minimizing wants. An insect which lives for a few days and then dies of cold may have perfect freedom according to the definition, since the cold may alter its desires, so that there is no moment when it wishes to achieve the impossible. Among human beings, also, this way of reaching freedom is possible. ... It is obvious that a community who all wish to murder each other cannot be so free as a community with more peaceable desires. Modification of desire may, therefore,

involve just as great a gain to freedom as increase of power.

Russell, Sceptical Essays, XIII

- 62 The freedom we should seek is not the right to oppress others, but the right to live as we choose and think as we choose where our doing so does not prevent others from doing likewise.

Russell, Sceptical Essays, XIII

- 63 Choice would hardly be significant if it did not take effect in outward action, and if it did not, when expressed in deeds, make a difference in things. Action as power would hardly be prized if it were power like that of an avalanche or an earthquake. The power, the ability to command issues and consequences, that forms freedom must, it should seem, have some connection with that something in personality that is expressed in choice. At all events, the essential problem of freedom, it seems to me, is the problem of the relation of choice and unimpeded effective action to each other.... There is an intrinsic connection between choice as freedom and power of action as freedom. A choice which intelligently manifests individuality enlarges the range of action, and this enlargement in turn confers upon our desires greater insight and foresight, and makes choice more intelligent. There is a circle, but an enlarging circle, or, if you please, a widening spiral.

Dewey, Philosophies of Freedom

- 64 If we want individuals to be free we must see to it that suitable conditions exist:—a truism which at least

indicates the direction in which to look and move.

It tells us among other things to get rid of the ideas that lead us to believe that democratic conditions automatically maintain themselves, or that they can be identified with fulfillment of prescriptions laid down in a constitution. Beliefs of this sort merely divert attention from what is going on, just as the patter of the prestidigitator enables him to do things that are not noticed by those whom he is engaged in fooling. For what is actually going on may be the formation of conditions that are hostile to any kind of democratic liberties. This would be too trite to repeat were it not that so many persons in the high places of business talk as if they believed or could get others to believe that the observance of formulae that have become ritualistic are effective safeguards of our democratic heritage.

Dewey, Freedom and Culture, 11

- 65 The only freedom that is of enduring importance is freedom of intelligence, that is to say, freedom of observation and of judgment exercised in behalf of purposes that are intrinsically worth while.

Dewey, Experience and Education, V

- 66 Freedom from restriction... is to be prized only as a means to a freedom which is power: power to frame purposes, to judge wisely, to evaluate desires by the consequences which will result from acting upon them; power to select and order means to carry chosen ends into operation.

Dewey, Experience and Education, V

67 To say that a man is free to choose to walk while the only walk he can take will lead him over a precipice is to strain words as well as facts.

Dewey, Human Nature and Conduct, IV, 3

68 To admit ignorance and uncertainty in man while denying them to nature involves a curious dualism. Variability, initiative, innovation, departure from routine, experimentation are empirically the manifestation of a genuine *nisus* in things. At all events it is these things that are precious to us under the name of freedom. It is their elimination from the life of a slave which makes his life servile, intolerable to the freeman who has once been on his own, no matter what his animal comfort and security. A free man would rather take his chance in an open world than be guaranteed in a closed world.

Dewey, Human Nature and Conduct, IV, 3

69 A man lives not only his personal life, as an individual, but also, consciously or unconsciously, the life of his epoch and his contemporaries.... All sorts of personal aims, ends, hopes, prospects, hover before the eyes of the individual, and out of these he derives the impulse to ambition and achievement. Now, if the life about him, if his own time seem, however outwardly stimulating, to be at bottom empty of such food for his aspirations; if he privately recognize it to be hopeless, viewless, helpless, opposing only a hollow silence to all the questions man puts, consciously or unconsciously, yet somehow puts, as to the final, absolute, and abstract meaning in all his efforts and activities; then, in such a case, a certain laming of the personality is bound to occur, the more

inevitably the more upright the character in question; a sort of palsy, as it were, which may even extend from his spiritual and moral over into his physical and organic part. In an age that affords no satisfying answer to the eternal question of "Why?" "To what end?" a man who is capable of achievement over and above the average and expected modicum must be equipped either with a moral remoteness and single-mindedness which is rare indeed and of heroic mould, or else with an exceptionally robust vitality.

Mann, Magic Mountain, II

70 If we have defined man's situation as a free choice, with no excuses and no recourse, every man who takes refuge behind the excuse of his passions, every man who sets up a determinism is a dishonest man.

The objection may be raised, "But why mayn't he choose himself dishonestly?" I reply that I am not obliged to pass moral judgment on him, but that I do define his dishonesty as an error. One cannot help considering the truth of the matter. Dishonesty is obviously a falsehood because it belies the complete freedom of involvement. On the same grounds, I maintain that there is also dishonesty if I choose to state that certain values exist prior to me; it is self-contradictory for me to want them and at the same state that they are imposed on me. Suppose someone says to me, "What if I want to be dishonest?" I'll answer, "There's no reason for you not to be, but I'm saying that that's what you are, and that the strictly coherent attitude is that of honesty."

Besides, I can bring moral judgment to bear. When I declare that freedom in every concrete circumstance can have no other aim than to want itself, if man has once

become aware that in his forlornness he imposes values, he can no longer want but one thing, and that is freedom, as the basis of all values. That doesn't mean that he wants it in the abstract. It means simply that the ultimate meaning of the acts of honest men is the quest for freedom as such. A man who belongs to a Communist or revolutionary union wants concrete goals; these goals imply an abstract desire for freedom; but this freedom is wanted in something concrete. We want freedom for freedom's sake and in every particular circumstance. And in wanting freedom we discover that it depends entirely on the freedom of others, and that the freedom of others depends on ours. Of course, freedom as the definition of man does not depend on others, but as soon as (here is involvement, I am obliged to want others to have freedom at the same time that I want my own freedom. I can take freedom as my goal only if I take that of others as a goal as well. Consequently, when, in all honesty, I've recognized that man is a being in whom existence precedes essence, that he is a free being who, in various circumstances, can want only his freedom, I have at the same time recognized that I can want only the freedom of others.

Therefore, in the name of this will for freedom, which freedom itself implies, I may pass judgment on those who seek to hide from themselves the complete arbitrariness and the complete freedom of their existence. Those who hide their complete freedom from themselves out of a spirit of seriousness or by means of deterministic excuses, I shall call cowards.

Sartre, Existentialism

13.2 Freedom of Thought and Expression

CENSORSHIP

Closely akin to freedom of action in society, discussed in Section 13.1, is freedom from interference in the expression of one's opinions, freedom from censorship in the publication of one's thought, and freedom in the production and, dissemination of works of art. The basic issue here is, of course, the one about state censorship of works of art and other forms of expression. Is the state ever justified in prohibiting the expression of opinion, or in condemning and repressing the communication of certain doctrines or views?

The reader will find quotations on both sides of the issue: those that argue for censorship on the grounds that the materials in question would, if allowed publication or dissemination, exert an injurious effect on the community or its members; and those that argue for complete, or almost complete, toleration of every variety of opinion or doctrine. Questions are raised about the extension of toleration to material that is obscene, libelous, seditious, heretical, and schismatic. The reader will observe that the passages drawn from antiquity and the Middle Ages tend to draw a sharp line between what should and should not be tolerated. Beginning with Milton's *Areopagitica* and coming down through Locke and Voltaire to J. S. Mill, the argument moves in the opposite direction—toward greater tolerance, based on increasing doubt that injury is ever done by the free expression of thought and opinion.

Related matters are discussed in Chapter 20, especially Section 20.9 on Heresy and Unbelief; and also in Chapter 6,

especially Section 6.5 on Opinion, Belief, and Faith, and Section 6.6 on Doubt and Skepticism.

■ ■ ■

- 1 *Artabanus*. It is impossible, if no more than one opinion is uttered, to make choice of the best: a man is forced then to follow whatever advice may have been given him; but if opposite speeches are delivered, then choice can be exercised. In like manner pure gold is not recognised by itself; but when we test it along with baser ore, we perceive which is the better.

Herodotus, History, VII, 10

- 2 *Socrates*. If you say to me, Socrates, this time we will not mind Anytus, and you shall be let off, but upon one condition, that you are not to enquire and speculate in this way any more, and that if you are caught doing so again you shall die;—if this was the condition on which you let me go, I should reply: Men of Athens, I honour and love you; but I shall obey God rather than you, and while I have life and strength I shall never cease from the practice and teaching of philosophy, exhorting any one whom I meet and saying to him after my manner: You, my friend,—a citizen of the great and mighty and wise city of Athens,— are you not ashamed of heaping up the greatest amount of money and honour and reputation, and caring so little about wisdom and truth and the greatest improvement of the soul, which you never regard or heed at all? And if the person with whom I am arguing, says: Yes, but I do care; then I do not leave him

or let him go at once; but I proceed to interrogate and examine and cross-examine him, and if I think that he has no virtue in him, but only says that he has, I reproach him with undervaluing the greater, and overvaluing the less. And I shall repeat the same words to every one whom I meet, young and old, citizen and alien, but especially to the citizens, inasmuch as they are my brethren. For know that this is the command of God; and I believe that no greater good has ever happened in the state than my service to the God.

Plato, Apology, 29B

- 3 *Socrates*. The beginning is the most important part of any work, especially in the case of a young and tender thing; for that is the time at which the character is being formed and the desired impression is more readily taken.... And shall we just carelessly allow children to hear any casual tales which may be devised by casual persons, and to receive into their minds ideas for the most part the very opposite of those which we should wish them to have when they are grown up?

Adeimantus. We cannot.

Then the first thing will be to establish a censorship of the writers of fiction, and let the censors receive any tale of fiction which is good, and reject the bad; and we will desire mothers and nurses to tell their children the authorised ones only. Let them fashion the mind with such tales.... A young person cannot judge what is allegorical and what is literal; anything that he receives into his mind at that age is likely to become indelible and unalterable; and therefore it is most important that the tales which the young first hear should be models of virtuous thoughts.

Plato, Republic, II, 377A

- 4 *Socrates*. Poets and story-tellers are guilty of making the gravest mis-statements when they tell us that wicked men are often happy, and the good miserable; and that injustice is profitable when undetected, but that justice is a man's own loss and another's gain—these things we shall forbid them to utter, and command them to sing and say the opposite.

Plato, Republic, III, 392A

- 5 *Socrates*. Shall our superintendence go no further, and are the poets only to be required by us to express the image of the good in their works, on pain, if they do anything else, of expulsion from our State? Or is the same control to be extended to other artists, and are they also to be prohibited from exhibiting the opposite forms of vice and intemperance and meanness and indecency in sculpture and building and the other creative arts; and is he who cannot conform to this rule of ours to be prevented from practising his art in our State, lest the taste of our citizens be corrupted by him? We would not have our guardians grow up amid images of moral deformity, as in some noxious pasture, and there browse and feed upon many a baneful herb and flower day by day, little by little, until they silently gather a festering mass of corruption in their own soul. Let our artists rather be those who are gifted to discern the true nature of the beautiful and graceful; then will our youth dwell in a land of health, amid fair sights and sounds, and receive the good in everything; and beauty, the effluence of fair works, shall flow into the eye and ear, like a health-giving breeze from a purer region, and insensibly draw the soul

from earliest years into likeness and sympathy with the beauty of reason.

Plato, Republic, III, 401A

- 6 *Socrates*. The imitative poet who aims at being popular is not by nature made, nor is his art intended, to please or to affect the rational principle in the soul; but he will prefer the passionate and fitful temper, which is easily imitated. . . . Therefore we shall be right in refusing to admit him into a well-ordered State, because he awakens and nourishes and strengthens the feelings and impairs the reason.

Plato, Republic, X, 605A

- 7 There is nothing which the legislator should be more careful to drive away than indecency of speech; for the light utterance of shameful words leads soon to shameful actions. The young especially should never be allowed to repeat or hear anything of the sort.... And since we do not allow improper language, clearly we should also banish pictures or speeches from the stage which are indecent.

Aristotle, Politics, 1336b3

- 8 Our Twelve Tables of law only carried the death penalty for a few crimes. Among these crimes was singing or composing a song that was derogatory or insulting to someone. This was a good law. Our way of life should be open to judgment by the magistrates and law courts and not left to the Commentary of clever playwrights. We should not be subjected to public disgrace unless we can answer and defend ourselves in a court of law. The early

Romans did not want any living man to be the object of praise or blame on the stage.

Cicero, Republic, IV, 10

- 9 One is... inclined to laugh at the stupidity of men who suppose that the despotism of the present can actually efface the remembrances of the next generation. On the contrary, the persecution of genius fosters its influence; foreign tyrants, and all who have imitated their oppression, have merely procured infamy for themselves and glory for their victims.

Tacitus, Annals, IV, 35

- 10 This was the most dreadful feature of the age, that leading members of the Senate, some openly, some secretly employed themselves in the very lowest work of the informer. One could not distinguish between aliens and kinsfolk, between friends and strangers, or say what was quite recent, or what half-forgotten from lapse of time. People were incriminated for some casual remark in the forum or at the dinner-table, for every one was impatient to be the first to mark his victim, some to screen themselves, most from being, as it were, infected with the contagion of the malady.

Tacitus, Annals, VI, 7

- 11 The laws of the Romans and the speculations of Plato have this resemblance, that the latter pronounce a wholesale condemnation of poetical fictions, while the former restrain the licence of satire, at least so far as men are the objects of it. Plato will not suffer poets even to dwell in his city: the laws of Rome prohibit actors from

being enrolled as citizens; and if they had not feared to offend the gods who had asked the services of the players, they would in all likelihood have banished them altogether. It is obvious, therefore, that the Romans could not receive, nor reasonably expect to receive, laws for the regulation of their conduct from their gods, since the laws they themselves enacted far surpassed and put to shame the morality of the gods. The gods demand stageplays in their own honour; the Romans exclude the players from all civic honours; the former commanded that they should be celebrated by the scenic representation of their own disgrace; the latter commanded that no poet should dare to blemish the reputation of any citizen. But that demigod Plato resisted the lust of such gods as these and showed the Romans what their genius had left incomplete; for he absolutely excluded poets from his ideal state, whether they composed fictions with no regard to truth or set the worst possible examples before wretched men under the guise of divine actions.

Augustine, City of God, II, 14

- 12 Human government is derived from the Divine government, and should imitate it. Now although God is all-powerful and supremely good, nevertheless He allows certain evils to take place in the universe, which He might prevent, lest, without them, greater goods might be forfeited, or greater evils ensue. Accordingly in human government also, those who are in authority, rightly tolerate certain evils, lest certain goods be lost, or certain greater evils be incurred.... Hence, though unbelievers sin in their rites, they may be tolerated, either on account of some good that ensues therefrom, or because of some evil avoided.

Aquinas, Summa Theologica, II-II, 10, 11

13 People are right to give the tightest possible barriers to the human mind. In study, as in everything else, its steps must be counted and regulated for it; the limits of the chase must be artificially determined for it. They bridle and bind it with religions, laws, customs, science, precepts, mortal and immortal punishments and rewards; and still we see that by its whirling and its incohesiveness it escapes all these bonds. It is an empty body, with nothing by which it can be seized and directed; a varying and formless body, which can be neither tied nor grasped.

Indeed there are few souls so orderly, so strong and wellborn, that they can be trusted with their own guidance, and that can sail with moderation and without temerity, in the freedom of their judgments, beyond the common opinions. It is more expedient to place them in tutelage.

The mind is a dangerous blade, even to its possessor, for anyone who does not know how to wield it with order and discretion. And there is no animal that must more rightly be given blinkers to hold its gaze, in subjection and constraint, in front of its feet, and to keep it from straying here or there outside the ruts that custom and the laws trace for it.

Wherefore it will become you better to confine yourself to the accustomed routine, whatever it is, than to fly headlong into this unbridled license.

Montaigne, Essays, II, 12, Apology for Raymond Sebond

14 It is annexed to the sovereignty to be judge of what opinions and doctrines are averse, and what conducing to

peace; and consequently, on what occasions, how far, and what men are to be trusted withal in speaking to multitudes of people; and who shall examine the doctrines of all books before they be published. For the actions of men proceed from their opinions, and in the well governing of opinions consisteth the well governing of men's actions in order to their peace and concord. And though in matter of doctrine nothing ought to be regarded but the truth, yet this is not repugnant to regulating of the same by peace. For doctrine repugnant to peace can no more be true, than peace and concord can be against the law of nature.

Hobbes, Leviathan, II, 18

- 15 Disobedience may lawfully be punished in them that against the laws teach even true philosophy.

Hobbes, Leviathan, IV, 46

- 16 For books are as meats and viands are; some of good, some of evil substance; and yet God, in that unapocryphal vision, said without exception, Rise, Peter, kill and eat, leaving the choice to each man's discretion. Wholesome meats to a vitiated stomach differ little or nothing from unwholesome; and best books to a naughty mind are not unappliable to occasions of evil. Bad meats will scarce breed good nourishment in the healthiest concoction; but herein the difference is of bad books, that they to a discreet and judicious reader serve in many respects to discover, to confute, to forewarn, and to illustrate. ... I conceive, therefore, that when God did enlarge the universal diet of man's body, saving ever the rules of temperance, He then also, as before, left arbitrary

the dieting and repasting of our minds; as wherein every mature man might have to exercise his own leading capacity.

Milton, Areopagitica

17 If every action, which is good or evil in man at ripe years, were to be under pittance and prescription and compulsion, what were virtue but a name, what praise could be then due to well-doing, what gratitude to be sober, just, or continent? Many there be that complain of Divine Providence for suffering Adam to transgress; foolish tongues! When God gave him reason, He gave him freedom to choose, for reason is but choosing; he had been else a mere artificial Adam, such an Adam as he is in the motions. We ourselves esteem not of that obedience, or love, or gift, which is of force: God therefore left him free, set before him a provoking object, ever almost in his eyes; herein consisted his merit, herein the right of his reward, the praise of his abstinence. Wherefore did He create passions within us, pleasures round about us, but that these rightly tempered are the very ingredients of virtue?...

This justifies the high providence of God, who, though He commands us temperance, justice, continence, yet pours out before us, even to a profuseness, all desirable things, and gives us minds that can wander beyond all limit and satiety. Why should we then affect a rigour contrary to the manner of God and of nature, by abridging or scanting those means, which books freely permitted are, both to the trial of virtue and the exercise of truth? It would be better done, to learn that the law must needs be frivolous, which goes to restrain things, uncertainly and yet equally working to good and to evil.

And were I the chooser, a dram of well-doing should be preferred before many times as much the forcible hindrance of evil-doing. For God sure esteems the growth and completing of one virtuous person more than the restraint of ten vicious.

Milton, Areopagitica

18 I know nothing of the licenser, but that I have his own hand here for his arrogance; who shall warrant me his judgment? The State, sir, replies the stationer, but has a quick return: The State shall be my governors, but not my critics; they may be mistaken in the choice of a licenser, as easily as this licenser may be mistaken in an author; this is some common stuff; and he might add from Sir Francis Bacon, That such authorised books are but the language of the times. For though a licenser should happen to be judicious more than ordinary, which will be a great jeopardy of the next succession, yet his very office and his commission enjoins him to let pass nothing but what is vulgarly received already.

Milton, Areopagitica

19 Give me the liberty to know, to utter, and to argue freely according to conscience, above all liberties.

Milton, Areopagitica

20 Whilst the parties of men cram their tenets down all men's throats whom they can get into their power, without permitting them to examine their truth or falsehood; and will not let truth have fair play in the world, nor men the liberty to search after it: what improvements can be expected of this kind? What

greater light can be hoped for in the moral sciences? The subject part of mankind in most places might, instead thereof, with Egyptian bondage, expect Egyptian darkness, were not the candle of the Lord set up by himself in men's minds, which it is impossible for the breath or power of man wholly to extinguish.

Locke, Concerning Human Understanding, Bk. IV, III, 20

- 21 Since... it is unavoidable to the greatest part of men, if not all, to have several opinions, without certain and indubitable proofs of their truth; and it carries too great an imputation of ignorance, lightness, or folly for men to quit and renounce their former tenets presently upon the offer of an argument which they cannot immediately answer, and show the insufficiency of: it would, methinks, become all men to maintain peace, and the common offices of humanity, and friendship, in the diversity of opinions; since we cannot reasonably expect that any one should readily and obsequiously quit his own opinion, and embrace ours, with a blind resignation to an authority which the understanding of man acknowledges not. For however it may often mistake, it can own no other guide but reason, nor blindly submit to the will and dictates of another.

Locke, Concerning Human Understanding, Bk. IV, XVI, 4

- 22 He knew no reason, why those who entertain opinions prejudicial to the publick, should be obliged to change, or should not be obliged to conceal them. And, as it was tyranny in any Government to require the first, so it was weakness not to enforce the second: for, a man may be

allowed to keep poisons in his closet, but not to vend them about as cordials.

Swift, Gulliver's Travels, II, 6

23 In what kind of government are censors necessary? My answer is, that they are necessary in a republic, where the principle of government is virtue. We must not imagine that criminal actions only are destructive of virtue; it is destroyed also by omissions, by neglects, by a certain coolness in the love of our country, by bad examples, and by the seeds of corruption: whatever does not openly violate but elude the laws, does not subvert but weaken them, ought to fall under the inquiry and correction of the censors....

In monarchies there should be no censors; the former are founded on honour, and the nature of honour is to have the whole world for its censor. Every man who fails in this article is subject to the reproaches even of those who are void of honour.

Montesquieu, Spirit of Laws, V, 19

24 I think, that the state ought to tolerate every principle of philosophy; nor is there an instance, that any government has suffered in its political interests by such indulgence. There is no enthusiasm among philosophers; their doctrines are not very alluring to the people; and no restraint can be put upon their reasonings, but what must be of dangerous consequence to the sciences, and even to the state, by paving the way for persecution and oppression in points, where the generality of mankind are more deeply interested and concerned.

Hume, Concerning Human Understanding, XI, 114

25 The spirit of the people must frequently be roused, in order to curb the ambition of the court; and the dread of rousing this spirit must be employed to prevent that ambition. Nothing so effectual to this purpose as the liberty of the press; by which all the learning, wit, and genius of the nation, may be employed on the side of freedom, and every one be animated to its defence. As long, therefore, as the republican part of our government can maintain itself against the monarchical, it will naturally be careful to keep the press open, as of importance to its own preservation.

Hume, Of the Liberty of the Press

26 The men of letters who have rendered the greatest services to the small number of thinking beings spread over the world, are the isolated writers, the true scholars shut in their studies, who have neither argued on the benches of the universities, nor told half-truths in the academies; and almost all of them have been persecuted- Our wretched species is so made that those who walk on the well-trodden path always throw stones at those who are showing a new road.

Montesquieu says that the Scythians rent their slaves' eyes, so that they might be less distracted while they were churning their butter; that is just how the inquisition functions, and in the land where this monster reigns almost everybody is blind. In England people have had two eyes for more than two hundred years; the French are starting to open one eye; but sometimes there are men in power who do not want the people to have even this one eye open.

These poor persons in power are like Doctor Balouard of the Italian Comedy, who does not want to be served by

anyone but the dolt Harlequin, and who is afraid of having too shrewd a valet.

Compose some odes in praise of My Lord Superbus Fadius, some madrigals for his mistress; dedicate a book on geography to his door-keeper, you will be well-received; enlighten mankind, you will be exterminated.

Descartes was forced to leave his country, Gassendi was calumniated, Arnauld dragged out his days in exile; every philosopher is treated as the prophets were among the Jews.

Who would believe that in the eighteenth century a philosopher was dragged before the secular tribunals, and treated as impious by the tribunals of arguments, for having said that men could not practise the arts if they had no hands? I do not despair that soon the first person who is so insolent as to say that men could not think if they had no heads will be immediately condemned to the galleys; "for," some young graduate will say to him, "the soul is a pure spirit, the head is only matter; God can put the soul in the heel, as well as in the brain; therefore I denounce you as impious."

The greatest misfortune of a man of letters is not perhaps being the object of his confreres' jealousy, the victim of the cabal, the despised of the men of power; but of being judged by fools,

Voltaire, Philosophical Dictionary: Men of Letters

- 27 Of all religions, the Christian is without doubt the one which should inspire tolerance most, although up to now the Christians have been the most intolerant of all men. The Christian Church was divided in its cradle, and was divided even in the persecutions which under the first emperors it sometimes endured. Often the martyr was

regarded as an apostate by his brethren, and the Carpocratian Christian expired beneath the sword of the Roman executioners, excommunicated by the Ebionite Christian, the which Ebionite was anathema to the Sabellian.

This horrible discord, which has lasted for so many centuries, is a very striking lesson that we should pardon each other's errors; discord is the great ill of mankind; and tolerance is the only remedy for it.

There is nobody who is not in agreement with this truth, whether he meditates soberly in his study, or peaceably examines the truth with his friends. Why then do the same men who admit in private indulgence, kindness, justice, rise in public with so much fury against these virtues? Why? it is that their own interest is their god, and that they sacrifice everything to this monster that they worship.

I possess a dignity and a power founded on ignorance and credulity; I walk on the heads of the men who lie prostrate at my feet; if they should rise and look me in the face, I am lost; I must bind them to the ground, therefore, with iron chains.

Thus have reasoned the men whom centuries of bigotry have made powerful. They have other powerful men beneath them, and these have still others, who all enrich themselves with the spoils of the poor, grow fat on their blood, and laugh at their stupidity. They all detest tolerance, as partisans grown rich at the public expense fear to render their accounts, and as tyrants dread the word liberty. And then, to crown everything, they hire fanatics to cry at the top of their voices: "Respect my master's absurdities, tremble, pay, and keep your mouths shut."

It is thus that a great part of the world long was treated; but to-day when so many sects make a balance of power, what course to take with them? Every sect, as one knows, is a ground of error; there are no sects of geometers, algebraists, arithmeticians, because all the propositions of geometry, algebra and arithmetic are true. In every other science one may be deceived. What Thomist or Scotist theologian would dare say seriously that he is sure of his case?

If it were permitted to reason consistently in religious matters, it is clear that we all ought to become Jews, because Jesus Christ our Saviour was born a Jew, lived a Jew, died a Jew, and that he said expressly that he was accomplishing, that he was fulfilling the Jewish religion. But it is clearer still that we ought to be tolerant of one another, because We are all weak, inconsistent, liable to fickleness and error. Shall a reed laid low in the mud by the wind say to a fellow reed fallen in the opposite direction: "Crawl as I crawl, wretch, or I shall petition that you be torn up by the roots and burned?"

Voltaire, Philosophical Dictionary: Tolerance

28 *Johnson*. "They make a rout about *universal* liberty, without considering that all that is to be valued, or indeed can be enjoyed by individuals, is *private* liberty. Political liberty is good only so far as it produces private liberty. Now, Sir, there is the liberty of the press, which you know' is a constant topick. Suppose you and I and two hundred more were restrained from printing our thoughts: what then? What proportion would that restraint upon us bear to the private happiness of the nation?"

This mode of representing the inconveniences of restraint as light and insignificant, was a kind of sophistry in which he delighted to indulge himself, in opposition to the extreme laxity for which it has been fashionable for too many to argue, when it is evident, upon reflection, that the very essence of government is restraint; and certain it is, that as government produces rational happiness, too much restraint is better than too little. But when restraint is unnecessary, and so close as to gall those who are subject to it, the people may and ought to remonstrate; and, if relief is not granted, to resist. Of this manly and spirited principle, no man was more convinced than Johnson himself.

Boswell, Life of Johnson (May 1768)

- 29 *Johnson*. "Every society has a right to preserve publick peace and order, and therefore has a good right to prohibit the propagation of opinions which have a dangerous tendency. To say the *magistrate* has this right, is using an inadequate word: it is the *society* for which the magistrate is agent. He may be morally or theologically wrong in restraining the propagation of opinions which he thinks dangerous, but he is politically right." *Mayo*. "I am of opinion, Sir, that every man is entitled to liberty of conscience in religion; and that the magistrate cannot restrain that right." *Johnson*. "Sir, I agree with you. Every man has a right to liberty of conscience, and with that the magistrate cannot interfere. People confound liberty of thinking with liberty of talking; nay, with liberty of preaching. Every man has a physical right to think as he pleases; for it cannot be discovered how he thinks. He has not a moral right, for he ought to inform himself, and think Justly. But, Sir, no

member of a society has a right to *teach* any doctrine contrary to what the society holds to be true. The magistrate, I say, may be wrong in what he thinks: but while he thinks himself right, he may and ought to enforce what he thinks." *Mayo*. "Then, Sir, we are to remain always in error, and truth never can prevail; and the magistrate was right in persecuting the first Christians." *Johnson*. "Sir, the only method by which religious truth can be established is by martyrdom. The magistrate has a right to enforce what he thinks; and he who is conscious of the truth has a right to suffer. I am afraid there is no other way of ascertaining the truth, but by persecution on the one hand and enduring it on the other." *Goldsmith*. "But how is a man to act, Sir? Though firmly convinced of the truth of his doctrine, may he not think it wrong to expose himself to persecution? Has he a right to do so? Is it not, as it were, committing voluntary suicide?" *Johnson*. "Sir, as to voluntary suicide, as you call it, there are twenty thousand men in an army who will go without scruple to be shot at, and mount a breach for five-pence a day." *Goldsmith*. "But have they a moral right to do this?" *Johnson*. "Nay, Sir, if you will not take the universal opinion of mankind, I have nothing to say. If mankind cannot defend their own way of thinking, I cannot defend it. Sir, if a man is in doubt whether it would be better for him to expose himself to martyrdom or not, he should not do it. He must be convinced that he has a delegation from heaven."

Boswell, Life of Johnson (May 7, 1773)

- 30 *The Beggar's Opera*, and the common question, whether it was pernicious in its effects, having been introduced;—*Johnson*. "As to this matter, which has been very much

contested, I myself am of opinion, that more influence has been ascribed to *The Beggar's Opera*, than it in reality ever had; for I do not believe that any man was ever made a rogue by being present at its representation. At the same time I do not deny that it may have some influence, by making the character of a rogue familiar, and in some degree pleasing."

Boswell, Life of Johnson (Apr. 18, 1775)

- 31 *Johnson*. Every man has a right to utter what he thinks truth, and every other man has a right to knock him down for it.

Boswell, Life of Johnson (1780)

- 32 I mentioned Dr. Johnson's excellent distinction between liberty of conscience and liberty of teaching. *Johnson*. "Consider, Sir; if you have children whom you wish to educate in the principles of the Church of England, and there comes a Quaker who tries to pervert them to his principles, you would drive away the Quaker. You would not trust to the predomination of right, which you believe is in your opinions; you would keep wrong out of their heads. Now the vulgar are the children of the State. If any one attempts to teach them doctrines contrary to what the State approves, the magistrate may and ought to restrain him." *Seward*. "Would you restrain private conversation, Sir?" *Johnson*. "Why, Sir, it is difficult to say where private conversation begins, and where it ends. If we three should discuss even the great question concerning the existence of a Supreme Being by ourselves, we should not be restrained; for that would be to put an end to all improvement. But if we should

discuss it in the presence of ten boarding-school girls, and as many boys, I think the magistrate would do well to put us in the stocks, to finish the debate there."

Boswell, Life of Johnson (Apr. 29, 1783)

- 33 The people are the only censors of their governors; and even their errors will tend to keep these to the true principles of their institution. To punish these errors too severely would be to suppress the only safeguard of the public liberty. The way to prevent these irregular interpositions of the people is to give them full information of their affairs through the channel of the public papers, and to contrive that those papers should penetrate the whole mass of the people. The basis of our governments being the opinion of the people, the very first object should be to keep that right; and were it left to me to decide whether we should have a government without newspapers, or newspapers without a government, I should not hesitate a moment to prefer the latter.

Jefferson, Letter to Edward Carrington (Jan. 16, 1787)

- 34 Every difference of opinion is not a difference of principle. We have called by different names brethren of the same principle. We are all Republicans, we are all Federalists. If there be any among us who would wish to dissolve this Union or to change its republican form, let them stand undisturbed as monuments of the safety with which error of opinion may be tolerated where reason is left free to combat it.

Jefferson, First Inaugural Address

35 Let each thinker pursue his own path; if he shows talent, if he gives evidence of profound thought, in one word, if he shows that he possesses the power of reasoning—reason is always the gainer. If you have recourse to other means, if you attempt to coerce reason, if you raise the cry of treason to humanity, if you excite the feelings of the crowd, which can neither understand nor sympathize with such subtle speculations—you will only make yourselves ridiculous. For the question does not concern the advantage or disadvantage which we are expected to reap from such inquiries; the question is merely how far reason can advance in the field of speculation, apart from all kinds of interest, and whether we may depend upon the exertions of speculative reason, or must renounce all reliance on it.

Kant, Critique of Pure Reason, Transcendental Method

36 To define freedom of the press as freedom to say and write whatever we please is parallel to the assertion that freedom as such means freedom to do as we please. Talk of this kind is due to wholly uneducated, crude, and superficial ideas. Moreover, it is in the very nature of the thing that abstract thinking should nowhere be so stubborn, so unintelligent, as in this matter of free speech, because what it is considering is the most fleeting, the most contingent, and the most personal side of opinion in its infinite diversity of content and tergiversation. Beyond the direct incitation to theft, murder, rebellion, etc., there lies its artfully constructed expression—an expression which seems in itself quite general and vague, while all the time it conceals a meaning anything but vague or else is compatible with inferences which are not actually expressed, and it is

impossible to determine whether they rightly follow from it, or whether they were meant to be inferred from it. This vagueness of matter and form precludes laws on these topics from attaining the requisite determinacy of law, and since the trespass, wrong, and injury here are so extremely personal and subjective in form, judgement on them is reduced equally to a wholly subjective verdict. Such an injury is directed against the thoughts, opinions, and wills of others, but apart from that, these form the element in which alone it is actually anything. But this element is the sphere of the freedom of others, and it therefore depends on them whether the injurious expression of opinion is or is not actually an effective act.

Laws then [against libel, etc.] may be criticized by exhibiting their indeterminacy as well as by arguing that they leave it open to the speaker or writer to devise turns of phrase or tricks of expression, and so evade the laws or claim that judicial decisions are mere subjective verdicts. Further, however, against the view that the expression of opinion is an act with injurious effects, it may be maintained that it is not an act at all, but only opining and thinking, or only talking. And so we have before us a claim that mere opining and talking is to go unpunished because it is of a purely subjective character both in form and content, because it does not mean anything and is of no importance. And yet in the same breath we have the claim that this same opining and talking should be held in high esteem and respect—the opining because it is personal property and in fact pre-eminently the property of mind; the talking because it is only this same property being expressed and used.

But the substance of the matter is and remains that traducing the honour of anyone, slander, abuse, the

contemptuous caricature of government, its ministers, officials, and in particular the person of the monarch, defiance of the laws, incitement to rebellion, etc., etc., are all crimes or misdemeanours in one or other of their numerous gradations. The rather high degree of indeterminability which such actions acquire on account of the element in which they are expressed does not annul this fundamental character of theirs. Its only effect is that the subjective field in which they are committed also determines the nature and form of the reaction to the offence. It is the field in which the offence was committed which itself necessitates subjectivity of view, contingency, etc., in the reaction to the offence, whether the reaction takes the form of punishment proper or of police action to prevent crimes. Here, as always, abstract thinking sets itself to explain away the fundamental and concrete nature of the thing by concentrating on isolated aspects of its external appearance and on abstractions drawn therefrom.

The sciences, however, are not to be found anywhere in the field of opinion and subjective views, provided of course that they be sciences in other respects. Their exposition is not a matter of clever turns of phrase, allusiveness, half-utterances, and semi-reticences, but consists in the unambiguous, determinate, and open expression of their meaning and purport. It follows that they do not fall under the category of public opinion. Apart from this, however, as I said just now, the element in which views and their expression become actions in the full sense and exist effectively, consists of the intelligence, principles, and opinions of others. Hence this aspect of these actions, that is their effectiveness proper and their danger to individuals, society, and the

state depends on the character of the ground on which they fall, just as a spark falling on a heap of gunpowder is more dangerous than if it falls on hard ground where it vanishes without trace. Thus, just as the right of science to express itself depends on and is safeguarded by its subject-matter and content, so an illegitimate expression may also acquire a measure of security, or at least sufferance, in the scorn which it has brought upon itself.

Hegel, Philosophy of Rights 319

37 Every' burned book or house enlightens the world.

Emerson, Compensation

38 The great writers to whom the world owes what religious liberty it possesses, have mostly asserted freedom of conscience as an indefeasible right, and denied absolutely that a human being is accountable to others for his religious belief. Yet so natural to mankind is intolerance in whatever they really care about, that religious freedom has hardly anywhere been practically realised, except where religious indifference, which dislikes to have its peace disturbed by theological quarrels, has added its weight to the scale.

Mill, On Liberty, I

39 If all mankind minus one were of one opinion, and only one person were of the contrary opinion, mankind would be no more justified in silencing that one person, than he, if he had the power, would be justified in silencing mankind.

Mill, On Liberty, II

40 We have now recognised the necessity to the mental well-being of mankind (on which all their other well-being depends) of freedom of opinion, and freedom of the expression of opinion, on four distinct grounds; which we will now briefly recapitulate.

First, if any opinion is compelled to silence, that opinion may, for aught we can certainly know, be true. To deny' this is to assume our own infallibility.

Secondly, though the silenced opinion be an error, if may, and very commonly does, contain a portion of truth; and since the general or prevailing opinion on any subject is rarely or never the whole truth, it is only by the collision of adverse opinions that the remainder of the truth has any chance of being supplied.

Thirdly, even if the received opinion be not only true, but the whole truth; unless it is suffered to be, and actually is, vigorously and earnestly contested, it will, by most of those who receive it, be held in the manner of a prejudice, with little comprehension or feeling of its rational grounds. And not only this, but, fourthly, the meaning of the doctrine itself will be in danger of being lost, or enfeebled, and deprived of its vital effect on the character and conduct: the dogma becoming a mere formal profession, inefficacious for good, but cumbering the ground, and preventing the growth of any real and heartfelt conviction, from reason or personal experience.

Mill, On Liberty, II

41 Men fear thought as they fear nothing else on earth—more than ruin, more even than death. Thought is subversive and revolutionary, destructive and terrible; thought is merciless to privilege, established institutions, and comfortable habits; thought is anarchic and lawless,

indifferent to authority, careless of the well-tried wisdom of the ages. Thought looks into the pit of hell and is not afraid. It sees man, a feeble speck, surrounded by unfathomable depths of silence; yet it bears itself proudly, as unmoved as if it were lord of the universe. Thought is great and swift and free, the light of the world, and the chief glory of man.

But if thought is to become the possession of many, not the privilege of the few, we must have done with fear. It is fear that holds men back— fear lest their cherished beliefs should prove delusions, fear lest the institutions by which they live should prove harmful, fear lest they themselves should prove less worthy of respect than they have supposed themselves to be. "Should the working man think freely about property? Then what will become of us, the rich? Should young men and young women think freely about sex? Then what will become of morality? Should soldiers think freely about war? Then what will become of military discipline? Aw-ay with thought! Back into the shades of prejudice, lest property, morals, and war should be endangered! Better men should be stupid, slothful, and oppressive than that their thoughts should be free. For if their thoughts were free they might not think as we do. And at all costs this disaster must be averted." So the opponents of thought argue in the unconscious depths of their souls. And so they act in their churches, their schools, and their universities.

Russell, Education

- 42 The fundamental argument for freedom of opinion is the doubtfulness of all our beliefs. If we certainly knew the truth, there would be something to be said for teaching it.

But in that ease it could be taught without invoking authority, by means of its inherent reasonableness. It is not necessary to make a law that no one shall be allowed to teach arithmetic if he holds heretical opinions on the multiplication table, because here the truth is clear, and does not require to be enforced by penalties. When the State intervenes to ensure the teaching of some doctrine, it does so because there is no conclusive evidence in favour of that doctrine.

Russell, Sceptical Essays, XIV

13.3 Equality

Two main questions are discussed in the passages assembled here. One is whether persons *are* by nature equal in any sense. The question is not whether individuals are unequal in a wide variety of respects—in their natural endowments and in their personal attainments; no one has ever denied that; but whether there is any truth in the proposition that men *are created* equal or *are by nature* equal in any sense of the term. The other question is whether men *should be* accorded equality of status or of opportunity and *should be* given an equality of external conditions. The question that involves the word "should," as contrasted with the question that involves the word "are," elicits a range of diverse answers, from the advocacy of a complete equality of conditions to the opposite extreme of contending that the inequalities that exist among men, in their natural endowments and their personal attainments, call for inequality of treatment, status, and opportunity.

Closely related to the issue raised by the second question is the issue concerning the relation of liberty and equality. The reader will find famous passages from John G. Calhoun, Alexis de Tocqueville, and William Graham Sumner arguing that liberty and equality are incompatible: every movement toward equality of treatment or the establishment of an equality of conditions tends to interfere with or diminish individual liberty. On the opposite side, the reader will find Henry George and R. H. Tawney arguing that equality of conditions, especially in economic matters, is indispensable to the operation and preservation of political liberty.

Crucial to both issues, of course, is the position one takes on the question of human equality: whether there is any significant respect in which all men are naturally or personally equal, and whether such equality is more fundamental than the many respects in which individuals are unequal. Relevant to this question is the discussion of natural slavery in Section 10.7 on Slavery; also relevant are the arguments for and against democracy that will be found in Section 10.4 on Government of and by the People: Republic AND Democracy. Other sections in which equality is a pivotal term are 12.2 on Justice AND Injustice, 12.3 on Rights—Natural and Civil, and 10.8 on Classes and Class Conflict.

The reader should observe that the main concern in certain of these contexts is political equality, equality of rights, or equality before the law; in other contexts it is economic equality—equality of wealth, in possessions, or in economic opportunity; and in still others it is social equality, achieved through the elimination of all discriminations based on gender, race, or ethnic origin.

■ ■ ■

1 *Jocasta*. It's better...

to honor Equality who tics friends to friends,
cities to cities, allies to allies.

For equality is stable among men.

If not, the lesser hates the greater force,
and so begins the day of enmity.

Equality set up men's weights and measures,
gave them their numbers.

Euripides, Phoenician Women, 535

2 *Athenian Stranger*. The old saying, that "equality makes friendship," is happy and also true; but there is obscurity and confusion as to what sort of equality is meant. For there are two equalities which are called by the same name, but are in reality in many ways almost the opposite of one another; one of them may be introduced without difficulty, by any state or any legislator in the distribution of honours: this is the rule of measure, weight, and number, which regulates and apportions them. But there is another equality, of a better and higher kind, which is not so easily recognized. This is the judgment of Zeus; among men it avails but little; that little, however, is the source of the greatest good to individuals and states. For it gives to the greater more, and to the inferior less and in proportion to the nature of each; and, above all, greater honour always to the greater virtue, and to the less less; and to either in proportion to their respective measure of virtue and education. And this is justice, and is ever the true

principle of states, at which we ought to aim, and according to this rule order the new city which is now being founded, and any other city which may be hereafter founded. To this the legislator should look—not to the interests of tyrants one or more, or to the power of the people, but to justice always; which, as I was saying, is the distribution of natural equality among unequals in each case. But there are times at which every state is compelled to use the words, "just," "equal," in a secondary sense, in the hope of escaping in some degree from factions. For equity and indulgence are infractions of the perfect and strict rule of justice. And this is the reason why we are obliged to use the equality of the lot, in order to avoid the discontent of the people; and so we invoke God and fortune in our prayers, and beg that they themselves will direct the lot with a view to supreme justice. And therefore, although we are compelled to use both equalities, we should use that into which the clement of chance enters as seldom as possible.

Plato, Laws, VI, 757A

- 3 The justice in transactions between man and man is a sort of equality indeed, and the injustice a sort of inequality; not according to that kind [geometrical] of proportion, however, but according to arithmetical proportion. For it makes no difference whether a good man has defrauded a bad man or a bad man a good one, nor whether it is a good or a bad man that has committed adultery; the law looks only to the distinctive character of the injury, and treats the parties as equal, if one is in the wrong and the other is being wronged, and if one inflicted injury and the other has received it. Therefore, this kind of injustice being an inequality, the judge tries to equalize it; for in

the case also in which one has received and the other has inflicted a wound, or one has slain and the other been slain, the suffering and the action have been unequally distributed; but the judge tries to equalize by means of the penalty, taking away from the gain of the assailant.... Therefore the equal is intermediate between the greater and the less, but the gain and the loss are respectively greater and less in contrary ways; more of the good and less of the evil are gain, and the contrary is loss; intermediate between them is, as we saw, the equal, which we say is just; therefore corrective justice will be the intermediate between loss and gain. This is why, when people dispute, they take refuge in the judge; and to go to the judge is to go to justice; for the nature of the judge is to be a sort of animate justice; and they seek the judge as an intermediate, and in some states they call judges mediators, on the assumption that if they get what is intermediate they will get what is just. The just, then, is an intermediate, since the judge is so. Now the judge restores equality; it is as though there were a line divided into unequal parts, and he took away that by which the greater segment exceeds the half, and added it to the smaller segment. And when the whole has been equally divided, then they say they have 'their own'—that is, when they have got what is equal.

Aristotle, Ethics, 1131b34

- 4 Equality does not seem to take the same form in acts of justice and in friendship; for in acts of justice what is equal in the primary sense is that which is in proportion to merit, while quantitative equality is secondary, but in friendship quantitative equality is primary and proportion to merit secondary.

Aristotle, Ethics, 1158b29

- 5 The only stable principle of government is equality according to proportion, and for every man to enjoy his own.

Aristotle, Politics, 1307a26

- 6 The third and most masterly stroke of this great lawgiver [Lycurgus] by which he struck a yet more effectual blow against luxury and the desire of riches, was the ordinance, he made, that they should all eat in common, of the same bread and same meat, and of kinds that were specified, and should not spend their Jives at home, laid on costly couches at splendid tables, delivering themselves up into the hands of their tradesmen and cooks, to fatten them in corners, like greedy brutes, and to ruin not their minds only but their very bodies which, enfeebled by indulgence and excess, would stand in need of long sleep, warm bathing, freedom from work, and, in a word, of as much care and attendance as if they were continually sick.

It was certainly an extraordinary thing to have brought about such a result as this, but a greater yet to have taken away from wealth, as Theophrastus observes, not merely the property of being coveted, but its very nature of being wealth. For the rich, being obliged to go to the same table with the poor, could not make use of or enjoy their abundance, nor so much as please their vanity by looking at or displaying it. So that the common proverb, that Plutus, the god of riches, is blind, was nowhere in all the world literally verified but in Sparta. There, indeed, he was not only blind, but like a picture, without either life or motion. Nor were they allowed to take food at

home first, and then attend the public tables, for every" one had an eye upon those who did not eat and drink like the rest, and reproached them with being dainty and effeminate.

Plutarch, Lycurgus

- 7 These reasonings have no logical connection: "I am richer than you, therefore I am your superior." "I am more eloquent than you, therefore I am your superior." The true logical connection is rather this: "I am richer than you, therefore my possessions must exceed yours." "I am more eloquent than you, therefore my style must surpass yours." But you, after all, consist neither in property nor in style.

Epictetus, Encheiridion, XLIV

- 8 The instincts of human nature . . . prompt men to scrutinize with keen eyes the recent elevation of their fellows, and to demand a temperate use of prosperity from none more rigorously than from those whom they have seen on a level with themselves.

Tacitus, Histories, II, 20

- 9 Equality of justice has its place in retribution, since equal rewards or punishments are due to equal merit or demerit. But this does not apply to things as at first instituted. For just as an architect, without injustice, places stones of the same kind in different parts of a building not on account of any antecedent difference in the stones, but with a view to securing that perfection of the entire building, which could not be obtained except by the different positions of the stones, even so, God from

the beginning, to secure perfection in the universe, has set therein creatures of various and unequal natures, according to His wisdom, and without injustice, since no diversity of merit is presupposed.

Aquinas, Summa Theologica, I, 65, 2

- 10 The souls of emperors and cobblers are cast in the same mold. Considering the importance of the actions of princes and their weightiness, we persuade ourselves that they are produced by some causes equally weighty and important. We are wrong: they are led to and fro in their movements by the same springs as we are in ours. The same reason that makes us bicker with a neighbor creates a war between princes; the same reason that makes us whip a lackey, when it happens in a king makes him ruin a province. Their will is as frivolous as ours, but their power is greater.

Montaigne, Essays, II, 12, Apology for Raymond Sebond

- 11 Nature hath made men so equal in the faculties of body and mind as that, though there be found one man sometimes manifestly stronger in body or of quicker mind than another, yet when all is reckoned together the difference between man and man is not so considerable as that one man can thereupon claim to himself any benefit to which another may not pretend as well as he. For as to the strength of body, the weakest has strength enough to kill the strongest, either by secret machination or by confederacy with others that are in the same danger with himself.

And as to the faculties of the mind, setting aside the arts grounded upon words, and especially that skill of

proceeding upon general and infallible rules, called science, which very few have and but in few things, as being not a native faculty born with us, nor attained, as prudence, while we look after somewhat else, I find yet a greater equality amongst men than that of strength. For prudence is but experience, which equal time equally bestows on all men in those things they equally apply themselves unto. That which may perhaps make such equality incredible is but a vain conceit of one's own wisdom, which almost all men think they have in a greater degree than the vulgar; that is, than all men but themselves, and a few others, whom by fame, or for concurring with themselves, they approve. For such is the nature of men that howsoever they may acknowledge many others to be more witty, or more eloquent, or more learned, yet they will hardly believe there be many so wise as themselves; for they see their own wit at hand, and other men's at a distance. But this proveth rather that men are in that point equal, than unequal. For there is not ordinarily a greater sign of the equal distribution of anything than that every man is contented with his share.

Hobbes, Leviathan, I, 13

- 12 The question who is the better man has no place in the condition of mere nature, where ... all men are equal. The inequality that now is has been introduced by the laws civil. I know that Aristotle in the first book of his *Politics*, for a foundation of his doctrine, maketh men by nature, some more worthy to command, meaning the wiser sort, such as he thought himself to be for his philosophy; others to serve, meaning those that had strong bodies, but were not philosophers as he; as if master and servant

were not introduced by consent of men, but by difference of wit: which is not only against reason, but also against experience. For there are very few so foolish that had not rather govern themselves than be governed by others: nor when the wise, in their own conceit, contend by force with them who distrust their own wisdom, do they always, or often, or almost at any time, get the victory. If nature therefore have made men equal, that equality is to be acknowledged: or if nature have made men unequal, yet because men that think themselves equal will not enter into conditions of peace, but upon equal terms, such equality must be admitted. And therefore for the ninth law of nature, I put this: *that every man acknowledge another for his equal by nature.*

Hobbes, Leviathan, I, 15

- 13 The safety of the people requireth further, from him or them that have the sovereign power, that justice be equally administered to all degrees of people; that is, that as well the rich and mighty, as poor and obscure persons, may be righted of the injuries done them; so as the great may have no greater hope of impunity, when they do violence, dishonour, or any injury to the meaner sort, than when one of these does the like to one of them: for in this consisteth equity; to which, as being a precept of the law of nature, a sovereign is as much subject as any of the meanest of his people.

Hobbes, Leviathan, II, 30

- 14 To understand political power aright, and derive it from its original, we must consider what estate all men are naturally in, and that is, a state of perfect freedom to

order their actions, and dispose of their possessions and persons as they think fit, within the bounds of the law of Nature, without asking leave or depending upon the will of any other man.

A state also of equality, wherein all the power and jurisdiction is reciprocal, no one having more than another, there being nothing more evident than that creatures of the same species and rank, promiscuously born to all the same advantages of Nature, and the use of the same faculties, should also be equal one amongst another, without subordination or subjection, unless the lord and master of them all should, by any manifest declaration of his will, set one above another, and confer on him, by an evident and clear appointment, an undoubted right to dominion and sovereignty.

Locke, II Civil Government, II, 4

15 Though I have said above "That all men by nature are equal," I cannot be supposed to understand all sorts of "equality." Age or virtue may give men a just precedency. Excellency of parts and merit may place others above the common level. Birth may subject some, and alliance or benefits others, to pay an observance to those to whom Nature, gratitude, or other respects, may have made it due; and yet all this consists with the equality which all men are in respect of jurisdiction or dominion one over another, which was the equality I there spoke of as proper to the business in hand, being that equal right that every man hath to his natural freedom, without being subjected to the will or authority of any other man.

Locke, II Civil Government, VI, 54

- 16 The love of equality in a democracy limits ambition to the sole desire, to the sole happiness, of doing greater services to our country than the rest of our fellow-citizens. They cannot all render her equal services, but they all ought to serve her with equal alacrity. At our coming into the world, we contract an immense debt to our country, which we can never discharge.

Montesquieu, Spirit of Laws, V, 3

- 17 As distant as heaven is from earth, so is the true spirit of equality from that of extreme equality. The former does not imply that everybody should command, or that no one should be commanded, but that we obey or command our equals. It endeavours not to shake off the authority of a master, but that its masters should be none but its equals.

Montesquieu, Spirit of Laws, VIII, 3

- 18 All men are born with a sufficiently violent liking for domination, wealth and pleasure, and with much taste for idleness; consequently, all men want their money and the wives or daughters of others, to be their master, to subject them to all their caprices, and to do nothing, or at least to do only very agreeable things. You see clearly that with these fine inclinations it is as impossible for men to be equal as it is impossible for two predicants or two professors of theology not to be jealous of each other.

The human race, such as it is, cannot subsist unless there is an infinity of useful men who possess nothing at all; for it is certain that a man who is well off will not leave his own land to come to till yours; and if you have need of a pair of shoes, it is not the Secretary to the Privy

Council who will make them for you. Equality, therefore, is at once the most natural thing and the most fantastic....

All men have the right in the bottom of their hearts to think themselves entirely equal to other men: it does not follow from that that the cardinal's cook should order his master to prepare him his dinner; but the cook can say: "I am a man like my master; like him I was born crying; like me he will die with the same pangs and the same ceremonies. Both of us perform the same animal functions. If the Turks take possession of Rome, and if then I am cardinal and my master cook, I shall take him into my service." This discourse is reasonable and just; but while waiting for the Great Turk to take possession of Rome, the cook must do his duty, or else all human society is perverted.

Voltaire, Philosophical Dictionary: Equality

- 19 I conceive that there are two kinds of inequality among the human species; one, which I call natural or physical, because it is established by nature, and consists in a difference of age, health, bodily strength, and the qualities of the mind or of the soul: and another, which may be called moral or political inequality, because it depends on a kind of convention, and is established, or at least authorised by the consent of men. This latter consists of the different privileges, which some men enjoy to the prejudice of others; such as that of being more rich, more honoured, more powerful or even in a position to exact obedience.

Rousseau, Origin of Inequality, Intro.

20 I have endeavoured to trace the origin and progress of inequality, and the institution and abuse of political societies, as far as these are capable of being deduced from the nature of man merely by the light of reason, and independently of those sacred dogmas which give the sanction of divine right to sovereign authority. It follows from this survey that, as there is hardly any inequality in the state of nature, all the inequality which now prevails owes its strength and growth to the development of our faculties and the advance of the human mind, and becomes at last permanent and legitimate by the establishment of property and laws. Secondly, it follows that moral inequality, authorised by positive right alone, clashes with natural right, whenever it is not proportionate to physical inequality; a distinction which sufficiently determines what we ought to think of that species of inequality which prevails in all civilised countries; since it is plainly contrary to the law of nature, however defined, that children should command old men, fools wise men, and that the privileged few should gorge themselves with superfluities, while the starving multitude are in want of the bare necessities of life.

Rousseau, Origin of Inequality, II

21 I shall end this chapter and this book by remarking on a fact on which the whole social system should rest: that is, that, instead of destroying natural inequality, the fundamental compact substitutes, for such physical inequality as nature may have set up between men, an equality that is moral and legitimate, and that men, who may be unequal in strength or intelligence, become every one equal by convention and legal right.

Rousseau, Social Contract, I, 9

22 *Johnson*. Sir, there is one Mrs. Macaulay in this town, a great republican. One day when I was at her house, I put on a very grave countenance, and said to her, 'Madam, I am now become a convert to your way of thinking. I am convinced that all mankind are upon an equal footing; and to give you an unquestionable proof, Madam, that I am in earnest, here is a very sensible, civil, well-behaved fellow-citizen, your footman; I desire that he may be allowed to sit down and dine with us.' I thus, Sir, shewed her the absurdity of the levelling doctrine. She has never liked me since. Sir, your levellers wish to level *down* as far as themselves; but they cannot bear leveling up to themselves. They would all have some people under them; why not then have some people above them?

Boswell, Life of Johnson (July 21, 1763)

23 On his favourite subject of subordination, Johnson said, "So far is it from being true that men are naturally equal, that no two people can be half an hour together, but one shall acquire an evident superiority over the other."

Boswell, Life of Johnson (Feb. 15, 1766)

24 I told him [Johnson] that Mrs. Macaulay said, she wondered how he could reconcile his political principles with his moral; his notions of inequality and subordination with wishing well to the happiness of all mankind, who might live so agreeably, had they all their portions of land, and none to domineer over another. Johnson. "Why, Sir, I reconcile my principles very well, because mankind are happier in a state of inequality and subordination. Were they to be in this pretty state of

equality, they would soon degenerate into brutes;-they would become Monboddos nation;—their tails would grow. Sir, all would be losers were all to work for all:— they would have no intellectual improvement. All intellectual improvement arises from leisure; all leisure arises from one working for another."

Boswell, Life of Johnson (Apr. 13, 1773)

- 25 Observing some beggars in the street as we walked along, I said to him I supposed there was no civilized country in the world, where the misery of want in the lowest classes of the people was prevented. *Johnson*. "I believe. Sir, there is not; but it is better that some should be unhappy, than that none should be happy, which would be the case in a general state of equality."

Boswell, Life of Johnson (Apr. 7, 1776)

- 26 The difference of natural talents in different men is in reality, much less than we are aware of.... The difference between the most dissimilar characters, between a philosopher and a common street porter, for example, seems to arise not so much from nature as from habit, custom, and education. When they came into the world, and for the first six or eight years of their existence, they were perhaps very much alike, and neither their parents nor playfellows could perceive any remarkable difference. About that age, or soon after, they come to be employed in very different occupations. The difference of talents comes then to be taken notice of, and widens by degrees, till at last the vanity of the philosopher is willing to acknowledge scarce any resemblance,

Adam Smith, Wealth of Nations, I, 2

27 Whatever each man can separately do, without trespassing upon others, he has a right to do for himself; and he has a right to a fair portion of all which society, with all its combinations of skill and force, can do in his favour. In this partnership all men have equal rights; but not to equal things. He that has but five shillings in the partnership, has as good a right to it, as he that has five hundred pounds has to his larger proportion. But he has not a right to an equal dividend in the product of the joint stock; and as to the share of power, authority, and direction which each individual ought to have in the management of the state, that I must deny to be amongst the direct original rights of man in civil society; for I have in my contemplation the civil social man, and no other. It is a thing to be settled by convention.

Burke, Reflections on the Revolution in France

28 The equality which might be set up, for example, in connexion with the distribution of goods, would all the same soon be destroyed again, because wealth depends on diligence. But if a project cannot be executed, it ought not to be executed. Of course men are equal, but only qua persons, that is, with respect only to the source from which possession springs; the inference from this is that everyone must have property. Hence, if you wish to talk of equality, it is this equality which you must have in view. But this equality is something apart from the fixing of particular amounts, from the question of how much I own. From this point of view it is false to maintain that justice requires everyone's property to be equal, since it requires only that everyone shall own property. The truth is that particularity is just the sphere where there is room for inequality and where equality would be wrong. True

enough, men often lust after the goods of others, but that is just doing wrong, since right is that which remains indifferent to particularity.

Hegel, Philosophy of Right, Additions, Par. 49

29 It is impossible to believe that equality will not eventually find its way into the political world, as it does everywhere else. To conceive of men remaining forever unequal upon a single point, yet equal on all others, is impossible; they must come in the end to be equal upon all.

Now, I know of only two methods of establishing equality in the political world; rights must be given to every citizen, or none at all to anyone. For nations which are arrived at the same stage of social existence as the Anglo-Americans, it is, therefore, very difficult to discover a medium between the sovereignty of all and the absolute power of one man: and it would be vain to deny that the social condition which I have been describing is just as liable to one of these consequences as to the other.

There is, in fact, a manly and lawful passion for equality that incites men to wish all to be powerful and honored. This passion tends to elevate the humble to the rank of the great; but there exists also in the human heart a depraved taste for equality, which impels the weak to attempt to lower the powerful to their own level and reduces men to prefer equality in slavery to inequality with freedom. Not that those nations whose social condition is democratic naturally despise liberty; on the contrary, they have an instinctive love of it. But liberty is not the chief and constant object of their desires; equality is their idol: they make rapid and

sudden efforts to obtain liberty and, if they miss their aim, resign themselves to their disappointment; but nothing can satisfy them without equality, and they would rather perish than lose it.

Tocqueville, Democracy in America, I, 3

30 It cannot be denied that democratic institutions strongly tend to promote the feeling of envy in the human heart; not so much because they afford to everyone the means of rising to the same level with others as because those means perpetually disappoint the persons who employ them. Democratic institutions awaken and foster a passion for equality which they can never entirely satisfy. This complete equality eludes the grasp of the people at the very moment when they think they have grasped it, and "flies," as Pascal says, "with an eternal flight"; the people are excited in the pursuit of an advantage, which is more precious because it is not sufficiently remote to be unknown or sufficiently near to be enjoyed. The lower orders are agitated by the chance of success, they are irritated by its uncertainty; and they pass from the enthusiasm of pursuit to the exhaustion of ill success, and lastly to the acrimony of disappointment. Whatever transcends their own limitations appears to be an obstacle to their desires, and there is no superiority, however legitimate it may be, which is not irksome in their sight.

Tocqueville, Democracy in America, I, 13

31 In proportion as castes disappear and the classes of society draw together, as manners, customs, and laws vary, because of the tumultuous intercourse of men, as

new facts arise, as new truths are brought to light, as ancient opinions are dissipated and others take their place, the image of an ideal but always fugitive perfection presents itself to the human mind. Continual changes are then every instant occurring under the observation of every man; the position of some is rendered worse, and he learns but too well that no people and no individual, however enlightened they may be, can lay claim to infallibility; the condition of others is improved, whence he infers that man is endowed with an indefinite faculty for improvement. His reverses teach him that none have discovered absolute good; his success stimulates him to the never ending pursuit of it. Thus, forever seeking, forever falling to rise again, often disappointed, but not discouraged, he tends unceasingly towards that unmeasured greatness so indistinctly visible at the end of the long track which humanity has yet to tread.

Tocqueville, Democracy in America, Vol. II, I, 8

32 Political liberty bestows exalted pleasure from time to time upon a certain number of citizens. Equality every day confers a number of small enjoyments on every man. The charms of equality are every instant felt and are within the reach of all; the noblest hearts are not insensible to them, and the most vulgar souls exult in them. The passion that equality creates must therefore be at once strong and general. Men cannot enjoy political liberty unpurchased by some sacrifices, and they never obtain it without great exertions. But the pleasures of equality are self-proffered; each of the petty incidents of life seems to occasion them, and in order to taste them, nothing is required but to live.

Democratic nations are at all times fond of equality, but there are certain epochs at which the passion they entertain for it swells to the height of fury. This occurs at the moment when the old social system, long menaced, is overthrown after a severe internal struggle, and the barriers of rank are at length thrown down. At such times men pounce upon equality as their booty, and they cling to it as to some precious treasure which they fear to loose. The passion for equality penetrates on every side into men's hearts, expands there, and fills them entirely. Tell them not that by this blind surrender of themselves to an exclusive passion they risk their dearest interests; they are deaf. Sow them not freedom escaping from their grasp while they are looking another way; they are blind, or rather they can discern but one object to be desired in the universe.

Tocqueville, Democracy in America, Vol. II, II, 1

- 33 When all the privileges of birth and fortune are abolished, when all professions are accessible to all, and a man's own energies may place him at the top of any one of them, an easy and unbounded career seems open to his ambition and he will readily persuade himself that he is born to no common destinies. But this is an erroneous notion, which is corrected by daily experience. The same equality that allows every citizen to conceive these lofty hopes renders all the citizens less able to realize them; it circumscribes their powers on every side, while it gives freer scope to their desires. Not only are they themselves powerless, but they are met at every step by immense obstacles, which they did not at first perceive. They have swept away the privileges of some of their fellow creatures which stood in their way, but they

have opened the door to universal competition; the barrier has changed its shape rather than its position. When men are nearly alike and all follow the same track, it is very difficult for any one individual to walk quickly and cleave a way through the dense throng that surrounds and presses on him. This constant strife between the inclination springing from the equality of condition and the means it supplies to satisfy them harasses and wearies the mind.

It is possible to conceive of men arrived at a degree of freedom that should completely content them; they would then enjoy their independence without anxiety and without impatience. But men will never establish any equality with which they can be contented. Whatever efforts a people may make, they will never succeed in reducing all the conditions of society to a perfect level; and even if they unhappily attained that absolute and complete equality of position, the inequality of minds would still remain, which, coming directly from the hand of God, will forever escape the laws of man. However democratic, then, the social state and the political constitution of a people may be, it is certain that every member of the community will always find out several points about him which overlook his own position; and we may foresee that his looks will be doggedly fixed in that direction. When inequality of conditions is the common law of society, the most marked inequalities do not strike the eye; when everything is nearly on the same level, the slightest are marked enough to hurt it. Hence the desire of equality always becomes more insatiable in proportion as equality is more complete.

Tocqueville, Democracy in America, Vol. II, II, 13

34 There is another error, not less great and dangerous, usually associated with the one which has just been considered. I refer to the opinion that liberty and equality are so intimately united that liberty cannot be perfect without perfect equality.

That they are united to a certain extent and that equality of citizens, in the eyes of the law, is essential to liberty in a popular government is conceded. But to go further and make equality of *condition* essential to liberty would be to destroy both liberty and progress. The reason is that inequality of condition, while it is a necessary consequence of liberty, is, at the same time, indispensable to progress. In order to understand why this is so, it is necessary to bear in mind that the mainspring to progress is the desire of individuals to better their condition and that the strongest impulse which can be given to it is to leave individuals free to exert themselves in the manner they may deem best for that purpose, as far at least as it can be done consistently with the ends for which government is ordained—and to secure to all the fruits of their exertions. Now, as individuals differ greatly from each other, in intelligence, sagacity, energy, perseverance, skill, habits of industry and economy, physical power, position, and opportunity, the necessary effect of leaving all free to exert themselves to better their condition must be a corresponding inequality between those who may possess these qualities and advantages in a high degree and those who may be deficient in them. The only means by which this result can be prevented are either to impose such restrictions on the exertions of those who may possess them in a high degree as will place them on a level with those who do not or to deprive them of the

fruits of their exertions. But to impose such restrictions on them would be destructive of liberty, while to deprive them of the fruits of their exertions would be to destroy the desire of bettering their condition. It is, indeed, this inequality of condition between the front and rear ranks, in the march of progress, which gives so strong an impulse to the former to maintain their position and to the latter to press forward into their files. This gives to progress its greatest impulse. To force the front rank back to the rear, or attempt to push forward the rear into line with the front, by the interposition of the government, would put an end to the impulse and effectually arrest the march of progress.

J. C. Calhoun, Disquisition on Government

- 35 Men are certainly not born free and equal in natural qualities; when they are born, the predicates “free” and “equal” in the political sense are not applicable to them; and as they develop year by year, the differences in the political potentialities with which they really are born, become more and more obviously converted into actual differences—the inequality of political faculty shows itself to be a necessary consequence of the inequality of natural faculty.

T. H. Huxley, On the Natural Inequality of Men

- 36 It is . . . conceded on all hands that men are not born physically, morally, or intellectually equal— some are males, some females, some from birth, large, strong, and healthy, others weak, small, and sickly—some are naturally amiable, others prone to all kinds of wickednesses—some brave, others timid. Their natural

inequalities beget inequalities of rights. The weak in mind or body require guidance, support, and protection; they must obey and work for those who protect and guide them—they have a natural right to guardians, committees, teachers, or masters. Nature has made them slaves; all that law and government can do is to regulate, modify, and mitigate their slavery. In the absence of legally instituted slavery, their condition would be worse under that natural slavery of the weak to the strong, the foolish to the wise and cunning. The wise and virtuous, the brave, the strong in mind and body, are by nature born to command and protect, and law but follows nature in making them rulers, legislators, judges, captains, husbands, guardians, committees, and masters. The naturally depraved class, those born prone to crime, are our brethren too; they are entitled to education, to religious instruction, to all the means and appliances proper to correct their evil propensities, and all their failings; they have a right to be sent to the penitentiary—for there, if they do not reform, they cannot at least disturb society. Our feelings and our consciences teach us that nothing but necessity can justify taking human life.

Fitzhugh, Sociology for the South

- 37 I think the authors of that notable instrument [the Declaration of Independence] intended to include *all* men, but they did not intend to declare all men equal in *all respects*. They did not mean to say all were equal in color, size, intellect, moral developments, or social capacity. They defined with tolerable distinctness, in what respects they did consider all men created equal—equal in "certain inalienable rights, among which are life, liberty, and the pursuit of happiness." This they said, and

this meant. They did not mean to assert the obvious untruth, that all were then actually enjoying that equality, nor yet, that they were about to confer it immediately upon them. In fact they had no power to confer such a boon. They meant simply to declare the *right*, so that the *enforcement* of it might follow as fast as circumstances should permit. They meant to set up a standard maxim for free society, which should be familiar to all, and revered by all; constantly looked to, constantly labored for, and even though never perfectly attained, constantly approximated, and thereby constantly spreading and deepening its influence, and augmenting the happiness and value of life to all people of all colors everywhere.

Lincoln, Speech at Springfield, Ill. (June 26, 1857)

- 38 There is no reason in the world why the negro is not entitled to all the natural rights enumerated in the Declaration of Independence, the right to life, liberty and the pursuit of happiness. I hold that he is as much entitled to these as the white man. I agree with Judge Douglas he is not my equal in many respects—certainly not in color, perhaps not in moral or intellectual endowment. But in the right to eat the bread, without leave of anybody else, which his own hand earns, he is my equal and the equal of Judge Douglas, and the equal of every living man.

Lincoln, Debate with Douglas (Aug. 21, 1858)

- 39 Democracy, in its very essence, insists so much more forcibly on the things in which all are entitled to be considered equally, than on those in which one person is

entitled to more consideration than another, that respect for even personal superiority is likely to be below the mark. It is for this, among other reasons, I hold it of so much importance that the institutions of the country should stamp the opinions of persons of a more educated class as entitled to greater weight than those of the less educated: and I should still contend for assigning plurality of votes to authenticated superiority of education, were it only to give the tone to public feeling, irrespective of any direct political consequences.

Mill, Representative Government, XII

40 Though the truth may not be felt or generally acknowledged for generations to come, the only school of genuine moral sentiment is society between equals. The moral education of mankind has hitherto emanated chiefly from the law of force, and is adapted almost solely to the relations which force creates. In the less advanced states of society, people hardly recognize any relation with their equals. To be an equal is to be an enemy. Society, from its highest place to its lowest, is one long chain, or rather ladder, where every individual is either above or below his nearest neighbour, and wherever he does not command he must obey. Existing moralities, accordingly, are mainly fitted to a relation of command and obedience. Yet command and obedience are but unfortunate necessities of human life: society in equality is its normal state. Already in modern life, and more and more as it progressively improves, command and obedience become exceptional facts in life, equal association its general rule. The morality of the first ages rested on the obligation to submit to power; that of the ages next following, on the right of the weak to the

forbearance and protection of the strong. How much longer is one form of society and life to content itself with the morality made for another? We have had the morality of submission, and the morality of chivalry and generosity; the time is now come for the morality of justice.

Mill, Subjection of Women, II

- 41 A thousand arguments may be discovered in favour of inequality, just as a thousand arguments may be discovered in favour of absolutism. And the one insuperable objection to inequality is the same as the one insuperable objection to absolutism: namely, that inequality, like absolutism, thwarts a vital instinct, and being thus against nature, is against our humanisation. On the one side, in fact, inequality harms by pampering; on the other, by vulgarising and depressing. A system founded on it is against nature, and in the long run breaks down.

Arnold, Mixed Essays, Pref.

- 42 Association in equality is the law of progress. Association frees mental power for expenditure in improvement, and equality, or justice, or freedom—for the terms here signify the same thing, the recognition of the moral law—prevents the dissipation of this power in fruitless struggles.

Here is the law of progress, which will explain all diversities, all advances, all halts, and retrogressions. Men tend to progress just as they come closer together, and by co-operation with each other increase the mental power that may be devoted to improvement, but just as

conflict is provoked, or association develops inequality of condition and power, this tendency to progression is lessened, checked, and finally reversed.

Henry George, Progress and Poverty, X, 3

- 43 The first effect of the tendency to political equality was to the more equal distribution of wealth and power; for, while population is comparatively sparse, inequality in the distribution of wealth is principally due to the inequality of personal rights, and it is only as material progress goes on that the tendency to inequality involved in the reduction of land to private ownership strongly appears. But it is now manifest that absolute political equality does not in itself prevent the tendency to inequality involved in the private ownership of land, and it is further evident that political equality, co-existing with an increasing tendency to the unequal distribution of wealth, must ultimately beget either the despotism of organized tyranny or the worse despotism of anarchy.

Henry George, Progress and Poverty, X, 4

- 44 Where there is anything like an equal distribution of wealth—that is to say, where there is general patriotism, virtue, and intelligence—the more democratic the government the better it will be; but where there is gross inequality in the distribution of wealth, the more democratic the government the worse it will be; for, while rotten democracy may not in itself be worse than rotten autocracy, its effects upon national character will be worse. To give the suffrage to tramps, to paupers, to men to whom the chance to labor is a boon, to men who must beg, or steal, or starve, is to invoke destruction. To put

political power in the hands of men embittered and degraded by poverty is to tie firebrands to foxes and turn them loose amid the standing corn; it is to put out the eyes of a Samson and to twine his arms around the pillars of national life.

Henry George, Progress and Poverty, X, 4

- 45 The doctrine of equality!... But there exists no more poisonous poison: for it *seems* to be preached by justice itself, while it is the *end* of justice.... 'Equality for equals, inequality for unequals'— *that* would be the true voice of justice: and, what follows from it, 'Never make equal what is unequal'.

Nietzsche, Twilight of the Idols: Expeditions of an Untimely Man

- 46 The poison of the doctrine 'equal rights for all'— this has been more thoroughly sowed by Christianity than by anything else; from the most secret recesses of base instincts, Christianity has waged a war to the death against every feeling of reverence and distance between man and man, against, that is, the *precondition* of every elevation, every increase in culture—it has forged out of the *ressentiment* of the masses its *chief weapon* against us, against everything noble, joyful, high-spirited on earth, against our happiness on earth.

Nietzsche, Antichrist, XLIII

- 47 If... there be liberty, men get from her just in proportion to their works, and their having and enjoying are just in proportion to their being and their doing. Such is the system of nature. If we do not like it, and if we try to

amend it, there is only one way in which we can do it. We can take from the better and give to the worse. We can deflect the penalties of those who have done ill and throw them on those who have done better. We can take the rewards from those who have done better and give them to those who have done worse. We shall thus lessen the inequalities. We shall favor the survival of the unfittest, and we shall accomplish this by destroying liberty. Let it be understood that we cannot go outside of this alternative: liberty, inequality, survival of the fittest; not-liberty, equality, survival of the unfittest. The former carries society forward and favors all its best members; the latter carries society downwards and favors all its worst members.

W. G. Sumner, Challenge of Facts

48 Socialists are filled with the enthusiasm of equality. Every scheme of theirs for securing equality has destroyed liberty. The student of political philosophy has the antagonism of equality and liberty constantly forced upon him. Equality of possession or of rights and equality before the law are diametrically opposed to each other. The object of equality before the law is to make the state entirely neutral. The state, under that theory, takes no cognizance of persons. It surrounds all, without distinctions, with the same conditions and guarantees. If it educates one, it educates all—black, white, red, or yellow; Jew or Gentile; native or alien. If it taxes one, it taxes all, by the same system and under the same conditions. If it exempts one from police regulations in home, church, and occupation, it exempts all. From this statement it is at once evident that pure equality before the law is impossible. Some occupations must be

subjected to police regulation. Not all can be made subject to militia duty even for the same limited period. The exceptions and special cases furnish the chance for abuse. Equality before the law, however, is one of the cardinal principles of civil liberty, because it leaves each man to run the race of life for himself as best he can. The state stands neutral but benevolent. It does not undertake to aid some and handicap others at the outset in order to offset hereditary advantages and disadvantages, or to make them start equally. Such a notion would belong to the false and spurious theory of equality which is socialistic. If the state should attempt this it would make itself the servant of envy. I am entitled to make the most I can of myself without hindrance from anybody, but I am not entitled to any guarantee that I shall make as much of myself as somebody else makes of himself.

W. G. Sumner, Challenge of Facts

- 49 Higgins, The great secret, Eliza, is not having bad manners or good manners or any other particular sort of manners, but having the same manner for all human souls: in short, behaving as if you were in Heaven, where there are no third-class carriages, and one soul is as good as another.

Shaw, Pygmalion, V

- 50 Today a surgeon who is too lazy or too uppish to put on his boots and pull off his trousers can find a valet who will do both for him, and will even submit to be sworn at and addressed on all occasions as an inferior, for a sufficient consideration. I am afraid this luxury will be untenable

under an equalitarian constitution. All able-bodied persons will have to valet themselves; and the ladies who ring for a maid in the middle of the night to pick up a book they have dropped out of bed, will have to get up and pick up the book for themselves, or take more care not to drop it. But though the surgeon may have to put on his own boots, it does not follow that he will have to clean them. A state of society in which a surgeon would have to clean the boots and knives; make the beds; lay and light the fires; and answer the door, is as unthinkable as one in which the housemaids would have to cut off their own legs. What is quite thinkable is that the surgeon and person who makes the surgeon's bed should have the same income and be equally polite to one another. As it is, the hospital nurse is sometimes better bred, as we call it, than the surgeon; and there are periods of their respective careers in which she has a larger income. There is certainly no reason why she should at any time have a smaller one.

Shaw, Redistribution of Income

- 51 The arguments for equality of income do not lie on the surface of individual interest. They are, as I have formulated them, first, the economic argument that as national needs should be satisfied in the order of their importance, equality of purchasing power is needed to prevent Ritz hotels from being built for idlers whilst workers are paying half a crown a week for half a bed in an overcrowded cottage; second, the political and legal argument that really representative parliaments and juries are impossible in a community broken up into antagonistic classes by differences of income; and last, that the supreme importance to the race of the fullest

and widest sexual selection makes it imperative that the whole community should consist of intermarriageable persons, and not, as at present, of individuals whose choice is limited to the narrow social circle formed by the local people of the same income. All these arguments are essentially comprehensive arguments: they do not occur to politicians who are pursuing merely individual interests for themselves and their constituents.

Shaw, Socialism and Culture

52 Throughout past history power has been used to give to the strong an undue share of good things and to leave to the weak a life of toil and misery.

Russell, Human Society in Ethics and Politics, II, 1

53 The doctrine of equality never meant what some of its critics supposed it to mean. It never asserted equality of natural gifts. It was a moral, a political and legal principle, not a psychological one. Thomas Jefferson believed as truly in a "natural aristocracy" as did John Adams. The existence of marked psychological inequalities was indeed one of the reasons why it was considered so important to establish political and legal equality. For otherwise those of superior endowment might, whether intentionally or without deliberation, reduce those of inferior capacity to a condition of virtual servitude. The words "nature" and "natural" are among the most ambiguous of all the words used to justify courses of action. Their very ambiguity is one source of their use in defense of any measure and end regarded as desirable. The words mean what is native, what is original or innate, what exists at birth in distinction from what is

acquired by cultivation and as a consequence of experience. But it also means that which men have got used to, inured to by custom, that imagination can hardly conceive of anything different. Habit is second nature and second nature under ordinary circumstances is as potent and urgent as first nature. Again, nature has a definitely moral import; that which is *normal* and hence is right; that which should be.

The assertion that men are free and equal by nature unconsciously, possibly deliberately, took advantage of the prestige possessed by what is "natural" in the first two senses to reinforce the moral force of the word. That "naturalness" in the moral sense provided the imperative ethical foundation of politics and law was, however, the axiomatic premise of democratic theory. Exercise of a liberty which was taken to be a moral right has in the course of events, especially economic events, seriously threatened the moral right to legal and political equality. While we may not believe that the revolutionary effect of steam, electricity, etc., has nullified moral faith in equality, their operation has produced a new difficult problem. The effect of statutes, of administrative measures, of judicial decision, upon the maintenance of equality and freedom cannot be estimated in terms of fairly direct personal consequences. we have first to estimate their effects upon complicated social conditions (largely a matter of guesswork), and then speculate what will be the effect of the new social conditions upon individual persons....

The point which is here pertinent is that early theory and practice assumed an inherent, and so to say pre-established, harmony between liberty and equality. As liberty has been practiced in industry and trade, the

economic inequalities produced have reacted against the existence of equality of opportunity. Only those who have a special cause to plead will hold that even in the most democratic countries, under the most favorable conditions, have children of the poor the same chances as those of the well-to-do, even in a thing like schooling which is supported at public expense. And it is no consoling offset that the children of the rich often suffer because of the onesided conditions under which they grow up.

Dewey, Freedom and Culture, III

54 It is obvious... that the word 'Equality' possesses more than one meaning, and that the controversies surrounding it arise partly, at least, because the same term is employed with different connotations. Thus it may either purport to state a fact, or convey the expression of an ethical judgment. On the one hand, it may affirm that men are, on the whole, very similar in their natural endowments of character and intelligence. On the other hand, it may assert that, while they differ profoundly as individuals in capacity and character, they are equally entitled as human beings to consideration and respect, and that the well-being of a society is likely to be increased if it so plans its organization that, whether their powers are great or small, all its members may be equally enabled to make the best of such powers as they possess.

R. H. Tawney, Equality, I

55 It is true... that some men are inferior to others in respect of their intellectual endowments, and it is possible—though the truth of the possibility has not yet been

satisfactorily established—that the same is true of certain classes. It does not, however, follow from this fact that such individuals or classes should receive less consideration than others, or should be treated as inferior in respect of such matters as legal status, or health, or economic arrangements, which are within the control of the community.

It may, of course, be deemed expedient so to treat them. It may be thought advisable, as Aristotle argued, to maintain the institution of slavery on the ground that some men are fit only to be living tools; or, as was customary in a comparatively recent past, to apply to the insane a severity not used towards the sane; or, as is sometimes urged today, to spend less liberally on the education of the slow than on that of the intelligent; or, in accordance with the practice of all ages, to show less respect for the poor than for the rich. But, in order to establish an inference, a major premise is necessary as well as a minor; and, if such discrimination on the part of society is desirable, its desirability must be shown by some other argument than the fact of inequality of intelligence and character. . . .

Everyone recognizes the absurdity of such an argument when it is applied to matters within his personal knowledge and professional competence. Everyone realizes that, in order to justify inequalities of circumstance or opportunity by reference to differences of personal quality, it is necessary, as Professor Ginsberg observes, to show that the differences in question are relevant to the inequalities. Everyone now sees, for example, that it is not a valid argument against women's suffrage to urge, as used to be urged not so long ago, that women are physically weaker than men, since

physical strength is not relevant to the question of the ability to exercise the franchise, or a valid argument in favour of slavery that some men are less intelligent than others, since it is not certain that slavery is the most suitable penalty for lack of intelligence.

R. H. Tawney, Equality, I

56 A society which values equality will attach a high degree of significance to differences of character and intelligence between different individuals, and a low degree of significance to economic and social differences between different groups. It will endeavour, in shaping its policy and organization, to encourage the former and to neutralize and suppress the latter, and will regard it as vulgar and childish to emphasize them when, unfortunately, they still exist.

R. H. Tawney, Equality, II

57 It is possible to conceive a community in which the necessary diversity of economic functions existed side by side with a large measure of economic and social equality. In such a community, while the occupations and incomes of individuals varied, they would live, nevertheless, in much the same environment, would enjoy similar standards of health and education, would find different positions, according to their varying abilities, equally accessible to them, would intermarry freely with each other, would be equally immune from the more degrading forms of poverty, and equally secure against economic oppression.

R. H. Tawney, Equality, II, 2

58 Since political arrangements may be such as to check excess of power, while economic arrangements permit or encourage them, a society, or a large part of it, may be both politically free and economically the opposite. It may be protected against arbitrary action by the agents of government, and be without the security against economic oppression which corresponds to civil liberty. It may possess the political institutions of an advanced democracy, and lack the will and ability to control the conduct of those powerful in its economic affairs, which is the economic analogy of political freedom.

The extension of liberty from the political to the economic sphere is evidently among the most urgent tasks of industrial societies. It is evident also, however, that, in so far as this extension takes place, the traditional antithesis between liberty and equality will no longer be valid. . . .

In conditions which impose co-operative, rather than merely individual, effort, liberty is, in fact, equality in action, in the sense, not that all men perform identical functions or wield the same degree of power, but that all men are equally protected against the abuse of power, and equally entitled to insist that power shall be used, not for personal ends, but for the general advantage. Civil and political liberty obviously imply, not that all men shall be members of parliament, cabinet ministers, or civil servants, but the absence of such civil and political inequalities as enable one class to impose its will on another by legal coercion. It should be not less obvious that economic liberty implies, not that all men should initiate, plan, direct, manage, or administer, but the absence of such economic inequalities as can be used as a means of economic constraint.

59 Along with the ethical urge of each individual to affirm his subjective existence, there is also the temptation to go to liberty and become a thing. This is an inauspicious road, for he who takes it—passive, lost, ruined—becomes henceforth the creature of another's will, frustrated in his transcendence and deprived of every value. But it is an easy road; on it one avoids the strain involved in undertaking an authentic existence. When man makes of woman the Other, he may, then, expect her to manifest deep-seated tendencies toward complicity. Thus, woman may fail to lay claim to the status of subject because she lacks definite resources, because she feels the necessary bond that tics her to man regardless of reciprocity, and because she is often very well pleased with her role as the Other.

Simone de Beauvoir, The Second Sex, Intro.

Chapter 14

WAR and PEACE

Chapter 14 is divided into three sections: 14.1 Warfare and the State of War, 14.2 The Instrumentalities of War: The Military, and 14.3 The Conditions of Peace.

Like Chapters 12 and 13, this chapter treats topics closely related to those treated in Chapter 10 on Politics. The discussion of war covers both civil war, or war within the boundaries of a state, and international war, or war between states. So, too, the discussion of peace considers the nature and conditions of civil peace as well as the prerequisites for international or world peace. The reader should, therefore, expect to find quotations in Sections 14.1 and 14.3 that deal with matters also treated in Chapter 10; and, in addition, the reader will find passages that are about equally relevant to war and to peace, which we have, nevertheless, placed in one or the other section, but not in both.

Section 14.2 on The Instrumentalities of War: The Military deals with armed force, in all its forms or varieties, as an instrument of the state, mainly in its relation with other states, but also as used against domestic insurrections. It includes passages describing the characteristics of military men.

The quotations collected in Section 14.2 are, of course, more closely related to those in Section 14.1 than to those in Section 14.3, though some passages will be found that argue for dominant military force as preventive of war even

though not productive of peace in the fullest sense of that term.

...

14.1 Warfare and the State of War

With a few exceptions to be noted, the predominant sentiment expressed by the writers represented here—poets, historians, and philosophers—deplores the horror and the folly of war. The poets and novelists, from Homer and Virgil to Tolstoy, depict the face of war in all its grimness and fiendishness: the episodes and encounters that they present with imaginative intensity support the philosopher's definition of war as the realm of pure force—force without right. The historians add confirmation by their accounts of campaigns and battles, accompanied by such comments as that war is "the greatest of follies," or that no one is "so foolish as to prefer war to peace."

The exceptions mentioned above are to be found in Machiavelli's statement that war is the proper business of princes; in Kant's observation that war, if conducted in a proper manner, has something ennobling about it; in Hegel's praise of war as a healthy disturbance that remedies the stagnation resulting from a prolonged peace; in Clausewitz's declaration that war is in essence nothing but politics itself carried on by other means; and in Nietzsche's insistence that war is necessary for human survival.

The reader will find passages in which the effort is made to distinguish between just and unjust wars, and passages in

which certain kinds of war are said to be better than others—for example, foreign as compared with civil wars. But the most important distinction noted here is the distinction between actual warfare and the state of war— a distinction that has only recently become generally recognized as the difference between "hot" and "cold" war.

The reader's attention is directed particularly to Thucydides' observation that the periods of no fighting during the thirty years of the Peloponnesian War were an armed truce, not a condition of peace; to Hobbes' statement that war is not a state of battle only, but, like the climate, a prevailing condition in which conflicts between sovereigns cannot be settled except by force; and to Locke's insight that peace is not merely the absence of fighting, but a state of affairs in which a duly constituted government has the authority and power to settle differences without recourse to violence on the parts of those in conflict.

If sovereigns are always in a state of war because, in relation to one another, they are in a state of anarchy, then it would seem to follow that government, the opposite of anarchy, is the indispensable prerequisite for the establishment and preservation of peace. The reader will find this insight developed in Section 14.3 on The Conditions of Peace and in Section 10.3 on Government: Its Nature, Necessity, and Forms. The reader will also find some consideration of the rights of war in Section 12.3 on Rights—Natural and Civil. Section 14.2 has a discussion of the instrumentalities employed in actual warfare—military personnel and equipment.

■ ■ ■

- 1 Thou hast heard, O my soul, the sound of the trumpet, the alarm of war.

Jeremiah 4:19

- 2 They have healed also the hurt of the daughter of my people slightly, saying, Peace, peace; when there is no peace.

Jeremiah 6:14

- 3 *Menelaos*. There is satiety in all things, in sleep, and love-making,
in the loveliness of singing and the innocent dance. In all these things a man will strive sooner to win satisfaction than in war.

Homer, Iliad, 636

- 4 *Aineias*. Warfare's finality lies in the work of hands, that of words in counsel.
It is not for us now to pile up talk, but to fight in battle.

Homer, Iliad, XVI, 629

- 5 *Chorus*. The god of war, money changer of dead bodies, held the balance of his spear in the fighting, and from the corpse-fires at Ilium sent to their dearest the dust heavy and bitter with tears shed packing smooth the urns with ashes that once were men.
They praise them through their tears, how this man knew well the craft of battle, how another went down splendid in the slaughter:

and all for some strange woman.
Thus they mutter in secrecy,
and the slow anger creeps below their grief
at Atreus' sons and their quarrels.
There by the walls of Ilium
the young men in their beauty keep
graves deep in the alien soil
they hated and they conquered.

Aeschylus, Agamemnon, 437

6 Meanwhile Croesus, taking the oracle in a wrong sense, led his forces into Cappadocia, fully expecting to defeat Cyrus and destroy the empire of the Persians. While he was still engaged in making preparations for his attack, a Lydian named Sandanis, who had always been looked upon as a wise man, but who after this obtained a very great name indeed among his countrymen, came forward and counselled the king in these words:

"Thou art about, oh I king, to make war against men who wear leathern trousers, and have all their other garments of leather; who feed not on what they like, but on what they can get from a soil that is sterile and unkindly; who do not indulge in wine, but drink water; who possess no figs nor anything else that is good to eat. If, then, thou conquerest them, what canst thou get from them, seeing that they have nothing at all? But if they conquer thee, consider how much that is precious thou wilt lose: if they once get a taste of our pleasant things, they will keep such hold of them that we shall never be able to make them loose their grasp. For my part, I am thankful to the gods that they have not put it into the hearts of the Persians to invade Lydia."

Herodotus, History, I, 71

- 7 *Croesus*. No one is so foolish as to prefer war to peace, in which, instead of sons burying their fathers, fathers bury their sons.

Herodotus, History, I, 87

- 8 Xerxes, when he fled away out of Greece, left his war-tent with Mardonius: when Pausanias, therefore, saw the tent with its adornments of gold and silver, and its hangings of divers colours, he gave commandment to the bakers and the cooks to make him ready a banquet in such fashion as was their wont for Mardonius. Then they made ready as they were bidden; and Pausanias, beholding the couches of gold and silver daintily decked out with their rich covertures, and the tables of gold and silver laid, and the feast itself prepared with all magnificence, was astonished at the good things which were set before him, and, being in a pleasant mood, gave commandment to his own followers to make ready a Spartan supper. When the suppers were both served, and it was apparent how vast a difference lay between the two, Pausanias laughed, and sent his servants to call to him the Greek generals. On their coming, he pointed to the two boards, and said:

—

"I sent for you, O Greeks, to show you the folly of this Median captain, who, when he enjoyed such fare as this, must needs come here to rob us of our penury."

Herodotus, History, IX, 82

- 9 *Neoptolemus*. War never takes a bad man but by chance, the good man always,

Sophocles, Philoctetes, 436

10 *Chorus*. Mindless, all of you, who in the strength of spears
and the tearing edge win your valors
by war, thus stupidly trying
to halt the grief of the world.
For if bloody debate shall settle
the issue, never again
shall hate be gone out of the cities of men.
By hate they won the chambers of Priam's city;
they could have solved by reason and words
the quarrel, Helen, for you.
Now these are given to the Death God below.
On the walls the flame, as of Zeus, lightened and fell.
And you, Helen, on your sorrows bear
more hardships still, and more matter for grieving.

Euripides, Helen, 1151

11 *Herald*. Your city is free;
That does not make it powerful. Hope has driven
Many cities against each other; she stirs
An overreaching heart; she is not to be trusted.
When the people vote on war, nobody reckons
On his own death; it is too soon; he thinks
Some other man will meet that wretched fate.
But if death faced him when he cast his vote,
Hellas would never perish from battle-madness.
And yet we men all know which of two words
Is better, and can weigh the good and bad
They bring: how much better is peace than war!
First and foremost, the Muses love her best;
And the goddess of vengeance hates her. She delights
In healthy children, and she glories in wealth.

But wickedly we throw all this away
To start our wars and make the losers slaves—
Man binding man and city chaining city.

Euripides, Suppliant Women, 477

- 12 The Peloponnesian War was prolonged to an immense length, and, long as it was, it was short without parallel for the misfortunes that it brought upon Hellas. Never had so many cities been taken and laid desolate, here by the barbarians, here by the parties contending (the old inhabitants being sometimes removed to make room for others); never was there so much banishing and bloodshedding, now on the field of battle, now in the strife of faction. Old stories of occurrences handed down by tradition, but scantily confirmed by experience, suddenly ceased to be incredible; there were earthquakes of unparalleled extent and violence; eclipses of the sun occurred with a frequency unrecorded in previous history; there were great droughts in sundry places and consequent famines, and that most calamitous and awfully fatal visitation, the plague. All this came upon them with the late war, which was begun by the Athenians and Peloponnesians by the dissolution of the thirty years' truce made after the conquest of Euboea. To the question why they broke the treaty, I answer by placing first an account of their grounds of complaint and points of difference, that no one may ever have to ask the immediate cause which plunged the Hellenes into a war of such magnitude. The real cause I consider to be the one which was formally most kept out of sight. The growth of the power of Athens, and the alarm which this inspired in Lacedaemon, made war inevitable.

Thucydides, Peloponnesian War, I, 23

- 13 *Corinthians*. Men are wont in their efforts against their enemies to forget everything for the sake of victory, regarding him who assists them then as a friend, even if thus far he has been a foe, and him who opposes them then as a foe, even if he has thus far been a friend; indeed they allow their real interests to suffer from their absorbing preoccupation in the struggle.

Thucydides, Peloponnesian War, I, 41

- 14 *Corinthians*. War of all things proceeds least upon definite rules, but draws principally upon itself for contrivances to meet an emergency; and in such cases the party who faces the struggle and keeps his temper best meets with most security, and he who loses his temper about it with correspondent disaster.

Thucydides, Peloponnesian War, I, 122

- 15 *Corinthians*. Out of war peace gains fresh stability, but to refuse to abandon repose for war is not so sure a method of avoiding danger.

Thucydides, Peloponnesian War, I, 124

- 16 *Pericles*. For those of course who have a free choice in the matter and whose fortunes are not at stake, war is the greatest of follies. But if the only choice was between submission with loss of independence, and danger with the hope of preserving that independence, in such a case it is he who will not accept the risk that deserves blame, not he who will.

Thucydides, Peloponnesian War, II, 61

- 17 *Hermocrates*. No one is forced to engage in it by ignorance, or kept out of it by fear, if he fancies there is anything to be gained by it. To the former the gain appears greater than the danger, while the latter would rather stand the risk than put up with any immediate sacrifice. But if both should happen to have chosen the wrong moment for acting in this way, advice to make peace would not be unserviceable.

Thucydides, Peloponnesian War, IV, 59

- 18 *Socrates*. Wars are occasioned by the love of money.

Plato, Phaedo, 66B

- 19 *Socrates*. A slice of our neighbours' land will be wanted by us for pasture and tillage, and they will want a slice of ours, if, like ourselves, they exceed the limit of necessity, and give themselves up to the unlimited accumulation of wealth?

Glaucon. That, *Socrates*, will be inevitable.
And so we shall go to war.

Plato, Republic, II, 373B

- 20 *Socrates*. A tyrant ... is always stirring up some war or other, in order that the people may require a leader.

Plato, Republic, VIII, 566B

- 21 *Cleinias* [a Cretan]. I think... that the aim of our institutions is easily intelligible to any one. Look at the character of our country; Crete is not like Thessaly, a large plain; and for this reason they have horsemen in Thessaly, and we have runners—the inequality of the ground in our country is more adapted to locomotion on

foot; but then, if you have runners you must have light arms—no one can carry a heavy weight when running, and bows and arrows are convenient because they are light. Now all these regulations have been made with a view to war, and the legislator appears to me to have looked to this in all his arrangements:—the common meals, if I am not mistaken, were instituted by him for a similar reason, because he saw that while they are in the field the citizens are by the nature of the case compelled to take their meals together for the sake of mutual protection. He seems to me to have thought the world foolish in not understanding that all men are always at war with one another; and if in war there ought to be common meals and certain persons regularly appointed under others to protect an army, they should be continued in peace. For what men in general term peace would be said by him to be only a name; in reality every city is in a natural state of war with every other, not indeed proclaimed by heralds, but everlasting. And if you look closely, you will find that this was the intention of the Cretan legislator; all institutions, private as well as public, were arranged by him with a view to war; in giving them he was under the impression that no possessions or institutions are of any value to him who is defeated in battle; for all the good things of the conquered pass into the hands of the conquerors.

Plato, Laws, I, 623B

- 22 In one point of view, the art of war is a natural art of acquisition, for the art of acquisition includes hunting, an art which we ought to practise against wild beasts, and against men who, though intended by nature to be

governed, will not submit; for war of such a kind is naturally just.

Aristotle, Politics, 1256b22

23 Then, after length of time, the labouring swains
Who turn the turfs of those unhappy plains,
Shall rusty piles from the ploughed furrows take.
And over empty helmets pass the rake—
Amazed at antique titles on the stones,
And mighty relics of gigantic bones.

Virgil, Georgics, I

24 Long the gods, we know.
Have grudged thee, Caesar, to the world below,
Where fraud and rapine right and wrong confound,
Where impious arms from every part resound,
And monstrous crimes in every shape are crowned.
The peaceful peasant to the wars is pressed;
The fields lie fallow in inglorious rest;
The plain no pasture to the flock affords;
The crooked scythes are straightened into swords:
And there Euphrates her soft offspring arms,
And here the Rhine rebellows with alarms;
The neighbouring cities range on several sides;
 Perfidious Mars long-pHghtcd leagues divides.
And o'er the wasted world in triumph rides.
So four fierce coursers, starting to the race,
Scour through the plain, and lengthen every pace;
Nor reins, nor curbs, nor threatening cries, they fear.
But force along the trembling charioteer.

Virgil, Georgics, I

25 The rustic honors of the scythe and share
Give place to swords and plumes, the pride of war.

Virgil, Aeneid, VII

26 Think not that I am come to send peace on earth:
I came not to send peace, but a sword.

Matthew 10:34

27 Ye shall hear of wars and rumours of wars.

Matthew 24:6

28 Then came they, and laid hands on Jesus, and took him.
And, behold, one of them which were with Jesus
stretched out his hand, and drew his sword, and struck a
servant of the high priest's, and smote off his ear.

Then said Jesus unto him, Put up again thy sword into
his place: for all they that take the sword shall perish with
the sword.

Matthew 26:50-52

29 For men whose ambition neither seas, nor mountains, nor
unpeopled deserts can limit, nor the bounds dividing
Europe from Asia confine their vast desires, it would be
hard to expect to forbear from injuring one another when
they touch and are close together. These are ever
naturally at war, envying and seeking advantages of one
another.

Plutarch, Pyrrhus

30 *Tiridates*. It is not ... by weak inaction that great empires
are held together; there must be the struggle of brave
men in arms; might is right with those who are at the

summit of power. And though it is the glory of a private house to keep its own, it is the glory of a king to fight for the possessions of others.

Tacitus, Annals, XV, 1

- 31 Men directing their weapons against each other— under doom of death yet neatly lined up to fight as in the pyrrhic sword-dances of their sport—this is enough to tell us that all human intentions are but play, that death is nothing terrible, that to die in a war or in a fight is but to taste a little beforehand what old age has in store, to go away earlier and come back the sooner.

Plotinus, Third Ennead, II, 15

- 32 Do they reply that the Roman empire could never have been so widely extended, nor so glorious, save by constant and unintermitting wars? A fit argument, truly! Why must a kingdom be distracted in order to be great? In this little world of man's body, is it not better to have a moderate stature, and health with it, than to attain the huge dimensions of a giant by unnatural torments, and when you attain it to find no rest, but to be pained the more in proportion to the size of your members?

Augustine, City of God, III, 10

- 33 The imperial city [Rome] has endeavoured to impose on subject nations not only her yoke, but her language, as a bond of peace, so that interpreters, far from being scarce, are numberless. This is true; but how many great wars, how much slaughter and bloodshed, have provided this unity! And though these are past, the end of these miseries has not yet come. For though there have never

been wanting, nor are yet wanting, hostile nations beyond the empire, against whom wars have been and are waged, yet, supposing there were no such nations, the very extent of the empire itself has produced wars of a more obnoxious description—social and civil wars—and with these the whole race has been agitated either by the actual conflict or the fear of a renewed outbreak.

Augustine, City of God, XIX, 7

- 34 In order for a war to be just... it is necessary that the belligerents should have a right intention, so that they intend the advancement of good, or the avoidance of evil.

Aquinas, Summa Theologica, II-II, 40, 1

- 35 Upon this [cry of "War!"], one of the old wise ones arose, and with his hand commanding silence and attention, he said: "Masters, there is many a man to cry 'War, War!' who yet knows but little of the meaning of it. War, in the beginning, has so high an entrance, and so wide, that every man may enter when he pleases, and may find war easily. But truly, what the end of war shall be is not so easy to know. For when a war is once begun, many an unborn child shall die in the womb because of the strife, or else shall be born into sorrow and die in wretchedness. Therefore, ere any war begins, men should take much counsel together and act only after much deliberation."

Chaucer, Canterbury Tales: Tale of Melibeus

- 36 A prince ought to have no other aim or thought, nor select anything else for his study, than war and its rules and discipline; for this is the sole art that belongs to him

who rules, and it is of such force that it not only upholds those who are born princes, but it often enables men to rise from a private station to that rank. And, on the contrary, it is seen that when princes have thought more of ease than of arms they have lost their states. And the first cause of your losing it is to neglect this art; and what enables you to acquire a state is to be master of the art.

Machiavelli, Prince, XIV

37 War is just which is necessary, and arms are hallowed when there is no other hope but in them.

Machiavelli, Prince, XXVI

38 The object of those who make war, either from choice or ambition, is to conquer and to maintain their conquests, and to do this in such a manner as to enrich themselves and not to impoverish the conquered country. To do this, then, the conqueror should take care not to spend too much, and in all things mainly to look to the public benefit; and therefore he should imitate the manner and conduct of the Romans, which was first of all to make the war short and sharp.

Machiavelli, Discourses, II, 6

39 Every one may begin a war at his pleasure, but cannot so finish it.

Machiavelli, Discourses, II, 10

40 I maintain, then, contrary to the general opinion, that the sinews of war are not gold, but good soldiers; for gold alone will not procure good soldiers, but good soldiers will always procure gold.

Machiavelli, Discourses, 11, 10

- 41 Although deceit is detestable in all other things, yet in the conduct of war it is laudable and honorable; and a commander who vanquishes an enemy by stratagem is equally praised with one who gains victory by force.

Machiavelli, Discourses, III, 40

- 42 *Friar John.* War, begun without good provision of money before-hand for going through with it, is but as a breathing of strength, and blast that will quickly pass away. Coin is the sinews of war.

Rabelais, Gargantua and Pantagruel, 1, 46

- 43 Very little withholds me from the opinion of good Heraclitus, which affirmeth war, to be the father of all good things; and therefore do I believe that war is in Latin called *Bellum*, and not by antiphrasis, as some patchers of old rusty Latin would have us to think, because in war there is little beauty to be seen; but absolutely and simply, for that in war appeareth all that is good and graceful, and that by the wars is purged out all manner of wickedness and deformity. For proof whereof the wise and pacific Solomon could no better represent the unspeakable perfection of the divine wisdom, than by comparing it to the due disposure and ranking of an army in battle array, well provided and ordered.

Rabelais, Gargantua and Pantagruel, III, Prologue

- 44 As it is sometimes necessary for kings and nations to take up arms for the infliction of such public vengeance, the same reason will lead us to infer the lawfulness of wars which are undertaken for this end. For if they have been

intrusted with power to preserve the tranquillity of their own territories, to suppress the seditious tumults of disturbers, to succour the victims of oppression, and to punish crimes,—can they exert this power for a better purpose, than to repel the violence of him who disturbs both the private repose of individuals and the general tranquillity of the nation; who excites insurrections, and perpetrates acts of oppression, cruelty, and every species of crime? If they ought to be the guardians and defenders of the laws, it is incumbent upon them to defeat the efforts of all by whose injustice the discipline of the laws is corrupted. And if they justly punish those robbers, whose injuries have only extended to a few persons, shall they suffer a whole district to be plundered and devastated with impunity? For there is no difference, whether he, who in a hostile manner invades, disturbs, and plunders the territory of another to which he has no right, be a king, or one of the meanest of mankind: all persons of this description are equally to be considered as robbers, and ought to be punished as such. It is the dictate both of natural equity, and of the nature of the office, therefore, that princes are armed, not only to restrain the crimes of private individuals by judicial punishments, but also to defend the territories committed to their charge by going to war against any hostile aggression.

Calvin, Institutes of the Christian Religion, IV, 20

45 *King Henry*. Once more unto the breach, dear friends,
once more;
Or close the wall up with our English dead.
In peace there's nothing so becomes a man
As modest stillness and humility:

But when the blast of war blows in our ears,
Then imitate the action of the tiger;
Stiffen the sinews, summon up the blood,
Disguise fair nature with hard-favour'd rage;
Then lend the eye a terrible aspect;
Let it pry through the portage of the head
Like the brass cannon; let the brow o'erwhelm it
As fearfully as doth a galled rock
O'erhang and jutty his confounded base.
Swill'd with the wild and wasteful ocean.
Now set the teeth and stretch the nostril wide,
Hold hard the breath and bend up every spirit
To his full height.

Shakespeare, Henry V, III, i, 1

- 46 *Virgilia*. His bloody brow! O Jupiter, no blood!
Volumnia. Away, you fool! it more becomes a man
Than gilt his trophy. The breasts of Hecuba,
When she did suckle Hector, look'd not lovelier
Than Hector's forehead when it spit forth blood
At Grecian sword, contemning.

Shakespeare, Coriolanus, I, iii, 41

- 47 *1st Servant*. But when goes this forward?
3rd Servant. To-morrow; to-day; presently; you shall
have the drum struck up this afternoon. 'Tis, as it were, a
parcel of their feast, and to be executed ere they wipe
their lips.
2nd Servant. Why, then we shall have a stirring world
again. This peace is nothing but to rust iron, increase
tailors, and breed ballad-makers.

1st Serv. Let me have war, say I; it exceeds peace as far as day does night; it's spritely, waking, audible, and full of vent. Peace is a very apoplexy, lethargy; mulled, deaf, sleepy, insensible; a getter of more bastard children than war's a destroyer of men.

2nd Serv. 'Tis so; and as war, in some sort, may be said to be a ravisher, so it cannot be denied but peace is a great maker of cuckolds.

1st Serv. Ay, and it makes men hate one another.

3rd Serv. Reason; because they then less need one another. The wars for my money.

Shakespeare, Coriolanus, IV, V, 228

48 No nation, which doth not directly profess arms, may look to have greatness fall into their mouths.

Bacon, Of the True Greatness of Kingdoms and Estates

49 There is that justice imprinted in the nature of men, that they enter not upon wars (whereof so many calamities do ensue) but upon some, at the least specious, grounds and quarrels.

Bacon, Of the True Greatness of Kingdoms and Estates

50 A civil war, indeed, is like the heat of a fever; but a foreign war is like the heat of exercise, and serveth to keep the body in health; for in a slothful peace, both courages will effeminate and manners corrupt.

Bacon, Of the True Greatness of Kingdoms and Estates

51 It is manifest that during the time men live without a common power to keep them all in awe, they are in that condition which is called war; and such a war as is of

every man against every man. For war consisteth not in battle only, or the act of fighting, but in a tract of time, wherein the will to contend by battle is sufficiently known: and therefore the notion of time is to be considered in the nature of war, as it is in the nature of weather. For as the nature of foul weather lieth not in a shower or two of rain, but in an inclination thereto of many days together: so the nature of war consisteth not in actual fighting, but in the known disposition thereto during all the time there is no assurance to the contrary. All other time is peace.

Hobbes, Leviathan, I, 13

52 Though there had never been any time wherein particular men were in a condition of war one against another, yet in all times kings and persons of sovereign authority, because of their independency, are in continual jealousies, and in the state and posture of gladiators, having their weapons pointing, and their eyes fixed on one another; that is, their forts, garrisons, and guns upon the frontiers of their kingdoms, and continual spies upon their neighbours, which is a posture of war. But because they uphold thereby the industry of their subjects, there does not follow from it that misery which accompanies the liberty of particular men.

To this war of every man against every man, this also is consequent; that nothing can be unjust. The notions of right and wrong, justice and injustice, have there no place. Where there is no common power, there is no law; where no law, no injustice. Force and fraud are in war the two cardinal virtues. Justice and injustice are none of the faculties neither of the body nor mind. If they were, they might be in a man that were alone in the world, as well as

his senses and passions. They are qualities that relate to men in society, not in solitude. It is consequent also to the same condition that there be no propriety, no dominion, no mine and thine distinct; but only that to be every man's that he can get, and for so long as he can keep it. And thus much for the ill condition which man by mere nature is actually placed in; though with a possibility to come out of it, consisting partly in the passions, partly in his reason.

Hobbes, Leviathan, I, 13

- 53 When all the world is overcharged with inhabitants, then the last remedy of all is war, which provideth for every man, by victory or death.

Hobbes, Leviathan, II, 30

- 54 Can anything be more ridiculous than that a man should have the right to kill me because he lives on the other side of the water, and because his ruler has a quarrel with mine, though I have none with him?

Pascal, Pensées, V, 294

- 55 So under fierie Cope together rush'd
Both Battels maine, with ruinous assault
And inextinguishable rage; all Heav'n
Resounded, and had Earth bin then, all Earth
Had to her Center shook. What wonder? when
Millions of fierce encountring Angels fought
On either side, the least of whom could weild
These Elements, and arm him with the force
Of all thir Regions: how much more of Power
Armie against Armic numberless to raise

Dreadful combustion warring, and disturb,
Though not destroy, thir happie Native seat.

Milton, Paradise Lost, VI, 215

56 Such were these Giants, men of high renown;
For in those dayes Might onely shall be admir'd,
And Valour and Heroic Vertu call'd;
To overcome in Battel, and subdue
Nations, and bring home spoils with infinite
Man-slaughter, shall be held the highest pitch
Of human Glorie, and for Glorie done
Of triumph, to be styl'd great Conquerours,
Patrons of Mankind, Gods, and Sons of Gods,
Destroyers rightlier call'd and Plagues of men.
Thus Fame shall be achiev'd, renown on Earth,
And what most merits fame in silence hid.

Milton, Paradise Lost, XI, 684

57 If one commonwealth wishes to make war on another and employ extreme measures to make that other dependent on itself, it may lawfully make the attempt, since it needs but the bare will of the commonwealth for war to be waged. But concerning peace it can decide nothing, save with the concurrence of another commonwealth's will. Whence it follows, that laws of war regard every commonwealth by itself, but laws of peace regard not one, but at the least two commonwealths, which are therefore called "contracting powers."

Spinoza, Political Treatise, III, 13

58 The state of war is a state of enmity and destruction; and therefore declaring by word or action, not a passionate

and hasty, but sedate, settled design upon another man's life puts him in a state of war with him against whom he has declared such an intention, and so has exposed his life to the other's power to be taken away by him, or any one that joins with him in his defence, and espouses his quarrel; it being reasonable and just I should have a right to destroy that which threatens me with destruction; for by the fundamental law of Nature, man being to be preserved as much as possible, when all cannot be preserved, the safety of the innocent is to be preferred, and one may destroy a man who makes war upon him, or has discovered an enmity to his being, for the same reason that he may kill a wolf or a lion, because they are not under the ties of the common law of reason, have no other rule but that of force and violence, and so may be treated as a beast of prey, those dangerous and noxious creatures that will be sure to destroy him whenever he falls into their power.

And hence it is that he who attempts to get another man into his absolute power does thereby put himself into a state of war with him; it being to be understood as a declaration of a design upon his life. For I have reason to conclude that he who would get me into his power without my consent would use me as he pleased when he had got me there, and destroy me too when he had a fancy to it; for nobody can desire to have me in his absolute power unless it be to compel me by force to that which is against the right of my freedom— make me a slave. To be free from such force is the only security of my preservation, and reason bids me look on him as an enemy to my preservation who would take away that freedom which is the fence to it; so that he who makes an attempt to enslave me thereby puts himself into a state

of war with me. He that in the state of Nature would take away the freedom that belongs to any one in that state must necessarily be supposed to have a design to take away everything else, that freedom being the foundation of all the rest; as he that in the state of society would take away the freedom belonging to those of that society or commonwealth must be supposed to design to take away from them everything else, and so be looked on as in a state of war.

Locke, II Civil Government, III, 16-17

59 Here we have the plain difference between the state of Nature and the state of war, which however some men have confounded, are as far distant as a state of peace, goodwill, mutual assistance, and preservation; and a state of enmity, malice, violence and mutual destruction are one from another. Men living together according to reason without a common superior on earth, with authority to judge between them, is properly the state of Nature. But force, or a declared design of force upon the person of another, where there is no common superior on earth to appeal to for relief, is the state of war; and it is the want of such an appeal gives a man the right of war even against an aggressor, though he be in society and a fellow-subject.... Want of a common judge with authority puts all men in a state of Nature; force without right upon a man's person makes a state of war both where there is, and is not, a common judge.

Locke, II Civil Government, III, 19

60 Whosoever uses force without right—as every one does in society who does it without law—puts himself into a state

of war with those against whom he so uses it, and in that state all former rights are cancelled, all other rights cease, and every one has a right to defend himself, and to resist the aggressor.

Locke, II Civil Government, XIX, 232

61 He [the Houyhnhnm master] asked me what were the usual causes or motives, that made one country go to war with another. I answered they were innumerable; but I should only mention a few of the chief. Sometimes the ambition of princes, who never think they have land or people enough to govern: sometimes the corruption of ministers, who engage their master in a war, in order to stifle or divert the clamour of the subjects against their evil administration. . . . Neither are any wars so furious and bloody, or of so long continuance, as those occasioned by difference in opinion, especially if it be in things indifferent.

Sometimes the quarrel between two princes is to decide which of them shall dispossess a third of his dominions, where neither of them pretend to any right. Sometimes one prince quarrelleth with another, for fear the other should quarrel with him. Sometimes a war is entered upon, because the enemy is too *strong*, and sometimes because he is too *weak*. Sometimes our neighbours *want* the *things* which we *have*, or *have* the things which we want; and we both fight, until they take ours, or give us theirs. It is a very justifiable cause of war, to invade a country after the people have been wasted by famine, destroyed by pestilence, or embroiled by factions amongst themselves. It is justifiable to enter into a war against our nearest ally, when one of his towns lie convenient for us, or a territory of land, that would render

our dominions round and compact. If a prince send forces into a nation, where the people are poor and ignorant, he may lawfully put half of them to death, and make slaves of the rest, in order to civilize and reduce them from their barbarous way of living. It is a very kingly, honourable, and frequent practice, when one prince desires the assistance of another to secure him against an invasion, that the assistant, when he hath driven out the invader, should seize on the dominions himself, and kill, imprison, or banish the prince he came to relieve. Alliance by blood or marriage, is a sufficient cause of war between princes; and the nearer the kindred is, the greater is their disposition to quarrel.

Swift, Gulliver's Travels, IV, 5

62 The life of governments is like that of man. The latter has a right to kill in case of natural defence: the former have a right to wage war for their own preservation.

In the case of natural defence I have a right to kill, because my life is in respect to me what the life of my antagonist is to him: in the same manner a state wages war because its preservation is like that of any other being.

With individuals the right of natural defence does not imply a necessity of attacking. Instead of attacking they need only have recourse to proper tribunals. They cannot therefore exercise this right of defence but in sudden cases, when immediate death would be the consequence of waiting for the assistance of the law. But with states the right of natural defence carries along with it sometimes the necessity of attacking; as for instance, when one nation sees that a continuance of peace will enable another to destroy her, and that to attack that

nation instantly is the only way to prevent her own destruction.

Montesquieu, Spirit of Laws, X, 2

63 It is a conqueror's business to repair a part of the mischief he has occasioned. The right, therefore, of conquest I define thus: a necessary, lawful, but unhappy power, which leaves the conqueror under a heavy obligation of repairing the injuries done to humanity.

Montesquieu, Spirit of Laws, X, 4

64 Bodies politic, remaining thus in a state of nature among themselves, presently experienced the inconveniences which had obliged individuals to forsake it; for this state became still more fatal to these great bodies than it had been to the individuals of whom they were composed. Hence arose national wars, battles, murders, and reprisals, which shock nature and outrage reason; together with all those horrible prejudices which class among the virtues the honour of shedding human blood. The most distinguished men hence learned to consider cutting each other's throats a duty; at length men massacred their fellow-creatures by thousands without so much as knowing why, and committed more murders in a single day's fighting, and more violent outrages in the sack of a single town, than were committed in the state of nature during whole ages over the whole earth. Such were the first effects which we can see to have followed the division of mankind into different communities.

Rousseau, Origin of Inequality, II

65 War... is a relation, not between man and man, but between State and State, and individuals are enemies only accidentally, not as men, nor even as citizens, but as soldiers; not as members of their country, but as its defenders. Finally, each State can have for enemies only other States, and not men.

Rousseau, Social Contract, I, 4

66 In real war, a just prince, while laying hands, in the enemy's country, on all that belongs to the public, respects the lives and goods of individuals: he respects rights on which his own are founded. The object of the war being the destruction of the hostile State, the other side has a right to kill its defenders, while they are bearing arms; but as soon as they lay them down and surrender, they cease to be enemies or instruments of the enemy, and become once more merely men, whose life no one has any right to take. Sometimes it is possible to kill the State without killing a single one of its members; and war gives no right which is not necessary to the gaining of its object.

Rousseau, Social Contract, I, 4

67 Anyone can understand that w'ar and conquest without and the encroachments of despotism within give each other mutual support; that money and men are habitually taken at pleasure from a people of slaves, to bring others beneath the same yoke; and that conversely war furnishes a pretext for exactions of money and another, no less plausible, for keeping large armies constantly on foot, to hold the people in awe. In a word, anyone can see that aggressive princes wage war at least as much on

their subjects as on their enemies, and that the conquering nation is left no better off than the conquered. "I have beaten the Romans," so Hannibal used to write to Carthage, "send me more troops. I have exacted an indemnity from Italy, send me more money." That is the real meaning of the *Te Drums*, the bonfires and rejoicings with which the people hail the triumphs of their masters.

Rousseau, A Lasting Peace

68 Among the calamities of war may be justly numbered the diminution of the love of truth by the falsehoods which interest dictates and credulity encourages. A peace will equally leave the warrior and the relater of wars destitute of employment; and I know not whether more is to be dreaded from streets filled with soldiers accustomed to plunder, or from garrets filled with scribblers accustomed to lie.

Johnson, Idler No. 30

69 It is not always necessary to accumulate gold and silver in order to enable a country to carry on foreign wars, and to maintain fleets and armies in distant countries. Fleets and armies are maintained, not with gold and silver, but with consumable goods. The nation which, from the annual produce of its domestic industry, from the annual revenue arising out of its lands, labour, and consumable stock, has wherewithal to purchase those consumable goods in distant countries, can maintain foreign wars there.

A nation may purchase the pay and provisions of an army in a distant country three different ways: by

sending abroad either, first, some part of its accumulated gold and silver; or, secondly, some part of the annual produce of its manufactures; or, last of all, some part of its annual rude produce.

Adam Smith, Wealth of Nations, IV, 1

70 In modern times many different causes contribute to render the defence of the society more expensive. The unavoidable effects of the natural progress of improvement have, in this respect, been a good deal enhanced by a great revolution in the art of war, to which a mere accident, the invention of gunpowder, seems to have given occasion.

In modern war the great expense of firearms gives an evident advantage to the nation which can best afford that expense, and consequently to an opulent and civilised over a poor and barbarous nation. In ancient times the opulent and civilised found it difficult to defend themselves against the poor and barbarous nations. In modern times the poor and barbarous find it difficult to defend themselves against the opulent and civilised. The invention of firearms, an invention which at first sight appears to be so pernicious, is certainly favourable both to the permanency and to the extension of civilisation.

Adam Smith, Wealth, of Nations, V, 1

71 The want of parsimony in time of peace imposes the necessity of contracting debt in time of war. When war comes, there is no money in the treasury but what is necessary for carrying on the ordinary expense of the peace establishment. In war an establishment of three or four times that expense becomes necessary for the

defence of the state, and consequently a revenue three or four times greater than the peace revenue. Supposing that the sovereign should have, what he scarce ever has, the immediate means of augmenting his revenue in proportion to the augmentation of his expense, yet still the produce of the taxes, from which this increase of revenue must be drawn, will not begin to come into the treasury till perhaps ten or twelve months after they are imposed. But the moment in which war begins, or rather the moment in which it appears likely to begin, the army must be augmented, the fleet must be fitted out, the garrisoned towns must be put into a posture of defence; that army, that fleet, those garrisoned towns must be furnished with arms, ammunition, and provisions. An immediate and great expense must be incurred in that moment of immediate danger, which will not wait for the gradual and slow returns of the new taxes. In this exigency government can have no other resource but in borrowing.

Adam Smith, Wealth of Nations, V, 3

72 To be prepared for war is one of the most effectual means of preserving peace.

Washington, First Annual Address

73 War in its fairest form implies a perpetual violation of humanity and justice.

Gibbon, Decline and Fall of the Roman Empire, XXXIII

74 The laws of war, that restrain the exercise of national rapine and murder, are founded on two principles of substantial interest: the knowledge of the permanent

benefits which may be obtained by a moderate use of conquest, and a just apprehension lest the desolation which we inflict on the enemy's country may be retaliated on our own.

Gibbon, Decline and Fall of the Roman Empire, XXXIV

- 75 It was the opinion of (the Emperor] Marcian, that war should be avoided as long as it is possible to preserve a secure and honourable peace; but it was likewise his opinion that peace cannot be honourable or secure, if the sovereign betrays a pusillanimous aversion to war.

Gibbon, Decline and Fall of the Roman Empire, XXXV

- 76 Every age, however destitute of science or virtue, sufficiently abounds with acts of blood and military renown.

Gibbon, Decline and Fall of the Roman Empire, XXXVIII

- 77 It is the duty of a patriot to prefer and promote the exclusive interest and glory of his native country: but a philosopher may be permitted to enlarge his views, and to consider Europe as one great republic, whose various inhabitants have attained almost the same level of politeness and cultivation, The balance of power will continue to fluctuate, and the prosperity of our own or the neighbouring kingdoms may be alternately exalted or depressed; but these partial events cannot essentially injure our general state of happiness, the system of arts, and laws, and manners, which so advantageously distinguish, above the rest of mankind, the Europeans and their colonies. The savage nations of the globe are the common enemies of civilised society; and we may

inquire, with anxious curiosity, whether Europe is still threatened with a repetition of those calamities which formerly oppressed the arms and institutions of Rome. Perhaps the same reflections will illustrate the fall of that mighty empire, and explain the probable causes of our actual security.

Gibbon, Decline and Fall of the Roman Empire, XXXVIII

78 The sword of the Saracens became less formidable when their youth was drawn away from the camp to college, when the armies of the faithful presumed to read and to reflect.

Gibbon, Decline and Fall of the Roman Empire, LII

79 [When Constantinople fell to the crusaders] at the first view it should seem that the wealth of Constantinople was only transferred from one nation to another, and that the loss and sorrow of the Greeks is exactly balanced by the joy and advantage of the Latins. But in the miserable account of war the gain is never equivalent to the loss, the pleasure to the pain; the smiles of the Latins were transient and fallacious; the Greeks for ever wept over the ruins of their country, and their real calamities were aggravated by sacrilege and mockery. What benefits accrued to the conquerors from the three fires which annihilated so vast a portion of the buildings and riches of the city? What a stock of such things as could neither be used nor transported was maliciously or wantonly destroyed! How much treasure was idly wasted in gaming, debauchery, and riot!

Gibbon, Decline and Fall of the Roman Empire, LX

80 If we contrast the rapid progress of this mischievous discovery [gunpowder] with the slow and laborious advances of reason, science, and the arts of peace, a philosopher, according to his temper, will laugh or weep at the folly of mankind.

Gibbon, Decline and Fall of the Roman Empire, LXV

81 The determination of what constitutes right in war, is the most difficult problem of the right of nations and international law. It is very difficult even to form a conception of such a right, or to think of any law in this lawless state without falling into a contradiction. It must then be just the right to carry on war according to such principles as render it always still possible to pass out of that natural condition of the states in their external relations to each other and to enter into a condition of right.

Kant, Science of Right, 57

82 The right that follows after war, begins at the moment of the treaty of peace and refers to the consequences of the war. The conqueror lays down the conditions under which he will agree with the conquered power to form the conclusion of peace. Treaties are drawn up; not indeed according to any right that it pertains to him to protect, on account of an alleged lesion by his opponent, but as taking this question upon himself, he bases the right to decide it upon his own power. Hence the conqueror may not demand restitution of the cost of the war; because he would then have to declare the war of his opponent to be unjust. And even although he should adopt such an argument, he is not entitled to apply it; because he would

have to declare the war to be punitive, and he would thus in turn inflict an injury. To this right belongs also the exchange of prisoners, which is to be carried out without ransom and without regard to equality of numbers.

Kant, Science of Right, 58

83 The right of a state against an unjust enemy has no limits, at least in respect of quality as distinguished from quantity or degree. In other words, the injured state may use—not, indeed any means, but yet—all those means that are permissible and in reasonable measure in so far as they are in its power, in order to assert its right to what is its own. But what then is an unjust enemy according to the conceptions of the right of nations, when, as holds generally of the state of nature, every state is judge in its own cause? It is one whose publicly expressed will, whether in word or deed, betrays a maxim which, if it were taken as a universal rule, would make a state of peace among the nations impossible, and would necessarily perpetuate the state of nature.

Kant, Science of Right, 60

84 War itself, provided it is conducted with order and a sacred respect for the rights of civilians, has something sublime about it, and gives nations that carry it on in such a manner a stamp of mind only the more sublime the more numerous the dangers to which they are exposed, and which they are able to meet with fortitude. On the other hand, a prolonged peace favours the predominance of a mere commercial spirit, and with it a debasing self-interest, cowardice, and effeminacy and tends to degrade the character of the nation.

Kant, Critique of Aesthetic Judgement, 28

85 To look for a continuation of harmony between a number of independent, unconnected sovereignties in the same neighbourhood, would be to disregard the uniform course of human events, and to set at defiance the accumulated experience of ages.

Hamilton, Federalist 6

86 That there may happen cases in which the national government may be necessitated to resort to force, cannot be denied. Our own experience has corroborated the lessons taught by the Examples of other nations; that emergencies of this sort will sometimes arise in all societies, however constituted; that seditions and insurrections are, unhappily, maladies as inseparable from the body politic as tumours and eruptions from the natural body; that the idea of governing at all times by the simple force of law (which we have been told is the only admissible principle of republican government) has no place but in the reveries of those political doctors whose sagacity disdains the admonitions of experimental instruction.

Hamilton, Federalist 28

87 To judge from the history of mankind, we shall be compelled to conclude that the fiery and destructive passions of war reign in the human breast with much more powerful sway than the mild and beneficent sentiments of peace; and that to model our political systems upon speculations of lasting tranquility is to calculate on the weaker springs of the human character.

Hamilton, Federalist 34

88 There was a sound of revelry by night,
And Belgium's capital had gather'd then
Her Beauty and her Chivalry, and bright
The lamps shone o'er fair women and brave men;
A thousand hearts beat happily; and when
Music arose with its voluptuous swell,
Soft eyes look'd love to eyes which spake again,
And all went merry as a marriage-bell;—
But hush! hark! a deep sound strikes like a rising
knell!

Did ye not hear it?—No; 't was but the wind,
Or the car rattling o'er the stony street;
On with the dance! let joy be unconfined;
No sleep till morn, when Youth and Pleasure meet
To chase the glowing Hours with flying feet—
But hark!—that heavy sound breaks in once more
As if the clouds its echo would repeat;
And nearer, clearer, deadlier than before!
Arm! Arm! it is—it is—the cannon's opening roar!

Byron, Childe Harold's Pilgrimage, III, 21-22

89 War is the state of affairs which deals in earnest with the
vanity of temporal goods and concerns— a vanity at
other times a common theme of edifying sermonizing.
This is what makes it the moment in which the ideality of
the particular attains its right and is actualized. War has
the higher significance that by its agency... the ethical
health of peoples is preserved in their indifference to the
stabilization of finite institutions; just as the blowing of
the winds preserves the sea from the foulness which

would be the result of a prolonged calm, so also corruption in nations would be the product of prolonged, let alone 'perpetual,' peace.

Hegel, Philosophy of Right, 324

90 War is an act of force, and to the application of that force there is no limit. Each of the adversaries forces the hand of the other, and a reciprocal action results which in theory can have no limit.

Von Clausewitz, On War, I, 3

91 If the aim of the military action is an equivalent for the political object, that action will in general diminish as the political object diminishes. The more this object comes to the front, the more will this be so. This explains how, without self-contradiction, there can be wars of all degrees of importance and energy, from a war of extermination down to a mere state of armed observation.

Von Clausewitz, On War, I, 11

92 There is no human activity that stands in such constant and universal contact with chance as does war.

Von Clausewitz, On War, I, 20

93 War is not merely a political act but a real political instrument, a continuation of political intercourse, a carrying out of the same by other means.

Von Clausewitz, On War, I, 24

94 No protracted war can fail to endanger the freedom of a democratic country. Not indeed that after every victory it

is to be apprehended that the victorious generals will possess themselves by force of the supreme power, after the manner of Sulla and Caesar; the danger is of another kind. War does not always give over democratic communities to military government, but it must invariably and immeasurably increase the powers of civil government; it must almost compulsorily concentrate the direction of all men and the management of all things in the hands of the administration. If it does not lead to despotism by sudden violence, it prepares men for it more gently by their habits. All those who seek to destroy the liberties of a democratic nation ought to know that war is the surest and the shortest means to accomplish it.

Tocqueville, Democracy in America, Vol. II, III, 22

95 Among a nation in which equality of condition prevails, on the contrary, each citizen has but a slender share of political power, and often has no share at all. On the other hand, all are independent, and all have something to lose; so that they are much less afraid of being conquered and much more afraid of war than an aristocratic people. It will always be very difficult to convince a democratic people to take up arms when hostilities have reached its own territory. Hence the necessity of giving to such a people the rights and the political character which may impart to every citizen some of those interests that cause the nobles to act for the public welfare in aristocratic countries.

It should never be forgotten by the princes and other leaders of democratic nations that nothing but the love and the habit of freedom can maintain an advantageous contest with the love and the habit of physical well-being. I can conceive nothing better prepared for

subjection, in case of defeat, than a democratic people without free institutions.

Tocqueville, Democracy in America, Vol. II, III, 26

96 Under the sky is no uglier spectacle than two men with clenched teeth, and hellfire eyes, hacking one another's flesh; converting precious living bodies, and priceless living souls, into nameless masses of putrescence, useful only for turnip manure.

Carlyle, Past and Present, III, 10

97 A state of war or anarchy, in which law has little force, is so far valuable that it puts every man on trial.

Emerson, The Conservative

98 The soldier is applauded who refuses to serve in an unjust war by those who do not refuse to sustain the unjust government which makes the war; is applauded by those whose own act and authority he desregards and sets at naught; as if the state were penitent to that degree that it hired one to scourge it while it sinned, but not to that degree that it left off sinning for a moment.

Thoreau, Civil Disobedience

99 The shield may be as important for victory, as the sword or spear.

Darwin, Origin of Species, IV

100 In proportion as the exploitation of one individual by another is put an end to, the exploitation of one nation by another will also be put an end to. In proportion as the

antagonism between classes within the nation vanishes, the hostility of one nation to another will come to an end.

Marx and Engels, Communist Manifesto, II

101 "If no one fought except on his own conviction, there would be no wars," he said.

"And that would be splendid," said Pierre.

Prince Andrew smiled ironically.

"Very likely it would be splendid, but it will never come about. ..."

Tolstoy, War and Peace, I, 6

102 The younger Emperor could not restrain his wish to be present at the battle and, in spite of the remonstrances of his courtiers, at twelve o'clock left the third column with which he had been and galloped toward the vanguard. Before he came up with the hussars, several adjutants met him with news of the successful result of the action.

This battle, which consisted in the capture of a French squadron, was represented as a brilliant victory over the French, and so the Emperor and the whole army, especially while the smoke hung over the battlefield, believed that the French had been defeated and were retreating against their will. A few minutes after the Emperor had passed, the Pavlograd division was ordered to advance. In Wischau itself, a petty German town, Rostov saw the Emperor again. In the market place, where there had been some rather heavy firing before the Emperor's arrival, lay several killed and wounded soldiers whom there had not been time to move. The Emperor, surrounded by his suite of officers and courtiers, was riding a bobtailed chestnut mare, a different one from

that which he had ridden at the review, and bending to one side he gracefully held a gold lorgnette to his eyes and looked at a soldier who lay prone, with blood on his uncovered head. The wounded soldier was so dirty, coarse, and revolting that his proximity to the Emperor shocked Rostov. Rostov saw how the Emperor's rather round shoulders shuddered as if a cold shiver had run down them, how his left foot began convulsively tapping the horse's side with the spur, and how the well-trained horse looked round unconcerned and did not stir. An adjutant, dismounting, lifted the soldier under the arms to place him on a stretcher that had been brought. The soldier groaned.

"Gently, gently! Can't you do it more gently?" said the Emperor apparently suffering more than the dying soldier, and he rode away.

Rostov saw tears filling the Emperor's eyes and heard him, as he was riding away, say to Czarto-ryski: "What a terrible thing war is: what a terrible thing! *Quelle terrible chose que la guerre!*"

Tolstoy, War and Peace, III, 10

103 One has renounced grand life when one renounces war.

Nietzsche, Twilight of the Idol, Morality as Anti-Nature

104 Many... substitutes for war will be discovered, but perhaps precisely thereby it will become more and more obvious that such a highly cultivated and therefore necessarily enfeebled humanity as that of modern Europe not only needs wars, but the greatest and most terrible wars,—consequently occasional relapses into barbarism,

—lest, by the means of culture, it should lose its culture and its ver>' existence.

Nietzsche, Human, All~ Too~ Human, 477

105 The beauty of war ... is that it is so congruous with ordinary human nature. Ancestral evolution has made us all potential warriors; so the most insignificant individual, when thrown into an army in the field, is weaned from whatever excess of tenderness towards his precious person he may bring with him, and may easily develop into a monster of insensibility.... The immediate aim of the soldier's life is. . . destruction, and nothing but destruction; and whatever constructions wars result in are remote and non-military. Consequently the soldier cannot train himself to be too feelingless to all those usual sympathies and respects, whether for persons or for things, that make for conservation. Yet the fact remains that war is a school of strenuous life and heroism; and, being in the line of aboriginal instinct, is the only school that as yet is universally available. But when we gravely ask ourselves whether this wholesale organization of irrationality and crime be our only bulwark against effeminacy, we stand aghast at the thought, and think more kindly of ascetic religion. One hears of the mechanical equivalent of heat. What we now need to discover in the social realm is the moral equivalent of war: something heroic that will speak to men as universally as war does, and yet will be as compatible with their spiritual selves as war has proved itself to be incompatible. I have often thought that in the old monkish poverty-worship, in spite of the pedantry which infested it, there might be something like that moral equivalent of war which we are seeking. May not

voluntarily accepted poverty be 'the strenuous life,' without the need of crushing weaker peoples?

William James, Varieties of Religious Experience, XIV-XV

106 I have spoken of liberty as a good, but it is not an absolute good. We all recognize the need to restrain murderers, and it is even more important to restrain murderous states. Liberty must be limited by law, and its most valuable forms can only exist within a framework of law. What the world most needs is effective laws to control international relations. The first and most difficult step in the creation of such law is the establishment of adequate sanctions, and this is only possible through the creation of a single armed force in control of the whole world. But such an armed force, like a municipal police force, is not an end in itself; it is a means to the growth of a social system governed by law, where force is not the prerogative of private individuals or nations, but is exercised only by a neutral authority in accordance with rules laid down in advance. There is hope that law, rather than private force, may come to govern the relations of nations within the present century. If this hope is not realized we face utter disaster; if it is realized, the world will be far better than at any previous period in the history of man.

Russell, Unpopular Essays, III

107 Wars can never cease so long as nations live under such widely differing conditions, so long as the value of individual life is in each nation so variously computed, and so long as the animosities which divide them represent such powerful instinctual forces in the mind.

Freud, Thoughts on War and Death, I

108 Then the war [World War I] in which we had refused to believe broke out, and brought—disillusionment. Not only is it more sanguinary and more destructive than any war of other days, because of the enormously increased perfection of weapons of attack and defence; but it is at least as cruel, as embittered, as implacable as any that has preceded it. It sets at naught all those restrictions known as International Law, which in peace-time the states had bound themselves to observe; it ignores the prerogatives of the wounded and the medical service, the distinction between civil and military sections of the population, the claims of private property. It tramples in blind fury on all that comes in its way, as though there were to be no future and no goodwill among men after it has passed. It rends all bonds of fellowship between the contending peoples, and threatens to leave such a legacy of embitterment as will make any renewal of such bonds impossible for a long time to come.

Freud, Thoughts on War and Death, I

109 Clans, tribes, races, cities, empires, nations, states have made war. The argument that this fact proves an ineradicable belligerent instinct which makes war forever inevitable is much more respectable than many arguments about the immutability of this and that social tradition.

Dewey, Human Nature and Conduct, II, 3

110 Pugnacity, rivalry, vainglory, love of booty, fear, suspicion, anger, desire for freedom from the conventions and restrictions of peace, love of power and hatred of

oppression, opportunity for novel displays, love of home and soil, attachment to one's people and to the altar and the hearth, courage, loyalty, opportunity to make a name, money or a career, affection, piety to ancestors and ancestral gods—all of these things and many more make up the war-like force. To suppose there is some one unchanging native force which generates war is as naive as the usual assumption that our enemy is actuated solely by the meaner of the tendencies named and we only by the nobler.

Dewey, Human Nature and Conduct, II, 3

- 111 The more horrible a depersonalized scientific mass war becomes, the more necessary it is to find universal ideal motives to justify it.

Dewey, Human Nature and Conduct, II, 3

- 112 War in our own civilization is as good an illustration as one can take of the destructive lengths to which the development of a culturally selected trait may go. If we justify war, it is because all peoples always justify the traits of which they find themselves possessed, not because war will bear an objective examination of its merits.

Benedict, Patterns of Culture, II

14.2 The Instrumentalities of War THE MILITARY

The quotations collected here deal, in large part, with the technical and technological details of warfare—the military personnel and the military equipment needed to wage war and to bring it to a successful conclusion. They touch on such considerations as the different kinds of troops and armaments, the qualities desired in a commander and in his soldiers, the quantities or masses of men that are needed to attain certain military objectives, the relative advantages of naval and land operations, and the pros and cons of employing mercenaries.

The poets, novelists, historians, and biographers give us descriptions of eminent commanders, and discuss the personalities and character of military leaders. This often leads into some consideration of strategy and tactics, but the arts of war are not discussed in detail. In this connection, the reader will be struck by Tolstoy's extremely negative view, personified in General Kutuzov, in *War and Peace*, as well as explicitly stated by Tolstoy himself, that the planning of battles or campaigns is utterly futile.

The two main issues debated in this section are, first, the question about the value of mercenary troops as compared with a citizen army, and, second, the effect of standing armies and elaborate military installations upon the political health of republics and democracies.

■ ■ ■

- 1 And the Lord said unto Moses, Wherefore criest thou unto me? speak unto the children of Israel, that they go forward:

But lift thou up thy rod, and stretch out thine hand over the sea, and divide it: and the children of Israel shall go on dry ground through the midst of the sea.

And I, behold, I will harden the hearts of the Egyptians, and they shall follow them: and I will get me honour upon Phar-aoh, and upon all his host, upon his chariots, and upon his horsemen.

And the Egyptians shall know that I am the Lord, when I have gotten me honour upon Pharaoh, upon his chariots, and upon his horsemen.

And the angel of God, which went before the camp of Israel, removed and went behind them; and the pillar of the cloud went from before their face, and stood behind them:

And it came between the camp of the Egyptians and the camp of Israel; and it was a cloud and darkness to them, but it gave light by night to these: so that the one came not near the other all the night.

And Moses stretched out his hand over the sea; and the Lord caused the sea to go back by a strong cast wind all that night, and made the sea dry land, and the waters were divided.

And the children of Israel went into the midst of the sea upon the dry ground: and the waters were a wall unto them on their right hand, and on their left.

And the Egyptians pursued, and went in after them to the midst of the sea, even all Phar-aoh's horses, his chariots, and his horsemen.

And it came to pass, that in the morning watch the Lord looked unto the host of the Egyptians through the pillar of fire and of the cloud, and troubled the host of the Egyptians,

And took off their chariot wheels, that they drave them heavily: so that the Egyptians said, Let us flee from the face of Israel; for the Lord fighteth for them against the Egyptians.

Exodus 14:15-25

2 Now Jericho was straitly shut up because of the children of Israel: none went out, and none came in.

And the Lord said unto Joshua, Sec, I have given into thine hand Jericho, and the king thereof, and the mighty men of valour....

And it came to pass, when Joshua had spoken unto the people, that the seven priests bearing the seven trumpets of rams' horns passed on before the Lord, and blew with the trumpets: and the ark oi the covenant of the Lord followed them.

And the armed men went before the priests that blew with the trumpets, and the rereward came after the ark, the priests going on, and blowing with the trumpets.

And Joshua had commanded the people, saying. Ye shall not shout, nor make any noise with your voice, neither shall any word proceed out of your mouth, until the day I bid you shout; then shall ye shout.

So the ark of the Lord compassed the city, going about it once: and they came into the camp, and lodged in the camp....

And it came to pass on the seventh day, that they rose early about the dawning of the day, and compassed the city after the same manner seven times: only on that day they compassed the city seven times.

And it came to pass at the seventh time, when the priests blew with the trumpets, Joshua said unto the people, Shout; for the Lord hath given you the city. . . .

So the people shouted when the priests blew with the trumpets: and it came to pass, when the people heard the sound of the trumpet, and the people shouted with a great shout, that the wall fell down flat, so that the people went up into the city, every man straight before him, and they took the city.

And they utterly destroyed all that was in the city, both man and woman, young and old, and ox, and sheep, and ass, with the edge of the sword.

Joshua 6:1-21

3 And they, the god-supported kings, about Agamemnon
ran marshalling the men, and among them grey-eyed
Athene

holding the dear treasured aegis, ageless, immortal,
from whose edges float a hundred all-golden tassels,
each one carefully woven, and each worth a hundred
oxen.

With this fluttering she swept through the host of the
Achaians

urging them to go forward. She kindled the strength in
each man's

heart to take the battle without respite and keep on
fighting.

And now battle became sweeter to them than to go
back

in their hollow ships to the beloved land of their
fathers.

As obliterating fire lights up a vast forest along the
crests of a mountain, and the flare shows far off,

so as they marched, from the magnificent bronze the
gleam went

dazzling all about through the upper air to the
heaven.

These, as the multitudinous nations of birds winged,
of geese, and of cranes, and of swans long-throated
in the Asian meadow beside the Kaystrian waters this
way and that way make their flights in the pride of their
wings, then

settle in clashing swarms and the whole meadow
echoes with them,

so of these the multitudinous tribes from the ships and
shelters poured to the plain of Skamandros, and the
earth beneath their

feet and under the feet of their horses thundered
horribly.

They took position in the blossoming meadow of
Skamandros,

thousands of them, as leaves and flowers appear in
their season.

Like the multitudinous nations of swarming insects
who drive hither and thither about the stalls of the
sheepfold

in the season of spring when the milk splashes in the
milk pails:

in such numbers the flowing-haired Achaians stood up
through the plain against the Trojans, hearts burning
to break them.

These, as men who are goatherds among the wide
goatflocks

easily separate them in order as they take to the
pasture,

thus the leaders separated them this way and that
way

toward the encounter, and among them powerful
Agamemnon,
with eyes and head like Zeus who delights in thunder,
like Ares for girth, and with the chest of Poseidon;
like some ox of the herd pre-eminent among the
others,
a bull, who stands conspicuous in the huddling cattle;
such was the son of Atreus as Zeus made him that
day,
conspicuous among men, and foremost among the
fighters.

Homer, Iliad, II, 445

- 4 As when along thundering beach the surf of the sea strikes
beat upon beat as the west wind drives it onward; far
out
crested first on the open water, it drives thereafter
to smash roaring along the dry land, and against the
rock jut
bending breaks itself into crests spewing back the salt
wash;
so thronged beat upon beat the Danaans' close
battalions
steadily into battle, with each of the lords
commanding
his own men; and these went silently, you would not
think
all these people with voices kept in their chests were
marching;
silently, in fear of their commanders; and upon all
glittered as they marched the shining armour they
carried.

But the Trojans, as sheep in a man of possessions'
steading
stand in their myriads waiting to be drained of their
white milk
and bleat interminably as they hear the voice of their
lambs, so
the crying of the Trojans went up through the wide
army.

Homer, Iliad, IV, 422

- 5 Now pitifully the Trojans might have gone back from the
shelters
and the ships, to windy Ilion, had not Poulydamas
come and stood beside bold Hektor and spoken a word to
him:
‘Hektor, you are too intractable to listen to reason.
Because the god has granted you the actions of
warfare
therefore you wish in counsel also to be wise beyond
others.
But you cannot choose to have all gifts given to you
together.
To one man the god has granted the actions of
warfare,
to one to be a dancer, to another the lyre and the
singing,
and in the breast of another Zeus of the wide brows
establishes
wisdom, a lordly thing, and many take profit beside
him
and he saves many, but the man’s own thought
surpasses all others.

Now I will tell you the way that it seems best to my mind.

For you, everywhere the fighting burns in a circle around you,

but of the great-hearted Trojans since they crossed over the rampart

some are standing back in their war gear, others are fighting

fewer men against many, being scattered among the vessels.

Draw back now, and call to this place all of our bravest,

and then we might work out together our general counsel.'

Homer, Iliad, XIII, 723

6 The Scythians... have in one respect... shown themselves wiser than any nation upon the face of the earth. Their customs otherwise are not such as I admire. The one thing of which I speak is the contrivance whereby they make it impossible for the enemy who invades them to escape destruction, while they themselves are entirely out of his reach, unless it please them to engage with him. Having neither cities nor forts, and carrying their dwellings with them wherever they go; accustomed, moreover, one and all of them, to shoot from horseback; and living not by husbandry but on their cattle, their waggons the only houses that they possess, how can they fail of being unconquerable, and unassailable even?

Herodotus, History, IV, 46

7 *Chorus*. Swift-footed Achilles I saw—
His feet like the stormwind—running,
Achilles whom Thetis bore,
and Chiron trained into manhood.
I saw him on the seashore.
In full armor over the sands racing.
He strove, his legs in contest
With a chariot and four,
Toward victory racing and rounding
The course.

Euripides, Iphigenia in Aulis, 206

8 *Brasidas*. Where an enemy seems strong but is really weak, a true knowledge of the facts makes his adversary the bolder, just as a serious antagonist is encountered most confidently by those who do not know him.

Thucydides, Peloponnesian War, IV, 126

9 The armies being now on the eve of engaging, each contingent received some words of encouragement from its own commander. The Mantineans were reminded that they were going to fight for their country and to avoid returning to the experience of servitude after having tasted that of empire; the Argives, that they would contend for their ancient supremacy, to regain their once equal share of Peloponnese of which they had been so long deprived, and to punish an enemy and a neighbour for a thousand wrongs; the Athenians, of the glory of gaining the honours of the day with so many and brave allies in arms, and that a victory over the Lacedaemonians in Peloponnese would cement and extend their empire, and would besides preserve Attica

from all invasions in future. These were the incitements addressed to the Argives and their allies. The Lacedaemonians meanwhile, man to man, and with their war-songs in the ranks, exhorted each brave comrade to remember what he had learnt before; well aware that the long training of action was of more saving virtue than any brief verbal exhortation, though never so well delivered.

Thucydides, Peloponnesian War, V, 69

10 *Alcibiades*. [Socrates] and I went on the expedition to Potidaea; there we messed together, and I had the opportunity of observing his extraordinary power of sustaining fatigue. His endurance was simply marvellous when, being cut off from our supplies, we were compelled to go without food— on such occasions, which often happen in time of war, he was superior not only to me but to everybody; there was no one to be compared to him. Yet at a festival he was the only person who had any real powers of enjoyment; though not willing to drink, he could if compelled beat us all at that,—wonderful to relate! no human being had ever seen Socrates drunk; and his powers, if I am not mistaken, will be tested before long. His fortitude in enduring cold was also surprising. There was a severe frost, for the winter in that region is really tremendous, and everybody else either remained indoors, or if they went out had on an amazing quantity of clothes, and were well shod, and had their feet swathed in felt and fleeces: in the midst of this, Socrates with his bare feet on the ice and in his ordinary dress marched better than the other soldiers who had shoes, and they looked daggers at him because he seemed to despise them.... There was another occasion on which his behaviour was very remarkable—in the flight of the army

after the battle of Delium, where he served among the heavy-armed—I had a better opportunity of seeing him than at Potidaea, for I was myself on horseback, and therefore comparatively out of danger. He and Laches were retreating, for the troops were in flight, and I met them and told them not to be discouraged, and promised to remain with them; and there you might see him, Aristophanes, as you describe, just as he is in the streets of Athens, stalking like a pelican, and rolling his eyes, calmly contemplating enemies as well as friends, and making very intelligible to anybody, even from a distance, that whoever attacked him would be likely to meet with a stout resistance; and in this way he and his companion escaped—for this is the sort of man who is never touched in war; those only are pursued who are running away headlong.

Plato, Symposium, 219B

- 11 *Socrates.* Nothing can be more important than that the work of a soldier should be well done. But is war an art so easily acquired that a man may be a warrior who is also a husbandman, or shoemaker, or other artisan; although no one in the world would be a good dice or draught player who merely took up the game as a recreation, and had not from his earliest years devoted himself to this and nothing else? No tools will make a man a skilled workman, or master of defence, nor be of any use to him who has not learned how to handle them, and has never bestowed any attention upon them. How then will he who takes up a shield or other implement of war become a good fighter all in a day, whether with heavy-armed or any other kind of troops?

Glaucon. Yes... the tools which would teach men their own use would be beyond price.

And the higher the duties of the guardian, I said, the more time, and skill, and art, and application will be needed by him?

No doubt....

Will he not also require natural aptitude for his calling?

Certainly.

Then it will be our duty to select, if we can, natures which are fitted for the task of guarding the city.

Plato, Republic, II, 374A

12 *Athenian Stranger.* For expeditions of war much consideration and many laws are required; the great principle of all is that no one of either sex should be without a commander; nor should the mind of any one be accustomed to do anything, either in jest or earnest, of his own motion, but in war and in peace he should look to and follow his leader, even in the least things being under his guidance; for example, he should stand or move, or exercise, or wash, or take his meals, or get up in the night to keep guard and deliver messages when he is bidden; and in the hour of danger he should not pursue and not retreat except by order of his superior; and in a word, not teach the soul or accustom her to know or understand how to do anything apart from others. Of all soldiers the life should be always and in all things as far as possible in common and together; there neither is nor ever will be a higher, or better, or more scientific principle than this for the attainment of salvation and victory in war. And we ought in time of peace from youth upwards to practise this habit of commanding others, and

of being commanded by others; anarchy should have no place in the life of man or of the beasts who are subject to man.

Plato, Laws, XII, 942A

- 13 *Socrates*. A general must also be capable of furnishing military equipment and providing supplies for the men; he must be resourceful, active, careful, hardy and quick-witted; he must be both gentle and brutal, at once straightforward and designing, capable of both caution and surprise, lavish and rapacious, generous and mean, skilful in defence and attack; and there are many other qualifications, some natural, some acquired, that are necessary to one who would succeed as a general.

Xenophon, Memorabilia, III, 1

- 14 In the choice of a general, we should regard his skill rather than his virtue; for few have military skill, but many have virtue.

Aristotle, Politics, 1309b3

- 15 There are four kinds of military forces,—the cavalry, the heavy infantry, the light-armed troops, the navy. When the country is adapted for cavalry, then a strong oligarchy is likely to be established. For the security of the inhabitants depends upon a force of this sort, and only rich men can afford to keep horses. The second form of oligarchy prevails when the country is adapted to heavy infantry; for this service is better suited to the rich than to the poor. But the light-armed and the naval element are wholly democratic; and nowadays, where they are numerous, if the two parties quarrel, the

oligarchy are often worsted by them in the struggle. A remedy for this state of things may be found in the practice of generals who combine a proper contingent of light-armed troops with cavalry and heavy-armed. And this is the way in which the poor get the better of the rich in civil contests; being lightly armed, they fight with advantage against cavalry and heavy infantry. An oligarchy which raises such a force out of the lower classes raises a power against itself. And therefore, since the ages of the citizens vary and some are older and some younger, the fathers should have their own sons, while they are still young, taught the agile movements of light-armed troops; and these, when they have been taken out of the ranks of the youth, should become light-armed warriors in reality.

Aristotle, Politics, 1321a7

16 Weapons are of little use on the field of battle if there is no wise counsel at home.

Cicero, De Officiis, I, 22

17 *Aeneas*. 'Brave souls!' said I,—'but brave, alas! in vain—
Come, finish what our cruel fates ordain.
You see the desperate state of our affairs.
And heav'n's protecting pow'rs are deaf to pray'rs.
The passive gods behold the Greeks defile
Their temples, and abandon to the spoil
Their own abodes: we, feeble few, conspire
To save a sinking town, involv'd in fire.
Then let us fall, but fall amidst our foes:
Despair of life the means of living shows.'

So bold a speech encourag'd their desire
Of death, and added fuel to their fire.

"As hungry wolves, with raging appetite,
Scour thro' the fields, nor fear the stormy night—
Their whelps at home expect the promis'd food.
And long to temper their dry chaps in blood—
So rush'd we forth at once; resolv'd to die,
Resolv'd, in death, the last extremes to try.
We leave the narrow lanes behind, and dare
Th' unequal combat in the public square:
Night was our friend; our leader was despair."

Virgil, Aeneid, II

18 Nor was he [Aemilius Paulus] less severe in requiring and observing the ancient Roman discipline in military affairs; not endeavouring, when he had the command, to ingratiate himself with his soldiers by popular flattery, though this custom prevailed at that time amongst many, who, by favour and gentleness to those that were under them in their first employment, sought to be promoted to a second; but, by instructing them in the laws of military discipline with the same care and exactness a priest would use in teaching ceremonies and dreadful mysteries, and by severity to such as transgressed and contemned those laws, he maintained his country in its former greatness, esteeming victory over enemies itself but as an accessory to the proper training and disciplining of the citizens.

Plutarch, Aemilius Paulus

19 As horses run brisker in a chariot than singly, not that their joint force divides the air with greater ease, but

because being matched one against the other emulation kindles and inflames their courage; thus he [Pelopidas] thought brave men, provoking one another to noble actions, would prove most serviceable, and most resolute, where all were united together.

Plutarch, Pelopidas

- 20 Any voluntary partaking with people in their labour is felt as an easing of that labour, as it seems to take away the constraint and necessity of it. It is the most obliging sight in the world to the Roman soldier to see a commander eat the same bread as himself, or lie upon an ordinary bed, or assist the work in the drawing a trench and raising a bulwark. For they do not so much admire those that confer honours and riches upon them, as those that partake of the same labour and danger with themselves; but love them better that will vouchsafe to join in their work, than those that encourage their idleness.

Plutarch, Caius Marius

- 21 It grieved Nicias to hear of flight and departing home, not that he did not fear the Syracusans, but he was worse afraid of the Athenians, their impeachments and sentences; he professed that he apprehended no further harm there, or if it must be, he would rather die by the hand of an enemy than by his fellow-citizens.... But fresh forces now coming to the Syracusans and the sickness growing worse in his camp, he, also, now approved of their retreat, and commanded the soldiers to make ready to go abroad.

And when all were in readiness, and none of the enemy had observed them, not expecting such a thing,

the moon was eclipsed in the night, to the great fright of Nicias and others, who, for want of experience, or out of superstition, felt alarm at such appearances. That the sun might be darkened about the close of the month, this even ordinary people now understood pretty well to be the effect of the moon; but the moon itself to be darkened, how that could come about, and how, on the sudden, a broad full moon should lose her light, and show such various colours, was not easy to be comprehended; they concluded it to be ominous, and a divine intimation of some heavy calamities. ... It so fell out with Nicias, that he had not at this time a skilful diviner with him; his former habitual adviser who used to moderate much of his superstition, Stilbides, had died a little before. For, in fact, this prodigy, as Philochorus observes, was not unlucky for men wishing to flee, but on the contrary very favourable; for things done in fear require to be hidden, and the light is their foe. Nor was it usual to observe signs in the sun or moon more than three days, as Autocles states in his *Commentaries*, But Nicias persuaded them to wait another full course of the moon, as if he had not seen it clear again as soon as ever it had passed the region of shadow where the light was obstructed by the earth.

In a manner abandoning all other cares, he betook himself wholly to his sacrifices, till the enemy came upon them with their infantry, besieging the forts and camp, and placing their ships in a circle about the harbour. Nor did the men in the galleys only, but the little boys everywhere got into the fishing-boats and rowed up and challenged the Athenians, and insulted over them....

The Athenians, their loss and slaughter being very great, their flight by sea cut off, their safety by land so

difficult, did not attempt to hinder the enemy towing away their ships, under their eyes, nor demanded their dead, as, indeed, their want of burial seemed a less calamity than the leaving behind the sick and wounded which they now had before them. Yet more miserable still than those did they reckon themselves, who were to work on yet, through more such sufferings, after all to reach the same end.

Plutarch, Nicias

- 22 Peace is only too apt to lower the reputation of men that have grown great by arms, who naturally find difficulty in adapting themselves to the habits of civil equality.

Plutarch, Pompey

- 23 [Caesar] was so much master of the good-will and hearty service of his soldiers that those who in other expeditions were but ordinary men displayed a courage past defeating or withstanding when they went upon any danger where Caesar's glory was concerned.

Plutarch, Caesar

- 24 Cato himself acquired in the fullest measure what it had been his least desire to seek, glory and good repute; he was highly esteemed by all men, and entirely beloved by the soldiers. Whatever he commanded to be done, he himself took part in the performing; in his apparel, his diet, and mode of travelling, he was more like a common soldier than an officer; but in character, high purpose, and wisdom, he far exceeded all that had the names and titles of commanders, and he made himself, without knowing it, the object of general affection.

Plutarch, Cato the Younger

25 Iphicrates the Athenian used to say that it is best to have a mercenary soldier fond of money and of pleasures, for thus he will fight the more boldly, to procure the means to gratify his desires. But most have been of opinion that the body of an army, as well as the natural one, when in its healthy condition, should make no efforts apart, but in compliance with its head.

Plutarch, Galba

26 [In] the events that followed among the Romans upon the death of Nero , . , plain proofs were given that nothing is more terrible than a military force moving about in an empire upon uninstructed and unreasoning impulses.

Plutarch, Galba

27 You can find, much more quickly, a witness
Who will perjure himself against a civilian's lawsuit
Than you will get one to tell the truth if it injures the
interests
Or the good name of a soldier.

Juvenal, Satire XVI

28 The worthiest. . . [soldiers] were moved by patriotism; many were wrought upon by the attractions of plunder; some by their private embarrassments. And so, good and bad, from different motives, but with equal zeal, were all eager for war.

Tacitus, Histories, II, 7

29 The arms with which a prince defends his state are either his own, or they are mercenaries, auxiliaries, or mixed. Mercenaries and auxiliaries are useless and dangerous; and if one holds his state based on these arms, he will stand neither firm nor safe; for they are disunited, ambitious and without discipline, unfaithful, valiant before friends, cowardly before enemies; they have neither the fear of God nor fidelity to men, and destruction is deferred only so long as the attack is; for in peace one is robbed by them, and in war by the enemy. The fact is, they have no other attraction or reason for keeping the field than a trifle of stipend, which is not sufficient to make them willing to die for you. They are ready enough to be your soldiers whilst you do not make war, but if war comes they take themselves off or run from the foe.

Machiavelli, Prince, XII

30 Mercenary captains are either capable men or they are not; if they are, you cannot trust them, because they always aspire to their own greatness, either by oppressing you, who are their master, or others contrary to your intentions; but if the captain is not skilful, you are ruined in the usual way.

And if it be urged that whoever is armed will act in the same way, whether mercenary or not, I reply that when arms have to be resorted to, either by a prince or a republic, then the prince ought to go in person and perform the duty of captain; the republic has to send its citizens, and when one is sent who does not turn out satisfactorily, it ought to recall him, and when one is worthy, to hold him by the laws so that he does not leave the command. And experience has shown princes and

republics, single-handed, making the greatest progress, and mercenaries doing nothing except damage; and it is more difficult to bring a republic, armed with its own arms, under the sway of one of its citizens than it is to bring one armed with foreign arms.

Machiavelli, Prince, XII

- 31 David offered himself to Saul to fight with Goliath, the Philistine champion, and, to give him courage, Saul armed him with his own weapons; which David rejected as soon as he had them on his back, saying he could make no use of them, and that he wished to meet the enemy with his sling and his knife. In conclusion, the arms of others either fall from your back, or they weigh you down, or they bind you fast.

Machiavelli, Prince, XIII

- 32 A general who disposes his army in such manner that it can rally three several times in the course of a battle, must have fortune against him three times before being defeated, and must have an enemy opposed to him sufficiently superior to overcome him three times. But if an army can resist only a single shock, as is the case nowadays with the Christian armies, it may easily lose the battle.

Machiavelli, Discourses, II, 16

- 33 To make an army victorious in battle it is necessary to inspire them with confidence, so as to make them believe that the victory will be theirs under any circumstances. But to give an army such confidence they must be well armed and disciplined, and the men must know each

other; such confidence and discipline, however, can exist only where the troops are natives of the same country, and have lived together for some time. It is necessary also that they should esteem their general, and have confidence in his ability; and this will not fail to be the case when they see him orderly, watchful, and courageous, and that he maintains the dignity of his rank by a proper reputation. All this he will do by punishing faults, by not fatiguing his troops unnecessarily, by strictly fulfilling his promises, by showing them that victory is easy, and by concealing or making light of the dangers which he discerns from afar.

Machiavelli, Discourses, III, 33

- 34 There is no occupation so pleasant as the military one, an occupation both noble in execution (for the strongest, most generous, and proudest of all virtues is valor) and noble in its cause; there is no more just and universal service than the protection of the peace and greatness of your country. . . . Death is more abject, more lingering and distressing, in bed than in battle; fevers and catarrhs are as painful and fatal as a harquebus shot. Whoever is prepared to bear valiantly the accidents of everyday life would not have to swell his courage to become a soldier.

Montaigne, Essays, III, 13, Of Experience

- 35 *Hotspur*. I remember, when the fight was done,
When I was dry with rage and extreme toil.
Breathless and faint, leaning upon my sword,
Came there a certain lord, neat, and trimly dress'd,
Fresh as a bridegroom; and his chin new reap'd
Show'd like a stubble-land at harvest-home;

He was perfumed like a milliner;
And 'twixt his finger and his thumb he held
A pouncet-box, which ever and anon
He gave his nose and took't away again:
Who therewith angry, when it next came there.
Took it in snuff; and still he smiled and talk'd.
And as the soldiers bore dead bodies by.
He call'd them untaught knaves, unmannerly,
To bring a slovenly unhandsome corse
Betwixt the wind and his nobility.
With many holiday and lady terms
He question'd me; amongst the rest, demanded
My prisoners in your Majesty's behalf.
I then, all smarting with my wounds being cold,
To be so pester'd with a popinjay,
Out of my grief and my impatience.
Answer'd neglectingly I know not what.
He should, or he should not; for he made me mad
To see him shine so brisk and smell so sweet
And talk so like a waiting-gentlewoman
Of guns and drums and wounds—God save the mark!—
And telling me the sovereign'st thing on earth
Was parmaceti for an inward bruise;
And that it was great pity, so it was.
This villainous salt-petre should be digg'd
Out of the bowels of the harmless earth,
Which many a good tall fellow had destroy'd
So cowardly; and but for these vile guns,
He would himself have been a soldier.

Shakespeare, I Henry IV, I, iii, 30

36 *Vernon*. I have learn'd,
The King himself in person is set forth,

Or hitherwards intended speedily,
With strong and mighty preparation.

Hotspur. He shall be welcome too. Where is his son,
The nimble-footed madcap Prince of Wales,
And his comrades, that daff'd the world aside.
And bid it pass?

Ver. Ail furnish'd, all in arms;
All plumed like estridges that with the wind
Baited like eagles having lately bathed;
Glittering in golden coats, like images;
As full of spirit as the month of May,
And gorgeous as the sun at midsummer;
Wanton as youthful goats, wild as young bulls.
I saw young Harry, with his beaver on.
His cuisses on his thighs, gallantly arm'd,
Rise from the ground like feather'd Mercury,
And vaulted with such case into his seat,
As if an angel dropp'd down from the clouds,
To turn and wind a fiery Pegasus
And witch the world with noble horsemanship.

Shakespeare, IV, IV, i, 90

37 *Prince of Wales.* Tell me, Jack, whose fellows are these
that come after?

Falstaff. Mine, Hal, mine.

Prince. I did nevr see such pitiful rascals,

Fal. Tut, tut; good enough to toss; food for powder,
food for powder; they'll fill a pit as well as better: tush,
man, mortal men, mortal men.

Shakespeare, I Henry IV, IV, ii, 67

38 *Othello*. O, now, for ever

Farewell the tranquil mind! farewell content!
Farewell the plumed troop, and the big wars,
That make ambition virtue! O, farewell!
Farewell the neighing steed, and the shrill trump.
The spirit-stirring drum, the ear-piercing fife,
The royal banner, and all quality,
Pride, pomp, and circumstance of glorious war!
And, O you mortal engines, whose rude throats
The immortal Jove's dread clamours counterfeit.
Farewell! Othello's occupation's gone!

Shakespeare, Othello, III, iii, 347

39 Blessed be those happy Ages that were Strangers to the
dreadful Fury of these devilish Instruments of Artillery,
whose Inventor I am satisfy'd is now in Hell, receiving the
Reward of his cursed Invention, which is the Cause that
very often a cowardly base Hand takes away the Life of
the bravest Gentleman, and that in the midst of that
Vigour and Resolution which animates and inflames the
Bold, a chance Bullet (shot perhaps by one that fled, and
was frighted at the very Flash the mischievous Piece
gave, when it went off) coming no Body knows how, or
from whence, in a Moment puts a Period to the brave
Designs, and the Life of one, that deserv'd to have
surviv'd many Years.

Cervantes, Don Quixote, I, 38

40 I know not how, but martial men are given to love: I think
it is but as they are given to wine; for perils commonly
ask to be paid in pleasures.

Bacon, Of Lore

41 A commander of an army in chief, if he be not popular, shall not be beloved, nor feared as he ought to be by his army, and consequently cannot perform that office with good success. He must therefore be industrious, valiant, affable, liberal and fortunate, that he may gain an opinion both of sufficiency and of loving his soldiers. This is popularity, and breeds in the soldiers both desire and courage to recommend themselves to his favour; and protects the severity of the general, in punishing, when need is, the mutinous or negligent soldiers. But this love of soldiers, if caution be not given of the commander's fidelity, is a dangerous thing to sovereign power; especially when it is in the hands of an assembly not popular. It belongeth therefore to the safety of the people, both that they be good conductors and faithful subjects, to whom the sovereign commits his armies.

Hobbes, Leviathan, II, 30

42 *Satan*. Innumerable force of Spirits arm'd
That durst dislike his reign, and me preferring,
His utmost power with adverse power oppos'd
In dubious Battel on the Plains of Heav'n.

Milton, Paradise Lost, I, 101

43 The preservation of the army, and in it of the whole commonwealth, requires an absolute obedience to the command of every superior officer, and it is justly death to disobey or dispute the most dangerous or unreasonable of them.

Locke, II Civil Government, XI, 139

44 He [the king of Brobdingnag] was amazed to hear me talk of a mercenary standing army in the midst of peace, and among a free people. He said, if we were governed by our own consent in the persons of our representatives, he could not imagine of whom we were afraid, or against whom we were to fight; and would hear my opinion, whether a private man's house might not better be defended by himself, his children, and family; than by half a dozen rascals picked up at a venture in the streets, for small wages, who might gel an hundred times more by cutting their throats.

Swift, Gulliver's Travels, II, 6

45 The trade of a *soldier* is held the most honourable of all others: because a *soldier* is a Yahoo hired to kill in cold blood as many of his own species, who have never offended him, as possibly he can.

Swift, Gulliver's Travels, IV, 3

46 Desertion in our day's has grown to a very great height; in consequence of which it was judged proper to punish those delinquents with death; and yet their number did not diminish. The reason is very natural; a soldier, accustomed to venture his life, despises, or affects to despise, the danger of losing it. He is habituated to the fear of shame; it would have been therefore much better to have continued a punishment which branded him with infamy for life; the penalty was pretended to be increased, while it really diminished.

Montesquieu, Spirit of Laws, VI, 12

47 It is said that God is always for the big battalions.

Voltaire, Letter to M. Le Riche (Feb. 6, 1770)

48 We talked of war. *Johnson*. "Every man thinks meanly of himself for not having been a soldier, or not having been at sea." *Boswell*. "Lord Mansfield does not." *Johnson*. "Sir, if Lord Mansfield were in a company of General Officers and Admirals who have been in service, he would shrink; he'd wish to creep under the table." *Boswell*. "No; he'd think he could *try* them all." *Johnson*. "Yes, if he could catch them: but they'd try him much sooner. No, Sir; were Socrates and Charles the Twelfth of Sweden both present in any company, and Socrates to say, 'Follow me, and hear a lecture on philosophy'; and Charles, laying his hand on his sword, to say, 'Follow me, and dethrone the Czar'; a man would be ashamed to follow Socrates. Sir, the impression is universal; yet it is strange. As to the sailor, when you look down from the quarter deck to the space below, you see the utmost extremity of human misery; such crowding, such filth, such stench!" *Boswell*. "Yet sailors are happy." *Johnson*. "They are happy as brutes are happy, with a piece of fresh meat,—with the grossest sensuality. But, Sir, the profession of soldiers and sailors has the dignity of danger. Mankind reverence those who have got over fear, which is so general a weakness."

Boswell, Life of Johnson (Apr. 10, 1778)

49 Without regarding the danger... young volunteers never enlist so readily as at the beginning of a new war; and though they have scarce any chance of preferment, they figure to themselves, in their youthful fancies, a thousand occasions of acquiring honour and distinction which never occur. These romantic hopes make the whole price

of their blood. Their pay is less than that of common labourers, and in actual service their fatigues are much greater.

Adam Smith, Wealth of Nations, I, 10

50 The art of war... as it is certainly the noblest of all arts, so in the progress of improvement it necessarily becomes one of the most complicated among them. The state of the mechanical, as well as of some other arts, with which it is necessarily connected, determines the degree of perfection to which it is capable of being carried at any particular time. But in order to carry it to this degree of perfection, it is necessary that it should become the sole or principal occupation of a particular class of citizens, and the division of labour is as necessary for the improvement of this, as of every other art. Into other arts the division of labour is naturally introduced by the prudence of individuals, who find that they promote their private interest better by confining themselves to a particular trade than by exercising a great number. But it is the wisdom of the state only which can render the trade of a soldier a particular trade separate and distinct from all others. A private citizen who, in time of profound peace, and without any particular encouragement from the public, should spend the greater part of his time in military exercises, might, no doubt, both improve himself very much in them, and amuse himself very well; but he certainly would not promote his own interest. It is the wisdom of the state only which can render it for his interest to give up the greater part of his time to this peculiar occupation: and states have not always had this wisdom, even when their circumstances had become

such that the preservation of their existence required that they should have it.

Adam Smith, Wealth of Nations, V, 1

51 Before the invention of firearms, that army was superior in which the soldiers had, each individually, the greatest skill and dexterity in the use of their arms. Strength and agility of body were of the highest consequence, and commonly determined the state of battles. But this skill and dexterity in the use of their arms could be acquired only, in the same manner as fencing is at present, by practising, not in great bodies, but each man separately, in a particular school, under a particular master, or with his own particular equals and companions. Since the invention of firearms, strength and agility of body, or even extraordinary dexterity and skill in the use of arms, though they are far from being of no consequence, are, however, of less consequence. The nature of the weapon, though it by no means puts the awkward upon a level with the skilful, puts him more nearly so than he ever was before. All the dexterity and skill, it is supposed, which are necessary for using it, can be well enough acquired by practising in great bodies.

Regularity, order, and prompt obedience to command are qualities which, in modern armies, are of more importance towards determining the fate of battles than the dexterity and skill of the soldiers in the use of their arms. But the noise of firearms, the smoke, and the invisible death to which every man feels himself every moment exposed as soon as he comes within cannon-shot, and frequently a long time before the battle can be well said to be engaged, must render it very difficult to maintain any considerable degree of this regularity,

order, and prompt obedience, even in the beginning of a modern battle. In an ancient battle there was no noise but what arose from the human voice; there was no smoke, there was no invisible cause of wounds or death. Every man, till some mortal weapon actually did approach him, saw clearly that no such weapon was near him. In these circumstances, and among troops who had some confidence in their own skill and dexterity in the use of their arms, it must have been a good deal less difficult to preserve some degree of regularity and order, not only in the beginning, but through the whole progress of an ancient battle, and till one of the two armies was fairly defeated. But the habits of regularity, order, and prompt obedience to command can be acquired only by troops which are exercised in great bodies.

Adam Smith, Wealth of Nations, V, 1

52 A militia ... in whatever manner it may be either disciplined or exercised, must always be much inferior to a well-disciplined and well-exercised standing army.

The soldiers who are exercised only once a week, or once a month, can never be so expert in the use of their arms as those who are exercised every day, or every other day.... The soldiers who are bound to obey their officer only once a week or once a month, and who are at all other times at liberty to manage their own affairs their own way, without being in any respect accountable to him, can never be under the same awe in his presence, can never have the same disposition to ready obedience, with those whose whole life and conduct are every day directed by him, and who every day even rise and go to bed, or at least retire to their quarters, according to his orders. In what is called discipline, or in the habit of

ready' obedience, a militia must always be still more inferior to a standing army than it may sometimes be in what is called the manual exercise, or in the management and use of its arms. But in modern war the habit of ready and instant obedience is of much greater consequence than a considerable superiority in the management of arms., . .

A militia of any kind... however, which has served for several successive campaigns in the field, becomes in every respect a standing army. The soldiers are every day exercised in the use of their arms, and, being constantly under the command of their officers, are habituated to the same prompt obedience which takes place in standing armies. What they were before they took the field is of little importance. They necessarily become in every respect a standing army after they have passed a few campaigns in it. Should the war in America drag out through another campaign, the American militia may come in every respect a match for that standing army of which the valour appeared, in the last war, at least not inferior to that of the hardiest veterans of France and Spain.

This distinction being well understood, the history of all ages, it will be found, bears testimony to the irresistible superiority which a well-regulated standing army has over a militia.

Adam Smith, Wealth of Nations, V, 1

53 Men of republican principles have been jealous of a standing army as dangerous to liberty. It certainly is so wherever the interest of the general and that of the principal officers are not necessarily connected with the support of the constitution of the state, . . . , But where the

sovereign is himself the general, and the principal nobility and gentry of the country the chief officers of the army, where the military force is placed under the command of those who have the greatest interest in the support of the civil authority, because they have themselves the greatest share of that authority, a standing army can never be dangerous to liberty. On the contrary, it may in some cases be favourable to liberty.

Adam Smith, Wealth of Nations, V, 1

54 The terror of the Roman arms added weight and dignity to the moderation of the emperors. They preserved peace by a constant preparation for war; and while justice regulated their conduct, they announced to the nations on their confines that they were as little disposed to endure as to offer an injury.

Gibbon, Decline and Fall of the Roman Empire, I

55 In the purer ages of the commonwealth, the use of arms was reserved for those ranks of citizens who had a country to love, a property to defend, and some share in enacting those laws, which it was their interest, as well as duty, to maintain. But in proportion as the public freedom was lost in extent of conquest, war was gradually improved into an art, and degraded into a trade.

Gibbon, Decline and Fall of the Roman Empire, I

56 In the various states of society armies are recruited from very different motives. Barbarians are urged by their love of war; the citizens of a free republic may be prompted by a principle of duty; the subjects, or at least the nobles, of a monarchy are animated by a sentiment of honour; but

the timid and luxurious inhabitants of a declining empire must be allured into the service by the hopes of profit, or compelled by the dread of punishment.

Gibbon, Decline and Fall of the Roman Empire, XVII

57 Cold, poverty, and a life of danger and fatigue fortify the strength and courage of barbarians. In every age they have oppressed the polite and peaceful nations of China, India, and Persia, who neglected, and still neglect, to counterbalance these natural powers by the resources of military art. The warlike states of antiquity, Greece, Macedonia, and Rome, educated a race of soldiers; exercised their bodies, disciplined their courage, multiplied their forces by regular evolutions, and converted the iron which they possessed into strong and serviceable weapons. But this superiority insensibly declined with their laws and manners: and the feeble policy of Constantine and his successors armed and instructed, for the ruin of the empire, the rude valour of the barbarian mercenaries. The military art has been changed by the invention of gunpowder; which enables man to command the two most powerful agents of nature, air and fire. Mathematics, chemistry, mechanics, architecture, have been applied to the service of war; and the adverse parties oppose to each other the most elaborate modes of attack and of defence. Historians may indignantly observe that the preparations of a siege would found and maintain a flourishing colony; yet we cannot be displeased that the subversion of a city should be a work of cost and difficulty; or that an industrious people should be protected by those arts which survive and supply the decay of military virtue. Cannon and fortifications now form an impregnable barrier against the

Tartar horse; and Europe is secure from any future irruption of barbarians; since, before they can conquer, they must cease to be barbarous. Their gradual advances in the science of war would always be accompanied, as we may learn from the example of Russia, with a proportionable improvement in the arts of peace and civil policy; and they themselves must deserve a place among the polished nations whom they subdue.

Gibbon, Decline and Fall of the Roman Empire, XXXVIII

58 The discipline of a soldier is formed by exercise rather than by study: the talents of a commander are appropriated to those calm, though rapid, minds, which nature produces to decide the fate of armies and nations: the former is the habit of a life, the latter the glance of a moment; and the battles won by lessons of tactics may be numbered with the epic poems created from the rules of criticism.

Gibbon, Decline and Fall of the Roman Empire, LIII

59 The disciplined armies always kept on foot on the continent of Europe, though they bear a malignant aspect to liberty and economy, have, notwithstanding, been productive of the signal advantage of rendering sudden conquests impracticable, and of preventing that rapid desolation which used to mark the progress of war prior to their introduction.

Hamilton, Federalist 8

60 The authorities essential to the common defence are these: to raise armies; to build and equip fleets; to prescribe rules for the government of both; to direct their

operations; to provide for their support. These powers ought to exist without limitation, because it is impossible to foresee or define the extent and variety of national exigencies, or the correspondent extent and variety of the means which may be necessary to satisfy them.

Hamilton, Federalist 23

61 As far as an army may be considered as a dangerous weapon of power, it had better be in those hands of which the people are most likely to be jealous than in those of which they are least likely to be jealous- For it is a truth, which the experience of ages has attested, that the people are always most in danger when the means of injuring their rights are in the possession of those of whom they entertain the least suspicion.

Hamilton, Federalist 25

62 *Soldiers*. Castles with lofty
Ramparts retaining,
Maids who are haughty,
Scornful, disdainful,
Fain I'd be gaining!
Bold is the venture,
Grand is the pay!
 We let the trumpet
Summon us, wooing,
Calling to pleasure.
Oft to undoing.
That is a storming!
Life in its splendour!
 Maidens and castles
Both must surrender.

Bold is the venture,
Grand is the pay!
Then are the soldiers
Off and away.

Goethe, Faust, I, 884

63 Of all armies, those most ardently desirous of war are democratic armies, and of all nations, those most fond of peace are democratic nations; and what makes these facts still more extraordinary is that these contrary effects are produced at the same time by the principle of equality.

All the members of the community, being alike, constantly harbor the wish and discover the possibility of changing their condition and improving their welfare; this makes them fond of peace, which is favorable to industry and allows every man to pursue his own little undertakings to their completion. On the other hand, this same equality makes soldiers dream of fields of battle, by increasing the value of military honors in the eyes of those who follow the profession of arms and by rendering those honors accessible to all. In either case the restlessness of the heart is the same, the taste for enjoyment is insatiable, the ambition of success as great; the means of gratifying it alone are different.

Tocqueville, Democracy in America, Vol. II, III, 22

64 Half a league, half a league,
Half a league onward,
All in the valley of Death
Rode the six hundred.
'Forward the Light Brigade!

Charge for the guns!' he said.
Into the valley of Death
Rode the six hundred.

 'Forward, the Light Brigade!'
Was there a man dismay'd?
Not tho' the soldier knew
Some one had blunder'd.
Theirs not to make reply,
Theirs not to reason why.
Theirs but to do and die.
Into the valley of Death
Rode the six hundred.

 Cannon to right of them.
Cannon to left of them,
Cannon in front of them
Volley'd and thunder'd;
Storm'd at with shot and shell,
Boldly they rode and well,
Into the jaws of Death,
Into the mouth of hell
Rode the six hundred....

 When can their glory fade?
O the wild charge they made!
All the world wonder'd.
Honor the charge they made!
Honor the Light Brigade,
Noble six hundred!

Tennyson, The Charge of the Light Brigade

65 Doubtless one leading reason why the world declines honouring us whalemén, is this: they think that, at best, our vocation amounts to a butchering sort of business; and that when actively engaged therein, we are

surrounded by all manner of defilements. Butchers we are, that is true. But butchers also, and butchers of the bloodiest badge, have been all martial commanders whom the world, invariably delights to honour. And as for the matter of the alleged uncleanness of our business, ye shall soon be initiated into certain facts hitherto pretty generally unknown, and which, upon the whole, will triumphantly plant the sperm whaleship at least among the cleanliest things of this tidy earth. But even granting the charge in question to be true, what disordered slippery decks of a whale ship are comparable to the unspeakable carrion of those battlefields from which so many soldiers return to drink in all ladies' plaudits? And if the idea of peril so much enhances the popular conceit of the soldier's profession; let me assure ye that many a veteran who has freely marched up to a battery, would quickly recoil at the apparition of the sperm whale's vast tail, fanning into eddies the air over his head. For what are the comprehensible terrors of man compared with the interlinked terrors and wonders of God!

Melville, Moby Dick, XXIV

66 The soldier's trade, verily and essentially, is not slaying, but being slain. This, without well knowing its own meaning, the world honours it for.

Ruskin, Unto This Last, I, 17

67 In war the most deeply considered plans have no significance. . . . All depends on the way unexpected movements of the enemy—that cannot be foreseen—are met, and on how and by whom the whole matter is handled.

Tolstoy, War and Peace, IX, 9

68 *Prince Andrew*. Not only does a good army commander not need any special qualities, on the contrary he needs the absence of the highest and best human attributes—love, poetry, tenderness, and philosophic inquiring doubt.

Tolstoy, War and Peace, IX, 11

69 Rostov knew by experience that men always lie when describing military exploits... that nothing happens in war at all as we can imagine or relate it.

Tolstoy, War and Peace, IX, 12

70 *Prince Andrew*. But what is war? What is needed for success in warfare? What are the habits of the military? The aim of war is murder; the methods of war are spying, treachery, and their encouragement, the ruin of a country's inhabitants, robbing them or stealing to provision the army, and fraud and falsehood termed military craft. The habits of the military class are the absence of freedom, that is, discipline, idleness, ignorance, cruelty, debauchery, and drunkenness. And in spite of all this it is the highest class, respected by everyone. All the kings, except the Chinese, wear military uniforms, and he who kills most people receives the highest rewards.

Tolstoy, War and Peace, X, 25

71 The profoundest and most excellent dispositions and orders seem very bad, and every learned militarist criticizes them with looks of importance, when they relate to a battle that has been lost, and the very worst dispositions and orders seem very good, and serious

people fill whole volumes to demonstrate their merits, when they relate to a battle that has been won.

Tolstoy, War and Peace, X, 28

72 The result of a battle is decided not by the orders of a commander in chief, nor the place where the troops are stationed, nor by the number of cannon or of slaughtered men, but by that intangible force called the spirit of the army.

Tolstoy, War and Peace, X, 35

73 The activity of a commander in chief does not at all resemble the activity we imagine to ourselves when we sit at ease in our studies examining some campaign on the map, with a certain number of troops on this and that side in a certain known locality, and begin our plans from some given moment. A commander in chief is never dealing with the beginning of any event—the position from which we always contemplate it. The commander in chief is always in the midst of a series of shifting events and so he never can at any moment consider the whole import of an event that is occurring.

Tolstoy, War and Peace, XI, 2

74 The army has always been the basis of power, and it is so today. Power is always in the hands of those who command it.

Tolstoy, The Kingdom of God Is Within You

75 An army, considered ideally, is an organ for the state's protection; but it is far from being such in its origin, since at first an army is nothing but a ravenous and lusty horde

quartered in a conquered country; yet the cost of such an incubus may come to be regarded as an insurance against further attack, and so what is in its real basis an inevitable burden resulting from a chance balance of forces may be justified in afterthought as a rational device for defensive purposes.

Santayana, Life of Reason, II, 3

76 The military classes, since they inherit the blood and habits of conquerors, naturally love war and their irrational combativeness is reinforced by interest; for in war officers can shine and rise, while the danger of death, to a brave man, is rather a spur and a pleasing excitement than a terror. A military class is therefore always recalling, foretelling, and meditating war; it fosters artificial and senseless jealousies toward other governments that possess armies; and finally, as often as not, it precipitates disaster by bringing about the objectless struggle on which it has set its heart.

Santayana, Life of Reason, II, 3

14.3 The Conditions of Peace

It is said, in some of the passages below, that war is for the sake of peace; and it is also said that an unjust peace is to be preferred to a just war. The latter statement is challenged by those who question the genuineness of peace without justice and who point out that oppressive injustice breeds violence and rebellion which, as Locke observes in commenting on the etymology of the word (*re-bellare*), is a return to war. This difference of opinion is epitomized in two

views of the *Pax Romana* —the Virgilian view of it as a boon that Rome conferred by conquest and the opposite view that Tacitus gives voice to in the words of the defeated British chieftain, Galgacus: the Romans make a desolation, he said, and call it peace.

The basic distinction that emerges in Section 14.1 on Warfare and the State of War is of primary relevance to the conception of peace as a positive, not merely a negative, state of affairs—not just the absence of actual fighting, but the elimination of the need for recourse to violence in order to settle disputes. Animals, it has been asserted, have only one way of settling their differences— by fighting; but men have two ways—by fighting and by law. Civil society, Locke tells us, is a state of peace in which the umpirage of government and the reign of law provide the instrumentalities for settling disputes without recourse to violence; for the use of authorized force by government is not violence. Other writers, notably Augustine and Aquinas, fill out this positive conception of peace by the notion that genuine concord is essential to the tranquility of order and by the insistence that genuine concord is impossible without justice and love.

Both here and in Section 14.1, there is some discussion of the possibility of abolishing war—not merely actual warfare, but also the state of war. The negative voices on this subject, found mainly in Section 14.1, regard war as inevitable and irremediable, given man as he is and societies as they are. Sometimes this is said with regret, as by Freud, and sometimes with acquiescence, as by Hegel. Of an opposite tenor is the hope that emerges here from the recognition that, the ultimate cause of war being anarchy, the ultimate condition of peace is government. If local civil peace has been established here and there by local

government, then perhaps there is some prospect for world civil peace through world government. The reader will find this insight presented and this hope weighed in passages drawn from Dante, Kant, *The Federalist*, and Tennyson; but in the absence of twentieth-century voices, the impact of the discussion is not as encouraging as it might be.

As already indicated, materials of relevance to the future of war and peace will be found in Section 14.1; and with regard to the role of government in the establishment of civil peace, turn to Section 10.3 on Government: Its Nature, Necessity, and Forms.

■ ■ ■

1 Great peace have they which love thy law: and nothing shall offend them.

Psalms 119:165

2 When a man's ways please the Lord, he maketh even his enemies to be at peace with him.

Proverbs 16:7

3 (The Lord] shall judge among the nations, and shall rebuke many people: and they shall beat their swords into plowshares, and their spears into pruninghooks: nation shall not lift up sword against nation, neither shall they learn war any more.

Isaiah 2:4

4 The wolf... shall dwell with the lamb, and the leopard shall lie down with the kid; and the calf and the young lion and the fawning together; and a little child shall lead them.

Isaiah 11:6

5 *Trygaeus*. Think of all the thousand pleasures.

Comrades, which to Peace we owe,
All the life of ease and comfort
Which she gave us long ago:
Figs and olives, wine and myrtles,
Luscious fruits preserv'd and dried,
Banks of fragrant violets, blowing
By the crystal fountain's side;
Scenes for which our hearts are yearning,
Joys that we have missed so long—
—Comrades, here is Peace returning,
Greet her back with dance and song!

Chorus. Welcome, welcome, best and dearest,
welcome, welcome, welcome, home.
We have looked and longed for thee,
Looking, longing, wondrously,
Once again our farms to see.

O the joy, the bliss, the rapture, really to behold thee
come.

Thou wast aye our chief enjoyment, thou wast aye our
greatest gain.

We who ply the farmer's trade Used, through thy
benignant aid,
All the joys of life to hold.
Ah! the unbought pleasures free
Which we erst received of thee
In the merry days of old,

When thou wast our one salvation and our roasted
barley grain.

Now will all the tiny shoots.
Sunny vine and fig-tree sweet,
All the happy flowers and fruits.
Laugh for joy thy steps to greet.

Aristophanes, Peace, 571

6 *Lacedaemonian envoys*. If great enmities are ever to be really settled, we think it will be, not by the system of revenge and military success, and by forcing an opponent to swear to a treaty to his disadvantage, but when the more fortunate combatant waives these his privileges, to be guided by gentler feelings, conquers his rival in generosity, and accords peace on more moderate conditions than he expected. From that moment, instead of the debt of revenge which violence must entail, his adversary owes a debt of generosity to be paid in kind, and is inclined by honour to stand to his agreement. And men oftener act in this manner towards their greatest enemies than where the quarrel is of less importance; they are also by nature as glad to give way to those who first yield to them, as they are apt to be provoked by arrogance to risks condemned by their own judgment.

Thucydides, Peloponnesian War, IV, 19

7 *Hermocrates*. In the face of the universal consent that peace is the first of blessings, how can we refuse to make it amongst ourselves; or do you not think that the good which you have, and the ills that you complain of, would be better preserved and cured by quiet than by war; that peace has its honours and splendours of a less perilous

kind, not to mention the numerous other blessings that one might dilate on, with the not less numerous miseries of war?

Thucydides, Peloponnesian War, IV, 62

- 8 *Athenian Stranger*. No one can be a true statesman, whether he aims at the happiness of the individual or state, who looks only, or first of all, to external warfare; nor will he ever be a sound legislator who orders peace for the sake of war, and not war for the sake of peace.

Plato, Laws, I, 628B

- 9 Facts, as well as arguments, prove that the legislator should direct all his military and other measures to the provision of leisure and the establishment of peace. For most of these military states are safe only while they are at war, but fall when they have acquired their empire; like unused iron they lose their temper in time of peace. And for this the legislator is to blame, he never having taught them how to lead the life of peace.

Aristotle, Politics, 1334a3

- 10 An unjust peace is better than a just war.

Cicero, Ad Atticum, VII, 14

- 11 The only excuse for going to war is to be able to live in peace undisturbed. When victory is won we should spare those who have not been bloodthirsty or barbarous in their warfare.

Cicero, De Officiis, I, 11

12 Rome, 't is thine alone, with awful sway. To rule mankind,
and make the world obey. Disposing peace and war by
thy own majestic way;

To tame the proud, the fetter'd slave to free: These are
imperial arts, and worthy thee.

Virgil, Aeneid, VI

13 There is no employment that gives so keen and quick a
relish for peace as husbandry and a country life, which
leave in men all that kind of courage that makes them
ready to fight in defence of their own, while it destroys
the licence that breaks out into acts of injustice and
rapacity.

Plutarch, Numa Pompilius

14 Janus, whether in remote antiquity he were a demigod or
a king, was certainly a great lover of civil and social
unity, and one who reclaimed men from brutal and
savage living; for which reason they figure him with two
faces, to represent the two states and conditions out of
the one of which he brought mankind, to lead them into
the other. His temple at Rome has two gates, which they
call the gates of war, because they stand open in the
time of war, and shut in the times of peace; of which
latter there was very seldom an example, for, as the
Roman empire was enlarged and extended, it was so
encompassed with barbarous nations and enemies to be
resisted, that it was seldom or never at peace. Only in the
time of Augustus Cscsar, after he had overcome Antony,
this temple was shut; as likewise once before, when
Marcus Atilius and Titus Manlius were consuls; but then it

was not long before, wars breaking out, the gates were again opened.

But, during the reign of Numa, those gates were never seen open a single day, but continued constantly shut for a space of forty-three years together; such an entire and universal cessation of war existed. For not only had the people of Rome itself been softened and charmed into a peaceful temper by the just and mild rule of a pacific prince, but even the neighbouring cities, as if some salubrious and gentle air had blown from Rome upon them, began to experience a change of feeling, and partook in the general longing for the sweets of peace and order, and for life employed in the quiet tillage of soil, bringing up of children, and worship of the gods. Festival days and sports, and the secure and peaceful interchange of friendly visits and hospitalities prevailed all through the whole of Italy.

Plutarch, Numa Pompilius

- 15 To robbery, slaughter, plunder, they [the Romans] give the lying name of empire; they make a desolation and call it peace.

Tacitus, Agricola

- 16 [The earthly city] desires earthly peace for the sake of enjoying earthly goods, and it makes war in order to attain to this peace; since, if it has conquered, and there remains no one to resist it, it enjoys a peace which it had not while there were opposing parties who contested for the enjoyment of those things which were too small to satisfy both. This peace is purchased by toilsome wars; it is obtained by what they style a glorious victory. Now,

when victory remains with the party which had the juster cause, who hesitates to congratulate the victor, and style it a desirable peace? These things, then, are good things, and without doubt the gifts of God. But if they neglect the better things of the heavenly city, which are secured by eternal victory and peace never-ending, and so inordinately covet these present good things that they believe them to be the only desirable things, or love them better than those things which are believed to be better—if this be so, then it is necessary that misery follow and ever increase.

Augustine, City of God, XV, 4

- 17 Peace is a good so great, that even in this earthly and mortal life there is no word we hear with such pleasure, nothing we desire with such zest, or find to be more thoroughly gratifying.

Augustine, City of God, XIX, 11

- 18 It is . . . with the desire for peace that wars are waged, even by those who take pleasure in exercising their warlike nature in command and battle. And hence it is obvious that peace is the end sought for by war. For every man seeks peace by waging war, but no man seeks war by making peace. For even they who intentionally interrupt the peace in which they are living have no hatred of peace, but only wish it changed into a peace that suits them better. They do not, therefore, wish to have no peace, but only one more to their mind.

Augustine, City of God, XIX, 12

- 19 Even wicked men wage war to maintain the peace of their own circle, and wish that, if possible, all men belonged to them, that all men and things might serve but one head, and might, either through love or fear, yield themselves to peace with him!

Augustine, City of God, XIX, 12

- 20 Peace between man and man is well-ordered concord. Domestic peace is the well-ordered concord between those of the family who rule and those who obey. Civil peace is a similar concord among the citizens. The peace of the celestial city is the perfectly ordered and harmonious enjoyment of God, and of one another in God. The peace of all things is the tranquillity of order.

Augustine, City of God, XIX, 13

- 21 If one man concord with another, not by a spontaneous will but through being forced, as it were, by the fear of some evil that threatens him, such concord is not really peace, because the order of each concordant is not observed, but is disturbed by some fear-inspiring cause.

Aquinas, Summa Theologica, II—II, 29, 1

- 22 Even those who seek war and dissension desire nothing but peace, which they do not consider themselves to have. For . . . there is no peace when a man agrees with another man counter to what he would prefer. Consequently men seek by means of war to break this concord, because it is a defective peace, in order that they may obtain a peace in which nothing is contrary to their will. Hence all wars are waged that men may find a more perfect peace than that which they had before.

Aquinas, Summa Theologica, II—II, 29, 2

23 Peace is the work of justice indirectly, in so far as justice removes the obstacles to peace; but it is the work of charity directly, since charity, according to its very notion, causes peace.

Aquinas, Summa Theologica, II—II, 29, 3

24 The proper work of mankind taken as a whole is to exercise continually its entire capacity for intellectual growth, first, in theoretical matters, and, secondarily, as an extension of theory in practice. And since the part is a sample of the whole, and since individual men find that they grow in prudence and wisdom when they can sit quietly, it is evident that mankind, too, is most free and easy to carry on its work when it enjoys the quiet and tranquillity of peace.

Dante, De Monarchia, I, 4

25 Wherever there can be contention, there judgment should exist; otherwise things would exist imperfectly, without their own means of adjustment or correction, which is impossible, since in things necessary, God or Nature is not defective. Between any two governments, neither of which is in any way subordinate to the other, contention can arise either through their own fault or that of their subjects. This is evident. Therefore there should be judication between them. And since neither can know the affairs of the other, not being subordinated (for among equals there is no authority), there must be a third and wider power which can rule both within its own jurisdiction. This third power is either the world-government or it is not. If it is, we have reached our

conclusion; if it is not, it must in turn have its equal outside its jurisdiction, and then it will need a third party as judge, and so *ad infinitum*, which is impossible. So we must arrive at a first and supreme judge for whom all contentions are judiciable either directly or indirectly; and this will be our world-governor or emperor. Therefore, world-government is necessary for the world.

Dante, De Monarchia, I, 10

26 World government . . . must be understood in the sense that it governs mankind on the basis of what all have in common and that by a common law it leads all toward peace. This common norm or law should be received by local governments in the same way that practical intelligence in action receives its major premises from the speculative intellect. To these it adds its own particular minor premises and then draws particular conclusions for the sake of its action. These basic norms not only can come from a single source, but must do so in order to avoid confusion among universal principles. Moses himself followed this pattern in the law which he composed, for, having chosen the chiefs of the several tribes, he left them the lesser judgments, reserving to himself alone the higher and more general. These common norms were then used by the tribal chiefs according to their special needs. Therefore, it is better for mankind to be governed by one, not by many; and hence by a single governor, the world ruler; and if it is better, it is pleasing to God, since He always wills the better. And when there are only two alternatives—the better is also the best, and is consequently not only pleasing to God, but the choice of "one" rather than "many" is what most pleases Him. Hence it follows that mankind lives best

under a single government, and therefore that such a government is necessary for the well-being of the world.

Dante, De Monorchia, I, 14

27 The reins of man are held by a double driver according to man's twofold end; one is the supreme pontiff, who guides mankind with revelations to life eternal, and the other is the emperor, who guides mankind with philosophical instructions to temporal happiness. And since none or very few (and these with difficulty) can reach this goal, unless a free mankind enjoys the tranquility of peace and the waves of distracting greed are stilled, this must be the constant aim of him who guides the globe and whom we call Roman Prince, in order that on this threshing floor of life mortals may exist free and in peace.

Dante, De Monorchia, III, 16

28 Let none presume to tell me that the Pen is preferable to the Sword; for be they who they will, I shall tell them they know not what they say: For the Reason they give, and on which chiefly they rely, is, that the Labour of the Mind exceeds that of the Body, and that the Exercise of Arms depends only the Body, as if the use of them were the Business of Porters, which requires nothing but much Strength. Or, as if This, which we who profess it call Chivalry, did not include the Acts of Fortitude, which depend very much upon the Understanding. Or else, as if that Warriour, who commands an Army or defends a City besieged, did not labour as much with the Mind as with the Body. If this be not so, let Experience teach us whether it be possible by bodily Strength to discover or

guess the Intentions of an Enemy. The forming Designs, laying of Stratagems, overcoming of Difficulties, and shunning of Dangers, are all Works of the Understanding, wherein the Body has no Share, It being therefore evident, that the Exercise of Arms requires the Help of the Mind as well as Learning, let us see in the next place, whether the Scholar or the Soldier's Mind undergoes the greatest Labour. Now this may be the better known, by regarding the End and Object each of them aims at; for that Intention is to be most valued, which makes the noblest End its Object. The Scope and End of Learning, I mean, human Learning (in this Place I speak not of Divinity, whose aim is to guide Souls to Heaven, for no other can equal a Design so infinite as that) Is to give a Perfection to distributive Justice, bestowing upon every one his due, and to procure and cause good Laws to be observ'd; an End really Generous, Great, and worthy of high Commendation; but yet not equal to that which Knight-Errantry tends to, whose Object and End is Peace, which is the greatest Blessing Man can wish for in this Life. And therefore the first good News the World receiv'd, was that the Angels brought in the Night, which was the Beginning of our Day, when they sang in the Air, Glory to God on high. Peace upon Earth, and to Men Good-will. And the only manner of Salutation taught by the best Master in Heaven, or upon Earth, to his Friends and Favourites, was, that entering any House they should say. Peace be to this House. And at other times he said to them. My Peace I give to you. My Peace I leave to you. Peace be among you. A Jewel and Legacy worthy of such a Donor, a Jewel so precious, that without it there can be no Happiness either in Earth or Heaven. This Peace is the

true End of War; for Arms and War are one and the same thing.

Cervantes, Don Quixote, I, 37

29 In the very heat of war the greatest security and expectation of divine support must be in the unabated desire, and invariable prospect of peace, as the only end for which hostilities can be lawfully begun. So that in the prosecution of war we must never carry the rage of it so far, as to unlearn the nature and dispositions of men.

Grotius, Rights of War and Peace, Bk. III, XXV, 2

30 How rightly do we distinguish men by external appearances rather than by internal qualities I Which of us two shall have precedence? Who will give place to the other? The least clever. But I am as clever as he. We should have to fight over this. He has four lackeys, and I have only one. This can be seen; we have only to count. It falls to me to yield, and I am a fool if I contest the matter. By this means we are at peace, which is the greatest of boons.

Pascal, Pensées, V, 319

31 No War, or Battails sound
Was heard the World around,
The idle spear and shield were high up hung;
The hooked Chariot stood
Unstain'd with hostile blood,
The Trumpet spake not to the armed throng,
And Kings sate still with awfull eye,
As if they surely knew their sovran Lord was by.

Milton, On the Morning of Christs Nativity, 53

32 Peace hath her victories

No less renowned than war, new foes arises
Threatning to bind our souls with secular chains:
Help us to save free Conscience from the paw
Of hireling wolves whose Gospel is their maw.

Milton, To the Lord Generall Cromwell May 1652

33 The more commonwealths there are, that have
contracted a joint treaty of peace, the less each of them
by itself is an object of fear to the remainder, or the less it
has the authority to make war. But it is so much the more
bound to observe the conditions of peace; that is, the less
independent, and the more bound to accommodate itself
to the general will of the contracting parties.

Spinoza, Political Treatise, III, 16

34 If the innocent honest man must quietly quit all he has
for peace sake to him who will lay violent hands upon it, I
desire it may be considered what kind of a peace there
will be in the world which consists only in violence and
rapine, and which is to be maintained only for the benefit
of robbers and oppressors. Who would not think it an
admirable peace betwixt the mighty and the mean, when
the lamb, without resistance, yielded his throat to be torn
by the imperious wolf?

Locke, II Civil Government, XIX, 228

35 I should have wished to choose myself a country,
diverted, by a fortunate impotence, from the brutal love
of conquest, and secured, by a still more fortunate
situation, from the fear of becoming itself the conquest of
other States: a free city situated between several nations,

none of which should have any interest in attacking it, while each had an interest in preventing it from being attacked by the others; in short, a Republic which should have nothing to tempt the ambition of its neighbours, but might reasonably depend on their assistance in case of need. It follow's that a republican State so happily situated could have nothing to fear but from itself; and that, if its members trained themselves to the use of arms, it would be rather to keep alive that military ardour and courageous spirit which are so proper among freemen, and tend to keep up their taste for liberty, than from the necessity of providing for their defence.

Rousseau, Origin of Inequality, Dedication

36 *Johnson*. It is thus that mutual cowardice keeps us in peace. Were one half of mankind brave, and one half cowards, the brave would be always beating the cowards. Were all brave, they would lead a very uneasy life; all would be continually fighting: but being all cowards, we go on very well.

Boswell, Life of Johnson (Apr. 28, 1778)

37 Hereafter, perhaps,. . . the inhabitants of all the different quarters of the world may arrive at that equality of courage and force which, by inspiring mutual fear, can alone overaw'e the injustice of independent nations into some sort of respect for the rights of one another. But nothing seems more likely to establish this equality of force than that mutual communication of knowledge and of all sorts of improvements which an extensive commerce from all countries to all countries naturally, or rather necessarily, carries along with it.

Adam Smith, Wealth of Nations, IV, 7

38 The... daring [Roman General] Probus pursued his Gathe victories, passed the Rhine, and displayed his invincible eagles on the banks of the Elbe and the Neckar. He was fully convinced that nothing could reconcile the minds of the barbarians to peace, unless they experienced in their own country the calamities of war.

Gibbon, Decline and Fall of the Roman Empire, XII

39 The natural state of nations as well as of individual men is a state which it is a duty to pass out of, in order to enter into a legal state. Hence, before this transition occurs, all the right of nations and all the external property of states acquirable or maintainable by war are merely provisory; and they can only become peremptory in a universal union of states analogous to that by which a nation becomes a state. It is thus only that a real state of peace could be established. But with the too great extension of such a union of states over vast regions, any government of it, and consequently the protection of its individual members, must at last become impossible; and thus a multitude of such corporations would again bring round a state of war. Hence the perpetual peace, which is the ultimate end of all the right of nations, becomes in fact an impracticable idea. The political principles, however, which aim at such an end, and which enjoin the formation of such unions among the states as may promote a continuous approximation to a perpetual peace, are not impracticable; they are as practicable as this approximation itself, which is a practical problem involving a duty, and founded upon the right of individual men and states.

Kant, Science of Right, 61

40 The morally practical reason utters within us its irrevocable veto: *There shall be no war*. So there ought to be no war, neither between me and you in the condition of nature, nor between us as members of states which, although internally in a condition of law, are still externally in their relation to each other in a condition of lawlessness; for this is not the way by which any one should prosecute his right. Hence the question no longer is as to whether perpetual peace is a real thing or not a real thing, or as to whether we may not be deceiving ourselves when we adopt the former alternative, but we must *act* on the supposition of its being real. We must work for what may perhaps not be realized, and establish that constitution which yet seems best adapted to bring it about (mayhap republicanism in all states, together and separately). And thus we may put an end to the evil of wars, which have been the chief interest of the internal arrangements of all the states without exception. And although the realization of this purpose may always remain but a pious wish, yet we do certainly not deceive ourselves in adopting the maxim of action that will guide us in working incessantly for it; for it is a duty to do this. To suppose that the moral law within us is itself deceptive, would be sufficient to excite the horrible wish rather to be deprived of all reason than to live under such deception, and even to see oneself, according to such principles, degraded like the lower animals to the level of the mechanical play of nature.

Kant, Science of Right, Conclusion

41 Confidence in the principles of an enemy must remain even during war, otherwise a peace could never be concluded; and hostilities would degenerate into a war of extermination since war in fact is but the sad resource employed in a state of nature in defence of rights; force standing there in lieu of juridical tribunals. Neither of the two parties can be accused of injustice, since for that purpose a juridical decision would be necessary. But here the event of a battle (as formerly the *judgments of God*) determine the justice of either party; since between states there cannot be a war of punishment no subordination existing between them. A war, therefore, which might cause the destruction of both parties at once, together with the annihilation of every right, would permit the conclusion of a perpetual peace only upon the vast burial-ground of the human species.

Kant, Perpetual Peace, Section I, 6

42 With men, the state of nature is not a state of peace, but of war; though not of open war, at least, ever ready to break out. A state of peace must therefore be established; for, in order to be sheltered against every act of hostility, it is not sufficient that none is committed; one neighbour must guarantee to another his personal security, which cannot take place except in a state of legislation; without which one may treat another as an enemy, after having in vain demanded this protection.

Kant, Perpetual Peace, Section II, Intro.

43 If it is a duty, if the hope can even be conceived, of realizing, though by an endless progress, the reign of public right—perpetual peace, which will succeed to the

suspensions of hostilities, hitherto named treaties of peace, is not then a chimera, but a problem, of which time, probably abridged by the uniformity of the progress of the human mind, promises us the solution.

Kant, Perpetual Peace, Appendix, 2

44 In cases where it may be doubtful on which side justice lies, what better umpires could be desired by two violent factions, flying to arms and tearing a State to pieces, than the representatives of confederate States not heated by the local flame? To the impartiality of judges they would unite the affection of friends. Happy would it be if such a remedy for its infirmities could be enjoyed by all free governments; if a project equally effectual could be established for the universal peace of mankind!

Madison, Federalist 43

45 War is on its last legs; and a universal peace is as sure as is the prevalence of civilization over barbarism, of liberal governments over feudal forms. The question for us is only How soon?

Emerson, War

46 The war-drum throb'd no longer, and the battle-flags
were furl'd
In the Parliament of man, the Federation of the world.
There the common sense of most shall hold a fretful
realm in awe.
And the kindly earth shall slumber, lapt in universal
law.

Tennyson, Lacksley Hall, 127

47 I devoutly believe in the reign of peace and in the gradual advent of some sort of a socialistic equilibrium. The fatalistic view of the war-function is to me nonsense, for I know that war-making is due to definite motives and subject to prudential checks and reasonable criticisms, just like any other form of enterprise. And when whole nations are the armies, and the science of destruction vies in intellectual refinement with the sciences of production, I see that war becomes absurd and impossible from its own monstrosity. Extravagant ambitions will have to be replaced by reasonable claims, and nations must make common cause against them. I see no reason why all this should not apply to yellow as well as to white countries, and I look forward to a future when acts of war shall be formally outlawed as between civilized peoples.

William James, Moral Equivalent of War

48 The only way to abolish war [is] to make peace heroic.

Dewey, Human Nature and Conduct, II, 3

Chapter 15

HISTORY

Chapter 15 is divided into three sections: 15.1 History: The Record of Events, 15.2 Progress, Regress, and Cycles in History, and 15.3 Fate, Fortune, and Destiny.

Two meanings of the word "history" separate the texts that we have placed in Section 15.1 and in Section 15.2. On the one hand, we use the word to refer to an intellectual discipline, a field of research and of scholarship, and a type of literature. Thus understood, history is a subject taught and studied; histories are books of a certain sort, having a distinctive subject matter and style; and history is a kind of knowledge to be contrasted with science and philosophy. On the other hand, history consists of what has in fact happened; anything that has a development through a span of time or involves a sequence of events, has a history. In both meanings of the term, history involves a reference to the past and a location of events in time; and it usually involves the ordering of events in a temporal sequence.

In Section 15.1, we have placed passages that discuss the task of the historian as a student of the past and as a writer about it, and that deal with history as an intellectual discipline and as a form of literature. The quotations that we have placed in Section 15.2 express reflections about the course of history—the patterns of change that men think they have discovered in the temporal sequence of events. This leaves for Section 15.3 a third group of texts in which

writers speculate about the forces, factors, or agencies that govern the course of history and wonder about the role of human freedom in determining -the direction that history takes.

...

15.1 History: The Record of Events

Among the passages included here are quotations from eminent historians—Herodotus and Thucydides, Plutarch and Tacitus, Hume, Gibbon, and Toynbee—in which they reflect about the art of writing history and about the task of the historian as a reporter and interpreter of the past. They are concerned with the credibility of the stories they tell, with the reliability of the evidence they advance for the interpretations they give, with the significance of the past for the present, and with the utility of studying history. Just as the histories they have written differ in style, so they differ in their accounts of the method or approach deemed proper for the historian.

Included also are quotations from philosophers and others who have thought about the character of history as an intellectual discipline and as a distinct branch of human knowledge. In certain respects, history is said to be more like science than like poetry, at least in the kind of truth it claims to have; but in other respects, it is said to be more like poetry, not only in its narrative form but also in its reflections on human life. In addition, there are passages that take opposite sides on the question whether biography

is the core of history as the record of the influence that great men have had upon the course of events; and passages that express opposite views about whether the human race has ever learned anything from the study of history, or learned enough not to repeat the mistakes that have been made in the past.

Some of the quotations attempt to distinguish different kinds of history by reference to differences in subject matter, and a few propose the project of a universal history— world history or the history of the human race as a whole. There are passing comments here on the laws or factors that govern the course of history, but a fuller treatment of that subject is reserved for Section 15.3.

■ ■ ■

- 1 For myself, my duty is to report all that is said; but I am not obliged to believe it all alike—a remark which may be understood to apply to my whole History.

Herodotus, History, VII, 152

- 2 The way that most men deal with traditions, even traditions of their own country, is to receive them all alike as they are delivered, without applying any critical test whatever.

Thucydides, Peloponnesian War, I, 20

- 3 With reference to the speeches in this history, some were delivered before the war began, others while it was going on; some I heard myself, others I got from various quarters; it was in all cases difficult to carry' them word

for word in one's memory, so my habit has been to make the speakers say what was in my opinion demanded of them by the various occasions, of course adhering as closely as possible to the general sense of what they really said. And with reference to the narrative of events, far from permitting myself to derive it from the first source that came to hand, I did not even trust my own impressions, but it rests partly on what I saw myself, partly on what others saw for me, the accuracy of the report being always tried by the most severe and detailed tests possible. My conclusions have cost me some labour from the want of coincidence between accounts of the same occurrences by different eye-witnesses, arising sometimes from imperfect memory, sometimes from undue partiality for one side or the other. The absence of romance in my history will, I fear, detract somewhat from its interest, but if it be judged useful by those inquirers who desire an exact knowledge of the past as an aid to the interpretation of the future, which in the course of human things must resemble if it does not reflect it, I shall be content. In fine, I have written my work, not as an essay which is to win the applause of the moment, but as a possession for all time.

Thucydides, Peloponnesian War I, 22

- 4 *The Corinthians*. There is ... no advantage in reflections on the past further than may be of service to the present.

Thucydides, Peloponnesian War, I, 123

- 5 *Socrates*. Because we do not know the truth about ancient times, we make falsehood as much like truth as we can, and so turn it to account.

Plato, Republic, II, 382B

- 6 A history has to deal not with one action, but with one period and all that happened in that to one or more persons, however disconnected the several events may have been.

Aristotle, Politics, 1459a22

- 7 The study of history is in the truest sense an education and a training for political life.... The most instructive, or rather the only, method of learning to bear with dignity the vicissitudes of fortune is to recall the catastrophes of others.

Polybius, Histories, I, 1

- 8 By far the greater number of historians concern themselves with isolated wars and the incidents that accompany them: while as to a general and comprehensive scheme of events, their date, origin, and catastrophe, no one as far as I know has undertaken to examine it. I thought it, therefore, distinctly my duty neither to pass by myself, nor allow any one else to pass by, without full study, a characteristic specimen of the dealings of Fortune at once brilliant and instructive in the highest degree.

Polybius, Histories, I, 4

- 9 Men, who are persuaded that they get a competent view of universal from episodical history, are very like persons who should see the limbs of some body, which had once been living and beautiful, scattered and remote; and should imagine that to be quite as good as actually

beholding the activity and beauty of the living creature itself.

Polybius, Histories, I, 4

- 10 If you take truth from history what is left is but an idle unprofitable tale. Therefore, one must not shrink either from blaming one's friends or praising one's enemies; nor be afraid of finding fault with and commending the same persons at different times. For it is impossible that men engaged in public affairs should always be right, and unlikely that they should always be wrong. Holding ourselves, therefore, entirely aloof from the actors, we must as historians make statements and pronounce judgment in accordance with the actions themselves.

Polybius, Histories, I, 14

- 11 Surely an historian's object should not be to amaze his readers by a series of thrilling anecdotes; nor should he aim at producing speeches which might have been delivered, nor study dramatic propriety in details like a writer of tragedy: but his function is above all to record with fidelity what was actually said or done, however commonplace it may be. For the purposes of history and of the drama are not the same, but widely opposed to each other. In the latter the object is to strike and delight by words as true to nature as possible; in the former to instruct and convince by genuine words and deeds.

Polybius, Histories, 11, 56

- 12 To remain ignorant of things that happened before you were born is to remain a child- What is a human life worth

unless it is incorporated into the lives of one's ancestors and set in an historical context?

Cicero, Orator, XXXIV

- 13 The study of history is the best medicine for a sick mind; for in history you have a record of the infinite variety of human experience plainly set out for all to see; and in that record you can find for yourself and your country both examples and warnings: fine things to take as models, base things, rotten through and through, to avoid.

Livy, Early History of Rome, I, 1

- 14 In this work of mine, in which I have compared the lives of the greatest men with one another, after passing through those periods which probable reasoning can reach to and real history find a footing in, I might very well say of those that are farther off: "Beyond this there is nothing but prodigies and fictions, the only inhabitants are the poets and inventors of fables; there is no credit, or certainty any farther."

Plutarch, Theseus

- 15 So very difficult a matter is it to trace and find out the truth of anything by history, when, on the one hand, those who afterwards write it find long periods of time intercepting their view, and, on the other hand, the contemporary records of any actions and lives, partly through envy and ill-will, partly through favour and flattery, pervert and distort truth.

Plutarch, Pericles

16 It was for the sake of others that I first commenced writing biographies; but I find myself proceeding and attaching myself to it for my own; the virtues of these great men serving me as a sort of looking-glass, in which I may see how to adjust and adorn my own life.

Plutarch, Timoleon

17 My method ... is, by the study of history, and by the familiarity acquired in writing, to habituate my memory to receive and retain images of the best and worthiest characters. I thus am enabled to free myself from any ignoble, base, or vicious impressions, contracted from the contagion of ill company that I may be unavoidably engaged in, by the remedy of turning my thoughts in a happy and calm temper to view these noble examples.

Plutarch, Timoleon

18 As we would wish that a painter who is to draw a beautiful face, in which there is yet some imperfection, should neither wholly leave out, nor yet too pointedly express what is defective, because this would deform it, and that spoil the resemblance; so since it is hard, or indeed perhaps impossible, to show the life of a man wholly free from blemish, in all that is excellent we must follow truth exactly, and give it fully; any lapses or faults that occur, through human passions or political necessities, we may regard rather as the shortcomings of some particular virtue, than as the natural effects of vice; and may be content without introducing them, curiously and officiously, into our narrative, if it be but out of tenderness to the weakness of nature, which has never succeeded in producing any human character so perfect

in virtue as to be pure from all admixture and open to no criticism.

Plutarch, Cimon

- 19 Such things as are not commonly known, and lie scattered here and there in other men's writings, or are found amongst the old monuments and archives, I shall endeavour to bring together; not collecting mere useless pieces of learning, but adducing what may make his disposition and habit of mind understood.

Plutarch, Nicias

- 20 If any man undertake to write a history that has to be collected from materials gathered by observation and the reading of works not easy to be got in all places, nor written always in his own language, but many of them foreign and dispersed in other hands, for him, undoubtedly, it is in the first place and above all things most necessary to reside in some city of good note, addicted to liberal arts, and populous; where he may have plenty of all sorts of books, and upon inquiry may hear and inform himself of such particulars as, having escaped the pens of writers, are more faithfully preserved in the memories of men, lest his work be deficient in many things, even those which it can least dispense with.

Plutarch, Demosthenes

- 21 Are you so much better off, O writer of history? Surely
You waste more time and more oil and thousands of
pages of paper
Costing a fortune: still, the laws of the craft are
demanding,

What with footnotes and research, cross references and index.

But how does the harvest pay off? What profit in all of this delving?

What historian gets as much as a clerk in a courtroom?

Juvenal, Satire VII

22 This I regard as history's highest function, to let no worthy action be uncommemorated, and to hold out the reprobation of posterity as a terror to evil words and deeds.

Tacitus, Annals, III, 65

23 Now, after a revolution, when Rome is nothing but the realm of a single despot, there must be good in carefully noting and recording this period, for it is but few who have the foresight to distinguish right from wrong or what is sound from what is hurtful, while most men learn wisdom from the fortunes of others. Still, though this is instructive, it gives very little pleasure. ... I have to present in succession the merciless biddings of a tyrant, incessant prosecutions, faithless friendships, the ruin of innocence, the same causes issuing in the same results, and I am everywhere confronted by a wearisome monotony in my subject matter. Then, again, an ancient historian has but few disparagers, and no one cares whether you praise more heartily the armies of Carthage or Rome.

Tacitus, Annals, IV, 33

24 This is a fine saying of Plato: That he who is discoursing about men should look also at earthly things as if he

viewed them from some higher place; should look at them in their assemblies, armies, agricultural labours, marriages, treaties, births, deaths, noise of the courts of justice, desert places, various nations of barbarians, feasts, lamentations, markets, a mixture of all things and an orderly combination of contraries.

Marcus Aurelius, Meditations, VII, 48

25 The historian's one task is to tell the thing as it happened. This he cannot do if he is Artaxerxes' physician, trembling before him, or hoping to get a purple cloak, a golden chain, a horse of the Nisaeon breed in payment for his laudations. A fair historian, a Xenophon, a Thucydides, will not accept that position. He may nurse some private dislikes, but he will attach far more importance to the public good, and set the truth high above his hate; he may have his favorites, but he will not spare their errors. For history, I say again, has this and this only for its own; if a man will start upon it, he must sacrifice to no god but Truth; he must neglect all else; his sole rule and unerring guide is this—to think not of those who are listening to him now, but of the yet unborn who shall seek his converse,

Lucian, Way to Write History

26 I sometimes fall to thinking whether it befits a theologian, a philosopher, and such people of exquisite and exact conscience and prudence, to write history. How can they stake their fidelity on the fidelity of an ordinary person? How be responsible for the thoughts of persons unknown and give their conjectures as coin of the realm? Of complicated actions that happen in their presence

they would refuse to give testimony if placed under oath by a judge; and they know no man so intimately that they would undertake to answer fully for his intentions. I consider it less hazardous to write of things past than present, inasmuch as the writer has only to give an account of a borrowed truth.

Montaigne, Essays, I, 21, Power of the Imagination

27 I like historians who are either very simple or outstanding. The simple, who have not the wherewithal to mix in anything of their own, and who bring to it only the care and diligence to collect all that comes to their attention and to record everything faithfully without choice or discrimination, leave our judgment intact to discern the truth....

The really outstanding ones have the capacity to choose what is worth knowing; they can pick out of two reports the one that is more likely. From the nature and humors of princes they infer their intentions and attribute appropriate words to them. They are right to assume the authority to regulate our belief by their own; but certainly this privilege belongs to very few people.

Those in between (which are the commonest sort) spoil everything for us. They want to chew our morsels for us; they give themselves the right to judge, and consequently to slant history to their fancy; for once the judgment leans to one side, one cannot help turning and twisting the narrative to that bias. They undertake to choose the things worth knowing, and often conceal from us a given word, a given private action, that would instruct us better; they omit as incredible the things they do not understand.... Let them boldly display their eloquence and their reasonings, let them judge all they

like; but let them also leave us the wherewithal to judge after them, and not alter or arrange by their abridgments and selection anything of the substance of the matter, but pass it on to us pure and entire in all its dimensions.

Montaigne, Essays, II, 10, Of Books

- 28 The only good histories are those that have been written by the very men who were in command in the affairs, or who were participants in the conduct of them, or who at least have had the fortune to conduct others of the same sort. . . . What can you expect of a doctor discussing war, or a schoolboy discussing the intentions of princes?

Montaigne, Essays, II, 10, Of Books

- 29 We have not the thousandth part of the writings of the ancients: it is Fortune that gives them life, longer or shorter according to her favor; and it is permissible to wonder whether what we have is not the worst, since we have not seen the rest.

Montaigne, Essays, II, 16, Of Glory

- 30 *King.* O God! that one might read the book of fate.
And see the revolution of the times
Make mountains level, and the continent,
Weary of solid firmness, melt itself
Into the sea! and, other times, to see
The beachy girdle of the ocean
Too wide for Neptune's hips; how chances mock,
And changes fill the cup of alteration
With divers liquors! O, if this were seen,
The happiest youth, viewing his progress through,

What perils past, what crosses to ensue,
Would shut the book, and sit him down and die.

Shakespeare, II Henry IV, III, i, 45

- 31 As it happeneth sometimes that the grandchild, or other descendant, resembleth the ancestor more than the son; so many times occurrences of present times may sort better with ancient examples than with those of the later or immediate times.

Bacon, Advancement of Learning, Bk. I, II, 3

- 32 History is natural, civil, ecclesiastical, and literary; whereof the three first I allow as extant, the fourth I note as deficient. For no man hath propounded to himself the general state of learning to be described and represented from age to age, as many have done the works of nature, and the state civil and ecclesiastical; without which the history of the world seemeth to me to be as the statue of Polyphemus with his eye out; that part being wanting which doth most show the spirit and life of the person. And yet I am not ignorant that in divers particular sciences, as of the juris-consults, the mathematicians, the rhetoricians, the philosophers, there are set down some small memorials of the schools, authors, and books; and so likewise some barren relations touching the invention of arts or usages. But a just story of learning, containing the antiquities and originals of knowledges and their sects, their inventions, their traditions, their diverse administrations and managings, their flourishing, their oppositions, decays, depressions, oblivions, removes, with the causes and occasions of them, and all other events concerning learning, throughout the ages of the

world, I may truly affirm to be wanting. The use and end of which work I do not so much design for curiosity or satisfaction of those that are the lovers of learning, but chiefly for a more serious and grave purpose, which is this in few words, that it make learned men wise in the use and administration of learning.

Bacon, Advancement of Learning, Bk. II, I, 2

- 33 It is the true office of history to represent the events themselves together with the counsels, and to leave the observations and conclusions thereupon to the liberty and faculty of every man's judgement.

Bacon, Advancement of Learning, Bk. II, II, 12

- 34 It is good to know something of the customs of different peoples in order to judge more sanely of our own, and not to think that everything of a fashion not ours is absurd and contrary to reason, as do those who have seen nothing. But when one employ's too much time in travelling, one becomes a stranger in one's own country, and when one is too curious about things which were practised in past centuries, one is usually very ignorant about those which are practised in our own time. Besides, fables make one imagine many events possible which in reality' are not so, and even the most accurate of histories, if they do not exactly misrepresent or exaggerate the value of things in order to render them more worthy of being read, at least omit in them all the circumstances which are basest and least notable; and from this fact it follows that what is retained is not portrayed as it really is, and that those who regulate their conduct by examples which they derive from such a

source, are liable to fall into the extravagances of the knights-errant of Romance, and form projects beyond their power of performance.

Descartes, Discourse on Method, I

- 35 In a good history', the judgement must be eminent; because the goodness consisteth in the method, in the truth, and in the choice of the actions that are most profitable to be known. Fancy' has no place, but only in adorning the sty'le,

Hobbes, Leviathan, I, 8

- 36 When testimonies contradict common experience, and the reports of history and witnesses clash with the ordinary course of nature, or with one another; there it is, where diligence, attention, and exactness are required, to form a right judgment, and to proportion the assent to the different evidence and probability of the thing: which rises and falls, according as those two foundations of credibility, viz. *common observation in like cases*, and *particular testimonies in that particular instance*, favour or contradict it.

Locke, Concerning Human Understanding, Bk. IV, XVI, 9

- 37 I would not be thought here to lessen the credit and use of history: it is all the light we have in many cases, and we receive from it a great part of the useful truths we have, with a convincing cadence. I think nothing more valuable than the records of antiquity; I wish we had more of them, and more uncorrupted. But this truth itself forces me to say. That no probability can rise higher than its first original. What has no other evidence than the

single testimony of one only witness must stand or fall by his only testimony, whether good, bad, or indifferent; and though cited afterwards by hundreds of others, one after another, is so far from receiving any strength thereby, that it is only the weaker. Passion, interest, inadvertency, mistake of his meaning, and a thousand odd reasons, or capricios, men's minds are acted by, (impossible to be discovered,) may make one man quote another man's words or meaning wrong. He that has but ever so little examined the citations of writers, cannot doubt how little credit the quotations deserve, where the originals are wanting; and consequently how much less quotations of quotations can be relied on. This is certain, that what in one age was affirmed upon slight grounds, can never after come to be more valid in future ages by being often repeated. But the further still it is from the original, the less valid it is, and has always less force in the mouth or writing of him that last made use of it than in his from whom he received it.

Locke, Concerning Human Understanding, Bk. IV, XVI, 11

38 Our new Science must... be a demonstration, so to speak, of the historical fact of providence, for it must be a history of the forms of order which, without human discernment or intent, and often against the designs of men, providence has given to this great city of the human race. For though this world has been created in time and particular, the orders established therein by providence are universal and eternal.

Vico, The New Science, I

39 In monarchies extremely absolute, historians betray the truth, because they are not at liberty to speak it; in states remarkably free, they betray the truth, because of their liberty itself; which always produces divisions, every one becoming as great a slave to the prejudices of his faction as he could be in a despotic state.

Montesquieu, Spirit of Laws, XIX, 27

40 Mankind are so much the same, in all times and places, that history informs us of nothing new or strange in this particular. Its chief use is only to discover the constant and universal principles of human nature, by showing men in all varieties of circumstances and situations, and furnishing us with materials from which we may form our observations and become acquainted with the regular springs of human action and behaviour. These records of wars, intrigues, factions, and revolutions, are so many collections of experiments, by which the politician or moral philosopher fixes the principles of his science, in the same manner as the physician or natural philosopher become acquainted with the nature of plants, minerals, and other external objects, by the experiments which he forms concerning them.

Hume, Concerning Human Understandings, VIII, 65

41 In reality, what more agreeable entertainment to the mind, than to be transported into the remotest ages of the world, and to observe human society, in its infancy, making the first faint essays towards the arts and sciences; to see the policy of government, and the civility of conversation refining by degrees, and every thing which is ornamental to human life advancing toward its

perfection? To remark the rise, progress, declension, and final extinction of the most flourishing empires; the virtues which contributed to their greatness, and the vices which drew on their ruin? In short, to see all the human race, from the beginning of time, pass, as it were, in review before us, appearing in their true colours, without any of those disguises which, during their lifetime, so much perplexed the judgment of the beholders. What spectacle can be imagined so magnificent, so various, so interesting? What amusement, either of the senses or imagination, can be compared with it?

Hume, Of the Study of History

42 History is not only a valuable part of knowledge, but opens the door to many other parts, and affords materials to most of the sciences. And, indeed, if we consider the shortness of human life, and our limited knowledge, even of what passes in our own time, we must be sensible that we should be forever children in understanding, were it not for this invention, which extends our experience to all past ages, and to the most distant nations; making them contribute as much to our improvement in wisdom, as if they had actually lain under our observation. A man acquainted with history may, in some respect, be said to have lived from the beginning of the world, and to have been making continual additions to his stock of knowledge in every century.

Hume, Of the Study of History

43 Historians have been, almost without exception, the true friends of virtue, and have always represented it in its

proper colours, however they may have erred in their judgments of particular persons.

Hume, Of the Study of History

44 The first foundations of all history are the recitals of the fathers to the children, transmitted afterward from one generation to another; at their origin they are at the very most probable, when they do not shock common sense, and they lose one degree of probability in each generation. With time the fable grows and the truth grows less; from this it comes that all the origins of peoples are absurd.

Voltaire, Philosophical Dictionary: History

45 Let us judge of what can be done by what has been done.

Rousseau, Social Contracts, III, 12

46 What are all the records of history but narratives of successive villainies, of treasons and usurpations, massacres and wars?

Johnson, Rambler No. 175

47 *Johnson*. Great abilities are not requisite for an historian; for in historical composition, all the greatest powers of the human mind are quiescent. He has facts ready to his hand; so there is no exercise of invention. Imagination is not required in any high degree; only about as much as is used in the lower kinds of poetry. Some penetration, accuracy, and colouring will fit a man for the task, if he can give the application which is necessary.

Boswell, Life of Johnson (July 6, 1763)

48 *Johnson*. We must consider how very little history there is; I mean real authentick history. That certain Kings reigned, and certain battles were fought, we can depend upon as true; but all the colouring, all the philosophy of history is conjecture.

Boswell, Life of Johnson (Apr. 16, 1775)

49 Antoninus diffused order and tranquillity over the greatest part of the earth. His reign is marked by the rare advantage of furnishing very few materials for history; which is, indeed, little more than the register of the crimes, follies, and misfortunes of mankind.

Gibbon, Decline and Fall of the Roman Empire, III

50 There is not anywhere upon the globe a large tract of country which we have discovered destitute of inhabitants, or whose first population can be fixed with any degree of historical certainty. And yet, as the most philosophic minds can seldom refrain from investigating the infancy of great nations, our curiosity consumes itself in toilsome and disappointed efforts.

Gibbon, Decline and Fall of the Roman Empire, IX

51 The confusion of the times, and the scarcity of authentic memorials, oppose equal difficulties to the historian, who attempts to preserve a clear and unbroken thread of narration. Surrounded with imperfect fragments, always concise, often obscure, and sometimes contradictory, he is reduced to collect, to compare, and to conjecture: and though he ought never to place his conjectures in the rank of facts, yet the knowledge of human nature, and of the sure operation of its fierce and unrestrained passions,

might, on some occasions, supply the want of historical materials.

Gibbon, Decline and Fall of the Roman Empire, X

52 A being of the nature of man, endowed with the same faculties, but with a longer measure of existence, would cast down a smile of pity and contempt on the crimes and follies of human ambition, so eager, in a narrow span, to grasp at a precarious and short-lived enjoyment. It is thus that the experience of history exalts and enlarges the horizon of our intellectual view. In a composition of some days, in a perusal of some hours, six hundred years have rolled away, and the duration of a life or reign is contracted to a fleeting moment: the grave is ever beside the throne; the success of a criminal is almost instantly followed by the loss of his prize.

Gibbon, Decline and Fall of the Roman Empire, XLVIII

53 The Greeks of Constantinople, after purging away the impurities of their vulgar speech, acquired the free use of their ancient language, the most happy composition of human art, and a familiar knowledge of the sublime masters who had pleased or instructed the first of nations. But these advantages only tend to aggravate the reproach and shame of a degenerate people. They held in their lifeless hands the riches of their fathers, without inheriting the spirit which had created and improved that sacred patrimony: they read, they praised, they compiled, but their languid souls seemed alike incapable of thought and action. In the revolution of ten centuries, not a single discovery was made to exalt the dignity or promote the happiness of mankind. Not a single idea has been added

to the speculative systems of antiquity, and a succession of patient disciples became in their turn the dogmatic teachers of the next servile generation.

Gibbon, Decline and Fall of the Roman Empire, LIII

54 It was at Rome, on the 15th of October, 1764, as I sat musing amidst the ruins of the Capitol, while the barefoot friars were singing vespers in the Temple of Jupiter, that the idea of writing the decline and fall of the city first started to my mind.

Gibbon, Autobiography

55 I have presumed to mark the moment of conception: I shall now commemorate the hour of my final deliverance. It was on the day, or rather night, of the 27th of June 1787, between the hours of eleven and twelve, that I wrote the last lines of the last page, in a summer-house in my garden. After laying down my pen I took several turns in a *berceau*, or covered walk of acacias, which commands a prospect of the country, the lake, and the mountains. The air was is temperate, the sky was serene, the silver orb of the moon was reflected from the waters, and all nature was silent. I will not dissemble the first emotions of joy on recovery of my freedom, and, perhaps, the establishment of my fame. But my pride was soon humbled, and a sober melancholy was spread over my mind, by the idea that I had taken an everlasting leave of an old and agreeable companion, and that, whatsoever might be the future date of my *History*, the life of the historian must be short and precarious.

Gibbon, Autobiography

56 My English text is chaste, and all licentious passages are left in the decent obscurity of a learned language.

Gibbon, Autobiography

57 Men, viewed as a whole, are not guided in their efforts merely by instinct, like the lower animals; nor do they proceed in their actions, like the citizens of a purely rational world, according to a preconcerted plan. And so it appears as if no regular systematic history of mankind would be possible, as in the case, for instance, of bees and beavers. Nor can one help feeling a certain repugnance in looking at the conduct of men as it is exhibited on the great stage of the world. With glimpses of wisdom appearing in individuals here and there, it seems, on examining it externally as if the whole web of human history were woven out of folly and childish vanity and the frenzy of destruction, so that at the end one hardly knows what idea to form of our race, albeit so proud of its prerogatives.

Kant, Idea of a Universal History, Intro.

58 A philosophical attempt to work out the universal history of the world according to the plan of nature in its aiming at a perfect civil union must be regarded as possible, and as even capable of helping forward the purpose of nature.

Kant, Idea of a Universal History, IX

59 How admirably calculated is this picture of the human race, freed from all these chains, secure from the domination of chance, as from that of the enemies of its progress, and advancing with firm and sure steps towards the attainment of truth, virtue, and happiness, to present

to the philosopher a spectacle which shall console him for the errors, the crimes, the injustice, with which the earth is still polluted, and whose victim he often is! It is in the contemplation of this picture that he receives the reward of his efforts towards the progress of reason and the defense of liberty. He dares then to link these with the eternal chain of human destiny; and thereby he finds virtue's true recompense, the joy of having performed a lasting service, which no fatality can ever destroy by restoring the evils of prejudice and slavery. This contemplation is for him a place of refuge, whither the memory of his persecutors cannot follow him, where, living in imagination with man restored to his rights and his natural dignity, he forgets him whom greed, fear, or envy torment and corrupt; there it is that he exists in truth with his kin, in an elysium which his reason has been able to create for him, and which his love for humanity enhances with the purest enjoyments.

Condorcet, Historical Picture of the Progress of the Human Mind, 10

60 Original historians... change the events, the deeds, and the states of society with which they are conversant, into an object for the conceptive faculty.

Hegel, Philosophy of History, Introduction, 1

61 A history which aspires to traverse long periods of time, or to be universal, must... forego the attempt to give individual representations of the past as it actually existed. It must foreshorten its pictures by abstractions; and this includes not merely the omission of events and deeds, but whatever is involved in the fact that thought

is, after all, the most trenchant epitomist. A battle, a great victory, a siege, no longer maintains its original proportions, but is put off with a bare mention.

Hegel, Philosophy of History, Introduction, 2

62 What experience and history teach is this—that peoples and governments never have learned anything from history, or acted on principles deduced from it.

Hegel, Philosophy of History, Introduction, 2

63 The history of the world begins with its general aim, the realization of the idea of spirit, only in an implicit form, that is, as nature; a hidden, most profoundly hidden, unconscious instinct; and the whole process of history (as already observed) is directed to rendering this unconscious impulse a conscious one. Thus appearing in the form of merely natural existence, natural will—that which has been called the subjective side—physical craving, instinct, passion, private interest, as also opinion and subjective conception—spontaneously present themselves at the very commencement. This vast congeries of volitions, interests and activities, constitute the instruments and means of the world-spirit for attaining its object; bringing it to consciousness, and realizing it. And this aim is none other than finding itself, coming to itself, and contemplating itself in concrete actuality. But that those manifestations of vitality on the part of individuals and peoples, in which they seek and satisfy their own purposes, are, at the same time, the means and instruments of a higher and broader purpose of which they know nothing—which they realize unconsciously—might be made a matter of question;

rather has been questioned, and in every variety of form negated, decried and contemned as mere dreaming and "philosophy." But on this point I announced my view at the very outset, and asserted our hypothesis—which, however, will appear in the sequel, in the form of a legitimate inference—and our belief that reason governs the world, and has consequently governed its history. In relation to this independently universal and substantial existence—all else is subordinate, subservient to it, and the means for its development.

Hegel, Philosophy of History, Introduction, 3

64 Light is a simply self-involved existence; but though possessing thus in itself universality, it exists at the same time as an individuality in the sun. Imagination has often pictured to itself the emotions of a blind man suddenly becoming possessed of sight, beholding the bright glimmering of the dawn, the growing light, and the flaming glory of the ascending sun. The boundless forgetfulness of his individuality in this pure splendor, is his first feeling—utter astonishment. But when the sun is risen, this astonishment is diminished; objects around are perceived, and from them the individual proceeds to the contemplation of his own inner being, and thereby the advance is made to the perception of the relation between the two. Then inactive contemplation is quitted for activity; by the close of day man has erected a building constructed from his own inner sun; and when in the evening he contemplates this, he esteems it more highly than the original external sun. For now he stands in a *conscious relation* to his spirit, and therefore a *free* relation. If we hold this image fast in mind, we shall find it

symbolizing the course of history, the great day's work of spirit.

Hegel, Philosophy of History, Intro.

65 History, which I like to think of as the contrary of poetry [*historoumenon* (investigated)—*pepoiemenon* (invented)], is for time what geography is for space; and it is no more to be called a science, in any strict sense of the word, than is geography, because it does not deal with universal truths but only with particular details. History has always been the favorite study of those who wish to learn something without having to face the effort demanded by any branch of real knowledge, which taxes the intelligence.

Schopenhauer, Some forms of Literature

66 The preference shown for history by the greater public in all ages may be illustrated by the kind of conversation which is so much in vogue everywhere in society. It generally consists in one person relating something and then another person relating something else; so that in this way everyone is sure of receiving attention. Both here and in the case of history it is plain that the mind is occupied with particular details. But as in science, so also in every worthy conversation, the mind rises to the consideration of some general truth.

This objection does not, however, deprive history of its value. Human life is short and fleeting, and many millions of individuals share in it, who are swallowed by that monster of oblivion which is waiting for them with ever open jaws. It is thus a very thankworthy task to try to rescue something—the memory of interesting and

important events, or the leading features and personages of some epoch—from the general shipwreck of the world.

From another point of view, we might look upon history as the sequel to zoology; for while with all other animals it is enough to observe the species, with man individuals, and therefore individual events, have to be studied; because every man possesses a character as an individual. And since individuals and events are without number or end, an essential imperfection attaches to history. In the study of it, all that a man learns never contributes to lessen that which he has still to learn. With any real science, a perfection of knowledge is, at any rate, conceivable.

Schopenhauer, Some Forms of Literature

67 Only through history does a nation become completely conscious of itself. Accordingly history is to be regarded as the rational consciousness of the human race, and is to the race what the reflected and connected consciousness is to the individual who is conditioned by reason, a consciousness through the want of which the brute is confined to the narrow, perceptible present.... In this sense, then, history... takes the place of an immediate self-consciousness common to the whole race, so that only by virtue of it does the human race come to be a whole, come to be a humanity. This is the true value of history.

Schopenhauer, The World as Will and Idea, III, 38

68 Universal History, the history of what man has accomplished in this world, is at bottom the History of the Great Men who have worked here.

Carlyle, The Hero as Divinity

69 I have no expectation that any man will read history aright who thinks that what was done in a remote age, by men whose names have resounded far, has any deeper sense than what he is doing to-day.

Emerson, History

70 All history becomes subjective; in other words there is properly no history, only biography.

Emerson, History

71 The advancing man discovers how deep a property he has in literature—in all fable as well as in all history....His own secret biography he finds in lines wonderfully intelligible to him, dotted down before he was born. One after another he comes up in his private adventures with every fable of Aesop, of Homer, of Hafiz, of Ariosto, of Chaucer, of Scott, and verifies them with his own head and hands.

Emerson, History

72 Whence then this worship of the past? The centuries are conspirators against the sanity and authority of the soul. Time and space are but physiological colors which the eye makes, but the soul is light: where it is, is day; where it was, is night; and history is an impertinence and an injury if it be any thing more than a cheerful apologue or parable of my being and becoming.

Emerson, Self-Reliance

73 We go eastward to realize history and study the works of art and literature, retracing the steps of the race; we go westward as into the future, with a spirit of enterprise and adventure.

Thoreau, Walking

74 Many are concerned about the monuments of the West and the East—to know who built them. For my part, I should like to know who in those days did not build them.

Thoreau, Walden: Economy

75 One nation can and should learn from others. And even when a society has got upon the right track for the discovery of the natural laws of its movement... it can neither clear by bold leaps, nor remove by legal enactments, the obstacles offered by the successive phases of its normal development. But it can shorten and lessen the birth-pangs.

Marx, Capital, Pref. to 1st Ed.

76 Where speculation ends—in real life—there real, positive science begins: the representation of the practical activity, of the practical process of development of men. Empty talk about consciousness ceases, and real knowledge has to take its place. When reality is depicted, philosophy as an independent branch of activity loses its medium of existence. At the best its place can only be taken by a summing-up of the most general results, abstractions which arise from the observation of the historical development of men. Viewed apart from real history, these abstractions have in themselves no value whatsoever. They can only serve to facilitate the

arrangement of historical material, to indicate the sequence of its separate strata. But they by no means afford a recipe or schema, as does philosophy, for neatly trimming the epochs of history. On the contrary, our difficulties begin only when we set about the observation and the arrangement—the real depiction—of our historical material, whether of a past epoch or of the present.

Marx and Engels, German Ideology, I, 1

- 77 "Yes, universal history! It's the study of the successive follies of mankind and nothing more. The only subjects I respect are mathematics and natural science," said Kolya.

Dostoevsky, Brothers Karamazov, Pt. IV, X, 5

- 78 In historic events, the so-called great men are labels giving names to events, and like labels they have but the smallest connection with the event itself.

Tolstoy, War and Peace, IX, 1

- 79 The movement of humanity, arising as it does from innumerable arbitrary human wills, is continuous.

To understand the law's of this continuous movement is the aim of history. But to arrive at these laws, resulting from the sum of all those human wills, man's mind postulates arbitrary and disconnected units. The first method of history is to take an arbitrarily selected series of continuous events and examine it apart from others, though there is and can be no beginning to any event, for one event always flows uninterruptedly from another.

The second method is to consider the actions of some one man—a king or a commander—as equivalent to the

sum of many individual wills; whereas the sum of individual wills is never expressed by the activity of a single historic personage.

Historical science in its endeavor to draw nearer to truth continually takes smaller and smaller units for examination. But however small the units it takes, we feel that to take any unit disconnected from others, or to assume a beginning of any phenomenon, or to say that the will of many men is expressed by the actions of any one historic personage, is in itself false.

It needs no critical exertion to reduce utterly to dust any deductions drawn from history. It is merely necessary to select some larger or smaller unit as the subject of observation—as criticism has every right to do, seeing that whatever unit history observes must always be arbitrarily selected.

Only by taking infinitesimally small units for observation (the differential of history, that is, the individual tendencies of men) and attaining to the art of integrating them (that is, finding the sum of these infinitesimals) can we hope to arrive at the laws of history.

Tolstoy, War and Peace, XI, 1

80 In historic events the rule forbidding us to eat of the fruit of the Tree of Knowledge is specially applicable. Only unconscious action bears fruit, and he who plays a part in an historic event never understands its significance. If he tries to realize it his efforts are fruitless.

Tolstoy, War and Peace, XII, 4

81 Man's mind cannot grasp the causes of events in their completeness, but the desire to find those causes is implanted in man's soul. And without considering the multiplicity and complexity of the conditions any one of which taken separately may seem to be the cause, he snatches at the first approximation to a cause that seems to him intelligible and says: "This is the cause!" In historical events (where the actions of men are the subject of observation) the first and most primitive approximation to present itself was the will of the gods and, after that, the will of those who stood in the most prominent position—the heroes of history. But we need only penetrate to the essence of any historic event—which lies in the activity of the general mass of men who take part in it—to be convinced that the will of the historic hero does not control the actions of the mass but is itself continually controlled. It may seem to be a matter of indifference whether we understand the meaning of historical events this way or that; yet there is the same difference between a man who says that the people of the West moved on the East because Napoleon wished it and a man who says that this happened because it had to happen, as there is between those who declared that the earth was stationary and that the planets moved round it and those who admitted that they did not know what upheld the earth, but knew there were laws directing its movement and that of the other planets. There is, and can be, no cause of an historical event except the one cause of all causes. But there are laws directing events, and some of these laws are known to us while we are conscious of others we cannot comprehend. The discovery of these laws is only possible when we have quite abandoned the attempt to find the cause in the will

of some one man, just as the discovery of the laws of the motion of the planets was possible only when men abandoned the conception of the fixity of the earth.

Tolstoy, War and Peace, XIII, 1

82 Science does not admit the conception of the ancients as to the direct participation of the Deity in human affairs, and therefore history ought to give other answers.

Tolstoy, War and Peace, II Epilogue, I

83 If the will of every man were free, that is, if each man could act as he pleased, all history would be a series of disconnected incidents.

Tolstoy, War and Peace, II Epilogue, VIII

84 A contemporary event seems to us to be indubitably the doing of all the known participants, but with a more remote event we already see its inevitable results which prevent our considering anything else possible. And the farther we go back in examining events the less arbitrary do they appear.

Tolstoy, War and Peace, II Epilogue, IX

85 The recognition of man's free will as something capable of influencing historical events, that is, as not subject to laws, is the same for history as the recognition of a free force moving the heavenly bodies would be for astronomy.

Tolstoy, War and Peace, II Epilogue, XI

86 It is folly ... to speak of the "laws of history" as of something inevitable, which science has only to discover,

and whose consequences anyone can then foretell but do nothing to alter or avert. Why, the very laws of physics are conditional, and deal with *ifs*. The physicist does not say, "The water will boil anyhow;" he only says it %vill boil if a fire be kindled beneath it. And so the utmost the student of sociology can ever predict is that *if* a genius of a certain sort shows the way, society will be sure to follow.

William James, Great Men and Their Environment

87 Alas! Hegel was right when he said that we learn from history that men never learn anything from history.

Shaw, Heartbreak House, Pref.

88 This notion of historians, of history devoid of aesthetic prejudice, of history devoid of any reliance on metaphysical principles and cosmological generalizations, is a figment of the imagination. The belief in it can only occur to minds steeped in provinciality,—the provinciality of an epoch, of a race, of a school of learning, of a trend of inter-est~ , minds unable to divine their own unspoken limitations.

Whitehead, Adventures of Ideas, I, 1

89 The historian in his description of the past depends on his own judgment as to what constitutes the importance of human life. Even when he has rigorously confined himself to one selected aspect, political or cultural, he still depends on some decision as to what constitutes the culmination of that phase of human experience and as to what constitutes its degradation.

Whitehead, Adventures of Ideas, I, 1

90 It is a curious delusion that the rock upon which our beliefs can be founded is an historical investigation. You can only interpret the past in terms of the present. The present is all that you have; and unless in this present you can find general principles which interpret the present as including a representation of the whole community of existents, you cannot move a step beyond your little patch of immediacy.

Thus history presupposes a metaphysic. It can be objected that we believe in the past and talk about it without settling our metaphysical principles, That is certainly the case. But you can only deduce metaphysical dogmas from your interpretation of the past on the basis of a prior metaphysical interpretation of the present.

In so far as your metaphysical beliefs are implicit, you vaguely interpret the past on the lines of the present. But when it comes to the primary metaphysical data, the world of which you are immediately conscious is the whole datum.

Whitehead, Religion in the Making, III, 1

91 History, in every country, is so taught as to magnify that country: children learn to believe that their own country has always been in the right and almost always victorious, that it has produced almost all the great men, and that it is in all respects superior to all other countries.

Russell, Education

92 For whom is there History? The question is seemingly paradoxical, for history is obviously for everyone to this extent, that every man, with his whole existence and consciousness, is a part of history. But it makes a great

difference whether anyone lives under the constant impression that his life is an element in a far wider life-course that goes on for hundreds and thousands of years, or conceives of himself as something rounded off and self-contained. For the latter type of consciousness there is certainly no world-history, no *world-as-history*.

Spengler, Decline of the West, I, 1

- 93 Memory itself is an internal rumour; and when to this hearsay within the mind we add the falsified echoes that reach us from others, we have but a shifting and unseizable basis to build upon. The picture we frame of the past changes continually and grows every day less similar to the original experience which it purports to describe.

Santayana, Life of Reason, V, 2

- 94 The historian's politics, philosophy, or romantic imagination furnishes a vital nucleus for reflection. All that falls within that particular vortex is included in the mental picture, the rest is passed over and tends to drop out of sight. It is not possible to say, nor to think, everything at once; and the private interest which guides a man in selecting his materials imposes itself inevitably on the events he relates and especially on their grouping and significance.

History is always written wrong, and so always needs to be rewritten.

Santayana, Life of Reason, V, 2

- 95 Historical investigation has for its aim to fix the order and character of events throughout past time in all places.

The task is frankly superhuman, because no block of real existence, with its infinitesimal detail, can be recorded, nor if somehow recorded could it be dominated by the mind; and to carry on a survey of this social continuum *ad infinitum* would multiply the difficulty.

Santayana, Life of Reason, V, 2

96 It is not enough to say that history is historical judgment, it is necessary to add that every judgment is an historical judgment or, quite simply, history. If judgment is a relation between a subject and a predicate, then the subject or the event, whatever it is that is being judged, is always an historical fact, a becoming, a process under way, for there are no immobile facts nor can such things be envisaged in the world of reality. Historical judgment is embodied even in the merest perception of the judging mind (if it did not judge there would not even be perception but merely blind and dumb sensation)....

Historical judgment is not a variety of knowledge, but it is knowledge itself; it is the form which completely fills and exhausts the field of knowing, leaving no room for anything else.

Croce, History as the Story of Liberty, I, 5

97 We are products of the past and we live immersed in the past, which encompasses us. How can we move towards the new life, how create new activities without getting out of the past and without placing ourselves above it? And how can we place ourselves above the past if we are in it and it is in us? There is no other way out except through thought, which does not break off relations with the past but rises ideally above it and converts it into

knowledge. The past must be faced or, not to speak in metaphors, it must be reduced to a mental problem which can find its solution in a proposition of truth, the ideal premise for our new activity and our new life. This is how we daily behave, when, instead of being prostrated by the vexations which beset us, and of bewailing and being shamed by errors we have committed, we examine what has happened, analyse its origin, follow its history, and, with an informed conscience and under an intimate inspiration, we outline what ought and should be undertaken and willingly and brightly get ready to undertake it.

Croce, History as the Story of Liberty, I, 8

- 98 The writing of histories—as Goethe once noted— is one way of getting rid of the weight of the past. . . . The writing of history liberates us from history.

Croce, History as the Story of Liberty, I, 8

- 99 I find it hard to have patience with historians who boast, as some modern Western historians do, that they keep entirely to the facts of history and don't go in for theories. Why, every so-called fact that they present to you had some pattern of theory behind it. Historians who genuinely believe they have no general ideas about history are, I would suggest to them, simply ignorant of the workings of their own minds, and such willful ignorance is, isn't it, really unpardonable.

Toynbee, Radio Debate (1948)

- 100 Historians generally illustrate rather than correct the ideas of the communities within which they live and

work.

Toynbee, A Study of History, I, I

101 History, in the sense of the histories of the human societies called civilizations, revealed itself as a sheaf of parallel, contemporary, and recent essays in a new enterprise: a score of attempts, up to date, to transcend the level of primitive human life at which man, after having become himself, had apparently lain torpid for some hundreds of thousands of years.

Toynbee, Civilization on Trial, I

15.2 Progress, Regress, and Cycles in History

One of the central issues in the philosophy of history concerns the pattern of change that has occurred in human affairs in the course of time. According to one view, the pattern is cyclical, like that of birth, growth, decline, and death in the life of living organisms. The point is not simply that history repeats itself in the recurrence of similar events, but that the whole sequence of historical development endlessly repeats itself. According to another view, history manifests a regression, a falling away from a golden age. According to still another view, history advances from age to age, either in a line of steady and uninterrupted progress or with intervals of stability or even of regression.

Of these three main views, the first is the one that predominates in the quotations drawn from antiquity, though there are also some expressions of the second view

in ancient texts, notably the ones by Hesiod and Ovid; and in addition, the opinion that in all essential respects the future will resemble the past. It is not until the seventeenth century that we find explicit affirmations of progress in human affairs—in the sphere of science, in human institutions, in population, in the production of wealth. Though progress has many votaries among modern writers, it also has its doubters or deniers— those who point out that regressive change counterbalances the evidences of progress, or that advances in such external matters as science, technology, and wealth do not carry with them essential improvements in the quality of human life.

■ ■ ■

1 Is there any thing whereof it may be said, See, this is new?
it hath been already of old time, which was before us.

There is no remembrance of former things; neither shall there be any remembrance of things that are to come with those that shall come after.

Ecclesiastes 1:10-11

2 When gods alike and mortals rose to birth,
Th' immortals formed a golden race on earth
Of many-languaged men; they lived of old
When Saturn reign'd in heaven; an age of gold.
Like gods they lived, with calm, untroubled mind.
Free from the toil and anguish of our kind:
Nor e'er decrepid age mis-shaped their frame,
The hand's, the foot's proportions, still the same.
Pleased with earth's unbought feasts; all ills removed,

Wealthy in flocks, and of the bless'd beloved.
Death as a slumber press'd their eyelids down;
All nature's common blessings were their own.
The life-bestowing tilth its fruitage bore,
A full, spontaneous, and ungrudging store:
They with abundant goods, midst quiet lands.
All willing shared the gatherings of their hands.
When earth's dark breast had closed this race around.
Great Jove as demons raised them from the ground.
Earth-hovering spirits, they their charge began,
The ministers of good, and guards of man.
Mantled with mist of darkling air they glide,
And compass earth, and pass on every side;
And mark, with earnest vigilance of eyes,
Where just deeds live, or crooked wrongs arise;
And shower the wealth of seasons from above,
Their kingly office, delegate from Jove.
The gods then form'd a second race of man,
Degenerate far, and silver years began;
Unlike the mortals of a golden kind,
Unlike in frame of limbs, and mould of mind.
Yet still a hundred years beheld the boy
Beneath the mother's roof, her infant joy,
All tender and unform'd: but when the flower
Of manhood bloom'd, it wither'd in an hour.
Their frantic follies wrought them pain and woe;
Nor mutual outrage would their hands forego:
Nor would they serve the gods, nor altars raise,
That in just cities shed their holy blaze.
Them angry Jove ingulf'd; who dared refuse
The gods their glory and their sacred dues:
Yet named the second bless'd, in earth they lie.
And second honours grace their memory.

The sire of heaven and earth created then
A race, the third, of many-languaged men:
Unlike the silver they; of brazen mould,
Strong with the ashen spear, and fierce, and bold;
Their thoughts were bent on violence alone,
The deed of battle, and the dying groan.
Bloody their feasts, with wheaten food unblest'd;
Of adamant was each unyielding breast.
Huge, nerved with strength, each hardy giant stands,
And mocks approach with unresisted hands.
Their mansions, implements, and armour shine
In brass; dark iron slept within the mine.
They by each other's hands inglorious fell,
In freezing darkness plunged, the house of hell:
Fierce though they were, their mortal course was run;
Death gloomy seized and snatch'd them from the sun.
Them when th' abyss had cover'd from the skies,
Lo! the fourth age on nurt'ring earth arise:
Jove form'd the race a better, juster line;
A race of heroes, and of stamp divine:
Lights of the age that rose before our own;
As demigods o'er earth's wide regions known.
Yet these dread battle hurried to their end;
Some where the seven-fold gates of Thebes ascend,
The Cadmian realm; where they with fatal might
Strove for the flocks of Oedipus in fight.
Some war in navies led to Troy's far shore;
O'er the great space of sea their course they bore,
For sake of Helen with the beauteous hair;
And death for Helen's sake o'erwhelm'd them there.
Them on earth's utmost verge the god assign'd
A life, a seat, distinct from human kind;
Beside the deepening whirlpools of the main,

In those bless'd isles where Saturn holds his reign,
Apart from heaven's immortals: calm they share
A rest, unsullied by the clouds of care;
And yearly thrice, with sweet luxuriance crown'd,
Springs the ripe harvest from the teeming ground.

Oh! would that Nature had denied me birth
Midst this fifth race, this iron age of earth;
That long before within the grave I lay,
Or long hereafter could behold the day!
Corrupt the race, with toils and griefs oppress'd,
Nor day nor night can yield a pause of rest:
Still do the gods a weight of care bestow,
Though still some good is mingled with the woe.
Jove on this race of many-linguaged man
Speeds the swift ruin, which but slow began;
For scarcely spring they to the light of day,
E'er age untimely strews their temples gray.
No fathers in the sons their features trace;
The sons reflect no more the father's face:
The host with kindness greets his guest no more;
And friends and brethren love not as of yore.
Reckless of Heaven's revenge, the sons behold
The hoary parents wax too swiftly old,
And impious point the keen dishonouring tongue,
With hard reproofs, and bitter mockeries hung;
Nor grateful in declining age repay
The nurturing fondness of their better day.
Now man's right hand is law; for spoil they wait,
And lay their mutual cities desolate.
Unhonour'd he, by whom his oath is fear'd,
Nor are the good beloved, the just revered.
With favour graced, the evil doer stands.
Nor curbs with shame nor equity his hands;

With crooked slanders wounds the virtuous man,
And stamps with perjury what hate began.
Lo! ill-rejoicing Envy, wing'd with lies.
Scattering calumnious rumours as she flies.
The steps of miserable men pursue.
With haggard aspect, blasting to the view:
Till those fair forms, in snowy raiment bright,
Quit the broad earth, and heavenward soar from sight:
Justice and Modesty, from mortals driven,
Rise to th' immortal family of heaven:
Dread sorrow's to forsaken man remain;
No cure of ills; no remedy of pain.

Hesiod, Works and Days

- 3 *Prometheus*. Men at first had eyes but saw to no purpose; they had cars but did not hear. Like the shapes of dreams they dragged through their long lives and handled all things in bewilderment and confusion. They did not know of building houses with bricks to face the sun; they did not know how to work in wood. They lived like swarming ants in holes in the ground, in the sunless caves of the earth. For them there was no secure token by which to tell winter nor the flowering spring nor the summer with its crops; all their doings were indeed without intelligent calculation until I showed them the rising of the stars, and the settings, hard to observe. And further I discovered to them numbering, pre-eminent among subtle devices, and the combining of letters as a means of remembering all things, the Muses' mother, skilled in craft. It was I who first yoked beasts for them in the yokes and made of those beasts the slaves of trace chain and pack saddle that they might be man's substitute in the hardest tasks; and I harnessed to the carriage, so that

they loved the rein, horses, the crowning pride of the rich man's luxury. It was I and none other who discovered ships, the sail-driven wagons that the sea buffets, Such were the contrivances that I discovered for men—alas for me! For I myself am without contrivance to rid myself of my present affliction.... Hear the rest, and you will marvel even more at the crafts and resources I contrived.

Greatest was this: in the former times if a man fell sick he had no defense against the sickness, neither healing food nor drink, nor unguent; but through the lack of drugs men wasted away, until I showed them the blending of mild simples wherewith they drive out all manner of diseases. It was I who arranged all the ways of seercraft, and I first adjudged what things come verily true from dreams; and to men I gave meaning to the ominous cries, hard to interpret. It was I who set in order the omens of the highway and the flight of crooked-taloned birds, which of them were propitious or lucky by nature, and what manner of life each led, and what were their mutual hates, loves, and companionships; also I taught of the smoothness of the vitals and what color they should have to pleasure the Gods and the dappled beauty of the gall and the lobe. It was I who burned thighs wrapped in fat and the long shank bone and set mortals on the road to this murky craft. It was I who made visible to men's eyes the flaming signs of the sky that were before dim. So much for these. Beneath the earth, man's hidden blessing, copper, iron; silver, and gold—will anyone claim to have discovered these before I did? No one, I am very sure, who wants to speak truly and to the purpose. One brief word will tell the whole story: all arts that mortals have come from Prometheus.

Aeschylus, Prometheus Bounds 445

4 I shall go forward with my history, describing equally the greater and the lesser cities. For the cities which were formerly great have most of them become insignificant; and such as are at present powerful, were weak in the olden time. I shall therefore discourse equally of both, convinced that human happiness never continues long in one stay.

Herodotus, History, I, 5

5 *Critias*. Just when you and other nations are beginning to be provided with letters and the other requisites of civilized life, after the usual interval, the stream from heaven, like a pestilence, comes pouring down, and leaves only those of you who are destitute of letters and education; and so you have to begin all over again like children, and know nothing of what happened in ancient times, either among us or among yourselves.

Plato, Timaeus, 23A

6 Human affairs form a circle, and... there is a circle in all other things that have a natural movement and coming into being and passing away. This is because all other things are discriminated by time, and end and begin as though conforming to a circle; for even time itself is thought to be a circle. And this opinion again is held because time is the measure of this kind of locomotion and is itself measured by such. So that to say that the things that come into being form a circle is to say that there is a circle of time; and this is to say that it is measured by the circular movement; for apart from the

measure nothing else to be measured is observed; the whole is just a plurality of measures.

Aristotle, Physics, 223b25

7 In most respects the future will be like what the past has been.

Aristotle, Rhetoric, 1394b8

8 We must suppose that human nature . . . was taught and constrained to do many things of every kind merely by circumstances; and that later on reasoning elaborated what had been suggested by nature and made further inventions, in some matters quickly, in others slowly, at some epochs and times making great advances, and lesser again at others.

Epicurus, Letter to Herodotus

9 There is in every body, or polity, or business a natural stage of growth, zenith, and decay.

Polybius, Histories, VI, 51

10 The aged ploughman shakes his head and sighs again and again to think that the labours of his hands have come to nothing; and when he compares present times with times past, he often praises the fortunes of his sire and harps on the theme, how the men of old rich in piety comfortably supported life on a scanty plot of ground, since the allotment of land to each man was far less of yore than now. The sorrowful planter too of the exhausted and shrivelled vine impeaches the march of time and wearies heaven, and comprehends not that all things are

gradually wasting away and passing to the grave, quite
forspent by age and length of days.

Lucretius, Nature of Things, II

- 11 Our father's age, than their sires' not so good.
Bred us ev'n worse than they; a brood
We'll leave that's viler still.

Horace, Odes, III, 6

- 12 What is free from the risk of change? Neither earth, nor
sky, nor the whole fabric of our universe, though it be
controlled by the hand of God. It will not always preserve
its present order; it will be thrown from its course in days
to come. All things move in accord with their appointed
times; they are destined to be born, to grow, and to be
destroyed. The stars which you see moving above us, and
this seemingly immovable earth to which we cling and on
which we are set, will be consumed and will cease to
exist. There is nothing that does not have its old age; the
intervals are merely unequal at which Nature sends forth
all these things towards the same goal. Whatever is will
cease to be, and yet it will not perish, but will be resolved
into its elements.

Seneca, Letters to Lucilius, 71

- 13 The elements of the earth must all be dissolved or utterly
destroyed in order that they may be created anew in
innocence, and that no remnant may be left to tutor men
in vice.... A single day will see the burial of all mankind.
All that the long forbearance of fortune has produced, all
that has been reared to eminence, all that is famous and
all that is beautiful, great thrones, great nations— all will

descend into the one abyss, will be overthrown in one hour....

When the destruction of the human race is consummated, and when wild beasts, whose nature men had come to share, have been consigned together to a like fate, the earth will once more drink up the waters. Nature will force the sea to stay its course, and to expend its rage within its wonted bounds. Ocean will be banished from our abodes into his own secret dwelling place. The ancient order of things will be recalled. Every living creature will be created afresh. The earth will receive a new man ignorant of sin, born under happier stars. But they, too, will retain their innocence only while they are new.

Seneca, Quaestiones Naturales, III, 29-30

- 14 In the beginning was the Golden Age, when men of their own accord, without threat of punishment, without laws, maintained good faith and did what was right. There were no penalties to be afraid of, no bronze tablets were erected, carrying threats of legal action, no crowd of wrong-doers, anxious for mercy, trembled before the face of their judge: indeed, there were no Judges, men lived securely without them. Never yet had any pine tree, cut down from its home on the mountains, been launched on ocean's waves, to visit foreign lands: men knew only their own shores. Their cities were not yet surrounded by sheer moats, they had no straight brass trumpets, no coiling brass horns, no helmets and no swords. The peoples of the world, untroubled by any fears, enjoyed a leisurely and peaceful existence, and had no use for soldiers. The earth itself, without compulsion, untouched by the hoe, unfurrowed by any share, produced all things

spontaneously, and men were content with foods that grew without cultivation. They gathered arbutus berries and mountain strawberries, wild cherries and blackberries that cling to thorny bramble bushes; or acorns, fallen from Jupiter's spreading oak. It was a season of everlasting spring, when peaceful zephyrs, with their warm breath, caressed the flowers that sprang up without having been planted. In time the earth, though untilled, produced corn too, and fields that never lay fallow whitened with heavy cars of grain. Then there flowed rivers of milk and rivers of nectar, and golden honey dripped from the green holm-oak.

When Saturn was consigned to the darkness of Tartarus, and the world passed under the rule of Jove, the age of silver replaced that of gold, inferior to it, but superior to the age of tawny bronze. Jupiter shortened the springtime which had prevailed of old, and instituted a cycle of four seasons in the year, winter, summer, changeable autumn, and a brief spring. Then, for the first time, the air became parched and arid, and glowed with white heat, then hanging icicles formed under the chilling blasts of the wind. It was in those days that men first sought covered dwelling places: they made their homes in caves and thick shrubberies, or bound branches together with bark. Then corn, the gift of Ceres, first began to be sown in long furrows, and straining bullocks groaned beneath the yoke.

After that came the third age, the age of bronze, when men were of a fiercer character, more ready to turn to cruel warfare, but still free from any taint of wickedness.

Last of all arose the age of hard iron: immediately, in this period which took its name from a baser ore, all manner of crime broke out; modesty, truth, and loyalty

fled. Treachery and trickery took their place, deceit and violence and criminal greed. Now sailors spread their canvas to the winds, though they had as yet but little knowledge of these, and trees which had once clothed the high mountains were fashioned into ships, and tossed upon the ocean waves, far removed from their own element. The land, which had previously been common to all, like the sunlight and the breezes, was now divided up far and wide by boundaries, set by cautious surveyors. Nor was it only corn and their due nourishment that men demanded of the rich earth: they explored its very bowels, and dug out the wealth which it had hidden away, close to the Stygian shades; and this wealth was a further incitement to wickedness. By this time iron had been discovered, to the hurt of mankind, and gold, more hurtful still than iron. War made its appearance, using both those metals in its conflict, and shaking clashing weapons in bloodstained hands. Men lived on what they could plunder: friend was not safe from friend, nor father-in-law from son-in-law, and even between brothers affection was rare. Husbands waited eagerly for the death of their wives, and wives for that of their husbands. Ruthless stepmothers mixed brews of deadly aconite, and sons pried into their fathers' horoscopes, impatient for them to die. All proper affection lay vanquished and, last of the immortals, the maiden Justice left the blood-soaked earth.

Ovid, Metamorphoses, I

- 15 These two things then thou must bear in mind; the one, that all things from eternity are of like forms and come round in a circle, and that it makes no difference whether a man shall see the same things during a hundred years

or two hundred, or an infinite time; and the second, that the longest liver and he who will die soonest lose just the same.

Marcus Aurelius, Meditations, II, H

- 16 On the occasion of everything which happens keep this in mind, that it is that which thou hast often seen. Everywhere up and down thou wilt find the same things, with which the old histories are filled, those of the middle ages and those of our own day... There is nothing new: all things are both familiar and short-lived.

Marcus Aurelius, Meditations, VII, 1

- 17 Constantly consider how all things such as they now are, in time past also were; and consider that they will be the same again. And place before thy eyes entire dramas and stages of the same form, whatever thou hast learned from thy experience or from older history ... for all those were such dramas as we see now, only with different actors.

Marcus Aurelius, Meditations, X, 27

- 18 This controversy some philosophers have seen no other approved means of solving than by introducing cycles of time, in which there should be a constant renewal and repetition of the order of nature; and they have therefore asserted that theses cycles will ceaselessly recur, one passing away and another coming, though they are not agreed as to whether one permanent world shall pass through all these cycles, or whether the world shall at fixed intervals die out and be renewed so as to exhibit a recurrence of the same phenomena—the things which have been and those which are to be coinciding. And

from this fantastic vicissitude they exempt not even the immortal soul that has attained wisdom, consigning it to a ceaseless transmigration between delusive blessedness and real misery. For how can that be truly called blessed which has no assurance of being so eternally, and is either in ignorance of the truth, and blind to the misery that is approaching, or, knowing it, is in misery and fear? Or if it passes to bliss, and leaves miseries forever, then there happens in time a new thing which time shall not end. Why not, then, the world also? Why may not man, too, be a similar thing? So that, by following the straight path of sound doctrine, we escape, I know not what circuitous paths, discovered by deceiving and deceived sages.

Augustine, City of God, XII, 13

- 19 Over and above those arts which are called virtues, and which teach us how we may spend our life well, and attain to endless happiness—arts which are given to the children of the promise and the kingdom by the sole grace of God which is in Christ—has not the genius of man invented and applied countless astonishing arts, partly the result of necessity, partly the result of exuberant invention, so that this vigour of mind, which is so active in the discovery not merely of superfluous but even of dangerous and destructive things, betokens an inexhaustible wealth in the nature which can invent, learn, or employ such arts? What wonderful—one might say stupefying—advances has human industry made in the arts of weaving and building, of agriculture and navigation! With what endless variety are designs in pottery, painting, and sculpture produced, and with what skill executed! What wonderful spectacles are exhibited

in the theatres, which those who have not seen them cannot credit! How skillful the contrivances for catching, killing, or taming wild beasts! And for the injury of men, also, how many kinds of poisons, weapons, engines of destruction, have been invented, while for the preservation or restoration of health the appliances and remedies are infinite! To provoke appetite and please the palate, what a variety of seasonings have been concocted! To express and gain entrance for thoughts, what a multitude and variety of signs there are, among which speaking and writing hold the first place! what ornaments has eloquence at command to delight the mind! what wealth of song is there to captivate the ear! how many musical instruments and strains of harmony have been devised! What skill has been attained in measures and numbers! with what sagacity have the movements and connections of the stars been discovered! Who could tell the thought that has been spent upon nature, even though, despairing of recounting it in detail, he endeavoured only to give a general view of it? In fine, even the defence of errors and misapprehensions, which has illustrated the genius of heretics and philosophers, cannot be sufficiently declared. For at present it is the nature of the human mind which adorns this mortal life which we are extolling, and not the faith and the way of truth which lead to immortality. And since this great nature has certainly been created by the true and supreme God, Who administers all things He has made with absolute power and justice, it could never have fallen into these miseries, nor have gone out of them to miseries eternal—saving only those who are redeemed—had not an exceeding

great sin been found in the first man from whom the rest have sprung.

Augustine, City of God, XXII, 24

20 This Sabbath shall appear still more clearly if we count the ages as days, in accordance with the periods of time defined in Scripture, for that period will be found to be the seventh. The first age, as the first day, extends from Adam to the deluge; the second from the deluge to Abraham, equalling the first, not in length of time, but in the number of generations, there being ten in each. From Abraham to the advent of Christ there are, as the evangelist Matthew calculates, three periods, in each of which are fourteen generations—one period from Abraham to David, a second from David to the captivity, a third from the captivity to the birth of Christ in the flesh. There are thus five ages in all. The sixth is now passing, and cannot be measured by any number of generations, as it has been said, "It is not for you to know the times, which the Father hath put in His own power." After this period God shall rest as on the seventh day, when He shall give us (who shall be the seventh day) rest in Himself. But there is not now space to treat of these ages; suffice it to say that the seventh shall be our Sabbath, which shall be brought to a close, not by an evening, but by the Lord's day, as an eighth and eternal day, consecrated by the resurrection of Christ and prefiguring the eternal repose not only of the spirit, but also of the body. There we shall rest and see, see and love, love and praise. This is what shall be in the end without end. For what other end do we propose to ourselves than to attain to the kingdom of which there is no end?

Augustine, City of God, XXII, 30

21 Whoever considers the past and the present will readily observe that all cities and all peoples are and ever have been animated by the same desires and the same passions; so that it is easy, by diligent study of the past, to foresee what is likely to happen in the future in any republic, and to apply those remedies that were used by the ancients, or, not finding any that were employed by them, to devise new ones from the similarity of the events.

Machiavelli, Discourses, I, 39

22 Nations, as a rule, when making a change in their system of government pass from order to disorder, and afterwards from disorder to order, because nature permits no stability in human affairs. When nations reach their final perfection and can mount no higher they commence to descend; and equally when they have descended and reached a depth where they can fall no lower, necessity compels them to rise again. Thus states will always be falling from prosperity to adversity, and from adversity they will ascend again to prosperity. Because valour brings peace, peace idleness, idleness disorder, and disorder ruin; once more from ruin arises good order, from order valour, and from valour success and glory.

Machiavelli, Florentine History, V

23 And now Don Quixote having satisfy'd his Appetite, he took a Handful of Acorns, and looking earnestly upon 'em; O happy Age, cry'd he, which our first Parents call'd the Age of Gold! not because Gold, so much ador'd in this Iron-Age, was then easily purchas'd, but because those

two fatal Words, Mine and Thine, were Distinctions unknown to the People of those fortunate Times; for all Things were in common in that holy Age: Men, for their Sustenance, needed only to lift their Hands, and take it from the sturdy Oak, whose spreading Arms liberally invited them to gather the wholesome savoury Fruit; while the clear Springs, and silver Rivulets, with luxuriant Plenty, offer'd them their pure refreshing Water. In hollow Trees, and in the Clefts of Rocks, the labouring and industrious Bees erected their little Commonwealths, that Men might reap with Pleasure and with Ease the sweet and fertile Harvest of their Toils. The tough and strenuous Cork-Trees did of themselves, and without other Art than their native Liberality, dismiss and impart their broad light Bark, which serv'd to cover those lowly Huts, propp'd up with rough-hewn Stakes, that were first built as a Shelter against the Inclemencies of the Air: All then was Union, all Peace, all Love and Friendship in the World: As yet no rude Plough-share presum'd with Violence to pry into the pious Bowels of our Mother Earth, for she without Compulsion kindly yielded from every Part of her fruitful and spacious Bosom, whatever might at once satisfy, sustain and indulge her frugal Children. Then was the Time when innocent beautiful young Shepherdesses went tripping o'er the Hills and Vales: Their lovely Hair sometimes plaited, sometimes loose and flowing, clad in no other Vestment but what was necessary to cover decently what Modesty would always have conceal'd: The *Tyrian* Die, and the rich glossy Hue of Silk, martyr'd and dissembled into every Colour, which are now esteem'd so fine and magnificent, were unknown to the innocent Plainness of that Age; yet bedeck'd with more becoming Leaves and Flowers, they may be said to

outshine the proudest of the vain-dressing Ladies of our Age, array'd in the most magnificent Garbs and all the most sumptuous Adorings which Idleness and Luxury have taught succeeding Pride: Lovers then express'd the Passion of their Souls in the unaffected Language of the Heart, with the native Plainness and Sincerity in which they were conceiv'd and divested of all that artificial Contexture, which enervates what it labours to enforce: Imposture, Deceit and Malice had not yet crept in, and impos'd themselves unbrib'd upon Mankind in the Disguise of Truth and Simplicity: Justice, unbiass'd either by Favour or Interest, which now so fatally pervert it, was equally and impartially dispensed; nor was the Judges Fancy Law, for then there were neither Judges, nor Causes to be judg'd; the modest Maid might walk where-ever she pleas'd alone, free from the Attacks of lewd lascivious Importuners. But in this degenerate Age, Fraud and a Legion of Ills infecting the World, no Virtue can be safe, no Honour be secure; while wanton Desires, diffus'd into the Hearts of Men, corrupt the strictest Watches, and the closest Retreats; which, though as intricate and unknown as the Labyrinth of Crete, are no Security for Chastity. Thus that Primitive Innocence being vanish'd, and Oppression daily prevailing, there was a Necessity to oppose the Torrent of Violence: For which Reason the Order of Knighthood-Errant was instituted, to defend the Honour of Virgins, protect Widows, relieve Orphans, and assist all the Distress'd in general. Now I my self am one of this Order, honest Friends; and though all People are oblig'd by the Law of Nature to be kind to Persons of My Order; yet since you, without knowing any thing of this Obligation, have so generously entertain'd me, I ought to

pay you my utmost Acknowledgment; and, accordingly, return you my most hearty Thanks for the same.

Cervantes, Don Quixote, 1,11

24 By far the greatest obstacle to the advancement of the sciences, and the undertaking of any new attempt or department, is to be found in men's despair and the idea of impossibility; for men of a prudent and exact turn of thought are altogether diffident in matters of this nature, considering the obscurity of nature, the shortness of life, the deception of the senses, and weakness of the judgment. They think, therefore, that in the revolutions of ages and of the world there are certain floods and ebbs of the sciences, and that they grow and flourish at one time, and wither and fall off at another, that when they have attained a certain degree and condition they can proceed no further.

Bacon, Novum Organum, I, 92

25 We should notice the force, effect, and consequences of inventions, which are nowhere more conspicuous than in those three which were unknown to the ancients; namely, printing, gunpowder, and the compass. For these three have changed the appearance and state of the whole world: first in literature, then in warfare, and lastly in navigation; and innumerable changes have been thence derived, so that no empire, sect, or star, appears to have exercised a greater power and influence on human affairs than these mechanical discoveries.

Bacon, Novum Organum, I, 129

26 Beehives were as well laid out a thousand years ago as today, and each bee forms that hexagon as exactly the first time as the last. It is the same with everything animals make by that hidden motion. Nature teaches them in response to the pressure of necessity; but this frail knowledge dies with its need: as they receive it without study, they do not have the happiness of preserving it; and every time they are given it, they find it new, because nature, whose object is merely to maintain animals in an order of limited perfection, infuses in them this necessary knowledge, always the same, lest they perish, and does not allow them to add to it lest they go beyond the boundaries prescribed to them. It is different with man, made only for infinity. He is ignorant in his life's first age, but he never ceases to learn as he goes forward, for he has the advantage not only of his own experience but also of his predecessors', because he always keeps in his memory the knowledge he has once acquired, and that of the ancients is always at hand in the books they have left. And since he keeps his knowledge, he can also easily increase it, so that men today are in a certain sense in the same condition in which those ancient philosophers would be if they could have prolonged their old age until now, adding to the knowledge they had what their studies might have won for them by the grace of so many centuries. Hence it is that by a special prerogative not only does each man advance from day to day in the sciences, but all men together make a continual progress as the universe grows old, because the same thing happens in the succession of men as in the different ages of an individual man. So that the whole series of men during the course of so many centuries should be considered as one selfsame man,

always in existence and continually learning. Whence it is seen with what injustice we respect antiquity in the persons of its philosophers; for since old age is the age furthest removed from childhood, who does not see that the old age of this universal man should be sought not in the limes near his birth but in those which are most distant from it? Those whom we call ancients were in truth new in every respect, and actually formed The childhood of man; and since we have added to their knowledge the experience of the succeeding centuries, it is in ourselves that that antiquity can be found which we revere in others.

Pascal. Preface to the Treatise on the Vacuum

27 *Chorus of All.* All, all of a piece throughout:

Thy chase had a beast in view;
Thy wars brought nothing about;
Thy lovers were all untrue.
'T is well an old age is out,
And time to begin a new.

Dryden, The Secular Masque (1700)

28 To realize in its completeness the universal beauty and perfection of the works of God, we must recognize a certain perpetual and very free progress of the whole universe, such that it is always going forward to greater improvement. So even now a great part of our earth has received cultivation and will receive it more and more. And although it is true that sometimes certain parts of it grow wild again, or again suffer destruction or degeneration, yet this is to be understood in the way in which affliction was explained above, that is to say, that

this very destruction and degeneration leads to some greater end, so that somehow we profit by the loss itself.

And to the possible objection that, if this were so, the world ought long ago to have become a paradise, there is a ready answer. Although many substances have already attained a great perfection, yet on account of the infinite divisibility of the continuous, there always remain in the abyss of things slumbering parts which have yet to be awakened, to grow in size and worth, and, in a word, to advance to a more perfect state. And hence no end of progress is ever reached.

Leibniz, On the Ultimate Origination of Things

29 I have perused many of their [the Lorbrulgrudians'] books, especially those in history and morality. Among the latter I was much diverted with a little old treatise, which always lay in Glumdalclitch's bed-chamber, and belonged to her governess, a grave elderly gentlewoman, who dealt in writings of morality and devotion. The book treats of the weakness of human kind; and is in little esteem, except among women and the vulgar. However, I was curious to see what an author of that country could say upon such a subject. This writer went through all the usual topicks of European moralists; shewing how diminutive, contemptible, and helpless an animal was man in his own nature; how unable to defend himself from inclemencies of the air, or the fury of wild beasts; how much he was excelled by one creature in strength, by another in speed, by a third in foresight, by a fourth in industry. He added, that nature was degenerated in these latter declining ages of the world, and could now produce only small abortive births, in comparison of those in ancient times. He said, it was very reasonable to think,

not only that the species of man were originally much larger, but also, that there must have been giants in former ages; which, as it is asserted by history and tradition, so it hath been confirmed by huge bones and skulls, casually dug up in several parts of the kingdom, far exceeding the common dwindled race of man in our days.

Swift, Gulliver's Travels, II, 7

- 30 Our Science... comes to describe ... an ideal eternal history traversed in time by the history of every nation in its rise, progress, maturity, decline and fall. Indeed we go so far as to assert that whoever meditates this Science tells himself this ideal eternal history only so far as he makes it by that proof "it had, has, and will have to be."

Vico, The New Science, I

- 31 This world without doubt has issued from a mind often diverse, at times quite contrary, and always superior to the particular ends that men had proposed to themselves; which narrow ends, made means to serve wider ends, it has always employed to preserve the human race upon this earth. Men mean to gratify their bestial lust and abandon their offspring, and they inaugurate the chastity of marriage from which the families arise. The fathers mean to exercise without restraint their paternal power over their clients, and they subject them to the civil powers from which the cities arise. The reigning orders of nobles mean to abuse their lordly freedom over the plebeians, and they are obliged to submit to the laws which establish popular liberty. The free peoples mean to shake off the yoke of their laws, and

they become subject to monarchs. The monarchs mean to strengthen their own positions by debasing their subjects with all the vices of dissoluteness, and they dispose them to endure slavery at the hands of stronger nations. The nations mean to dissolve themselves, and their remnants flee for safety to the wilderness, whence, like the phoenix, they rise again.

Vico, The New Science, Conclusion

32 Thus—thus, my fellow-labourers and associates in this great harvest of our learning, now ripening before our eyes; thus it is, by slow steps of casual increase, that our knowledge physical, metaphysical, physiological, polemical, nautical, mathematical, enigmatical, technical, biographical, romantical, chemical, and obstetrical, with fifty other branches of it, (most of 'em ending as these do, in *ica*!) have for these two centuries and more, gradually been creeping upwards towards that acme of their perfections, from which, if we may form a conjecture from the advances of these last seven years, we cannot possibly be far off.

When that happens, it is to be hoped, it will put an end to all kind of writings whatsoever;—the want of all kind of writing will put an end to all kind of reading;—and that in time, As war begets poverty; poverty peace,—must, in course, put an end to all kind of knowledge,—and then—we shall have all to begin over again; or, in other words, be exactly where we started.

Sterne, Tristram Shandy, I, 21

33 A famous author, reckoning up the good and evil of human life, and comparing the aggregates, finds that our

pains greatly exceed our pleasures: so that, all things considered, human life is not at all a valuable gift. This conclusion does not surprise me; for the writer drew all his arguments from man in civilisation. Had he gone back to the state of nature, his inquiries would clearly have had a different result, and man would have been seen to be subject to very few evils not of his own creation. It has indeed cost us not a little trouble to make ourselves as wretched as we are. When we consider, on the one hand, the immense labours of mankind, the many sciences brought to perfection, the arts invented, the powers employed, the deeps filled up, the mountains levelled, the rocks shattered, the rivers made navigable, the tracts of land cleared, the lakes emptied, the marshes drained, the enormous structures erected on land, and the teeming vessels that cover the sea; and, on the other hand, estimate with ever so little thought, the real advantages that have accrued from all these works to mankind, we cannot help being amazed at the vast disproportion there is between these things, and deploring the infatuation of man, which, to gratify his silly pride and vain self-admiration, induces him eagerly to pursue all the miseries he is capable of feeling, Though beneficent nature had kindly placed them out of his way.

Rousseau, Origin of Inequality, Appendix

- 34 Savage man, when he has dined, is at peace with all nature, and the friend of all his fellow-creatures. If a dispute arises about a meal, he rarely comes to blows, without having first compared the difficulty of conquering his antagonist with the trouble of finding subsistence elsewhere: and, as pride does not come in, it all ends in a few blows; the victor cats, and the vanquished seeks

provision somewhere else, and all is at peace. The ease is quite different with man in the state of society, for whom first necessities have to be provided, and then superfluities; delicacies follow next, then immense wealth, then subjects, and then slaves. He enjoys not a moment's relaxation; and what is yet stranger, the less natural and pressing his wants, the more headstrong are his passions, and, still worse, the more he has it in his power to gratify them; so that after a long course of prosperity, after having swallowed up treasures and ruined multitudes, the hero ends up by cutting every throat till he finds himself, at last, sole master of the world. Such is in miniature the moral picture, if not of human life, at least of the secret pretensions of the heart of civilised man.

Rousseau, Origin of Inequality, Appendix

- 35 *Johnson*. It is in refinement and elegance that the civilized man differs from the savage. A great part of our industry, and all our ingenuity is exercised in procuring pleasure; and, Sir, a hungry man has not the same pleasure in eating a plain dinner, That a hungry man has in eating a luxurious dinner.

Boswell, Life of Johnson (Apr, 14, 1778)

- 36 Natural phenomena, governed by constant laws, traverse forever certain fixed cycles of change. All things perish, all things revive; and in those successive generations which mark the reproduction of plants and of animals, time but restores continually the likeness of what it has annihilated.

The succession of mankind, on the contrary, presents from age to age an ever-varied spectacle. Reason, the passions, liberty, continually give rise to new events. All the ages are linked together by a chain of causes and effects which unite the existing state of the world with all that has gone before. The arbitrary signs of speech and of writing giving to men the means of insuring the possession of their ideas and of communicating them to others, have made a common treasure-store of all individual knowledge, which one generation bequeaths to the next, a heritage constantly augmented by the discoveries of each age; and mankind, viewed from its origin, appears to the eyes of a philosopher as one vast whole, which itself, like each individual, has its infancy and its growth.

Turgot, Progress of the Human Mind, 1

- 37 What a host of inventions unknown to the ancients, and credited to an age of barbarism! Our art of recording music, our bills of exchange, our paper, window-glass, plate-glass, windmills, watches, spectacles, gunpowder, the magnetic needle and the consequent perfection of navigation and commerce. The arts are but the utilization of nature, and the exercise of the arts is a series of physical experiments which progressively unveil her. Facts were accumulating in the darkness of the age of ignorance, and the sciences, whose progress, for all that it was hidden, was none the less actual, were destined to reappear in time increased by these new riches; like those rivers which, after having disappeared from view for a space in some subterranean channel, reappear farther on augmented by all the waters which have filtered through the earth.

Turgot, Progress of the Human Mind, I

38 The uniform, constant, and uninterrupted effort of every man to better his condition, the principle from which public and national, as well as private opulence is originally derived, is frequently powerful enough to maintain the natural progress of things towards improvement, in spite both of the extravagance of government and of the greatest errors of administration. Like the unknown principle of animal life, it frequently restores health and vigour to the constitution, in spite, not only of the disease, but of the absurd prescriptions of the doctor.

Adam Smith, Wealth of Nations, II, 3

39 Laws and institutions must go hand in hand with the progress of the human mind. As that becomes more developed, more enlightened, as new discoveries are made, new truths disclosed, and manners and opinions change with the change of circumstances, institutions must advance also, and keep pace with the times.

Jefferson, Letter to Samuel Kerchaval (July 12, 1816)

40 We imperceptibly advance from youth to age without observing the gradual, but incessant, change of human affairs; and even in our larger experience of history, the imagination is accustomed, by a perpetual series of causes and effects, to unite the most distant revolutions. But if the interval between two memorable eras could be instantly annihilated; if it were possible, after a momentary slumber of two hundred years, to display the *new* world to the eyes of a spectator who still retained a lively and recent impression of the *old*, his surprise and

his reflections would furnish the pleasing subject of a philosophical romance.

Gibbon, Decline and Fall of the Roman Empire, XXXIII

- 41 Since the first discovery of the arts, war, commerce, and religious zeal have diffused among the savages of the Old and New World these inestimable gifts: they have been successively propagated; they can never be lost. We may therefore acquiesce in the pleasing conclusion that every age of the world has increased and still increases the real wealth, the happiness, the knowledge, and perhaps the virtue, of the human race.

Gibbon, Decline and Fall of the Roman Empire, XXXVIII

- 42 The history of the human race, viewed as a whole, may be regarded as the realization of a hidden plan of nature to bring about a political constitution, internally, and, for this purpose, also externally perfect, as the only state in which all the capacities implanted by her in mankind can be fully developed.

Kant, Idea of a Universal History, VIII

- 43 I will... venture to assume that as the human race is continually advancing in civilisation and culture as its natural purpose, so it is continually making progress for the better in relation to the moral end of its existence, and that this progress although it may be sometimes interrupted, will never be entirely broken off or stopped. It is not necessary for me to prove this assumption; the burden of proof lies on its opponents. For I take my stand upon my innate sense of duty in this connection. Every member in the series of generations to which I belong as

a man—although mayhap not so well equipped with the requisite moral qualifications as I ought to be, and consequently might be—is, in fact, prompted by his sense of duty so to act in reference to posterity that they may always become better, and the possibility of this must be assumed. This duty can thus be rightfully transmitted from one member of the generations to another. Now whatever doubts may be drawn from history against my hopes, and were they even of such a kind as, in case of their being demonstrated, might move me to desist from efforts which according to all appearances would be vain, yet so long as this is not made out with complete certainty, I am not entitled to give up the guidance of duty which is clear, and to adopt the prudential rule of not working at the impracticable, since this is not clear but is mere hypothesis. And, however uncertain I may always be as to whether we may rightly hope that the human race will attain to a better condition, yet this individual uncertainty cannot detract from the general rule of conduct, or from the necessary assumption in the practical relation that such a condition is practicable.

Kant, On the Saying: That a Thing may be Right in Theory, but may not Hold in Practice

- 44 The question next arises as to the means by which this continuous progress to the better may be maintained and even hastened. When carefully considered, we soon see that as this process must go on to an incalculable distance of time, it cannot depend so much on what we may do of ourselves, for instance, on the education we give to the younger generation, or on the method by which we may proceed in order to realise it, as on what human Nature as such will do in and with us, to compel

us to move in a track into which we would not readily have betaken ourselves. For, it is from human Nature in general, or rather— since supreme wisdom is requisite for the accomplishment of this end—it is from *Providence* alone that we can expect a result which proceeds by relation to the whole and reacts through the whole upon the parts. Men with their *plans* start, on the contrary, only from the parts, and even continue to regard the parts alone, while the whole as such is viewed as too great for them to influence and as attainable by them only in idea.

Kant, On the Saying: That a Thing may be Right in Theory, but may not Hold in Practice

45 Human Reason pursues her course in the species in general: she invents, before she can apply; she discovers, though evil hands may long abuse her discoveries. Abuse will correct itself; and, through the unwearied zeal of ever-growing Reason, disorder will in time become order. By contending against passions, she strengthens and enlightens herself: from being oppressed in this place, she will fly to that, and extend the sphere of her sway over the Earth. There is nothing enthusiastical in the hope, that, wherever men dwell, at some future period will dwell men rational, just, and happy: happy, not through the means of their own reason alone, but of the common reason of their whole fraternal race.

Herder, Philosophy of the History of Man, XV

46 The organic perfectibility or degeneration of species in the case of plants or of animals can be regarded as one of the general laws of nature.

This law extends to the human race, and no one probably will doubt that progress in preventive medicine, the use of more healthful foods and habitations, a mode of living which should develop the strength through exercise without impairing it through excess, that, finally, the destruction of the two most active causes of degeneracy, extreme poverty and excessive wealth, will necessarily prolong the average duration of man's life and secure him a more constant health and a more robust constitution. It is felt that the progress of preventive medicine, become more efficacious through the progress of reason and that of the social order, must do away in time with transmissible or contagious diseases, and those general disorders which owe their origin to climates, foods, or the nature of occupations. It would not be difficult to prove that this hope may be extended to nearly all the other maladies, the distant causes of which it is probable will be discovered hereafter. Would it be absurd, then, to suppose that this improvement of the human race may be regarded as susceptible of indefinite progress, that there may come a time when death shall be no more than the result either of extraordinary accidents or of the ever more gradual decay of the vital forces, and that, finally, the average interval elapsing between birth and this decay may itself have no assignable limit? Doubtless man will never become immortal, but may not the distance between the moment when he first receives life and the common period when in the course of nature, without illness and without accident, he finds it no longer possible to exist, grow constantly wider?

*Condorcet, Historical Picture of the Progress of the
Human Mind, 10*

47 [The] average duration of human life is destined to increase continually, if physical revolutions do not oppose themselves thereto; but we do not know what limit it is that it can never pass; we do not even know if the general laws of nature have fixed such a limit.

*Condorcet, Historical Picture of the Progress of the
Human Mindy 10*

48 It is, undoubtedly, a most disheartening reflection that the great obstacle in the way to any extraordinary improvement in society is of a nature that we can never hope to overcome. The perpetual tendency in the race of man to increase beyond the means of subsistence is one of the general laws of animated nature which we can have no reason to expect will change. Yet, discouraging as the contemplation of this difficulty must be to those whose exertions are laudably directed to the improvement of the human species, it is evident that no possible good can arise from any endeavors to slur it over or keep it in the background.

Malthus, Population, XVII

49 *Chorus.* The world's great age begins anew,
The golden years return,
The earth doth like a snake renew
Her winter weeds outworn;
Heaven smiles, and faiths and empires gleam.
Like wrecks of a dissolving dream.

A brighter Hellas rears its mountains

From waves serener far;
A new Peneus rolls his fountains
Against the morning-star.
Where fairer Tempes bloom, there sleep
Young Cyclads on a sunnier deep.

A loftier Argo cleaves the main.
Fraught with a later prize;
Another Orpheus sings again.
And loves, and weeps, and dies.
A new Ulysses leaves once more
Calypso for his native shore.

Oh, write no more the tale of Troy,
If earth Death's scroll must be!
Nor mix with Laian rage the joy
Which dawns upon the free;
Although a subtler Sphinx renew
Riddles of death Thebes never knew.

Another Athens shall arise,
And to remoter time
Bequeath, like sunset to the skies,
The splendor of its prime;
And leave, if nought so bright may live,
All earth can take or Heaven can give.

Saturn and Love their long repose
Shall burst, more bright and good
Than all who fell, than One who rose,
Than many unsubdued;
Not gold, not blood, their altar dowers,
But votive tears and symbol flowers.

Oh, cease! must hate and death return?
Cease! must men kill and die?
Cease! drain not to its dregs the urn
Of bitter prophecy.
The world is weary of the past.
Oh, might it die or rest at last!

Shelley, Hellas, 1060

50 In order to understand the true value and character of the Positive Philosophy, we must take a brief general view of the progressive course of the human mind, regarded as a whole; for no conception can be understood otherwise than through its history.

From the study of the development of human intelligence, in all directions, and through all times, the discovery arises of a great fundamental law, to which it is necessarily subject, and which has a solid foundation of proof, both in the facts of our organization and in our historical experience. The law is this:—that each of our leading conceptions—each branch of our knowledge—passes successively through three different theoretical conditions: the Theological, or fictitious; the Metaphysical, or abstract; and the Scientific, or positive. In other words, the human mind, by its nature, employs in its progress three methods of philosophizing, the character of which is essentially different, and even radically opposed: viz., the theological method, the metaphysical, and the positive. Hence arise three philosophies, or general systems of conceptions on the aggregate of phenomena, each of which excludes the others. The first IS the necessary point of departure of the human

understanding; and the third is its fixed and definite state. The second is merely a state of transition.

Comte, Positive Philosophy, Introduction, 1

51 We have nothing to do here with the metaphysical controversy about the absolute happiness of Man at different stages of civilization. As the happiness of every man depends on the harmony between the development of his various faculties and the entire system of the circumstances which govern his life; and as, on the other hand, this equilibrium always establishes itself spontaneously to a certain extent, it is impossible to compare in a positive way, either by sentiment or reasoning, the individual welfare which belongs to social situations that can never be brought into direct comparison; and therefore the question of the happiness of different animal organisms, or of their two sexes, is merely impracticable and unintelligible. The only question, therefore, is of the effect of the social evolution, which is so undeniable that there is no reasoning with any one who does not admit it as the basis of the inquiry. The only ground of discussion is whether development and improvement,—The theoretical and the practical aspect,— are one; whether the development is necessarily accompanied by a corresponding amelioration, or progress, properly so called. To me it appears that the amelioration is as unquestionable as the development from which it proceeds, provided we regard it as subject, like the development itself, to limits, general and special, which science will be found to prescribe. The chimerical notion of unlimited perfectibility is thus at once excluded. Taking the human race as a whole, and not any one people, it appears that

human development brings after it, in two ways, an ever-growing amelioration, first, in the radical condition of Man, which no one disputes; and next, in his corresponding faculties, which is a view much less attended to. There is no need to dwell upon the improvement in the conditions of human existence, both by the increasing action of Man on his environment through the advancement of the sciences and arts, and by the constant amelioration of his customs and manners; and again, by the gradual improvement in social organization. We shall presently see that in the Middle Ages, which are charged with political retrogression, the progress was more political than any other. One fact is enough to silence sophistical declamation on this subject; the continuous increase of population all over the globe, as a consequence of civilization, while the wants of individuals are, as a whole, better satisfied at the same time. The tendency to improvement must be highly spontaneous and irresistible to have persevered notwithstanding the enormous faults—political faults especially—which have at all times absorbed or neutralized the greater part of our social forces. Even throughout the revolutionary period, in spite of the marked discordance between the political system and the general state of civilization, the improvement has proceeded, not only in physical and intellectual, but also in moral respects, though the transient disorganization could not but disturb the natural evolution. As for the other aspect of the question, the gradual and slow improvement of human nature, within narrow limits, it seems to me impossible to reject altogether the principle proposed (with great exaggeration, however) by Lamarck, of the necessary influence of a homogeneous and

continuous exercise in producing, in every animal organism, and especially in Man, an organic improvement, susceptible of being established in the race, after a sufficient persistence. If we take the best-marked case—that of intellectual development, it seems to be unquestionable that there is a superior aptitude for mental combinations, independent of all culture, among highly-civilized people; or, what comes to the same thing, an inferior aptitude among nations that are less advanced,—the average intellect of the members of those societies being taken for observation. The intellectual faculties are, it is true, more modified than the others by the social evolution; but then they have the smallest relative effect in the individual human constitution: so that we are authorized to infer from their amelioration a proportionate improvement in aptitudes that are more marked and equally exercised. In regard to morals, particularly, I think it indisputable that the gradual development of humanity favors a growing preponderance of the noblest tendencies of our nature,—as I hope to prove further on. The lower instincts continue to manifest themselves in modified action, but their less sustained and more repressed exercise must tend to debilitate them by degrees; and their increasing regulation certainly brings them into involuntary concurrence in the maintenance of a good social economy; and especially in the case of the least marked Organisms, which constitute a vast majority. These two aspects of social evolution, then,— the *development* which brings after it the *improvement*, — We may consider to be admitted as facts.

Comte, Positive Philosophy, VI, 3

52 The progress of the race must be considered susceptible of modification only with regard to its speed, and without any reversal in the order of development, or any interval of any importance being overleaped.

Comte, Positive Philosophy, VI, 3

53 Society never advances. It recedes as fast on one side as it gains on the other. It undergoes continual changes; it is barbarous, it is civilized, it is christianized, it is rich, it is scientific; but this change is not amelioration. For every thing that is given something is taken. Society acquires new arts and loses old instincts. What a contrast between the well-clad, reading, writing, thinking American, with a watch, a pencil and a bill of exchange in his pocket, and the naked New Zealander, whose property is a club, a spear, a mat and an undivided twentieth of a shed to sleep under! But compare the health of the two men and you shall see that the white man has lost his aboriginal strength. If the traveller tell us truly, strike the savage with a broad-axe and in a day or two the flesh shall unite and heal as if you struck the blow into soft pitch, and the same blow shall send the white to his grave.

Emerson, Self-Reliance

54 The civilized man has built a coach, but has lost the use of his feet. He is supported on crutches, but lacks so much support of muscle. He has a fine Geneva watch, but he fails of the skill to tell the hour by the sun. A Greenwich nautical almanac he has, and so being sure of the information when he wants it, the man in the street does not know a star in the sky.

Emerson, Self-Reliance

55 There is not a piece of science but its flank may be turned to-morrow; there is not any literary reputation, not the so-called eternal names of fame, that may not be revised and condemned. The very hopes of man, the thoughts of his heart, the religion of nations, the manners and morals of mankind are all at the mercy of a new generalization.

Emerson, Circles

56 As long as our civilization is essentially one of property, of fences, of exclusiveness, it will be mocked by delusions. Our riches will leave us sick; there will be bitterness in our laughter, and our wine will bum our mouth. Only that good profits which we can taste with all doors open, and which serves all men.

Emerson, Napoleon; or, The Man of the World

57 Not in vain the distance beacons. Forward, forward let us range,

Let the great world spin for ever down the ringing grooves of change.

Thro' the shadow of the globe we sweep into the younger day;

Better fifty years of Europe than a cycle of Cathay.

Tennyson, Locksley Hall, 181

58 Shad are still taken in the basin of Concord River, at Lowell, where they are said to be a month earlier than the Merrimack shad, on account of the warmth of the water. Still patiently, almost pathetically, with instinct not to be discouraged, not to be *reasoned* with, revisiting their old haunts, as if their stern fates would relent, and still met

by the Corporation with its dam. Poor shad! where is thy redress? When Nature gave thee instinct, gave she thee the heart to bear thy fate? Still wandering the sea in thy scaly armor to inquire humbly at the mouths of rivers if man has perchance left them free for thee to enter. By countless shoals loitering uncertain meanwhile, merely stemming the tide there, in danger from sea foes in spite of thy bright armor, awaiting new instructions, until the sands, until the water itself, tell thee if it be so or not. Thus by whole migrating nations, full of instinct, which is thy faith, in this backward spring, turned adrift, and perchance knowest not where men do not dwell, where there are not factories, in these days. Armed with no sword, no electric shock, but mere shad, armed only with innocence and a just cause, with tender dumb mouth only forward, and scales easy to be detached. I for one am with thee, and who knows what may avail a crowbar against that Billerica dam?—Not despairing when whole myriads have gone to feed those sea monsters during thy suspense, but still brave, indifferent, on easy fin there, like shad reserved for higher destinies. Willing to be decimated for man's behoof after the spawning season. Away with the superficial and selfish philanthropy of men—who knows what admirable virtue of fishes may be below low-water-mark, bearing up against a hard destiny, not admired by that fellow-creature who alone can appreciate it! Who hears the fishes when they cry? It will not be forgotten by some memory that we were contemporaries. Thou shalt ere long have thy way up the rivers, up all the rivers of the globe, if I am not mistaken. Yea, even thy dull watery dream shall be more than realized. If it were not so, but thou wert to be overlooked at first and at last, then would not I take their heaven.

Yes, I say so, who think I know better than thou canst.
Keep a stiff fin, then, and stem all the tides thou mayst
meet.

*Thoreau, A Week on the Concord and Merrimack Rivers
(Saturday)*

59 In the savage state every family owns a shelter as good as the best, and sufficient for its coarser and simpler wants; but I think that I speak within bounds when I say that, though the birds of the air have their nests, and the foxes their holes, and the savages their wigwams, in modern civilized society not more than one half the families own a shelter. In the large towns and cities, where civilization especially prevails, the number of those who own a shelter is a very small fraction of the whole. The rest pay an annual tax for this outside garment of all, become indispensable summer and winter, which would buy a village of Indian wigwams, but now helps to keep them poor as long as they live. I do not mean to insist here on the disadvantage of hiring compared with owning, but it is evident that the savage owns his shelter because it costs so little, while the civilized man hires his commonly because he cannot afford to own it; nor can he, in the long run, any better afford to hire. But, answers one, by merely paying (his tax) the poor civilized man secures an abode which is a palace compared with the savage's. An annual rent of from twenty-five to a hundred dollars (these are the country rates) entitles him to the benefit of the improvements of centuries, spacious apartments, clean paint and paper, Rumford fireplace, back plastering, Venetian blinds; copper pump, spring lock, a commodious cellar, and many other things. But how happens it that he who is

said to enjoy these things is so commonly a poor civilized man, while the savage, who has them not, is rich as a savage? If it is asserted that civilization is a real advance in the condition of man— and I think that it is, though only the wise improve their advantages—it must be shown that it has produced better dwellings without making them more costly; and the cost of a thing is the amount of what I will call life which is required to be exchanged for it, immediately or in the long run. An average house in this neighborhood costs perhaps eight hundred dollars, and to lay up this sum will take from ten to fifteen years of the laborer's life, even if he is not encumbered with a family—estimating the pecuniary value of every man's labor at one dollar a day, for if some receive more, others receive less;—so that he must have spent more than half his life commonly before his wigwam will be earned. If we suppose him to pay a rent instead, this is but a doubtful choice of evils. Would the savage have been wise to exchange his wigwam for a palace on these terms?

Thoreau, Walden: Economy

60 Some are dinning in our ears that we Americans, and moderns generally, are intellectual dwarfs compared with the ancients, or even the Elizabethan men. But what is that to the purpose? A living dog is better than a dead Hon. Shall a man go and hang himself because he belongs to the race of pygmies, and not be the biggest pygmy that he can? Let every one mind his own business, and endeavor to be what he was made.

Thoreau, Walden: Conclusion

61 To believe that man was aboriginally civilised and then suffered utter degradation in so many regions, is to take a pitifully low view of human nature. It is apparently a truer and more cheerful view that progress has been much more general than retrogression; that man has risen, though by slow and interrupted steps, from a lowly condition to the highest standard as yet attained by him in knowledge, morals and religion.

Darwin, Descent of Man, I, 5

62 Thoughtful men, once escaped from the blinding influences of traditional prejudice, will find in the lowly stock whence Man has sprung, the best evidence of the splendour of his capacities; and will discern in his long progress through the Past, a reasonable ground of faith in his attainment of a nobler Future.

T. H. Huxley, Relations of Man to the Lower Animals

63 Men in society are undoubtedly subject to the cosmic process. As among other animals, multiplication goes on without cessation, and involves severe competition for the means of support. The struggle for existence tends to eliminate those less fitted to adapt themselves to the circumstances of their existence. The strongest, the most self-assertive, tend to tread down the weaker. But the influence of the cosmic process on the evolution of society is the greater the more rudimentary its civilization. Social progress means a checking of the cosmic process at every step and the substitution for it of another, which may be called the ethical process; the end of which is not the survival of those who may happen to

be the fittest, in respect of the whole of the conditions which obtain, but of those who are ethically the best.

T. H. Huxley, Evolution and Ethics

64 In support of the position that Order is intrinsically different from Progress, and that preservation of existing and acquisition of additional good are sufficiently distinct to afford the basis of a fundamental classification, we shall perhaps be reminded that Progress may be at the expense of Order; that while we are acquiring, or striving to acquire, good of one kind, we may be losing ground in respect to others: thus there may be progress in wealth, while there is deterioration in virtue. Granting this, what it proves is not that Progress is generically a different thing from Permanence, but that wealth is a different thing from virtue. Progress is permanence and something more; and it is no answer to this to say that Progress in one thing does not imply Permanence in everything. No more does Progress in one thing imply Progress in everything. Progress of any kind includes Permanence in that same kind; whenever Permanence is sacrificed to some particular kind of Progress, other Progress is still more sacrificed to it; and if it be not worth the sacrifice, not the interest of Permanence alone has been disregarded, but the general interest of Progress has been mistaken.

Mill, Representative Government, II

65 No one whose opinion deserves a moment's consideration can doubt that most of the great positive evils of the world are in themselves removable, and will, if human affairs continue to improve, be in the end reduced

within narrow limits. Poverty, in any sense implying suffering, may be completely extinguished by the wisdom of society, combined with the good sense and providence of individuals. Even that most intractable of enemies, disease, may be indefinitely reduced in dimensions by good physical and moral education, and proper control of noxious influences; while the progress of science holds out a promise for the future of still more direct conquests over this detestable foe. And every advance in that direction relieves us from some, not only of the chances which cut short our own lives, but, what concerns us still more, which deprive us of those in whom our happiness is wrapt up. As for vicissitudes of fortune, and other disappointments connected with worldly circumstances, these are principally the effect either of gross imprudence, of ill-regulated desires, or of bad or imperfect social institutions.

Mill, Utilitarianism, II

66 It is my belief indeed that the general tendency is, and will continue to be, saving occasional and temporary exceptions, one of improvement—a tendency towards a better and happier state. This, however, is not a question of the method of the social science, but a theorem of the science itself. For our purpose it is sufficient that there is a progressive change, both in the character of the human race and in their outward circumstances so far as moulded by themselves; that in each successive age the principal phenomena of society are different from what they were in the age preceding, and still more different from any previous age: the periods which most distinctly mark these successive changes being intervals of one generation, during which a new set of human beings

have been educated, have grown up from chili hood, and taken possession of society.

Mill, System of Logic, Bk. VI, X, 3

67 A Philosophy of History is generally admitted to be at once the verification and the initial form of the Philosophy of the Progress of Society.

Mill, System of Logic, Bk. VI, X, 8

68 Progress is

The law of life, man is not Man as yet.

Browning, Paracelsus, V

69 Man knows partly but conceives beside.

Creeps ever on from fancies to the fact,
And in this striving, this converting air
Into a solid he may grasp and use,
Finds progress, man's distinctive mark alone,
Not God's, and not the beasts': God is, they are,
Man partly is and wholly hopes to be.

Browning, A Death in the Desert

70 The pursuit of perfection ... is the pursuit of sweetness and light. He who works for sweetness and light, works to make reason and the will of God prevail. He who works for machinery, he who works for hatred, works only for confusion. Culture looks beyond machinery, culture hates hatred; culture has one great passion, the passion for sweetness and light. It has one even yet greater!—the passion for making them *prevail*. It is not satisfied till we *all* come to a perfect man; it knows that the sweetness and light of the few must be imperfect until the raw and

unkindled masses of humanity are touched with sweetness and light. If I have not shrunk from saying that we must work for sweetness and light, so neither have I shrunk from saying that we must have a broad basis, must have sweetness and light for as many as possible, Again and again I have insisted how those are the happy moments of humanity, how those are the marking epochs of a people's life, how those are the flowering times for literature and art and all the creative power of genius, when there is a national glow of life and thought, when the whole of society is in the fullest measure permeated by thought, sensible to beauty, intelligent and alive.

Arnold, Culture and Anarchy, I

71 Progress ... is not an accident, but a necessity. Instead of civilization being artificial, it is a part of nature; all of a piece with the development of the embryo or the unfolding of a flower. The modifications mankind have undergone, and are still undergoing, result from a law underlying the whole organic creation; and provided the human race continues, and the constitution of things remains the same, those modifications must end in completeness. As surely as the tree becomes bulky when it stands alone, and slender if one of a group; as surely as the same creature assumes the different forms of cart-horse and race-horse, according as its habits demand strength or speed; as surely as a blacksmith's arm grows large, and the skin of a labourer's hand thick; as surely as the eye tends to become long-sighted in the sailor, and short-sighted in the student; as surely as the blind attain a more delicate sense of touch; as surely as a clerk acquires rapidity in writing and calculation; as surely as the musician learns to detect an error of a semi-tone

amidst what seems to others a very babel of sounds; as surely as a passion grows by indulgence and diminishes when restrained; as surely as a disregarded conscience becomes inert, and one that is obeyed active; as surely as there is any efficacy in educational culture, or any meaning in such terms as habit, custom, practice; so surely must the human faculties be moulded into complete fitness for the social state; so surely must the things we call evil and immorality disappear; so surely must man become perfect.

Spencer, Social Statics, I, 2

72 The plexus of causes returneth in which I am intertwined, —it will again create me! I myself pertain to the causes of the eternal return.

I come again with this sun, with this earth, with this eagle, with this serpent— not to a new life, or a better life, or a similar life:

—I come again eternally to this identical and selfsame life, in its greatest and its smallest, to teach again the eternal return of all things,—

—To speak again the word of the great noontide of earth and man, to announce again to man the Superman.

Nietzsche, Thus Spake Zarathustra, III, 57

73 This life, as thou livest it now, as thou hast lived it, thou needst must live again, and an infinite number of times; and there will be in it nothing new; but every grief and every joy, every thought and every sigh, all the infinitely great and the infinitely little in thy life must return for thee, and all this in the same sequence and the same order. And also this spider and the moonlight through the

trees, and also this moment and myself. The eternal hourglass of existence will ever be turned again, and thou with it, dust of dust,

Nietzsche, Wisdom, 341

74 The more ignorant men are, the more convinced are they that their little parish and their little chapel is an apex to which civilization and philosophy has painfully struggled up the pyramid of time from a desert of savagery. Savagery, they think, became barbarism; barbarism became ancient civilization; ancient civilization became Pauline Christianity; Pauline Christianity became Roman Catholicism; Roman Catholicism became the Dark Ages; and the Dark Ages were finally enlightened by the Protestant instincts of the English race. The whole process is summed up as Progress with a capital P. And any elderly gentleman of Progressive temperament will testify that the improvement since he was a boy is enormous....

The notion that there has been any such Progress since Caesar's time (less than 20 centuries) is too absurd for discussion. All the savagery, barbarism, dark ages and the rest of it of which we have any record as existing in the past exists at the present moment.

Shaw, Caesar and Cleopatra, Notes

75 We must... frankly give up the notion that Man as he exists is capable of net progress. There will always be an illusion of progress, because wherever we are conscious of an evil we remedy it, and therefore always seem to ourselves to be progressing, forgetting that most of the evils we see are the effects, finally become acute, of long-

unnoticed retrogressions; that our compromising remedies seldom fully recover the lost ground; above all, that on the lines along which we are degenerating, good has become evil in our eyes, and is being undone in the name of progress precisely as evil is undone and replaced by good on the lines along which we are evolving. This is indeed the Illusion of Illusions; for it gives us infallible and appalling assurance that if our political ruin is to come, it will be effected by ardent reformers supported by enthusiastic patriots as a series of necessary steps in our progress. Let the Reformer, the Progressive, the Meliorist then reconsider himself and his eternal ifs and ans which never become pots and pans. Whilst Man remains what he is, there can be no progress beyond the point already attained and fallen headlong from at every attempt at civilization; and since even that point is but a pinnacle to which a few people cling in giddy terror above an abyss of squalor, mere progress should no longer charm us.

Shaw, Man and Superman, Revolutionist's Handbook

- 76 The reasonable man adapts himself to the world: the unreasonable one persists in trying to adapt the world to himself. Therefore all progress depends on the unreasonable man.

Shaw, Man and Superman, Maxims for Revolutionists

- 77 The differences between the nations and races of mankind are required to preserve the conditions under which higher development is possible. One main factor in the upward trend of animal life has been the power of wandering. Perhaps this is why the armour-plated

monsters fared badly. They could not wander. Animals wander into new conditions. They have to adapt themselves or die. Mankind has wandered from the trees to the plains, from the plains to the seacoast, from climate to climate, from continent to continent, and from habit of life to habit of life. When man ceases to wander, he will cease to ascend in the scale of being. Physical wandering is still important, but greater still is the power of man's spiritual adventures—adventures of thought, adventures of passionate feeling, adventures of aesthetic experience. A diversification among human communities is essential for the provision of the incentive and material for the Odyssey of the human spirit. Other nations of different habits are not enemies: they are godsend. Men require of their neighbours something sufficiently akin to be understood, something sufficiently different to provoke attention, and something great enough to command admiration. We must not expect, however, all the virtues. We should even be satisfied if there is something odd enough to be interesting.

Modern science has imposed on humanity the necessity for wandering. Its progressive thought and its progressive technology make the transition through time, from generation to generation, a true migration into uncharted seas of adventure. The very benefit of wandering is that it is dangerous and needs skill to avert evils. We must expect, therefore, that the future will disclose dangers. It is the business of the future to be dangerous; and it is among the merits of science that it equips the future for its duties. The prosperous middle classes, who ruled the nineteenth century, placed an excessive value upon placidity of existence. They refused to face the necessities for social reform imposed by the

new industrial system, and they are now refusing to face the necessities for intellectual reform imposed by the new knowledge. The middle class pessimism over the future of the world comes from a confusion between civilisation and security. In the immediate future there will be less security than in the immediate past, less stability. It must be admitted that there is a degree of instability which is inconsistent with civilisation. But, on the whole, the great ages have been unstable ages.

Whitehead, Science and the Modern World, XIII

78 The foundation of all understanding ... is that no static maintenance of perfection is possible. This axiom is rooted in the nature of things. Advance or Decadence are the only choices offered to mankind. The pure conservative is fighting against the essence of the universe.

Whitehead, Adventures of Ideas, XIX, 2

79 That Man is the product of causes which had no prevision of the end they were achieving; that his origin, his growth, his hopes and fears, his loves and his beliefs, are but the outcome of accidental collocations of atoms; that no fire, no heroism, no intensity of thought and feeling, can preserve an individual life beyond the grave; that all the labours of the ages, all the devotion, all the inspiration, all the noonday brightness of human genius, are destined to extinction in the vast death of the solar system, and that the whole temple of Man's achievement must inevitably be buried beneath the debris of a universe in ruins—all these things, if not quite beyond

dispute, are yet so nearly certain, that no philosophy which rejects them can hope to stand.

Russell, A Free Man's Worship

80 Civilization is the fruit of renunciation of instinctual satisfaction, and from each newcomer in turn it exacts the same renunciation. Throughout the life of the individual, there is a constant replacement of the external compulsion by the internal. The influences of civilization cause an ever-increasing transmutation of egoistic trends into altruistic and social ones, and this by an admixture of erotic elements. In the last resort it may be said that every internal compulsion which has been of service in the development of human beings was originally, that is, in the evolution of the human race, nothing but an external one. Those who are born today bring with them as an inherited constitution some degree of a tendency (disposition) towards transmutation of egoistic into social instincts, and this disposition is easily stimulated to achieve that effect. A further measure of this transformation must be accomplished during the life of the individual himself. And so the human being is subject not only to the pressure of his immediate environment, but also to the influence of the cultural development attained by his forefathers.

Freud, Thoughts on War and Death, I

81 It sounds like a fairy-tale, but not only that; this story of what man by his science and practical inventions has achieved on this earth, where he first appeared as a weakly member of the animal kingdom, and on which each individual of his species must ever again appear as

a helpless infant— O inch of nature!—is a direct fulfilment of all, or of most, of the dearest wishes in his fairy-tales. All these possessions he has acquired through culture. Long ago he formed an ideal conception of omnipotence and omniscience which he embodied in his gods. Whatever seemed unattainable to his desires—or forbidden to him—he attributed to these gods. One may say, therefore, that these gods were the ideals of his culture. Now he has himself approached very near to realizing this ideal, he has nearly become a god himself. But only, it is true, in the way that ideals are usually realized in the general experience of humanity. Not completely; in some respects not at all, in others only by halves. Man has become a god by means of artificial limbs, so to speak, quite magnificent when equipped with all his accessory organs; but they do not grow on him and they still give him trouble at times. However, he is entitled to console himself with the thought that this evolution will not come to an end in A.D. 1930.

Freud, Civilization and Its Discontents, III

82 Future ages will produce further great advances in this realm of culture, probably inconceivable now, and will increase man's likeness to a god still more.

Freud, Civilization and Its Discontents, III

83 The fateful question of the human species seems to me to be whether and to what extent the cultural process developed in it will succeed in mastering the derangements of communal life caused by the human instinct of aggression and self-destruction. In this connection, perhaps the phase through which we are at

this moment passing deserves special interest. Men have brought their powers of subduing the forces of nature to such a pitch that by using them they could now very easily exterminate one another to the last man. They know this—hence arises a great part of their current unrest, their dejection, their mood of apprehension. And now it may be expected that the other of the two heavenly forces, eternal Eros, will put forth his strength so as to maintain himself alongside of his equally immortal adversary.

Freud, Civilization and Its Discontents, VIII

- 84 If civilization has profoundly modified man, he is by accumulating in his social surroundings, as in a reservoir, the habits and knowledge which society pours into the individual at each new generation. Scratch the surface, abolish everything we owe to an education which is perpetual and unceasing, and you find in the depth of our nature primitive humanity, or something very near it.

Bergson, Two Sources of Morality and Religion, II

- 85 The longing to be primitive is a disease of culture; it is archaism in morals. To be so preoccupied with vitality is a symptom of anaemia. When life was really vigorous and young, in Homeric times for instance, no one seemed to fear that it might be squeezed out of existence either by the incubus of matter or by the petrifying blight of intelligence. Life was like the light of day, something to use, or to waste, or to enjoy. It was not a thing to worship; and often the chief luxury of living consisted in dealing death about vigorously. Life indeed was loved, and the beauty and pathos of it were felt exquisitely; but its

beauty and pathos lay in the divineness of its model and in its own fragility. No one paid it the equivocal compliment of thinking it a substance or a material force. Nobility was not then impossible in sentiment, because there were ideals in life higher and more indestructible than life itself, which life might illustrate and to which it might fitly be sacrificed. Nothing can be meaner than the anxiety to live on, to live on anyhow and in any shape; a spirit with any honour is not willing to live except in its own way, and a spirit with any wisdom is not over-eager to live at all. In those days men recognised immortal gods and resigned themselves to being mortal. Yet those were the truly vital and instinctive days of the human spirit. Only when vitality is low do people find material things oppressive and ideal things unsubstantial.

Santayana, Winds of Doctrine, I

86 Progress, far from consisting in change, depends on retentiveness. When change is absolute there remains no being to improve and no direction is set for possible improvement: and when experience is not retained, as among savages, infancy is perpetual. Those who cannot remember the past are condemned to repeat it.

Santayana, Life of Reason, I, 12

87 The cry was for vacant freedom and indeterminate progress... *Full speed ahead!*, without asking whether directly before you was a bottomless pit,

Santayana, My Host the World, Epilogue

88 Everything is transitory and everything is preserved in progress, and if humanity is untiring and has always

something further to undertake, if every one of its achievements gives rise to doubt and dissatisfaction and the demand for new achievement, yet now and again there is achievement; something is possessed and enjoyed and the apparently precipitous race is in reality a succession of reposes, of satisfactions in the midst of dissatisfactions, of fleeting moments spent in the joy of contemplation.

Croce, History as the Story of Liberty, I, 10

89 It must be realised by any student of civilisation that we pay heavily for our heterogeneous, rapidly changing civilisation; we pay in high proportions of crime and delinquency, we pay in the conflicts of youth, we pay in an ever-increasing number of neuroses, we pay in the lack of a coherent tradition without which the development of art is sadly handicapped. In such a list of prices, we must count our gains carefully, not to be discouraged. And chief among our gains must be reckoned this possibility of choice, the recognition of many possible ways of life, where other civilisations have recognised only one. Where other civilisations give a satisfactory outlet to only one temperamental type, be he mystic or soldier, business man or artist, a civilisation in which there are many standards offers a possibility of satisfactory adjustment to individuals of many different temperamental types, of diverse gifts and varying interests.

Margaret Mead, Coming of Age in Samoa, XIV

90 We are quite willing to admit now that the revolution of the earth about the sun, or the animal ancestry of man,

has next to nothing to do with the uniqueness of our human achievements. If we inhabit one chance planet out of a myriad solar systems, so much the greater glory, and if all the ill-assorted human races are linked by evolution with the animal, the provable differences between ourselves and them are the more extreme and the uniqueness of our institutions the more remarkable. But our achievements, our institutions are unique; they are of a different order from those of lesser races and must be protected at all costs.

Benedict, Patterns of Culture, I

- 91 There is no doubt about the cultural continuity of the civilization, no matter who its carriers were at the moment. We must accept all the implications of our human inheritance, one of the most important of which is the small scope of biologically transmitted behaviour, and the enormous role of the cultural process of the transmission of tradition.

Benedict, Patterns of Culture, I

- 92 Civilization, as we know it, is a movement and not a condition, a voyage and not a harbour. No known civilization has ever reached the goal of civilization yet. There has never been a communion of saints on earth. In the least uncivilized society at its least uncivilized moment, the vast majority of its members have remained very near indeed to the primitive human level. And no society has ever been secure of holding such ground as it has managed to gain in its spiritual advance. All the civilizations that we know of, including the Greek, have already broken down and gone to pieces with the single

possible exception of our own Western civilization—and no child of this civilization who has been born into our generation can easily imagine that our own society is immune from the danger of suffering the common fate.

Toynbee, Civilization on Trial, IV

93 Humanity is not an animal species, it is a historical reality. Human society is an antiphysis—in a sense it is against nature; it does not passively submit to the presence of nature but rather takes over the control of nature on its own behalf. This arrogation is not an inward, subjective operation; it is accomplished objectively in practical action.

Simone de Beauvoir, The Second Sex, III

15.3 Fate, Fortune, and Destiny

The common thread running through the three subjects treated in this section lies in the conception of forces or factors at work in history that are totally beyond the control of man. The notion of fate—of an inexorable and blind necessity governing everything that happens—is most evident in the quotations drawn from antiquity, especially in the many quotations from the ancient poets. Some of them even go so far as to declare that the gods themselves are subject to the decrees of Fate and cannot set them aside. Nevertheless, there are a few ancient writers, Cicero for one, who question the universal domination of Fate or think that man's freedom is not totally obliterated by it.

In the Christian era, the notion of fate tends to be replaced by that of Divine providence and of predestination.

Christian theologians, such as Augustine and Aquinas, attempt to reconcile human freedom withb predestination and with the providential ordering of things by the will of God. For others, such as Luther and Calvin, providence and predestination have the same inexorability that the ancients accorded fate, a view that is echoed in Spinoza's declaration that everything is necessitated by God. The reader will find other quotations relevant to this subject in Chapter 5 on Mind, Section 5.7 on Will: Free Choice.

The discussion of fortune is more closely related to the consideration of cause and chance, which are treated in Sections 19.3 and 19.4 of Chapter 19 on Nature and the Cosmos. Here the treatment of fortune stresses its implications for ethics and politics— the role that good fortune plays in the conduct of human life and in the pursuit of happiness; and the way in which it either facilitates or impedes the best laid plans of princes or statesmen to gain the objectives they have in view. Thus, we find Machiavelli advising the prince to regard Fortune as a woman who will yield only to bold advances.

■ ■ ■

1 Except the Lord build the house, they labour in vain that build it; except the Lord keep the city, the watchman waketh but in vain.

Psalms 127:1

2 Man also knoweth not his time: as the fishes that are taken in an evil net, and as the birds that are caught in the

snare; so are the sons of men snared in an evil time, when it falleth suddenly upon them.

Ecclesiastes 9:12

3 Cast thy bread upon the waters: for thou shall find it after many days.

Ecclesiastes 11:1

4 If a man live many years, and rejoice in them all; yet let him remember the days of darkness; for they shall be many.

Ecclesiastes 11:8

5 *Zeus*. For this among the immortal gods is the mightiest witness

I can give, and nothing I do shall be vain nor revocable
nor a thing unfulfilled when I bend my head in assent
to it.

Homer, Iliad, I, 525

6 *Hektor*. No man is going to hurl me to Hades, unless it is fated,

but as for fate, I think that no man yet has escaped it
once it has taken its first form, neither brave man nor
coward.

Homer, Iliad, VI, 487

7 *Achilleus*. There are two urns that stand on the door-sill of Zeus. They are unlike

for the gifts they bestow: an urn of evils, an urn of
blessings.

If Zeus who delights in thunder mingles these and bestows them

on man, he shifts, and moves now in evil, again in good fortune.

But when Zeus bestows from the urn of sorrows, he makes a failure

of man, and the evil hunger drives him over the shining

earth, and he wanders respected neither of gods nor mortals.

Homer, Iliad, XXIV, 527

8 *Chorus*. Once a man fostered in his house a lion cub, from the mother's milk torn, craving the breast given.

In the first steps of its young life mild, it played with children and delighted the old.

Caught in the arm's cradle they pampered it like a newborn child, shining eyed and broken to the hand to stay the stress of its hunger.

But it grew with time, and the lion in the blood strain came out; it paid grace to those who had fostered it in blood and death for the sheep flocks, a grim feast forbidden.

The house reeked with blood run nor could its people beat down the bane, the giant murderer's onslaught.

This thing they raised in their house was blessed by God to be priest of destruction.

Aeschylus, Agamemnon, 716

- 9 *Electra*. The day of destiny waits for the free man as well
as for the man enslaved beneath an alien hand.

Aeschylus, Libation Bearers, 103

- 10 *Chorus*. All providence
Is effortless: throned,
Holy and motionless,
His will is accomplished.

Aeschylus, Suppliant Maidens, 97

- 11 *Prometheus*. It is an easy thing for one whose foot
is on the outside of calamity
to give advice and to rebuke the sufferer.
I have known all that you have said: I knew,
I knew when I transgressed nor will deny it.
In helping man I brought my troubles on me;
but yet I did not think that with such tortures
I should be wasted on these airy cliffs,
this lonely mountain top, with no one near.
But do not sorrow for my present suffering;
alight on earth and hear what is to come
that you may know the whole complete: I beg you
alight and join your sorrow with mine: misfortune
wandering the same track lights now upon one
and now upon another.

Aeschylus, Prometheus Bound, 265

- 12 *Prometheus*. Craft is far weaker than necessity.
Chorus. Who then is the steersman of necessity?
Prom. The triple-formed Fates and the remembering
Furies.

Ch. Is Zeus weaker than these?

Prom. Yes, for he, too, cannot escape what is fated.

Aeschylus, Prometheus Bound, 513

- 13 The Egyptians... discovered to which of the gods each month and day is sacred; and found out from the day of a man's birth what he will meet with in the course of his life, and how he will end his days, and what sort of man he will be.

Herodotus, History, II, 82

- 14 *Chorus.* Fate has terrible power.
You cannot escape it by wealth or war.
No fort will keep it out, no ships outrun it.

Sophocles, Antigone, 951

- 13 *Chorus.* Nothing painless has the all-accomplishing King dispensed for mortal men. But grief and joy come circling to all, like the turning paths of the Bear among the stars.
The shimmering night does not stay for men, nor does calamity, nor wealth, but swiftly they are gone, and to another man it comes to know joy and its loss.

Sophocles, Women of Trachis, 126

- 16 *Philoctetes.* Look how men live, always precariously balanced between good and bad fortune. If you are out of trouble, watch for danger. And when you live well, then consider the most your life, lest ruin take it unawares.

Sophocles, Philoctetes, 502

- 17 *Heracles.* Fortune is dark; she moves, but we cannot see the way

nor can we pin her down by science and study her.

Euripides, Alcestis, 785

- 18 *Attendant*. Don't envy men
Because they seem to have a run of luck,
Since luck's a nine days' wonder. Wait their end.

Euripides, Heracleidae, 864

- 19 *Megara*. The man who sticks it out against his fate shows
spirit, but the spirit of a fool.
No man alive can budge necessity.

Euripides, Heracles, 309

- 20 *Iphigenia*. Who knows on whom such strokes of fate will
fall? for all that Heaven decrees, proceeds unseen, and no
man knoweth of the ills in store; for Fate misleads us into
doubtful paths.

Euripides, Iphigenia in Tauris, 475

- 21 *Hermocrates*. The incalculable element in the future
exercises the widest influence, and is the most
treacherous, and yet in fact the most useful of all things,
as it frightens us all equally.

Thucydides, Peloponnesian War, IV, 62

- 22 *Athenian Stranger*. God governs all things, and... chance
and opportunity co-operate with him in the government
of human affairs.

Plato, Laws, IV, 709A

- 23 Chance or fortune is called 'good' when the result is
good, 'evil' when it is evil. The terms 'good fortune' and

'ill fortune' are used when either result is of considerable magnitude. Thus one who comes within an ace of some great evil or great good is said to be fortunate or unfortunate. The mind affirms the presence of the attribute, ignoring the hair's breadth of difference. Further, it is with reason that good fortune is regarded as unstable; for chance is unstable, as none of the things which result from it can be invariable or normal.

Aristotle, Physics, 197a25

- 24 It were better to follow the myths about the gods than to become a slave to the Destiny of the natural philosophers; for the former suggests a hope of placating the gods by worship, whereas the latter involves a necessity which knows no placation.

Epicurus, Letter to Menoeceus

- 25 That men, in the infirmity of human nature, should fall into misfortunes which defy calculation, is the fault not of the sufferers but of Fortune, and of those who do the wrong; but that they should from mere levity, and with their eyes open, thrust themselves upon the most serious disasters is without dispute the fault of the victims themselves. Therefore it is that pity and sympathy and assistance await those whose failure is due to Fortune: reproach and rebuke from all men of sense those who have only their own folly to thank for it.

Polybius, Histories, 11, 7

- 26 Reason forces us to agree that everything happens by fate. By fate, I mean that orderly succession of causes whereby causes are linked together, and each cause

produces an effect. This undying truth has its source in eternity. Therefore everything that has happened was bound to happen. Nothing will happen that does not have an efficient cause in nature. Consequently, fate is that which is, not out of ignorance, but scientifically, named the eternal cause of things past, present, and future. This observation will inform us what effect will most likely proceed from most causes, even if the cause is not known at all. It would be too much to presume that it is known in all cases.

Cicero, Divination, I, 55

27 I would think that it is not even within God's power to know what events will happen by accident or by chance. If he does know, then obviously the event must happen. But if it must happen, chance does not exist. Yet chance does exist. There is therefore no foreknowledge of things that happen by chance.

Cicero, Divination, II, 7

28 If there were no such word, or thing, or force as Fate, and if everything happened by chance, would the course of events be different than they are? Why then keep harping on Fate? If everything can be explained in terms of nature or fortune, why drag Fate in?

Cicero, Fate, III

29 What is the use of a philosophy that insists that everything happens by fate? It is a philosophy for old women, and ignorant old women at that.

Cicero, De Natura Deorum, I, 20

30 The Fates, when they this happy web have spun,
Shall bless the sacred clue, and bid it smoothly

Virgil, Eclogues, IV

31 Here stood her [Juno's] chariot; here, if Heav'n were kind,
The scat of awful empire she design'd.
Yet she had heard an ancient rumor fly,
(Long cited by the people of the sky,)
That times to come should see the Trojan race
Her Carthage ruin, and her tow'rs deface;
Nor thus confin'd, the yoke of sov'reign sway
Should on the necks of all the nations lay.
She ponder'd this, and fear'd it was in fate;
Nor could forget the war she wag'd of late
For conqu'ring Greece against the Trojan state.
Besides, long causes working in her mind,
And secret seeds of envy, lay behind;
Deep graven in her heart the doom remain'd
Of partial Paris, and her form disdain'd;
The grace bestow'd on ravish'd Ganymed,
Electra's glories, and her injur'd bed.
Each was a cause alone; and all combin'd
To kindle vengeance in her haughty mind.
For this, far distant from the Latian coast
She drove the remnants of the Trojan host;
And sev'n long years th' unhappy wand'ring train
Were toss'd by storms, and scatter'd thro' the main.
Such time, such toil, requir'd the Roman name,
Such length of labor for so vast a frame.

Virgil, Aeneid, I

32 *Jove*. Each to his proper fortune stand or fall;
Equal and unconcern'd I look on all.
Rutulians, Trojans, are the same to me;
And both shall draw the lots their fates decree.
Let these assault, if Fortune be their friend;
And, if she favors those, let those defend:
The Fates will find their way.

Virgil, Aeneid, X

33 What next mom's sun may bring, forbear to ask;
But count each day that comes by gift of chance
So much to the good.

Horace, Odes, 1,9

34 Fortune, her cruel trade quite to her mind.
Persistent still her wanton game to play,

Transfers her favours day by day,—
To me, to others, kind.

Horace, Odes, III, 29

35 We should project our thoughts ahead of us at every turn and have in mind every possible eventuality instead of only the usual course of events. For what is there that fortune does not when she pleases fell at the height of its powers? What is there that is not the more assailed and buffeted by her the more lustrous its attraction? What is there that is troublesome or difficult for her? Her assaults do not always come along a single path, or even a well-recognized path. At one time she will call in the aid of our own hands in attacking us, at another she will be content with her own powers in devising for us dangers for which

no one is responsible. No moment is exempt: in the midst of pleasures there are found the springs of suffering. In the middle of peace war rears its head, and the bulwarks of one's security are transformed into sources of alarm, friend turning foe and ally turning enemy. The summer's calm is upset by sudden storms more severe than those of winter. In the absence of any enemy we suffer all that an enemy might wreak on us. Overmuch prosperity if all else fails will hit on the instruments of its own destruction. Sickness assails those leading the most sensible lives, tuberculosis those with the strongest constitutions, retribution the utterly guiltless, violence the most secluded. Misfortune has a way of choosing some unprecedented means or other of impressing its power on those who might be said to have forgotten it. A single day strews in ruins all that was raised by a train of construction extending over a long span of time and involving a great number of separate works and a great deal of favour on the part of heaven. To say a 'day', indeed, is to put too much of a brake on the calamities that hasten down upon us: an hour, an instant of time, suffices for the overthrow of empires. It would be some relief to our condition and our frailty if all things were as slow in their perishing as they were in their coming into being: but as it is, the growth of things is a tardy process and their undoing is a rapid matter.

Seneca, Letters to Lucilius, 91

- 36 Let fate find us ready and eager. Here is your noble spirit—the one which has put itself in the hands of fate; on the other side we have the puny degenerate spirit which struggles, and which sees nothing right in the way the

universe is ordered, and would rather reform the gods than reform itself.

Seneca, Letters to Lucilius, 107

37 We know that all things work together for good to them that love God, to them who are the called according to his purpose.

For whom he did foreknow, he also did predestinate to be conformed to the image of his Son, that he might be the firstborn among many brethren.

Moreover whom he did predestinate, them he also called: and whom he called, them he also justified: and whom he justified, them he also glorified.

Romans 8:28-30

38 Blessed be the God and Father of our Lord Jesus Christ, who hath blessed us with all spiritual blessings in heavenly places in Christ:

According as he hath chosen us in him before the foundation of the world, that we should be holy and without blame before him in love.

Ephesians 1:3—4

39 What a poet fortune sometimes shows herself.

Plutarch, Romulus

40 Though fortune may often... defeat the efforts of virtue to avert misfortunes, it cannot, when we incur them, prevent our bearing them reasonably.

Plutarch, Caius Gracchus

41 It is common enough for people, when they fall into great disasters, to discern what is right, and what they ought to do; but there are but few who in such extremities have the strength to obey their judgment, either in doing what it approves or avoiding what it condemns; and a good many are so weak as to give way to their habits all the more, and are incapable of using their minds.

Plutarch, Antony

42 Fortune makes kings of slaves and gives the captive a triumph,
Yet the fortunate man is very much harder to come on
Than a white crow.

Juvenal, Satire VII

43 So—should men pray for nothing at all? If you're asking my counsel,
You will permit the gods themselves to make the decision
What is convenient to give, and what befits our estate.
we shall not get what we want, but the things most
suitable for us.
Man is dearer to gods than he is to himself. We are
foolish,
Led by blind desire, the spirit's extravagant impulse.
Asking for marriage and offspring, but the gods know
what they'll be like,
Our wives and our sons. But still, just for the sake of
the asking,
For the sake of something to give to the chapels, ritual
entrails.

The consecrated meat of a little white pig, pray for one thing.

Pray for a healthy mind in a healthy body, a spirit
Unafraid of death, but reconciled to it, and able
To bear up, to endure whatever troubles afflict it,
Free from hate and desire, preferring Hercules' labors
To the cushions and loves and feasts of Sardanapallus.

I show you what you can give to yourself: only through
virtue

Lies the certain road to a life that is blessed and
tranquil.

If men had any sense, Fortune would not be a
goddess.

We are the ones who make her so, and give her a place
in the heavens.

Juvenal, Satire X

44 The wider the scope of my reflection on the present and
the past, the more am I impressed by their mockery of
human plans in every transaction.

Tacitus, Annals, III, 18

45 Just as we must understand when it is said, That
Aesculapius prescribed to this man horse-exercise, or
bathing in cold water or going without shoes; so we must
understand it when it is said, That the nature of the
universe prescribed to this man disease or mutilation or
loss or anything else of the kind. For in the first case
Prescribed means something like this: he prescribed this
for this man as a thing adapted to procure health; and in
the second case it means: That which happens to (or,
suits) every man is fixed in a manner for him suitably to

his destiny. For this is what we mean when we say that things are suitable to us, as the workmen say of squared stones in walls or the pyramids, that they are suitable, when they fit them to one another in some kind of connexion. For there is altogether one fitness, harmony. And as the universe is made up out of all bodies to be such a body as it is, so out of all existing causes necessity (destiny) is made up to be such a cause as it is. And even those who are completely ignorant understand what I mean, for they say. It (necessity, destiny) brought this to such a person.

Marcus Aurelius, Meditations, V, 8

- 46 Whatever of the things which are not within thy power thou shall suppose to be good for thee or evil, it must of necessity be that, if such a bad thing befall thee or the loss of such a good thing, thou wilt blame the gods, and hate men too, those who are the cause of the misfortune or the loss, or those who are suspected of being likely to be the cause; and indeed we do much injustice, because we make a difference between these things. But if we judge only those things which are in our power to be good or bad, there remains no reason either for finding fault with God or standing in a hostile attitude to man.

Marcus Aurelius, Meditations, VI, 41

- 47 This universe of ours is a wonder of power and wisdom, everything by a noiseless road coming to pass according to a law which none may elude— which the base man never conceives though it is leading him, all unknowingly, to that place in the All where his lot must be cast—which the just man knows, and, knowing, sets

out to the place he must, understanding, even as he begins the journey, where he is to be housed at the end, and having the good hope that he will be with gods.

Plotinus, Fourth Ennead, IV, 45

48 God, the author and giver of felicity, because He alone is the true God, Himself gives earthly kingdoms both to good and bad. Neither does He do this rashly, and, as it were, fortuitously—because He is God not fortune—but according to the order of things and times, which is hidden from us, but thoroughly known to Himself; which same order of times, however. He does not serve as subject to it, but Himself rules as lord and appoints as governor.

Augustine, City of God, IV, 33

49 Human kingdoms are established by divine providence. And if any one attributes their existence to fate, because he calls the will or the power of God itself by the name of fate, let him keep his opinion, but correct his language.

Augustine, City of God, V, 1

50 Those who are of opinion that, apart from the will of God, the stars determine what we shall do, or what good things we shall possess, or what evils we shall suffer, must be refused a hearing by all, not only by those who hold the true religion, but by those who wish to be the worshippers of any gods whatsoever, even false gods. For what does this opinion really amount to but this, that no god whatever is to be worshipped or prayed to? Against these, however, our present disputation is not intended to be directed, but against those who, in defence of those

whom they think to be gods, oppose the Christian religion. They, however, who make the position of the stars depend on the divine will, and in a manner decree what character each man shall have, and what good or evil shall happen to him, if they think that these same stars have that power conferred upon them by the supreme power of God, in order that they may determine these things according to their will, do a great injury to the celestial sphere, in whose most brilliant senate, and most splendid senate-house, as it were, they suppose that wicked deeds are decreed to be done—such deeds as that, if any terrestrial state should decree them, it would be condemned to overthrow by the decree of the whole human race. What judgment, then, is left to God concerning the deeds of men, who is Lord both of the stars and of men, when to these deeds a celestial necessity is attributed?

Augustine, City of God, V, I

- 51 If there is free will, all things do not happen according to fate; if all things do not happen according to fate, there is not a certain order of causes; and if there is not a certain order of causes, neither is there a certain order of things foreknown by God—for things cannot come to pass except they are preceded by efficient causes—but, if there is no fixed and certain order of causes foreknown by God, all things cannot be said to happen according as He foreknew that they would happen. And further, if it is not true that all things happen just as they have been foreknown by Him, there is not, says he, in God any foreknowledge of future events.

Now, against the sacrilegious and impious darings of reason, we assert both that God knows all things before

they come to pass and that we do by our free will whatsoever we know and feel to be done by us only because we will it. But that all things come to pass by fate, we do not say; nay we affirm that nothing comes to pass by fate; for we demonstrate that the name of fate, as it is wont to be used by those who speak of fate, meaning thereby the position of the stars at the time of each one's conception or birth, is an unmeaning word, for astrology itself is a delusion. But an order of causes in which the highest efficiency is attributed to the will of God, we neither deny nor do we designate it by the name of fate, unless, perhaps, we may understand fate to mean that which is spoken, deriving it from *fari*, to speak; for we cannot deny that it is written in the sacred Scriptures, "God hath spoken once; these two things have I heard, that power belongeth unto God. Also unto Thee, O God, belongeth mercy: for Thou wilt render unto every man according to his works." Now the expression, "Once hath He spoken," is to be understood as meaning "*immovably*," that is, unchangeably hath He spoken, inasmuch as He knows unchangeably all things which shall be and all things which He will do. We might, then, use the word fate in the sense it bears when derived from *fari*, to speak, had it not already come to be understood in another sense, into which I am unwilling that the hearts of men should unconsciously slide. But it does not follow that, though there is for God a certain order of all causes, there must therefore be nothing depending on the free exercise of our own wills, for our wills themselves are included in that order of causes which is certain to God and is embraced by His foreknowledge, for human wills are also causes of human actions; and He Who

foreknew all the causes of things would certainly among those causes not have been ignorant of our wills.

Augustine, City of God, V, 9

52 [The human] race we have distributed into two parts, the one consisting of those who live according to man, the other of those who live according to God. And these we also mystically call the two cities, or the two communities of men, of which the one is predestined to reign eternally with God, and the other to suffer eternal punishment with the devil.

Augustine, City of God, XV, 1

53 Of all suffering from Fortune, the unhappiest misfortune is to have known a happy fortune.

Boethius, Consolation of Philosophy, II

54 *Philosophy*. Providence is the very divine reason which arranges all things, and rests with the supreme disposer of all; while Fate is that ordering which is a part of all changeable things, and by means of which Providence binds all things together in their own order. Providence embraces all things equally, however different they may be, even however infinite: when they are assigned to their own places, forms, and times, Fate sets them in an orderly motion; so that this development of the temporal order, unified in the intelligence of the mind of God, is Providence. The working of this unified development in time is called Fate. These are different, but the one hangs upon the other. For this order, which is ruled by Fate, emanates from the directness of Providence.

Boethius, Consolation of Philosophy, IV

55 *Philosophy*. A wise man should never complain, whenever he is brought into strife with fortune; just as a brave man cannot properly be disgusted whenever the noise of battle is heard, since for both of them their very difficulty is their opportunity, for the brave man of increasing his glory, for the wise man of confirming and strengthening his wisdom. From this is virtue itself so named, because it is so supported by its strength that it is not overcome by adversity. And you who were set in the advance of virtue have not come to this pass of being dissipated by delights, or enervated by pleasure; but you fight too bitterly against all fortune. Keep the middle path of strength and virtue, lest you be overwhelmed by misfortune or corrupted by pleasant fortune. All that falls short or goes too far ahead, has contempt for happiness, and gains not the reward for labour done. It rests in your own hands what shall be the nature of the fortune which you choose to form for yourself. For all fortune which seems difficult, either exercises virtue, or corrects or punishes vice.

Boethius, Consolation of Philosophy, IV

56 It is fitting that God should predestine men. For all things are subject to His providence.... Now it belongs to providence to order things towards their end.

Aquinas, Summa Theologica, I, 23, 1

57 Even if by a special privilege their predestination were revealed to some, it is not fitting that it should be revealed to everyone; because, if so, those who were not predestined would despair, and security would beget negligence in the predestined.

Aquinas, Summa Theologica, I, 23, 1

58 As predestination is a part of providence, in regard to those divinely ordained to eternal salvation, so reprobation is a part of providence in regard to those who turn aside from that end. Hence reprobation implies not only foreknowledge, but also something more, as does providence.... Therefore, as predestination includes the will to confer grace and glory, so also reprobation includes the will to permit a person to fall into sin, and to impose the punishment of damnation on account of that sin.

God loves all men and all creatures, in so far as He wishes them all some good, but He does not wish every good to them all. So far, therefore, as He does not wish this particular good—namely, eternal life—He is said to hate or reprobate them.

Reprobation differs in its causality from predestination. This latter is the cause both of what is expected in the future life by the predestined—namely, glory—and of what is received in this life—namely, grace. Reprobation, however, is not the cause of what is in the present—namely, sin, but it is the cause of abandonment by God. It is the cause, however, of what is assigned in the future—namely, eternal punishment. But guilt proceeds from the free choice of the person who is reprobated and deserted by grace. In this way the word of the prophet is true—namely, *Destruction is thy own, O Israel*.

Reprobation by God does not take anything away from the power of the person reprobated. Hence, when it is said that the reprobated cannot obtain grace, this must not be understood as implying absolute impossibility, but

only conditional impossibility... that the predestined must necessarily be saved, yet by a conditional necessity, which does not do away with the liberty of choice. Hence, although anyone reprobated by God cannot acquire grace, nevertheless that he falls into this or that particular sin comes from his free choice. And so it is rightly imputed to him as guilt.

Aquinas, Summa Theologica, I, 23, 3

59 The number of the predestined is said to be certain to God not only by reason of His knowledge, because, that is to say, He knows how many will be saved (for in this way the number of drops of rain and the sands of the sea are certain to God), but by reason of His deliberate choice and determination.

Aquinas, Summa Theologica, I, 23, 7

60 The majority of men have a sufficient knowledge for the guidance of life, and those who have not this knowledge are said to be half-witted or foolish; but they who attain to a profound knowledge of things intelligible are a very small minority in respect to the rest. Since their eternal happiness, consisting in the vision of God, exceeds the common state of nature, and especially in so far as this is deprived of grace through the corruption of original sin, those who are saved are in the minority. In this especially, however, appears the mercy of God, that He has chosen some for that salvation, from which very many in accordance with the common course and tendency of nature fall short.

Aquinas, Summa Theologica, I, 23, 7

61 Those who are ordained to possess eternal life through divine predestination are written down in the book of life absolutely, because they are written therein to have eternal life in itself; such are never blotted out from the book of life. Those, however, who are ordained to eternal life not through the divine predestination, but through grace, are said to be written in the book of life not absolutely, but relatively, for they are written therein not to have eternal life in itself, but in its cause only. These latter are blotted out of the book of life, though this blotting out must not be referred to God as if God foreknew a thing, and afterwards knew it not, but to the thing known, namely, because God knows one is first ordained to eternal life, and afterwards not ordained when he falls from grace.

Aquinas, Summa Theologica, I, 24, 3

62 What happens here by accident, both in natural things and in human affairs, is reduced to a preordaining cause, which is Divine Providence.

Aquinas, Summa Theologica, I, 116, 1

63 The Divine power or will can be called fate as being the cause of fate. But essentially fate is the very disposition or series, that is, the order, of second causes.

Aquinas, Summa Theologica, I, 116, 2

64 "Master," I said to him, "now tell me also: this Fortune, of which thou hintest to me; what is she, that has the good things of the world thus within *her* clutches?"

And he (Virgil] to me: "O foolish creatures, how great is this ignorance that falls upon ye! Now I wish thee to

receive my judgment of her.

He whose wisdom is transcendent over all, made the heavens and gave them guides, so that every part shines to every part,

equally distributing the light; in like manner, for worldly splendours, he ordained a general minister and guide,

to change betimes the vain possessions, from people to people, and from one kindred to another beyond the hindrance of human wisdom:

hence one people commands, another languishes; obeying her sentence, which is hidden like the serpent in the grass.

Your knowledge cannot understand her: she provides, judges, and maintains her kingdom, as the other Gods do theirs.

Her permutations have no truce; necessity makes her be swift; thus he comes oft who doth a change obtain.

This is she, who is so much reviled, even by those who ought to praise her, when blaming her wrongfully, and with evil words."

Dante, Inferno, VII, 67

65 When the game of dice breaks up, he who loses stays sorrowing, repeating the throws, and sadly learns:

with the other all the folk go away: one goes in front, another plucks him from behind, and another at his side recalls him to his mind.

He halts not and attends to this one and to that: those to whom he stretches forth his hand press no more; and so he saves him from the crowd.

Dante, Purgatorio, VI, 1

66 *Pandar*. For every person hath his happy chance,
If good faith with his fortune he will hold.
But if he turns aside with scornful glance
When fortune comes, unwelcoming and cold,
Then for ill luck he may not fortune scold,
But his own sloth and feebleness of heart,
And he must take all blame from end to start.

Chaucer, Troilus and Cressida, 11, 41

67 Too short a fleeting time, alas the while.
Great joy endures, and Fortune wills it so,
Who truest seems when most she will beguile,
And most allures when she will strike a blow,
And from her wheel some hapless victim throw;
For when some wretch slips down and disappears,
She laughs at him and comforts him with jeers.

Chaucer, Troilus and Cressida, IV, 1

68 "I am," he [Troilus] said, "but done for, so to say;
For all that comes, comes by necessity,
Thus to be done for is my destiny.

"I must believe and cannot other choose,
That Providence, in its divine foresight,
Hath known that Cressida I once must lose,

Since God sees everything from heaven's height
And plans things as he thinks both best and right,
According to their merits in rotation,
As was arranged for by predestination.

"But still I don't quite know what to believe!

For there have been great scholars, many a one,
Who say that destined fate we must receive,
Yet others prove that this need not be done,
And that free choice hath been denied to none.
Alack, so sly they are, these scholars old,
I can't make out what doctrine I should hold!

"For some declare, what God perceives before,
(And God of course can never be misled)
All that must be, though men may it deplore.
Because foreordination hath so said;
Wherefore the thought still lingers in my head.
If God foreknows the thought and act of each
Of us, we have no choice, as scholars preach.

"For neither thought nor deed might ever be,
Or anything, unless foreordination,
In which there may be no uncertainty,
Perceives it without shade of variation;
For if there were the slightest hesitation
Or any slip in God's foreordering,
Foreknowledge then were not a certain thing,

"But rather one would call it expectation,
Unsteadfast, not foreknowledge absolute;
And that, indeed, were an abomination,
For God's foreknowledge thus to substitute
Imperfect human doubts and mere repute;
In God such human error to imply
Were false and foul and cursed treason high.

"Then there is this opinion held by some,
Whose tonsured foreheads quite imposing shine;

They say whatever happens does not come
Because foreknowledge sees with fixed design
That come it must, but rather they incline
To say that come it will, and reason so,
That such foreknowledge doth but merely know.

"But there resides here a perplexity
That in some proper way must be explained,
That things that happen do not have to be
Merely because they may be foreordained;
Yet still this truth at least must be maintained,
That all the things that ever shall befall,
Must surely be ordained, both one and all.

"You see that I am trying to find out
Just what is cause and what is consequence.
Is God's foreknowledge cause beyond a doubt
As necessary in his plan pre-pense
Of all the human things we call events,
Or does necessity in them reside
And thus ordaining cause for them provide?

"I must confess I can't pretend to show
Just how the reasons stand, but this I'll say,
That every thing that happens, must do so,
And must have been foreknown in such a way
That made it necessary, though it may
Be that foreknowledge did not so declare
That it must happen, be it foul or fair.

"But if a man is sitting on a chair.
Then this necessity you can't evade.
That true it is that he is sitting there,

And thus a truthful judgment you have made;
And furthermore against this may be laid
A supplement to this and its contrary,
As thus—pray heed, and just a moment tarry.

"I say if that opinion which you hold
That he sits there is true, then furthermore
He must be sitting there, as I have told;
There's thus necessity on either score.
That he must sit, as we agreed before,
And you must think he does, and so say I,
Necessity on both of you doth lie.

"But you may urge, this man, he does not sit
Because your judgment on this may be true,
But rather, since he sat ere you thought it,
Your judgment from his sitting doth ensue;
But I say, though your judgment may be due
To his first sitting there, necessity
To judge and sit distributed must be.

"These arguments I think I may advance,
And make apply, for so it seems to me.
To God's foreknowledge and foreordinance,
In all the happenings that come to be.
And by these arguments you well may see,
That all the things that on the earth befall,
By plain necessity they happen all.

"Though things to come must all be foreordained.
Their cause therein you cannot simply find,
For these two points apart must be maintained,
But yet foreordinance cannot be blind,

And God must foreordain with truthful mind,
Or else whatever foreordained should be.
Would come to pass through blind necessity,

"But no more arguments I need display
To show that free choice is an idle dream.
Yet this, however, 'tis quite false to say.
That temporal things one should esteem
As cause of God's foreknowledge aye supreme;
From such opinion only errors grow.
That things that happen cause him to foreknow.

"I must suppose then, had I such a thought.
That God ordains each thing that is to come
Because it is to come, and for else naught!
Why, then, I might believe things, all and some,
From ages past, whate'er they issued from,
Are cause of God's high power that before
Hath known all things and nothing doth ignore!

"I have just one more point to add hereto,
That when I know that there exists a thing,
I know my knowing of that thing is true,
And so, whatever time to pass shall bring,
Those things I know must come; the happening
Of things foreknown ere their appointed hour,
Can be prevented by no human power."

Chaucer, Troilus and Cressida, IV, 137-154

69 It is not unknown to me how many men have had, and still have, the opinion that the affairs of the world are in such wise governed by fortune and by God that men with their wisdom cannot direct them and that no one can

even help them; and because of this they would have us believe that it is not necessary to labour much in affairs, but to let chance govern them.... Sometimes pondering over this, I am in some degree inclined to their opinion. Nevertheless, not to extinguish our free will, I hold it to be true that Fortune is the arbiter of one-half of our actions, but that she still leaves us to direct the other half, or perhaps a little less.

I compare her to one of those raging rivers, which when in flood overflows the plains, sweeping away trees and buildings, bearing away the soil from place to place; everything flies before it, all yield to its violence, without being able in any way to withstand it; and yet, though its nature be such, it does not follow therefore that men, when the weather becomes fair, shall not make provision, both with defences and barriers, in such a manner that, rising again, the waters may pass away by canal, and their force be neither so unrestrained nor so dangerous. So it happens with fortune, who shows her power where valour has not prepared to resist her, and thither she turns her forces where she knows that barriers and defences have not been raised to constrain her.

Machiavelli, Prince, XXV

70 Fortune being changeful and mankind steadfast in their ways, so long as the two are in agreement men are successful, but unsuccessful when they fall out. For my part I consider that it is better to be adventurous than cautious, because fortune is a woman, and if you wish to keep her under it is necessary to beat and ill-use her; and it is seen that she allows herself to be mastered by the adventurous rather than by those who go to work more coldly. She is, therefore, always, womanlike, a lover of

young men, because they are less cautious, more violent, and with more audacity command her.

Machiavelli, Prince, XXV

71 Concerning predestination, it is best to begin below, at Christ, as then we both hear and find the Father; for all those that have begun at the top have broken their necks. I have been thoroughly plagued and tormented with such cogitations of predestination; I would needs know how God intended to deal with me, etc. But at last, God be praised! I clean left them; I took hold again on God's revealed word; higher I was not able to bring it, for a human creature can never search out the celestial will of God; this God hides, for the sake of the devil, to the end the crafty spirit may be deceived and put to confusion. The revealed will of God the devil has learned from us, but God reserves his secret will to himself. It is sufficient for us to learn and know Christ in his humanity, in which the Father has revealed himself.

Luther, Table Talk, H661

72 Predestination, by which God adopts some to the hope of life, and adjudges others to eternal death, no one, desirous of the credit of piety, dares absolutely to deny. But it is involved in many cavils, especially by those who make foreknowledge the cause of it. We maintain, that both belong to God; but it is preposterous to represent one as dependent on the other. When we attribute foreknowledge to God, we mean that all things have ever been, and perpetually remain, before his eyes, so that to his knowledge nothing is future or past, but all things are present; and present in such a manner, that he does not

merely conceive of them from ideas formed in his mind, as things remembered by us appear present to our minds, but really beholds and sees them as if actually placed before him. And this foreknowledge extends to the whole world, and to all the creatures. Predestination we call the eternal decree of God, by which he has determined in himself, what he would have to become of every individual of mankind. For they are not all created with a similar destiny; but eternal life is foreordained for some, and eternal damnation for others. Every man, therefore, being created for one or the other of these ends, we say, he is predestinated either to life or to death. This God has not only testified in particular persons, but has given a specimen of it in the whole posterity of Abraham, which should evidently show the future condition of every nation to depend upon his decision. "When the Most High divided the nations, when he separated the sons of Adam, the Lord's portion was his people; Jacob was the lot of his inheritance." The separation is before the eyes of all: in the person of Abraham, as in the dry trunk of a tree, one people is peculiarly chosen to the rejection of others: no reason for this appears, except that Moses, to deprive their posterity of all occasion of glorying, teaches them that their exaltation is wholly from God's gratuitous love. He assigns this reason for their deliverance, that "he loved their fathers, and chose their seed after them."

Calvin, Institutes of the Christian Religion, III, 21

73 Though it is sufficiently clear, that God, in his secret counsel, freely chooses whom he will, and rejects others, his gratuitous election is but half displayed till we come to particular individuals, to whom God not only offers salvation, but assigns it in such a manner, that the

certainty of the effect is liable to no suspense or doubt.... In conformity ... to the clear doctrine of the Scripture, we assert, that by zm eternal and immutable counsel, God has once for all determined, both whom he would admit to salvation, and whom he would condemn to destruction. We affirm that this counsel, as far as concerns the elect, is founded on his gratuitous mercy, totally irrespective of human merit; but that to those whom he devotes to condemnation, the gate of life is closed by a just and irreprehensible, but incomprehensible, judgment. In the elect, we consider calling as an evidence of election, and justification as another token of its manifestation, till they arrive in glory, which constitutes its completion. As God seals his elect by vocation and justification, so by excluding the reprobate from the knowledge of his name and the sanctification of his Spirit, he affords an indication of the judgment that awaits them.

Calvin, Institutes of the Christian Religion, III, 21

74 Fortune does us neither good nor harm; she only offers us the material and the seed of them, which our soul, more powerful than she, turns and applies as it pleases, sole cause and mistress of its happy or unhappy condition.

Montaigne, Essays, I, 14, That the Taste of Good

75 Not only in medicine but in many more certain arts Fortune has a large part Poetic sallies, which transport their author and ravish him out of himself, why shall we not attribute them to his good luck? He himself confesses that they surpass his ability and strength, and acknowledges that they come from something other than

himself and that he does not have them at all in his power, any more than orators say they have in theirs those extraordinary impulses and agitations that push them beyond their plan. It is the same with painting: sometimes there escape from the painter's hand touches so surpassing his conception and his knowledge as to arouse his wonder and astonishment, But Fortune shows still more evidently the part she has in all these works by the graces and beauties that are found in them, not only without the workman's intention, but even without his knowledge. An able reader often discovers in other men's writings perfections beyond those that the author put in or perceived, and lends them richer meanings and aspects.

Montaigne, Essays, I, 24, Various Outcomes

76 God, in the roll book of the causes of events which he has in his foreknowledge, has also those which are called fortuitous, and the voluntary ones, which depend on the freedom he has given to our will; and he knows that we shall err, because we shall have willed to err.

Montaigne, Essays, II, 29, Of Virtue

77 *King Edward*. What fates impose, that men must needs abide;
It boots not to resist both wind and tide.

Shakespeare, III Henry VI, IV, iii, 58

78 *John of Gaunt*. All places that the eye of heaven visits
Are to a wise man ports and happy havens.
Teach thy necessity to reason thus;
There is no virtue like necessity.

Shakespeare, Richard II, I, iii, 275

79 *Warwick*. There is a history in all men's lives.
Figuring the nature of the times deceased;
The which observed, a man may prophesy,
With a near aim, of the main chance of things
As yet not come to life, which in their seeds
And weak beginnings lie intreasured.
Such things become the hatch and brood of time.

Shakespeare, II Henry IV, III, i, 80

80 *Fluellen*. Here is the man.

Pistol. Captain, I thee beseech to do me favours: The
Duke of Exeter doth love thee well.

Flu. Ay, I praise God; and I have merited some love at
his hands.

Pist. Bardolph, a soldier, firm and sound of heart,
And of buxom valour, hath, by cruel fate,
And giddy Fortune's furious fickle wheel.
That goddess blind.

That stands upon the rolling restless stone—

Flu. By your patience, Aunchient Pistol. Fortune is
painted blind, with a muffler afore her eyes, to signify to
you that Fortune is blind; and she is painted also with a
wheel, to signify to you, which is the moral of it, that she
is turning, and inconstant, and mutability, and variation:
and her foot, look you, is fixed upon a Spherical stone,
which rolls, and rolls, and rolls: in good truth, the poet
makes a most excellent description of it: Fortune is an
excellent moral.

Shakespeare, Henry V, III, vi, 21

81 *Cassius*. Men at some time are masters of their fates:
The fault, dear Brutus, is not in our stars.
But in ourselves, that we are underlings.

Shakespeare, Caesar, I, ii, 139

82 *Hamlet*. My excellent good friends! How dost thou,
Guildenstern? Ah, Rosencrantz! Good lads, how do ye
both?

Rosencrantz. As the indifferent children of the earth.

Guildenstern. Happy, in that we are not over-happy;
On fortune's cap we are not the very button.

Ham. Nor the soles of her shoe?

Ros. Neither, my lord.

Ham. Then you live about her waist, or in the middle
of her favours?

Guil. 'Faith, her privates we.

Ham. In the secret parts of fortune? O, most true; she
is a strumpet.

Shakespeare, Hamlet, II, ii, 228

83 *Hamlet*. Our indiscretion sometimes serves us well,
When our deep plots do pall; and that should teach us
There's a divinity that shapes our ends.
Rough-hew them how we will—

Horatio. That is most certain.

Shakespeare, Hamlet, V, ii, 8

84 *Hamlet*. We defy augury. There's a special providence in
the fall of a sparrow. If it be now, 'tis not to come; if it be
not to come, it will be now; if it be not now, yet it will
come; the readiness is all.

Shakespeare, Hamlet, V, ii, 230

85 *Edmund*. This is the excellent foppery of the world, that, when we are sick in fortune—often the surfeit of our own behaviour—we make guilty of our disasters the sun, the moon, and the stars, as if we were villains by necessity, fools by heavenly compulsion, knaves, thieves, and treachers, by spherical predominance, drunkards, liars, and adulterers, by an enforced obedience of planetary influence, and all that we are evil in, by a divine thrusting on. An admirable evasion of whoremaster man, to lay his goatish disposition to the charge of a star!

Shakespeare, Lear, I, ii, 128

86 When, in disgrace with Fortune and men's eyes,
I all alone beweep my outcast state
And trouble deaf heaven with my bootless cries
And look upon myself and curse my fate,
Wishing me like to one more rich in hope,
Featured like him, like him with friends possess'd,
Desiring this man's art and that man's scope,
with what I most enjoy contented least;
Yet in these thoughts myself almost despising,
Haply I think on thee, and then my state,
Like to the lark at break of day arising
From sullen earth, sings hymns at heaven's gate.

Shakespeare, Sonnet XXIX

87 Your Grace must know, answer'd Don *Quixote*, that almost every thing that relates to Me, is manag'd quite contrary to what the Affairs of other Knights-Errant us'd to be. Whether it be the unfathomable Will of Destiny, or the Implacable Malice of some envious Inchanter orders it so, or no, I can't well tell. For 'tis beyond all doubt, that

most of us Knights-Errant still have had something peculiar in our Fates. One has had the Privilege to be above the Power of Inchantments, another Invulnerable, as the famous *Orlando*, one of the twelve Peers of *France*, whose Flesh, they tell us, was impenetrable every where but in the Sole of his left Foot, and even there too he cou'd be Wounded with no other Weapon than the Point of a great Pin; so that when *Bernardo del Carpio* deprived him of Life at *Roncesvalles*, finding he cou'd not Wound him with his Sword, he lifted him from the Ground, and squeez'd him to Death in his Arms; remembering how *Hercules* kill'd *Antaeus*, that cruel Giant, who was said to be the Son of the Earth. Hence I infer, that probably I may be secur'd in the same manner, under the Protection of some particular Advantage, tho' 'tis not that of being Invulnerable; for I have often found by Experience, that my Flesh is tender, and not impenetrable. Nor does any private Prerogative free me from the Power of the Inchantment; for I have found myself clapp'd into a Cage, where all the World cou'd not have Lock'd me up, but the Force of Necromantick Incantations. But since I got free again, I believe that even the Force of Magick will never be able to confine me thus another time. So that these Magicians finding they cannot work their wicked Ends directly on me, revenge themselves on what I most esteem, and endeavour to take away my Life by persecuting that of *Dulcinea*, in whom, and for whom I live. And therefore I believe, when my Squire deliver'd my Embassy to her, they Transform'd her into a Country-Dowdy, poorly busied in the low' and base Employment of Winnowing Wheat. But I do aver, that it was neither Rye, nor Wheat, but Oriental Pearl: and to prove this, I must acquaint your Graces, that passing t'other Day by

Toboso, I could not so much as find *Dulcinea's* Palace; whereas my Squire went the next Day, and saw her in all her native Charms, the most beautiful Creature in the World! yet when I met her presently after, she appear'd to me in the Shape of an Ugly, Coarse, Country-Mawkin, Boorish, and Ill-bred, though she really is Discretion itself. And therefore, because I myself cannot be Inchant'd, the unfortunate Lady must be thus Inchant'd, Misus'd, Disfigur'd, Chopp'd and Chang'd. Thus my Enemies wreaking their Malice on Her, have reveng'd themselves on Me, which makes me abandon my self to Sorrows, till she be restor'd to her former Perfections.

Cervantes, Don Quixote, II, 32

88 Don *Quixote*, as he went out of *Barcelona*, cast his Eyes on the Spot of Ground where he was overthrow'n. Here once *Troy* stood, said he; here my unhappy Fate, and not my Cowardice, depriv'd me of all the Glories I had purchas'd. Here Fortune, by an unexpected Reverse, made me sensible of her Unconstancy and Fickleness. Here my Exploits suffer'd a total Eclipse; and, in short, here fell my Happiness, never to rise again. *Sancho* hearing his Master thus dolefully paraphrasing on his Misfortune, Good Sir, quoth he, 'tis as much the Part of great Spirits to have Patience when the World frowns upon 'em, as to be joyful when all goes well: And I judge of it by my self; for if when I was a Governor I was merry, now I am but a poor Squire afoot I am not sad. And indeed I have heard say, that this same She Thing they call Fortune, is a whimsical freakish drunken Quean, and blind into the Bargain; so that she neither sees what she does, nor knows whom she raises, nor whom she casts down. Thou art very much a Philosopher, *Sancho*, said

Don *Quixote*, thou talk'st very sensibly. I wonder how thou cam'st by all this; but I must tell thee there is no such Thing as Fortune in the World; nor does any Thing that happens here below of Good or Ill come by Chance, but by the particular Providence of Heaven; and this makes good the Proverb, That every Man may thank himself for his own Fortune, For my Part, I have been the Maker of mine, but for want of using the Discretion I ought to have us'd, all my presumptuous Edifice sunk, and tumbl'd down at once. I might well have consider'd, that *Rosinante* was too weak and feeble to withstand the Knight of the *White Moon's* huge and strong-built Horse. However, I would needs adventure; I did the best I could, and was overcome. Yet though it has cost me my Honour, I have not lost, nor can I lose, my Integrity to perform my Promise. When I was a Knight-Errant, valiant and bold, the Strength of my Hands and my Actions gave a Reputation to my Deeds; and now I am no more than a dismounted Squire, the Performance of my Promise shall give a Reputation to my Words. Trudge on then, Friend Sancho, and let us get home, to pass the Year of our Probation. In that Retirement we shall recover new Vigour to return to that, which is never to be forgotten by me, I mean the Profession of Arms.

Cervantes, Don Quixote, II, 66

89 Chiefly the mould of a man's fortune is in his own hands.

Bacon, Of Fortune

90 When all looks fair about, and thou seest not a cloud so big as a Hand to threaten thee, forget not the Wheel of things: Think of sullen vicissitudes, but beat not thy

brains to fore-know them. Be armed against such obscurities, rather by submission than fore-knowledge.

Sir Thomas Browne, Christian Morals, III, 16

91 Others apart sat on a Hill retir'd,
In thoughts more elevate, and reason'd high
Of Providence, Foreknowledge, Will, and Fate,
Fixt Fate, free will, foreknowledge absolute,
And found no end, in wandring mazes lost.

Milton, Paradise Lost, II, 557

92 Raphael God made thee perfect, not immutable;
And good he made thee, but to persevere
He left it in thy power, ordain'd thy will
By nature free, not over-rul'd by Fate
Inextricable, or strict necessity;
Our voluntarie service he requires,
Not our necessitated, such with him
Finds no acceptance, nor can find, for how
Can hearts, not free, be tri'd whether they serve
Willing or no, who will but what they must
By Destinie, and can no other choose?

Milton, Paradise Lost, V, 524

93 When God shakes a Kingdom with strong and healthful commotions to a general reforming, 'tis not untrue that many sectaries and false teachers are then busiest in seducing; but yet more true it is, that God then raises to His own work men of rare abilities, and more than common industry, not only to look back and revise what hath been taught heretofore, but to gain further and go on some new enlightened steps in the discovery of truth.

Milton, Areopagitica

94 We know that all things follow from the eternal decree of God, according to that same necessity by which it follows from the essence of a triangle that its three angles are equal to two right angles.

Spinoza, Ethics, II, Prop. 49

95 Since no one can do anything save by the predetermined order of nature, that is by God's eternal ordinance and decree, it follows that no one can choose a plan of life for himself, or accomplish any work save by God's vocation choosing him for the work or the plan of life in question, rather than any other.

Spinoza, Theologico-Political Treatise, III

96 The Power of Fortune is confest only by the Miserable; for the Happy impute all their Success to Prudence or Merit.

Swift, Thoughts on Various Subjects

97 Nothing more aggravates ill success than the near approach to good. The gamester, who loses his party at piquet by a single point, laments his bad luck ten times as much as he who never came within a prospect of the game. So in a lottery, the proprietors of the next numbers to that which wins the great prize, are apt to account themselves much more unfortunate than their fellow-suffers. In short, these kind of hairbreadth missings of happiness look like the insults of Fortune, who may be considered as thus playing tricks with us, and wantonly diverting herself at our expense.

Fielding, Tom Jones, XIII, 2

98 To reconcile the indifference and contingency of human actions with prescience; or to defend absolute decrees, and yet free the Deity from being the author of sin, has been found hitherto to exceed all the power of philosophy. Happy, if she be thence sensible of her temerity, when she pries into these sublime mysteries; and leaving a scene so full of obscurities and perplexities, return, with suitable modesty, to her true and proper province, the examination of common life; where she will find difficulties enough to employ her enquiries, without launching into so boundless an ocean of doubt, uncertainty, and contradiction!

Hume, Concerning Human Understanding, VIII, 81

99 *Boswell*. "It appears to me, Sir, that predestination, or what is equivalent to it, cannot be avoided, if we hold an universal prescience in the Deity," *Johnson*. "Why, Sir, does not GOD every day see things going on without preventing them?" *Boswell*. "True, Sir; but if a thing be certainly foreseen, it must be fixed, and cannot happen otherwise; and if we apply this consideration to the human mind, there is no free will, nor do I see how prayer can be of any avail," He mentioned Dr. Clarke, and Bishop Bramhall on *Liberty and Necessity*, and bid me read South's *Sermons on Prayer*; but avoided the question which has excruciated philosophers and divines, beyond any other. I did not press it further.

Boswell, Life of Johnson (Oct, 26, 1769)

100 I expressed a horror at the thought of death. *Mrs. Knowles*. "Nay, thou should'st not have a horror for what is the gate of life." *Johnson*. (standing upon the hearth

rolling about, with a serious, solemn, and somewhat gloomy air,) "No rational man can die without uneasy apprehension." *Mrs. Knowles*. "The Scriptures tell us, 'The righteous shall have *hope* in his death.'" *Johnson*. "Yes, Madam; that is, he shall not have despair. But, consider, his hope of salvation must be founded on the terms on which it is promised that the mediation of our SAVIOUR shall be applied to us,—namely, obedience; and where obedience has failed, then, as suppletory to it, repentance. But what man can say that his obedience has been such, as he would approve of in another, or even in himself upon close examination, or that his repentance has not been such as to require being repented of? No man can be sure that his obedience and repentance will obtain salvation." *Mrs. Knowles*. "But divine intimation of acceptance may be made to the soul." *Johnson*. "Madam, it may; but I should not think the better of a man who should tell me on his death-bed he was sure of salvation. A man cannot be sure himself that he has divine intimation of acceptance; much less can he make others sure that he has it." *Boswell*. "Then, Sir, we must be contented to acknowledge that death is a terrible thing." *Johnson*. "Yes, Sir. I have made no approaches to a state which can look on it as not terrible."

Boswell, Life of Johnson (Apr. 15, 1778)

101 Men of merit, who have no success in life, may be forgiven for *lamenting*, if they are not allowed to *complain*. They may consider it as *hard* that their merit should not have its suitable distinction. Though there is no intentional injustice towards them on the part of the world, their merit not having been perceived, they may yet repine against *fortune*, or *fate*, or by whatever name

they choose to call the supposed mythological power of *Destiny*.

Boswell, Life of Johnson (Mar. 23, 1783)

102 The overweening conceit which the greater part of men have of their own abilities is an ancient evil remarked by the philosophers and moralists of all ages. Their absurd presumption in their own good fortune has been less taken notice of. It is, however, if possible, still more universal. There is no man living who, when in tolerable health and spirits, has not some share of it. The chance of gain is by every man more or less overvalued, and the chance of loss is by most men undervalued, and by scarce any man, who is in tolerable health and spirits, valued more than it is worth.

Adam Smith, Wealth of Nations, 1, 10

103 The doctrine of eternal decrees and absolute predestination is strictly embraced by the Mohammedans; and they struggle with the common difficulties, *how* to reconcile the prescience of God with the freedom and responsibility of man; *how* to explain the permission of evil under the reign of infinite power and infinite goodness.

Gibbon, Decline and Fall of the Roman Empire, L

104 The Koran inculcates, in the most absolute sense, the tenets of fate and predestination, which would extinguish both industry and virtue, if the actions of man were governed by his speculative belief. Yet their influence in every age has exalted the courage of the Saracens and Turks. The first companions of Mohammed advanced to

battle with a fearless confidence: there is no danger where there is no chance: they were ordained to perish in their beds; or they were safe and invulnerable amidst the darts of the enemy.

Gibbon, Decline and Fall of the Roman Empire, L

105 *Mephistopheles*. How closely linked are Luck and Merit, Is something fools have never known.

Goethe, Faust, II, 1, 5061

106 From every point of view the concept predestination may be considered as an abortion, for having unquestionably arisen in order to relate freedom and God's omnipotence it solves the riddle by denying one of the concepts and consequently explains nothing.

Kierkegaard, Journals (Aug. 19, 1834)

107 We may be partial, but Fate is not.

Emerson, The Conservative

108 So strange a dreaminess did there then reign all over the ship and all over the sea, only broken by the intermitting dull sound of the sword, that it seemed as if this were the Loom of Time, and I myself were a shuttle mechanically weaving and weaving away at the Fates. There lay the fixed threads of the warp subject to but one single, ever returning, unchanging vibration, and that vibration merely enough to admit of the crosswise interblending of other threads with its own. This warp seemed necessity; and here, thought I, with my own hand, I ply my own shuttle and weave my own destiny into these unalterable threads.

Melville, Moby Dick, XLVII

109 *Ahab*. What is it, what nameless, inscrutable, unearthly thing is it; what cozening, hidden lord and master, and cruel, remorseless emperor commands me; that against all natural lovings and longings, I so keep pushing, and crowding, and jamming myself on all the time; recklessly making me ready to do what in my own proper, natural heart, I durst not so much as dare? Is Ahab, Ahab? Is it I, God, or who, that lifts this arm? But if the great sun move not of himself; but is as an errand-boy in heaven; nor one single star can revolve, but by some invisible power; how then can this one small heart beat; this one small brain think thoughts; unless God does that beating, does that thinking, does that living, and not I.

Melville, Moby Dick, CXXXII

110 There are two sides to the life of every man, his individual life, which is the more free the more abstract its interests, and his elemental hive life in which he inevitably obeys laws laid down for him.

Man lives consciously for himself, but is an unconscious instrument in the attainment of the historic, universal, aims of humanity. A deed done is irrevocable, and its result coinciding in time with the actions of millions of other men assumes an historic significance. The higher a man stands on the social ladder, the more people he is connected with and the more power he has over others, the more evident is the predestination and inevitability of his every action.

"The king's heart is in the hands of the Lord."

A king is history's slave.

Tolstoy, War and Peace, IX, 1

111 The innumerable people who took part in the war acted in accord with their personal characteristics, habits, circumstances, and aims. They were moved by fear or vanity, rejoiced or were indignant, reasoned, imagining that they knew what they were doing and did it of their own free will, but they all were involuntary tools of history, carrying on a work concealed from them but comprehensible to us. Such is the inevitable fate of men of action, and the higher they stand in the social hierarchy the less are they free.

Tolstoy, War and Peace, X, 1

112 For history, the insoluble mystery presented by the incompatibility of free will and inevitability does not exist as it does for theology, ethics, and philosophy. History surveys a presentation of man's life in which the union of these two contradictions has already taken place.

In actual life each historic event, each human action, is very clearly and definitely understood without any sense of contradiction, although each event presents itself as partly free and partly compulsory.

Tolstoy, War and Peace, II Epilogue, IX

113 When a man has let himself go time after time, he easily becomes impressed with the enormously preponderating influence of circumstances, hereditary habits, and temporary bodily dispositions over what might seem a spontaneity born for the occasion. "All is fate," he then says; "all is resultant of what pre-exists. Even if the moment seems original, it is but the instable molecules passively tumbling in their preappointed way. It is

hopeless to resist the drift, vain to look for any new force coming in; and less, perhaps, than anywhere else under the sun is there anything really mine in the decisions which I make." This is really no argument for simple determinism. There runs throughout it the sense of a force which might make things otherwise from one moment to another, if it were only strong enough to breast the tide. A person who feels the *impotence* of free effort in this way has the acutest notion of what is meant by it, and of its possible independent power. How else could he be so conscious of its absence and of that of its effects? But genuine determinism occupies a totally different ground; not the *impotence* but the *unthinkability* of free-will is what it affirms. It admits something phenomenal *called* free effort, which seems to breast the tide, but it claims this as a *portion of the tide*. The variations of the effort cannot be independent, it says; they cannot originate *ex nihilo*, or come from a fourth dimension; they are mathematically fixed functions of the ideas themselves, which are the tide. Fatalism, which conceives of effort clearly enough as an independent variable that might come from a fourth dimension if it *would* come but that does *not* come, is a very dubious ally for determinism. It strongly imagines that very possibility which determinism denies.

William James, Psychology, XXVI

Chapter 16

ART and AESTHETICS

Chapter 16 is divided into seven sections: 16.1 The Realm of Art, 16.2 Books and Reading, 16.3 Poetry and Poets, 16.4 Tragedy and Comedy, 16.5 Music, 16.6 Beautiful and the Beautiful, and 16.7 Criticism and the Standards of Taste.

The lines that divide these sections cannot be sharply drawn. The reader will, therefore, find passages quoted in one section that might with good reason be placed in another. Sections 16.2, 16.3, and 16.4 all deal with literature in one or another aspect. The presence of a special section on music, together with the absence of similar sections on such other fine arts as painting, sculpture, architecture, and the dance, has no explanation other than the fact that the writings of the great authors here quoted are richer in their comments on that art than on any others except the arts of literature. Nevertheless, if the reader will consult the index under painting, sculpture, architecture, and so on, he will find the location of passages dealing with these arts.

One group of arts, the traditional liberal arts of mathematics and of grammar, rhetoric, and logic is treated in other chapters: grammar, rhetoric, and logic in Section 7.2 on The Arts of Language in Chapter 7 on Language; and The Discipline of Mathematics in Section 17.3 of Chapter 17 on Philosophy, Science, and Mathematics.

...

16.1 The Realm of Art

The passages quoted in this section treat both art and the artist in the most general sense of these terms, and the reader must, therefore, be forewarned that the most general sense of these terms in the tradition of Western thought is radically different from the extremely restricted connotation that attaches to them in current usage. As used by almost all of the authors quoted, from the Greeks down to the end of the eighteenth century, the word "art" refers to skill in the making of anything—a shoe or a ship as well as a poem or a painting or, for that matter, a demonstration in mathematics or a political oration. The artist is a man who has a specific skill to some degree. Those who happen to make something without art do so entirely by chance. Since the word "art" is used to refer to the skill possessed by a maker, it is not used to refer to the thing he makes, the object he produces. That is a work of art. The terms thus used are not evaluative. They do not signify the achievement of excellence. Artists may have more or less skill; works of art may be more or less good.

It is only in the last few centuries that the term "art" has become so restricted that it refers only to literary and musical compositions, paintings, and sculptures, and the like; it is even narrowed further in the familiar expression "literature, music, and the fine arts," in which the last phrase refers exclusively to what hangs on walls, stands on pedestals, or is enclosed in cases. When the phrase "fine art"

was first coined (it makes its first appearance in the age of Immanuel Kant), it was used to distinguish one group of arts from all others, i.e., those arts the products of which are an end (Latin, *finis*) in themselves—to be enjoyed for what they are rather than used for some ulterior purpose.

The basic points made in the discussion of art in general apply equally to the fine arts, the useful arts, and the liberal arts. Writers call our attention, for example, to the fact that a work of art may either have an enduring existence or be a transient process. A statue and a poem, like a house or a chair, endure in themselves after the artist has finished his work; not so the performance of an actor or a dancer on the stage, the speech of an orator, and the operation of a surgeon.

Occasionally, authors touch on the subject of art in passages dealing with other matters. The reader would, therefore, do well to glance at the index under such terms as "art," "artist," "work," and so forth.

■ ■ ■

- 1 *Agathon*. Of his [Love's] courage and justice and temperance I have spoken, but I have yet to speak of his wisdom; and according to the measure of my ability I must try to do my best. In the first place he is a poet (and here, like Eryximachus, I magnify my art), and he is also the source of poesy in others, which he could not be if he were not himself a poet. And at the touch of him every one becomes a poet, even though he had no music in him before; this also is a proof that Love is a good poet and accomplished in all the fine arts; for no one can give to

another that which he has not himself, or teach that of which he has no knowledge. Who will deny that the creation of the animals is his doing? Are they not all the works of his wisdom, born and begotten of him? And as to the artists, do we not know that he only of them whom love inspires has the light of fame?—he whom Love touches not walks in darkness. The arts of medicine and archery and divination were discovered by Apollo, under the guidance of love and desire; so that he too is a disciple of Love. Also the melody of the Muses, the metallurgy of Hephaestus, the weaving of Athene, the empire of Zeus over gods and men, are all due to Love, who was the inventor of them.

Plato, Symposium, 196B

- 2 She (Diotima) answered me [Socrates] as follows: "There is poetry, which, as you know, is complex and manifold. All creation or passage of non-being into being is poetry or making, and the processes of all art are creative; and the masters of arts are all poets or makers." "Very true." "Still," she said, "you know that they are not called poets, but have other names; only that portion of the art which is separated off from the rest, and is concerned with music and metre, is termed poetry, and they who possess poetry in this sense of the word are called poets." "Very true," I said.

Plato, Symposium, 205A

- 3 *Socrates*. The artist disposes all things in order, and compels the one part to harmonize and accord with the other part, until he has constructed a regular and systematic whole.

Plato, Gorgias, 503B

4 *Socrates*. There is another artist. . . one who is the maker of all the works of all other workmen.

Glaucon. What an extraordinary man!

Wait a little, and there will be more reason for your saying so. For this is he who is able to make not only vessels of every kind, but plants and animals, himself and all other things—the earth and heaven, and the things which are in heaven or under the earth; he makes the gods also.

He must be a wizard and no mistake.

Oh! you are incredulous, are you? Do you mean that there is no such maker or creator, or that in one sense there might be a maker of all these things but in another not? Do you see that there is a way in which you could make them all yourself?

What way?

An easy way enough; or rather, there are many ways in which the feat might be quickly and easily accomplished, none quicker than that of turning a mirror round and round—you would soon enough make the sun and the heavens, and the earth and yourself, and other animals and plants, and all the other things of which we were just now speaking, in the mirror.

Yes, he said; but they would be appearances only.

Very good, I said, you are coming to the point now. And the painter too is, as I conceive. Just such another—a creator of appearances, is he not?...

Suppose now that. . . we enquire who this imitator is? If you please.

Well then, here are three beds: one existing in nature, which is made by God, as I think that we may say—for no

one else can be the maker?

No.

There is another which is the work of the carpenter?

Yes.

And the work of the painter is a third?

Yes.

Beds, then, are of three kinds, and there are three artists who superintend them: God, the maker of the bed, and the painter?

Yes, there are three of them.

God, whether from choice or from necessity, made one bed in nature and one only; two or more such ideal beds neither ever have been nor ever will be made by God.

Why is that?

Because even if He had made but two, a third would still appear behind them which both of them would have for their idea, and that would be the ideal bed and not the two others.

Very true, he said.

God knew this, and He desired to be the real maker of a real bed, not a particular maker of a particular bed, and therefore He created a bed which is essentially and by nature one only.

So we believe.

Shall we, then, speak of Him as the natural author or maker of the bed?

Yes, he replied; inasmuch as by the natural process of creation He is the author of this and of all other things.

And what shall we say of the carpenter—is not he also the maker of the bed?

Yes.

But would you call the painter a creator and maker?

Certainly not.

Yet if he is not the maker, what is he in relation to the bed?

I think, he said, that we may fairly designate him as the imitator of that which the others make.

Plato, Republic, X, 596A

- 5 The products of art... require the pre-existence of an efficient cause homogeneous with themselves, such as the statuary's art, which must necessarily precede the statue; for this cannot possibly be produced spontaneously. Art indeed consists in the conception of the result to be produced before its realization in the material.

Aristotle, Parts of Animals, 640a30

- 6 All arts, that is, all productive forms of knowledge, are potencies; they are originative sources of change in another thing or in the artist himself considered as other.

Aristotle, Metaphysics, 1046b3

- 7 Every art and every inquiry, and similarly every action and pursuit, is thought to aim at some good; and for this reason the good has rightly been declared to be that at which all things aim. But a certain difference is found among ends; some are activities, others are products apart from the activities that produce them. Where there are ends apart from the actions, it is the nature of the products to be better than the activities. Now, as there are many actions, arts, and sciences, their ends also are many; the end of the medical art is health, that of shipbuilding a vessel, that of strategy victory, that of economics wealth. But where such arts fall under a single

capacity—as bridlemaking and the other arts concerned with the equipment of horses fall under the art of riding, and this and every military action under strategy, in the same way other arts fall under yet others— in all of these the ends of the master arts are to be preferred to all the subordinate ends; for it is for the sake of the former that the latter are pursued.

Aristotle, Ethics, 1094a1

- 8 Those occupations are most truly arts in which there is the least element of chance; they are the meanest in which the body is most deteriorated, the most servile in which there is the greatest use of the body, and the most illiberal in which there is the least need of excellence.

Aristotle, Politics, 1258b35

- 9 Since learning and wondering are pleasant, it follows that such things as acts of imitation must be pleasant—for instance, painting, sculpture, poetry—and every product of skilful imitation; this latter, even if the object imitated is not itself pleasant; for it is not the object itself which here gives delight; the spectator draws inferences ('That is a so-and-so') and thus learns something fresh. Dramatic turns of fortune and hairbreadth escapes from perils are pleasant, because we feel all such things are wonderful.

Aristotle, Rhetoric, 1371H

- 10 Ships and tillage, walls, laws, arms, roads, dress, and all such like things, all the prizes, all the elegancies too of life without exception, poems, pictures, and the chiselling of fine-wrought statues, all these things practiced

together with the acquired knowledge of the untiring mind taught men by slow degrees as they advanced on the way step by step. Thus time by degrees brings each several thing forth before men's eyes and reason raises it up into the borders of light; for things must be brought to light one after the other and in due order in the different arts, until these have reached their highest point of development.

Lucretius, Nature of Things, V

11 The height of art is to conceal art.

Quintilian, Institutio Oratoria, I

12 Every art aims at this, that the thing which has been made should be adapted to the work for which it has been made; and both the vine-planter who looks after the vine, and the horse-breaker, and he who trains the dog, seek this end.

Marcus Aurelius, Meditations, VI, 16

13 As for the arts: such as look to house building and the like are exhausted when that object is achieved; there are again those—medicine, farming, and other serviceable pursuits—which deal helpfully with natural products, seeking to bring them to natural efficiency; and there is a class— rhetoric, music, and every other method of swaying mind or soul—with the power of modifying for better or for worse.

Plotinus, Fourth Ennead, IV, 31

14 Still the arts are not to be slighted on the ground that they create by imitation of natural objects; for, to begin

with, these natural objects are themselves imitations; then, we must recognise that they give no bare reproduction of the thing seen but go back to the ideas from which Nature itself derives, and, furthermore, that much of their work is all their own; they are holders of beauty and add where nature is lacking.

Plotinus, Fifth Ennead, VIII, 1

15 But how did You make heaven and earth? What instrument did You use for a work so mighty? You are not like an artist; for he forms one body from another as his mind chooses; his mind has the power to give external existence to the form it perceives within itself by its inner eye—and whence should it have that power unless You made it? It impresses that form upon a material already existent and having the capacity to be thus formed, such as clay or stone or wood or gold or such like. And how should these things have come to be unless You had made them to be? It was You who made the workman his body, and the mind that directs his limbs, the matter of which he makes what he makes, the intelligence by which he masters his art and sees inwardly what he is to produce exteriorly, the bodily sense by which he translates what he does from his mind to his material, and then informs the mind of the result of his workmanship, so that the mind may judge by that truth which presides within it whether the work is well done.

Augustine, Confessions, XI, 5

16 As to the... arts, whether those by which something is made which, when the effort of the workman is over, remains as a result of his work, as, for example, a house,

a bench, a dish, and other things of that kind; or those which, so to speak, assist God in His operations, as medicine, and agriculture, and navigation: or those whose sole result is an action, as dancing, and racing, and wrestling; in all these arts experience teaches us to infer the future from the past. For no man who is skilled in any of these arts moves his limbs in any operation without connecting the memory of the past with the expectation of the future.

Augustine, Christian Doctrine, II, 30

- 17 All natural things were produced by the Divine art, and so may be called God's works of art. Now every artist intends to give to his work the best disposition; not absolutely the best, but the best as regards the proposed end. And even if this entails some defect, the artist does not care. Thus, for instance, when a man makes himself a saw for the purpose of cutting, he makes it of iron, which is suitable for the object in view; and he does not prefer to make it of glass, though this be a more beautiful material, because this very beauty would be an obstacle to the end he has in view. Thus, therefore, God gave to each natural being the best disposition; not absolutely so, but in view of its proper end.

Aquinas, Summa Theologica, I, 91, 3

- 18 Art is nothing else but the right reason about certain works to be made. And yet the good of these things depends, not on man's appetite being affected in this or that way, but on the goodness of the work done. For a craftsman, as such, is commendable not for the will with which he does a work, but for the quality of the work. Art,

therefore, properly speaking, is an operative habit. And yet it has something in common with the speculative habits, since the quality of the object considered by the latter is a matter of concern to them also, but not how the human appetite may be affected towards that object. For as long as the geometrician demonstrates the truth, it does not matter how his appetitive part may be affected, whether he be joyful or angry, even as neither does this matter in a craftsman, as we have observed. And so art has the nature of a virtue in the same way as the speculative habits, in so far, that is, as neither art nor speculative habit makes a good work as regards the use of the habit, which is proper to a virtue that perfects the appetite, but only as regards the aptness to work well.

Aquinas, Summa Theologica, I-II, 57, 3

- 19 When anyone endowed with an art produces bad workmanship, this is not the work of that art, but rather is contrary to the art, even as when a man lies while knowing the truth, his words are not in accord with his knowledge, but contrary to it. Therefore, just as science has always a relation to good... so it is with art, and it is for this reason that it is called a virtue. And yet it falls short of being a perfect virtue, because it does not make its possessor use it well, for which purpose something further is requisite, although there cannot be a good use without the art.

In order that man may make good use of the art he has, he needs a good will, which is perfected by moral virtue; and for this reason the Philosopher says that there is a virtue of art, namely, a moral virtue, in so far as the good use of art requires a moral virtue. For it is evident

that a craftsman is inclined by justice, which rectifies his will, to do his work faithfully.

Even in speculative matters there is something by way of work; for example, the making of a syllogism or of a fitting speech, or the work of counting or measuring. Hence whatever habits are ordered to such works of the speculative reason, are by a kind of comparison called arts indeed, but liberal arts, in order to distinguish them from those arts that are ordered to works done by the body, which arts are, in a fashion, servile, in so far as the body is in servile subjection to the soul, and man, as regards his soul, is free. On the other hand, those sciences which are not ordered to any work of this kind, are called sciences absolutely, and not arts. Nor, if the liberal arts be more excellent, does it follow that the notion of art is more applicable to them.

Aquinas, Summa Theologica, I-II, 57, 3

- 20 The good of an art is to be found not in the craftsman himself, but in the product of the art. ... It is a perfection not of the maker, but of the thing made.... Consequently art does not require of the craftsman that his act be a good act, but that his work be good. Rather would it be necessary for the thing made to act well (for example, that a knife should carve well, or that a saw should cut well), if it were proper to such things to act rather than to be acted on, because they do not have dominion over their actions. Therefore the craftsman needs art not that he may live well, but that he may produce a good work of art, and preserve it.

Aquinas, Summa Theologica, I—II, 57, 5

21 It is not reasonable that art should win the place of honor over our great and powerful mother Nature. We have so overloaded the beauty and richness of her works by our inventions that we have quite smothered her. Yet wherever her purity shines forth, she wonderfully puts to shame our vain and frivolous attempts.... All our efforts cannot even succeed in reproducing the nest of the tiniest little bird, its contexture, its beauty and convenience; or even the web of the puny spider.

Montaigne, Essays, I, 31, Of Cannibals

22 I very much doubt that Phidias or any other excellent sculptor would be so pleased with the preservation and long life of his natural children as with that of an excellent statue that his long labor and study had brought to artistic perfection. And as for those vicious and frenzied passions which have sometimes inflamed fathers with love for their daughters, or mothers for their sons, the like even of these are found in this other sort of parenthood: witness what they tell of Pygmalion, who after building a statue of a woman of singular beauty, became so madly and frantically smitten with love of this work that the gods, for the sake of his passion, had to bring it to life for him.

Montaigne, Essays, II, 8, Affection of Fathers

23 *Hamlet*. 'Tis the sport to have the engineer
Hoist with his own petar; and't shall go hard
But I will delve one yard below their mines,
And blow them at the moon, O, 'tis most sweet,
When in one line two crafts directly meet.

Shakespeare, Hamlet, III, iv, 206

24 As the understanding is elevated and raised by rare and unusual works of nature, to investigate and discover the forms which include them also, so is the same effect frequently produced by the excellent and wonderful works of art; and even to a greater degree, because the mode of effecting and constructing the miracles of art is generally plain, whilst that of effecting the miracles of nature is more obscure- Great care, however, must be taken, that they do not depress the understanding, and fix it, as it were, to earth.

For there is some danger, lest the understanding should be astonished and chained down, and as it were bewitched, by such works of art, as appear to be the very summit and pinnacle of human industry, so as not to become familiar with them, but rather to suppose that nothing of the kind can be accomplished, unless the same means be employed, with perhaps a little more diligence, and more accurate preparation.

Now, on the contrary, it may be stated as a fact, that the ways and means hitherto discovered and observed, of effecting any matter or work, are for the most part of little value, and that all really efficient power depends, and is really to be deduced from the sources of forms, none of which have yet been discovered.

Thus (as we have before observed), had any one meditated on ballistic machines, and battering rams, as they were used by the ancients, whatever application he might have exerted, and though he might have consumed a whole life in the pursuit, yet would he never have hit upon the invention of flaming engines, acting by means of gunpowder; nor would any person, who had made woollen manufactories and cotton the subject of his

observation and reflection, have ever discovered thereby the nature of the silkworm or of silk.

Bacon, Novum Organum, II, 31

- 25 All the arts are but imitations of nature in one way or another; as our reason or understanding is a derivative from the Divine intelligence, manifested in His works; and when perfected by habit, like another adventitious and acquired soul, gaining some semblance of the Supreme and Divine agent, it produces somewhat similar effects.

William Harvey, Animal Generation, 50

- 26 How useless is painting, which attracts admiration by the resemblance of things, the originals of which we do not admire!

Pascal, Pensées, II, 134

- 27 First follow Nature, and your judgment frame
By her just standard, which is still the same;
Unerring Nature, still divinely bright.
One clear, unchanged, and universal light,
Life, force, and beauty must to all impart,
At once the source, and end, and test of art.

Pope, Essay on Criticism, I, 68

- 28 All polite letters are nothing but pictures of human life in various attitudes and situations; and inspire us with different sentiments, of praise or blame, admiration or ridicule, according to the qualities of the object, which they set before us. An artist must be better qualified to succeed in this undertaking, who, besides a delicate taste and a quick apprehension, possesses an accurate

knowledge of the internal fabric, the operations of the understanding, the workings of the passions, and the various species of sentiment which discriminate vice and virtue. How painful soever this inward search or enquiry may appear, it becomes, in some measure, requisite to those, who would describe with success the obvious and outward appearances of life and manners.

Hume, Concerning Human Understanding, I, 5

29 It is justly considered as the greatest excellency of art, to imitate nature; but it is necessary to distinguish those parts of nature, which are most proper for imitation: greater care is still required in representing life, which is so often discoloured by passion, or deformed by wickedness. If the world be promiscuously described, I cannot see of what use it can be to read the account; or why it may not be as safe to turn the eye immediately upon mankind, as upon a mirror which shows all that presents itself without discrimination.

It is therefore not a sufficient vindication of a character, that it is drawn as it appears, for many characters ought never to be drawn; nor of a narrative, that the train of events is agreeable to observation and experience, for that observation which is called knowledge of the world, will be found much more frequently to make men cunning than good. The purpose of these writings is surely not only to show mankind, but to provide that they may be seen hereafter with less hazard; to teach the means of avoiding the snares which are laid by Treachery for Innocence, without infusing any wish for that superiority with which the betrayer flatters his vanity; to give the power of counteracting fraud, without the temptation to practise it; to initiate youth by

mock encounters in the art of necessary defence, and to increase prudence without impairing virtue.

Johnson, Rambler No. 4

- 30 The practice of architecture is directed by a few general and even mechanical rules. But sculpture, and, above all, painting, propose to themselves the imitation not only of the forms of nature, but of the characters and passions of the human soul. In those sublime arts the dexterity of the hand is of little avail unless it is animated by fancy and guided by the most correct taste and observation.

Gibbon, Decline and Fall of the Roman Empire, XIII

- 31 Art is distinguished from nature as making is from acting or operating in general, and the product or the result of the former is distinguished from that of the latter as work from operation.

By right it is only production through freedom, that is, through an act of will that places reason at the basis of its action, that should be termed art.

Kant, Critique of Aesthetic Judgement, 43

- 32 Art, as human skill, is distinguished also from science (as ability from knowledge), as a practical from a theoretical faculty, as technic from theory (as the art of surveying from geometry). For this reason, also, what one can do the moment one only knows what is to be done, hence without anything more than sufficient knowledge of the desired result, is not called art. To art that alone belongs for which the possession of the most complete knowledge does not involve one's having then and there the skill to do it.

33 Art is further distinguished from handicraft. The first is called free, the other may be called industrial art. We look on the former as something which could only prove final (be a success) as play, i.e., an occupation which is agreeable on its own account; but on the second as labour, i.e., a business, which on its own account is disagreeable (drudgery), and is only attractive by means of what it results in (e.g., the pay), and which is consequently capable of being a compulsory imposition. Whether in the list of arts and crafts we are to rank watchmakers as artists, and smiths on the contrary as craftsmen, requires a standpoint different from that here adopted—one, that is to say, taking account of the proposition of the talents which the business undertaken in either case must necessarily involve. Whether, also, among the so-called seven free arts some may not have been included which should be reckoned as sciences, and many, too, that resemble handicraft, is a matter I will not discuss here. It is not amiss, however, to remind the reader of this: that in all free arts something of a compulsory character is still required, or, as it is called, a mechanism, without which the soul, which in art must be free, and which alone gives life to the work, would be body-less and evanescent (e.g., in the poetic art there must be correctness and wealth of language, likewise prosody and metre). For not a few leaders of a newer school believe that the best way to promote a free art is to sweep away all restraint and convert it from labour into mere play.

34 Fine art. . . is a mode of representation which is intrinsically final, and which, although devoid of an end, has the effect of advancing the culture of the mental powers in the interests of social communication.

Kant, Critique of Aesthetic Judgement, 44

35 Genius (1) is a talent for producing that for which no definite rule can be given, and not an aptitude in the way of cleverness for what can be learned according to some rule; and... consequently originality must be its primary property. (2) Since there may also be original nonsense, its products must at the same time be models, that is, be exemplary; and consequently, though not themselves derived from imitation, they must serve that purpose for others, that is, as a standard or rule of estimating.... Where an author owes a product to his genius, he does not himself know how the ideas for it have entered into his head, nor has he it in his power to invent the like at pleasure, or methodically, and communicate the same to others in such precepts as would put them in a position to produce similar products.

Kant, Critique of Aesthetic Judgement, 46

36 Despite the marked difference that distinguishes mechanical art, as an art merely depending upon industry and learning, from fine art, as that of genius, there is still no fine art in which something mechanical, capable of being at once comprehended and followed in obedience to rules, and consequently something academic, does not constitute the essential condition of the art. For the thought of something as end must be present, or else its product would not be ascribed to an

art at all, but would be a mere product of chance. But the effectuation of an end necessitates determinate rules which we cannot venture to dispense with. Now, seeing that originality of talent is one (though not the sole) essential factor that goes to make up the character of genius, shallow minds fancy that the best evidence they can give of their being full-blown geniuses is by emancipating themselves from all academic constraint of rules, in the belief that one cuts a finer figure on the back of an ill-tempered than of a trained horse.

Kant, Critique of Aesthetic Judgement, 47

37 *Faust*. Unless you feel, naught will you ever gain;
Unless this feeling pours forth from your soul
With native, pleasing vigour to control
The hearts of all your hearers, it will be in vain.
Pray keep on sitting! Pray collect and glue,
From others' feasts brew some ragout;
With tiny heaps of ashes play your game
And blow the sparks into a wretched flame!
Children and apes will marvel at you ever,
If you've a palate that can stand the part;
But heart to heart you'll not draw men, no, never,
Unless your message issue from your heart.

Goethe, Faust, I, 534

38 There is no surer method of evading the world than by following art, and no surer method of linking oneself to it than by art.

Goethe, Reflections and Maxims

39 Were any one to despise art on the ground that it imitates nature, we should reply that Nature herself imitates many other things, and that, furthermore, art does not merely imitate that which we see with our eyes, but goes back to that element of reason of which nature consists and according to which she acts.

Goethe, Reflections and Maxims

40 The artist has a twofold relation to nature; he is at once her master and her slave. He is her slave, inasmuch as he must work with earthly things, in order to be understood; but he is her master, inasmuch as he subjects these earthly means to his higher intentions, and renders them subservient.

Goethe, Conversations with Eckermann (Apr. 18, 1827)

41 The religious concentration of the soul appears in the form of feeling; it nevertheless passes also into reflection; a form of worship is a result of reflection. The second form of the union of the objective and subjective in the human spirit is art. This advances farther into the realm of the actual and sensuous than religion. In its noblest walk it is occupied with representing, not indeed, the spirit of God, but certainly the form of God; and in its secondary aims, that which is divine and spiritual generally. Its office is to render visible the divine; presenting it to the imaginative and intuitive faculty. But the true is the object not only of conception and feeling, as in religion—and of intuition, as in art—but also of the thinking faculty; and this gives us the third form of the union in question—philosophy.

Hegel, Philosophy of History, Introduction, 3

42 What is the true content of art, and with what aim is this content to be presented? On this subject our consciousness supplies us with the common opinion that it is the task and aim of art to bring in contact with our sense, our feeling, our inspiration, all that finds a place in the mind of man. ... Its aim is therefore placed in arousing and animating the slumbering emotions, inclinations, and passions; in filling the heart, in forcing the human being, whether cultured or uncultured, to feel the whole range of what man's soul in its inmost and secret comers has power to experience and to create, and all that is able to move and to stir the human breast in its depths and in its manifold aspects and possibilities; to present as a delight to emotion and to perception all that the mind possesses of real and lofty in its thought and in the Idea—all the splendour of the noble, the eternal, and the true; and no less to make intelligible misfortune and misery, wickedness and crime; to make men realize the inmost nature of all that is shocking and horrible, as also of all pleasure and delight; and, finally, to set imagination roving in idle toyings of fancy, and luxuriating in the seductive spells of sense-stimulating visions.

Hegel, Philosophy of Fine Art, III

43 We have here to consider three relations of the Idea to its outward shaping.

First, the Idea gives rise to the beginning of art when, being itself still in its indistinctness and obscurity, or in vicious untrue determinateness, it is made the import of artistic creations. As indeterminate it does not yet possess in itself that individuality which the Ideal demands; its abstractness and one-sidedness leave its shape to be outwardly bizarre and defective. The first

form of art is therefore rather a mere search after plastic portrayal than a capacity of genuine representation. The Idea has not yet found the true form even within itself, and therefore continues to be merely the struggle and aspiration thereafter. In general terms we may call this form the Symbolic form of art....

In the second form of art, which we propose to call Classical, the double defect of symbolic art is cancelled. The plastic shape of symbolic art is imperfect, because, in the first place, the Idea in it only enters into consciousness in abstract determinateness or indeterminateness, and, in the second place, this must always make the conformity of shape to import defective, and in its turn merely abstract. The classical form of art is the solution of this double difficulty; it is the free and adequate embodiment of the Idea in the shape that, according to its conception, is peculiarly appropriate to the Idea itself. With it, therefore, the Idea is capable of entering into free and complete accord. Hence, the classical type of art is the first to afford the production and intuition of the completed Ideal, and to establish it as a realized fact....

[There] arises, in its turn, the defect which brings about the dissolution of classical art, and demands a transition into a third and higher form, viz. into the Romantic form of art.

The romantic form of art destroys the completed union of the Idea and its reality, and recurs, though in a higher phase, to that difference and antagonism of two aspects which was left unvanquished by symbolic art. The classical type attained the highest excellence, of which the sensuous embodiment of art is capable; and if it is in any way defective, the defect is in art as a whole, i.e. in

the limitation of its sphere. This limitation consists in the fact that art as such takes for its object Mind—the conception of which is infinite concrete universality—in the shape of sensuous concreteness, and in the classical phase sets up the perfect amalgamation of spiritual and sensuous existence as a conformity of the two. Now, as a matter of fact, in such an amalgamation Mind cannot be represented according to its true notion. For mind is the infinite subjectivity of the Idea, which, as absolute inwardness, is not capable of finding free expansion in its true nature on condition of remaining transposed into a bodily medium as the existence appropriate to it.

Hegel, Philosophy of Fine Art, V

- 44 Art is a jealous mistress, and if a man have a genius for painting, poetry, music, architecture or philosophy, he makes a bad husband and ill provider, and should be wise in season and not fetter himself with duties which will embitter his days and spoil him for his proper work.

Emerson, Wealth

- 45 To make a prairie it takes a clover and one bee,
One clover and a bee
And revery.
The revery alone will do
If bees are few.

Emily Dickinson, To Make a Prairie

- 46 I want a definition of art wide enough to include all its varieties of aim: I do not say therefore that the art is greatest which gives most pleasure, because perhaps there is some art whose end is to teach, and not to

please, I do not say that the art is greatest which teaches us most, because perhaps there is some art whose end is to please and not to teach. I do not say that the art is greatest which imitates best, because perhaps there is some art whose end is to create, and not to imitate. But I say that the art is greatest, which conveys to the mind of the spectator, by any means whatsoever, the greatest number of the greatest ideas, and I call an idea great in proportion as it is received by a higher faculty of the mind, and as it more fully occupies, and in occupying, exercises and exalts, the faculty by which it is received.

If this then be the definition of great art, that of a great artist naturally follows. He is the greatest artist who has embodied, in the sum of his works, the greatest number of the greatest ideas.

Ruskin, Modern Painters, Pt. I, I, 2

47 1. Never encourage the manufacture of any article not absolutely necessary, in the production of which Invention has no share.

2. Never demand an exact finish for its own sake, but only for some practical or noble end.

3. Never encourage imitation or copying of any kind, except for the sake of preserving record of great works.

Ruskin, Stones of Venice, II, 6

48 Literary and artistic productions never grow old, in this sense, that they are expressions of feeling, changeless as human nature.

Claude Bernard, Experimental Medicine, II, 2

49 Art is a human activity, whose purpose is the transmission of the highest and best feelings to which men have attained.

Tolstoy, What Is Art?, VIII

50 Future artists will understand that it is incomparably more important to compose a fairy-tale, a little song, a lullaby, an amusing riddle or joke, or to draw a sketch that delights millions of children and adults over the generations, than to create a novel or symphony, or paint a canvas that diverts a few members of the wealthy class for a moment and then is forgotten forever.

Tolstoy, What Is Art?, XIX

51 The present task of art is to make the feeling of brotherhood and love of one's neighbor, which is now shared only by the best members of society, the customary feeling, even the instinct, of all human beings.... Art is destined to promulgate the truth that the well-being of men consists in their being united together, and to help to set up, in place of the reign of force that now exists, the kingdom of God (Who is Love) that we all recognize as the highest goal of human life.

Tolstoy, What Is Art?, XX

52 The artist notoriously selects his items, rejecting all tones, colors, shapes, which do not harmonize with each other and with the main purpose of his work. That unity, harmony... which gives to works of art their superiority over works of nature, is wholly due to *elimination*. Any natural subject will do, if the artist has wit enough to pounce upon some one feature of it as characteristic, and

suppress all merely accidental items which do not harmonize with this.

William James, Psychology, IX

53 The world of aesthetics ... is an ideal world, a Utopia, a world which the outer relations persist in contradicting, but which we as stubbornly persist in striving to make actual. Why do we thus invincibly crave to alter the given order of nature? Simply because other relations among things are far more interesting to us and more charming than the mere rates of frequency of their time-and space-conjunctions. These other relations are all secondary and brain-born, "spontaneous variations" most of them, of our sensibility, whereby certain elements of experience, and certain arrangements in time and space, have acquired an agreeableness which otherwise would not have been felt. It is true that habitual arrangements may also become agreeable. But this agreeableness of the merely habitual is felt to be a mere ape and counterfeit of real inward fitness; and one sign of intelligence is never to mistake the one for the other.

William James, Psychology, XXVIII

54 *Tanner*. The true artist will let his wife starve, his children go barefoot, his mother drudge for his living at seventy, sooner than work at anything but his art. To women he is half vivisector, half vampire. He gets into intimate relations with them to study them, to strip the mask of convention from them, to surprise their inmost secrets, knowing that they have the power to rouse his deepest creative energies, to rescue him from his cold reason, to make him see visions and dream dreams, to inspire him,

as he calls it. He persuades women that they may do this for their own purpose whilst he really means them to do it for his. He steals the mother's milk and blackens it to make printer's ink to scoff at her and glorify ideal women with. He pretends to spare her the pangs of child-bearing so that he may have for himself the tenderness and fostering that belong of right to her children. Since marriage began, the great artist has been known as a bad husband. But he is worse: he is a child-robber, a blood-sucker, a hypocrite, and a cheat. Perish the race and wither a thousand women if only the sacrifice of them enable him to act Hamlet better, to paint a finer picture, to write a deeper poem, a greater play, a profounder philosophy!

Shaw, Man and Superman, I

55 Goodness is the third member of the trinity which traditionally has been assigned as the complex aim of art—namely, Truth, Beauty, and Goodness. With the point of view here adopted. Goodness must be denied a place among the aims of art. For Goodness is a qualification belonging to the constitution of reality, which in any of its individual actualizations is better or worse. Good and evil lie in depths and distances below and beyond appearance. They solely concern inter-relations within the real world. The real world is good when it is beautiful. Art has essentially to do with perfections attainable by purposeful adaptation of appearance. With a larger view and a deeper analysis, some instance of the perfection of art may diminish the good otherwise inherent in some specific situation as it passes into its objective actuality for the future. Unseasonable art is analogous to an unseasonable Joke, namely, good in its place, but out of

place a positive evil. It is a curious fact that lovers of art who are most insistent on the doctrine of 'art for art's sake' are apt to be indignant at the banning of art for the sake of other interests. The charge of immorality' is not refuted by pointing to the perfection of art. Of course it is true that the defence of morals is the battle-cry which best rallies stupidity against change. Perhaps countless ages ago respectable amoebae refused to migrate from ocean to dry land—refusing in defence of morals. One incidental service of art to society lies in its adventurousness.

It is a tribute to the strength of the sheer craving for freshness, that change, whose justification lies in aim at the distant ideal, should be promoted by Art which is the adaptation of immediate Appearance for immediate Beauty. Art neglects the safety of the future for the gain of the present. In so doing it is apt to render its Beauty thin. But after all, there must be some immediate harvest. The Good of the Universe cannot lie in indefinite postponement. The Day of Judgment is an important notion: but that Day is always with us. Thus Art takes care of the immediate fruition, here and now; and in so doing is apt to lose some depth by reason of the immediate fruition at which it is aiming. Its business is to render the Day of Judgment a success, now. The effect of the present on the future is the business of morals. And yet the separation is not so easy. For the inevitable anticipation adds to the present a qualitative element which profoundly affects its whole qualitative harmony.

Whitehead, Adventures of Ideas, XVIII, 3~4

56 The merit of Art in its service to civilization lies in its artificiality and its finiteness. It exhibits for consciousness

a finite fragment of human effort achieving its own perfection within its own limits. Thus the mere toil for the slavish purpose of prolonging life for more toil or for mere bodily gratification, is transformed into the conscious realization of a self-contained end, timeless within time. The work of Art is a fragment of nature with the mark on it of a finite creative effort, so that it stands alone, an individual thing detailed from the vague infinity of its background. Thus Art heightens the sense of humanity. It gives an elation of feeling which is supernatural. A sunset is glorious, but it dwarfs humanity and belongs to the general flow of nature. A million sunsets will not spur on men towards civilization. It requires Art to evoke into consciousness the finite perfections which lie ready for human achievement.

Consciousness itself is the product of art in its lowliest form. For it results from the influx of ideality into its contrast with reality, with the purpose of reshaping the latter into a finite, select appearance. But consciousness having emerged from Art at once produces the new specialized art of the conscious animals—in particular human art. In a sense art is a morbid overgrowth of functions which lie deep in nature. It is the essence of art to be artificial But it is its perfection to return to nature, remaining art. In short art is the education of nature. Thus, in its broadest sense, art is civilization. For civilization is nothing other than the unremitting aim at the major perfections of harmony.

Whitehead, Adventures of Ideas, XVIII, 6

- 57 There is, in fact, a path from phantasy back again to reality, and that is—art. The artist has also an introverted disposition and has not far to go to become neurotic. He

is one who is urged on by instinctual needs which are too clamorous; he longs to attain to honour, power, riches, fame, and the love of women; but he lacks the means of achieving these gratifications. So, like any other with an unsatisfied longing, he turns away from reality and transfers all his interest, and all his libido too, on to the creation of his wishes in the life of phantasy, from which the way might readily lead to neurosis. There must be many factors in combination to prevent this becoming the whole outcome of his development; it is well known how often artists in particular suffer from partial inhibition of their capacities through neurosis. Probably their constitution is endowed with a powerful capacity for sublimation and with a certain flexibility in the repressions determining the conflict. But the way back to reality is found by the artist thus: He is not the only one who has a life of phantasy; the intermediate world of phantasy is sanctioned by general human consent, and every hungry soul looks to it for comfort and consolation. But to those who are not artists the gratification that can be drawn from the springs of phantasy is very limited; their inexorable repressions prevent the enjoyment of all but the meagre daydreams which can become conscious. A true artist has more at his disposal. First of all he understands how to elaborate his day-dreams, so that they lose that personal note which grates upon strange ears and become enjoyable to others; he knows too how to modify them sufficiently so that their origin in prohibited sources is not easily detected. Further, he possesses the mysterious ability to mould his particular material until it expresses the ideas of his phantasy faithfully; and then he knows how to attach to this reflection of his phantasy-life so strong a stream of

pleasure that, for a time at least, the repressions are out-balanced and dispelled by it. When he can do all this, he opens out to others the way back to the comfort and consolation of their own unconscious sources of pleasure, and so reaps their gratitude and admiration; then he has won—through his phantasy— what before he could only win in phantasy: honour, power, and the love of women.

Freud, General Introduction to Psycho-Analysis, XXIII

58 As regards intellectual work, it remains a fact, indeed, that great decisions in the realm of thought and momentous discoveries and solutions of problems are only possible to an individual, working in solitude. But even the group mind is capable of genius in intellectual creation, as is shown above all by language itself, as well as by folk-song, folklore and the like. It remains an open question, moreover, how much the individual thinker or writer owes to the stimulation of the group in which he lives, or whether he does more than perfect a mental work in which the others have had a simultaneous share.

Freud, Group Psychology and Analysis of the Ego, III

59 People say that women contributed but little to the discoveries and inventions of civilization, but perhaps after all they did discover one technical process, that of plaiting and weaving. If this is so, one is tempted to guess at the unconscious motive at the back of this achievement. Nature herself might be regarded as having provided a model for imitation, by causing pubic hair to grow at the period of sexual maturity so as to veil the genitals. The step that remained to be taken was to attach the hairs permanently together, whereas in the

body they are fixed in the skin and only tangled with one another. If you repudiate this idea as being fantastic, and accuse me of having an *idée fixe* on the subject of the influence exercised by the lack of a penis upon the development of femininity, I cannot of course defend myself.

*Freud, New Introductory Lectures on Psycho-Analysis,
XXXIII*

60 Art. . . explicitly recognizes what it has taken so long to discover in science; the control exercised by emotion in reshaping natural conditions, and the place of the imagination, under the influence of desire, in re-creating the world into a more orderly place. When so-called nonrational factors are found to play a large part in the production of relations of consistency and order in logical systems, it is not surprising that they should operate in artistic structures. Indeed, it may be questioned whether any scientific systems extant, save perhaps those of mathematics, equal artistic structure in integrity, subtlety and scope, while the latter are evidently more readily and widely understood, and are the sources of a more widespread and direct satisfaction. These facts are explicable only when it is realized that scientific and artistic systems embody the same fundamental principles of the relationship of life to its surroundings, and that both satisfy the same fundamental needs. Probably a time will come when it will be universally recognized that the differences between coherent logical schemes and artistic structures in poetry, music and the plastics are technical and specialized, rather than deep-seated.

Dewey, Affective Thought

61 That art originated in play is a common saying. Whether or not the saying is historically correct, it suggests that harmony of mental playfulness and seriousness describes the artistic ideal. When the artist is preoccupied overmuch with means and materials, he may achieve wonderful technique, but not the artistic spirit *par excellence*. When the animating idea is in excess of the command of method, aesthetic feeling may be indicated, but the art of presentation is too defective to express the feeling thoroughly. When the thought of the end becomes so adequate that it compels translation into the means that embody it, or when attention to means is inspired by recognition of the end they serve, we have the attitude typical of the artist, an attitude that may be displayed in all activities, even though not conventionally designated arts.

Dewey, How We Think, Pt. III, XVI, 2

62 O sages standing in God's holy fire
As in the gold mosaic of a wall,
Come from the holy fire, perne in a gyre,
And be the singing-masters of my soul.
Consume my heart away; sick with desire
And fastened to a dying animal
It knows not what it is; and gather me
Into the artifice of eternity.

Once out of nature I shall never take
My bodily form from any natural thing,
But such a form as Grecian goldsmiths make
Of hammered gold and gold enameling
To keep a drowsy Emperor awake;
Or set upon a golden bough to sing

To lords and ladies of Byzantium
Of what is past, or passing, or to come.

Yeats, Sailing lo Byzantium

63 The effect of a work of art upon the person who enjoys it is an experience different in kind from any experience not of art. It may be formed out of one emotion, or may be a combination of several; and various feelings, inhering for the writer in particular words or phrases or images, may be added to compose the final result. Or great poetry may be made without the direct use of any emotion whatever: composed out of feelings solely.... It is not the "greatness," the intensity, of the emotions, the components, but the intensity of the artistic process, the pressure, so to speak, under which the fusion takes place, that counts.

T. S. Eliot, Tradition and the Individual Talent

64 This mental vegetation, this fitful nervous groping, is...a sign of life, out of which art emerges by discipline and by a gradual application to real issues. An artist is a dreamer consenting to dream of the actual world; he is a highly suggestible mind hypnotised by reality.

Santayana, Life of Reason, IV, 3

65 The subject matter of art is life, life as it actually is; but the function of art is to make life better. The depth to which an artist may find current experience to be sunk in discord and confusion is not his special concern; his concern is, in some measure, to lift experience out. The more barbarous his age, the more drastic and violent must be his operation.

Santayana, Life of Reason, IV, 4

66 Love, one of the great commonplaces of existence, is slowly leaving mine. The maternal instinct is another great commonplace. Once we've left these behind, we find that all the rest is gay and varied, and that there is plenty of it. But one doesn't leave all that behind when or as one pleases. How wise one of my husbands was when he remonstrated: "But is it impossible for you to write a book that isn't about love, adultery, semi-incestuous relations and a final separation? Aren't there other things in life?" If he had not been in such a hurry to get to his amorous rendezvous—for he was handsome and charming—he might perhaps have taught me what can take the place of love, in a novel or out of it.

Colette, La Naissance d'un jour

67 Art, which rules Making and not Doing, stands therefore outside the human sphere; it has an end, rules, values, which are not those of man, but those of the work to be produced. This work is everything for Art; there is for Art but one law—the exigencies and the good of the work.

Hence the tyrannical and absorbing power of Art, and also its astonishing power of soothing; it delivers one from the human; it establishes the *artifex*—artist or artisan—in a world apart, closed, limited, absolute, in which he puts the energy and intelligence of his manhood at the service of a thing which he makes. This is true of all art; the ennui of living and willing ceases at the door of every workshop.

But if art is not human in the end that it pursues, it is human, essentially human, in its mode of operating. It's a

work of man that has to be made; it must have on it the mark of man: animal rationale.

Maritain, Art and Scholasticism, III

68 Art in general tends to make a work. But certain arts tend to make a *beautiful* work, and in this they differ essentially from all the others. The work to which all the other arts tend is itself ordered to the service of man, and is therefore a simple means; and it is entirely enclosed in a determined material genus. The work to which the fine arts tend is ordered to beauty; as beautiful, it is an end, an absolute, it suffices of itself; and if, as work-to-be-made, it is material and enclosed in a genus, as beautiful it belongs to the kingdom of the spirit and plunges deep into the transcendence and the infinity of being.

The fine arts thus stand out in the genus art as man stands out in the *genus* animal. And like man himself they are like a horizon where matter and spirit meet. They have a spiritual soul. Hence they possess many distinctive properties. Their contact with the beautiful modifies in them certain characteristics of art in general, notably, as I shall try to show, with respect to the rules of art; on the other hand, this contact discloses and carries to a sort of excess other generic characteristics of the virtue of art, above all its intellectual character and its resemblance to the speculative virtues.

Maritain, Art and Scholasticism, V

69 Art is *gratuitous* or disinterested as such—that is to say, ... in the production of the work the virtue of art aims only at one thing; the good of the work-to-be-made, beauty to be made to shine in matter, the creating of the thing

according to its own laws, independently of all the rest; and accordingly it desires that there be nothing in the work which will escape its regulation, and that it be alone in immediately ruling the work, in moulding it and fashioning it.

There are many ways of failing in this "gratuitousness." One may think, for instance, that good moral intentions make up for the quality of the craft or the inspiration, and suffice to construct a work. Or else one may go so far as to adulterate the work itself, such as the rules and the determined ways of art would have it to be, by forcibly applying to it, in order to rule it, foreign elements—the desire to edify, or to disedify, not to shock the public, or to create scandal, to have "arrived" in society, or to cut a figure in the bars and cafes as an artist free and rare.

Maritain, Art and Scholasticism, Appendix I

- 70 Art is just as comprehensible as science, but in its own terms; that is, one can always ask, and usually can determine, how the artistic semblance of life is made and in what it consists.

Langer, Mind, I, Intro.

- 71 Artistic conception, for all its similarities to mythical ideation and even dream, is not a transitional phase of mental evolution, but a final symbolic form making revelation of truths about actual life. Like discursive reason, it seems to have unlimited potentialities. The facts which it makes conceivable are precisely those which literal statement distorts. Having once symbolized and perceived them, we may talk about them; but only

artistic perception can find them and judge them real in the first place.

Langer, Mind, I, 4

72 Art is the objectification of feeling, and the subjectification of nature.

Langer, Mind, I, 4

73 Every kind of art is beautiful, as all life is beautiful, and for much the same reason: that it embodies sentience, from the most elementary sense of vitality, individual being and continuity, to the full expansion of human perception, human love and hate, triumph and misery enlightenment, wisdom.

Langer, Mind, I, 5

16.2 Books and Reading

The passages here assembled require little or no preamble. They are about the writing and reading of books, the collection and enjoyment of them, and the pleasures and pretensions of the literary life.

The reader will find both praise and dispraise of books, criteria for distinguishing good books from bad, enduring from ephemeral literature, and wise counsel about the books to be read or about the amount and character of the reading one should do, including the cautionary observation by Socrates that the living mind of man can never be enclosed within the dead pages of a book.

Comments on literature will also be found in the next two sections of this chapter; and relevant passages in other

chapters, the reader should consult the index under such for terms as "book," "books," and "literature."

■ ■ ■

- 1 Of making many books there is no end; and much study is a weariness of the flesh.

Ecclesiastes 12:12

- 2 *Socrates*. The worst of authors will say something which is to the point.

Plato, Phaedrus, 235B

- 3 *Socrates*. I cannot help feeling, Phaedrus, that writing is unfortunately like painting; for the creations of the painter have the attitude of life, and yet if you ask them a question they preserve a solemn silence. And the same may be said of speeches. You would imagine that they had intelligence, but if you want to know anything and put a question to one of them, the speaker always gives one unvarying answer. And when they have been once written down they are tumbled about anywhere among those who may or may not understand them, and know not to whom they should reply, to whom not: and, if they are maltreated or abused, they have no parent to protect them; and they cannot protect or defend themselves.

Phaedrus. That again is most true.

Soc. Is there not another kind of word or speech far better than this, and having far greater power—a son of the same family, but lawfully begotten?

Phaedr. Whom do you mean, and what is his origin?

Soc. I mean an intelligent word graven in the soul of the learner, which can defend itself, and knows when to speak and when to be silent.

Phaedr. You mean the living word of knowledge which has a soul, and of which the written word is properly no more than an image?

Soc. Yes, of course that is what I mean. And now may I be allowed to ask you a question: Would a husbandman, who is a man of sense, take the seeds, which he values and which he wishes to bear fruit, and in sober seriousness plant them during the heat of summer, in some garden of Adonis, that he may rejoice when he sees them in eight days appearing in beauty? at least he would do so, if at all, only for the sake of amusement and pastime. But when he is in earnest he sows in fitting soil, and practises husbandry, and is satisfied if in eight months the seeds which he has sown arrive at perfection?

Phaedr. Yes, Socrates, that will be his way when he is in earnest; he will do the other, as you say, only in play.

Soc. And can we suppose that he who knows the just and good and honourable has less understanding, than the husbandman, about his own seeds?

Phaedr. Certainly not.

Soc. Then he will not seriously incline to "write" his thoughts "in water" with pen and ink, sowing words which can neither speak for themselves nor teach the truth adequately to others?

Phaedr. No, that is not likely.

Soc. No, that is not likely—in the garden of letters he will sow and plant, but only for the sake of recreation and amusement; he will write them down as memorials to be treasured against the forgetfulness of old age, by himself, or by any other old man who is treading the same path.

He will rejoice in beholding their tender growth; and while others are refreshing their souls with banqueting and the like, this will be the pastime in which his days are spent.

Phaedr. A pastime, Socrates, as noble as the other is ignoble, the pastime of a man who can be amused by serious talk, and can discourse merrily about justice and the like.

Soc. True, Phaedrus. But nobler far is the serious pursuit of the dialectician, who, finding a congenial soul, by the help of science sows and plants therein words which are able to help themselves and him who planted them, and are not unfruitful, but have in them a seed which others brought up in different soils render immortal, making the possessors of it happy to the utmost extent of human happiness.

Phaedr. Far nobler, certainly.

Plato, Phaedrus, 275B

- 4 Every man of worth, when dealing with matters of worth, will be far from exposing them to ill feeling and misunderstanding among men by committing them to writing. In one word, then, it may be known from this that, if one sees written treatises composed by anyone, either the laws of a lawgiver, or in any other form whatever, these are not for that man the things of most worth, if he is a man of worth, but that his treasures are laid up in the fairest spot that he possesses. But if these things were worked at by him as things of real worth, and committed to writing, then surely, not gods, but men "have themselves bereft him of his wits."

Plato, Seventh Letter

5 Go, little book, my little tragedy!
God grant thy maker, ere his ending day,
May write some tale of happy poetry!
But, little book, of any poet's lay
Envy of heart here shalt thou not display,
But kiss the steps where pass through ages spacious,
Vergil and Ovid, Homer, Lucan and Statius.

Chaucer, Troilus and Cressida, V, 256

6 And as for me, though that I konne but lyte,
On bokes for to rede I me delyte.
And to hem yive I feyth and ful credence,
And in myn herte have hem in reverence.

Chaucer, The Legend of Good Women

7 For in the composing of this lordly book, I never lost nor bestowed any more, nor any other time, than what was appointed to serve me for taking of my bodily refection, that is, whilst I was eating and drinking. And, indeed, that is the fittest and most proper hour, wherein to write these high matters and deep sentences: as Homer knew very well, the paragon of all philologues, and Ennius, father of the Latin poets, as Horace calls him, although a certain sneaking jobbernal alleged that his verses smelled more of the wine than oil.

So saith a Turlupin or a new start-up grub of my books; but a turd for him. The fragrant odour of the wine, oh I how much more dainty, pleasant, laughing, celestial, and delicious it is, than that smell of oil! and I will glory as much when it is said of me, that I have spent more on wine than oil, as did Demosthenes, when it was told him, that his expense on oil was greater than on wine.

Rabelais, Gargantua and Pantagruel, I, Prologue

8 If I had written to seek the world's favor, I should have bedecked myself better, and should present myself in a studied posture. I want to be seen here in my simple, natural, ordinary fashion, without straining or artifice; for it is myself that I portray. My defects will here be read to the life, and also my natural form, as far as respect for the public has allowed. Had I been placed among those nations which are said to live still in the sweet freedom of nature's first laws, I assure you I should very gladly have portrayed myself here entire and wholly naked.

Thus, reader, I am myself the matter of my book; you would be unreasonable to spend your leisure on so frivolous and vain a subject.

Montaigne, Essays, To the Reader

9 Do you think that Epicurus, who (while dying in torment, as he says, from the utmost pains of colic) had all his consolation in the beauty of the doctrine he was leaving to the world, would have received as much contentment from a number of well-born and well-brought-up children, if he had had any, as he did from the production of his rich writings? And that if he had had to choose between leaving behind a deformed and ill-born child and leaving behind a stupid and inept book, he would not rather have chosen, and not only he but any man of like ability, to incur the former misfortune than the other?

Montaigne, Essays, II, 8, Affection of Fathers

10 Reason, wisdom, and the offices of friendship are oftener found among men; therefore they govern the affairs of the world.

These two kinds of association are accidental and dependent on others. One is annoying by its rarity, the other withers with age; thus they would not have provided well enough for the needs of my life. Association with books, which is the third kind, is much more certain and more our own. It yields the other advantages to the first two, but it has for its share the constancy and ease of its service. It is at my side throughout my course, and accompanies me everywhere. It consoles me in old age and in solitude. It relieves me of the weight of a tedious idleness, and releases me at any time from disagreeable company. It dulls the pangs of sorrow, unless they are extreme and overpowering. To be diverted from a troublesome idea, I need only have recourse to books: they easily turn my thoughts to themselves and steal away the others. And yet they do not rebel at seeing that I seek them out only for want of those other pleasures, that are more real, lively, and natural; they always receive me with the same expression.

He may well go on foot, they say, who leads his horse by the bridle. And our James, king of Naples and Sicily, who, handsome, young, and healthy, had himself carried around the country on a stretcher, lying on a wretched feather pillow, dressed in a gown of gray cloth with a cap to match, meanwhile followed by great regal pomp, litters, hand-led horses of all sorts, gentlemen and officers, showed an austerity still weak and wavering. The sick man is not to be pitied who has a cure up his sleeve. In the practice and application of this maxim, which is very true, lies all the fruit I reap from books. Actually I use them scarcely any more than those who do not know them at all. I enjoy them, as misers enjoy treasures, because I know that I can enjoy them when I please; my

soul takes its fill of contentment from this right of possession.

I do not travel without books, either in peace or in war. However, many days will pass, and even some months, without my using them. Til do it soon, I say, or tomorrow, or when I please. Time flies and is gone, meanwhile, without hurting me. For I cannot tell you what case and repose I find when I reflect that they are at my side to give me pleasure at my own time, and when I recognize how much assistance they bring to my life. It is the best provision I have found for this human journey, and I am extremely sorry for men of understanding who do not have it. I sooner accept any other kind of amusement, however trivial, because this one cannot fail me.

Montaigne, Essays, III, 3, Three Kinds of Association

- 11 You must know then, that when our Gentleman had nothing to do (which was almost all the Year round) he pass'd his Time in reading Books of Knight-Errantry; which he did with that Application and Delight, that at last he in a manner wholly left off his Country-Sports, and even the Care of his Estate: nay, he grew so strangely besotted with those Amusements, that he sold many Acres of Arable-Land to purchase Books of that kind; by which means he collected as many of them as were to be had....

In fine, he gave himself up so wholly to the reading of Romances, that a-Nights he would pore on 'till 'twas Day, and a-Days he would read on 'till 'twas Night; and thus by sleeping little, and reading much, the Moisture of his Brain was exhausted to that Degree, that at last he lost the Use of his Reason, A world of disorderly Notions, pick'd out of his Books, crouded into his Imagination; and

now his Head was full of nothing but Inchantments, Quarrels, Battles, Challenges, Wounds, Complaints, Amours, Torments, and abundance of Stuff and Impossibilities; insomuch, that all the Fables and fantastical Tales which he read, seem'd to him now as true as the most au-thentick Histories.

Cervantes, Don Quixote, I, 1

12 Don *Quixote* listen'd with great Attention to the Canon's Discourse, and perceiving he had done, after he had fix'd his Eyes on him for a considerable Space; Sir, said he, all your Discourse, I find, tends to signify to me, there never were any Knights-Errant; that all the Books of Knight-Errantry are false, fabulous, useless, and prejudicial to the publick; that I have done ill in reading, err'd in believing, and been much to blame in imitating them, by taking upon me the most painful Profession of Chivalry. And you deny that ever there were any *Amadis's* of *Gaul* or *Greece*, or any of those Knights mention'd in those Books. Even as you have said. Sir, quoth the Canon. You also were pleas'd to add, continu'd Don *Quixote*, that those Books had been very hurtful to me, having depriv'd me of my Reason and reduc'd me to be carry'd in a Cage; that therefore it would be for my Advantage to take up in Time, and apply myself to the reading of other Books, where I might find more Truth, more Pleasure, and better Instruction. You are in the right, said the Canon. Then I am satisfy'd, reply'd Don *Quixote*, you yourself are the Man that raves and is enchanted, since you have thus boldly blasphem'd against a Truth so universally receiv'd, that whosoever presumes to contradict it, as you have done, deserves the Punishment you would inflict on those Books, which in reading offend and tire you. For it were as

easy to persuade the World that the Sun does not enlighten, the Frost cool, and the Earth bear us, as that there never was an *Amadis*, or any of the other adventurous Knights, whose Actions are the Subjects of so many Histories, What Mortal can persuade another, that there is no Truth in what is recorded of the Infanta *Floripes*, and *Guy of Burgundy*: as also *Fierabras* at the Bridge of *Mantible* in the Reign of *Charlemaign*? which Passages, I dare swear, are as true as that now it is Day. But if this be false, you may as well say there was no *Hector*, nor *Achilles*; nor a *Trojan War*, nor *Twelve Peers of France*, nor a King *Arthur* of Britain, who is now converted into a Crow, and hourly expected in his Kingdom.

Cervantes, Don Quixote, I, 49

- 13 For Me alone was the Great *Quixote* born, and I alone for Him. Deeds were his Task, and to record 'em, Mine. *We two, like Tallies for each other struck, are nothing when apart.*

Cervantes, Don Quixote, II, 74

- 14 For a man to write well, there are required three necessities—to read the best authors, observe the best speakers, and much exercise of his own style.

Jonson, Discoveries: De Stilo

- 15 Let no man upon a weak conceit of sobriety or an ill-applied moderation think or maintain, that a man can search too far, or be too well studied in the book of God's word, or in the book of God's works, divinity or philosophy; but rather let men endeavour an endless progress or proficiencie in both.

Bacon, Advancement of Learning, Bk. I, I, 3

- 16 If anyone turn from the manufactories to libraries, and be inclined to admire the immense variety of books offered to our view, let him but examine and diligently inspect the matter and contents of these books, and his astonishment will certainly change its object: for when he finds no end of repetitions, and how much men do and speak the same thing over again, he will pass from admiration of this variety to astonishment at the poverty and scarcity of matter, which has hitherto possessed and filled men's minds.

Bacon, Novum Organum, I, 85

- 17 Some books are to be tasted, others to be swallowed, and some few to be chewed and digested; that is, some books are to be read only in parts; others to be read, but not curiously; and some few to be read wholly, and with diligence and attention. Some books also may be read by deputy, and extracts made of them by others; but that would be only in the less important arguments, and the meaner sort of books; else distilled books are like common distilled waters, flashy things. Reading maketh a full man; conference a ready man; and writing an exact man. And therefore, if a man write little, he had need have a great memory; if he confer little, he had need have a present wit: and if he read little, he had need have much cunning, to seem to know that he doth not. Histories make men wise; poets witty; the mathematics subtile; natural philosophy deep; moral grave; logic and rhetoric able to contend.

Bacon, Of Studies

18 The reading of all good books is indeed like a conversation with the noblest men of past centuries who were the authors of them, nay a carefully studied conversation, in which they reveal to us none but the best of their thoughts.

Descartes, Discourse on Method, I

19 If I read as many books as other men do, I would be as dull-witted as they.

Hobbes, qu. by Aubrey, Brief Lives

20 The best books are those whose readers think they could have written them.

Pascal, Geometrical Demonstration

21 Books are not absolutely dead things, but do contain a potency of life in them to be as active as that soul was whose progeny they are; nay, they do preserve as in a vial the purest efficacy and extraction of that living intellect that bred them. I know they are as lively, and as vigorously productive, as those fabulous dragon's teeth; and being sown up and down, may chance to spring up armed men. And yet, on the other hand, unless wariness be used, as good almost kill a man as kill a good book. Who kills a man kills a reasonable creature, God's image; but he who destroys a good book, kills reason itself, kills the image of God, as it were in the eye. Many a man lives a burden to the earth; but a good book is the precious lifeblood of a master spirit, embalmed and treasured up on purpose to a life beyond life. 'Tis true, no age can restore a life, whereof perhaps there is no great loss; and revolutions of ages do not oft recover the loss of a

rejected truth, for the want of which whole nations fare the worse.

Milton, Areopagitica

22 Who reads

Incessantly, and to his reading brings not
A spirit and judgment equal or superior,
(And what he brings, what needs he elsewhere seek)
Uncertain and unsettl'd still remains,
Deep verst in books and shallow in himself,
Crude or intoxicate, collecting toys,
And trifles for choice matters, worth a sponge;
As Children gathering pibles on the shore.

Milton, Paradise Regained, IV, 322

23 Would a Writer know how to behave himself with relation to Posterity, let him consider in old Books, what he finds, that he is glad to know, and what Omissions he most laments.

Swift, Thoughts on Various Subjects

24 The most accomplished way of using books at present is two-fold; either, first, to serve them as some men do lords, learn their titles exactly, and then brag of their acquaintance. Or, secondly, which is indeed the choicer, the profounder, and politer method, to get a thorough insight into the index, by which the whole book is governed and turned, like fishes by the tail. For to enter the palace of learning at the great gate requires an expense of time and forms; therefore men of much haste and little ceremony are content to get in by the back door.

Swift, Tale of a Tub, VII

25 Now, it is not well enough considered to what accidents and occasions the world is indebted for the greatest part of those noble writings which hourly start up to entertain it. If it were not for a rainy day, a drunken vigil, a fit of the spleen, a course of physic, a sleepy Sunday, an ill run at dice, a long tailor's bill, a beggar's purse, a factious head, a hot sun, costive diet, want of books, and a just contempt of learning: but for these events, I say, and some others too long to recite (especially a prudent neglect of taking brimstone inwardly), I doubt the number of authors and of writings would dwindle away to a degree most woful to behold.

Swift, Tale of a Tub, X

26 I am now trying an experiment very frequent among modern authors, which is to write upon nothing.

Swift, Tale of a Tub, Conclusion

27 True ease in writing comes from art, not chance,
As those move easiest who have learned to dance.

Pope, Essay on Criticism, II, 362

28 [An author is] a fool who, not content with having bored those who have lived with him, insists on tormenting the generations to come.

Montesquieu, Persian Letters, LXVI

29 Digressions, incontestably, are the sunshine;— they are the life, the soul of reading!—take them out of this book, for instance,—you might as well take the book along with

them;—one cold eternal winter would reign in every page of it; restore them to the writer;—he steps forth like a bridegroom,—bids All-hail; brings in variety, and forbids the appetite to fail.

Sterne, Tristram Shandy, I, 22

30 You despise them, books, you whose whole life is plunged in the vanities of ambition and in the search for pleasure or in idleness; but think that the whole of the known universe, with the exception of the savage races, is governed by books alone. The whole of Africa right to Ethiopia and Nigritia obeys the book of the Alcoran, after having staggered under the book of the Gospel. China is ruled by the moral book of Confucius; a greater part of India by the book of the Veidam. Persia was governed for centuries by the books of one of the Zarathustras.

If you have a law-suit, your goods, your honour, your life even depends on the interpretation of a book which you never read....

Who leads the human race in civilized countries? those who know how to read and write. You do not know either Hippocrates, Boerhaave or Sydenham; but you put your body in the hands of those who have read them. You abandon your soul to those who are paid to read the Bible, although there are not fifty among them who have read it in its entirety with care.

Voltaire, Philosophical Dictionary: Books

31 The chief glory of every people arises from its authours.

Johnson, Preface to the Dictionary

32 No place affords a more striking conviction of the vanity of human hopes than a public library.

Johnson, Rambler No. 106

33 Nothing is more common than to find men whose works are now totally neglected mentioned with praises by their contemporaries as the oracles of their age and the legislators of science.

Johnson, Rambler No. 106

34 *Johnson.* I would not advise a rigid adherence to a particular plan of study. I myself have never persisted in any plan for two days together. A man ought to read just as inclination leads him; for what he reads as a task will do him little good. A young man should read five hours in a day, and so may acquire a great deal of knowledge.

Boswell, Life of Johnson (July 14, 1763)

35 *Johnson.* When a man writes from his own mind, he writes very rapidly. The greatest part of a writer's time is spent in reading, in order to write; a man will turn over half a library to make one book.

Boswell, Life of Johnson (Apr. 6, 1775)

36 He [Johnson] then took occasion to enlarge on the advantages of reading, and combated the idle superficial notion, that knowledge enough may be acquired in conversation. "The foundation (said he), must be laid by reading. General principles must be had from books, which, however, must be brought to the test of real life. In conversation you never get a system. What is said upon a subject is to be gathered from a hundred people. The

parts of a truth, which a man gets thus, are at such a distance from each other that he never attains to a full view."

Boswell, Life of Johnson (Apr. 76, 1775)

- 37 When I expressed an earnest wish for his [Johnson's] remarks on Italy, he said, "I do not see that I could make a book upon Italy; yet I should be glad to get two hundred pounds, or five hundred pounds, by such a work." This shewed both that a journal of his Tour upon the Continent was not wholly out of his contemplation, and that he uniformly adhered to that strange opinion, which his indolent disposition made him utter: "No man but a blockhead ever wrote, except for money." Numerous instances to refute this will occur to all who are versed in the history of literature.

Boswell, Life of Johnson (Apr. 5, 1776)

- 38 On Thursday, May 1, I visited him [Johnson] in the evening along with young Mr. Burke. He said, "It is strange that there should be so little reading in the world, and so much writing. People in general do not willingly read, if they can have any thing else to amuse them. There must be an external impulse; emulation, or vanity, or avarice. The progress which the understanding makes through a book, has more pain than pleasure in it. Language is scanty, and inadequate to express the nice gradations and mixtures of our feelings. No man reads a book of science from pure inclination. The books that we do read with pleasure are light compositions, which contain a quick succession of events. However, I have this year read all Virgil through. I read a book of the

Aeneid every night, so it was done in twelve nights, and I had great delight in it."

Boswell, Life of Johnson (May 1, 1783)

39 I sincerely regret the more valuable libraries which have been involved in the ruin of the Roman empire; but when I seriously compute the lapse of ages, the waste of ignorance, and the calamities of war, our treasures, rather than our losses, are the object of my surprise. Many curious and interesting facts are buried in oblivion: the three great historians of Rome have been transmitted to our hands in a mutilated state; and we are deprived of many pleasing compositions of the lyric, iambic, and dramatic poetry of the Greeks. Yet we should gratefully remember that the mischances of time and accident have spared the classic works to which the suffrage of antiquity' had adjudged the first place of genius and glory: the teachers of ancient knowledge, who are still extant, had perused and compared the writings of their predecessors; nor can it fairly be presumed that any important truth, any useful discovery in art or nature, has been snatched away from the curiosity of modern ages.

Gibbon, Decline and Fall of the Roman Empire, LI

40 Authors should use common words to say uncommon things. But they do just the opposite. We find them trying to wrap up trivial ideas in grand words, and to clothe their very ordinary thoughts in the most extraordinary phrases, the most farfetched, unnatural, and out-of-the-way expressions. Their sentences perpetually stalk about on stilts. They take so much pleasure in bombast, and write in such a high-flown, bloated, affected, hyperbolical

and acrobatic style that their prototype is Ancient Pistol, whom his friend Falstaff once impatiently told to say what he had to say like a man of this world.

Schopenhauer, Style

- 41 If a man wants to read good books, he must make a point of avoiding bad ones; for life is short, and time and energy limited.

Schopenhauer, Some Forms of Literature

- 42 The man who writes for fools is always sure of a large audience; be careful to limit your time for reading, and devote it exclusively to the works of those great minds of all times and countries, who o’ertop the rest of humanity, those whom the voice of fame points to as such. These alone really educate and instruct. You can never read bad literature too little, nor good literature too much. Bad books are intellectual poison; they destroy the mind.

Schopenhauer, Books and Reading

- 43 There are at all times two literatures in progress, running side by side, but little known to each other; the one real, the other only apparent. The former grows into permanent literature; it is pursued by those who live *for* science or poetry; its course is sober and quiet, but extremely slow; and it produces in Europe scarcely a dozen works in a century; these, however, are permanent. The other kind is pursued by persons who live *on* science or poetry; it goes at a gallop with much noise and shouting of partisans; and every twelve-month puts a thousand works on the market. But after a few years one asks, Where are they? where is the glory which

came so soon and made so much clamor? This kind may be called fleeting, and the other, permanent literature.

Schopenhauer, Books and Reading

44 The true University of these days is a Collection of Books.

Carlyle, The Hero as Man of Letters

45 Of all Priesthoods, Aristocracies, Governing Glasses at present extant in the world, there is no class comparable for importance to that Priesthood of the Writers of Books.

Carlyle, The Hero as Man of Letters

46 Meek young men grow up in libraries, believing it their duty to accept the views which Cicero, which Locke, which Bacon, have given; forgetful that Cicero, Locke, and Bacon were only young men in libraries when they wrote these books.

Hence, instead of Man Thinking, we have the bookworm.

Emerson, The American Scholar

47 The three practical rules, then, which I have to offer, are —1. Never read any book that is not a year old. 2. Never read any but famed books. 3. Never read any but what you like.

Emerson, Books

48 'Tis the good reader that makes the good book; in every book he finds passages which seem confidences or asides hidden from all else and unmistakably meant for his ear; the profit of books is according to the sensibility of the

reader; the profoundest thought or passion sleeps as in a mine, until it is discovered by an equal mind and heart.

Emerson, Success

- 49 All literature is yet to be written. Poetry has scarce chanted its first song. The perpetual admonition of nature to us is, "The world is new, untried. Do not believe the past. I give you the universe a virgin today."

Emerson, Literary Ethics

- 50 Authors—essayist, atheist, novelist, realist, rhymester, play your part,
Paint the mortal shame of nature with the living hues of art.
Rip your brothers' vices open, strip your own foul passions bare;
Down with Reticence, down with Reverence— forward—naked—let them stare.

Tennyson, Locksley Hall Sixty Years After, 139

- 51 One often hears of writers that rise and swell with their subject, though it may seem but an ordinary one. How, then, with me, writing of this Leviathan? Unconsciously my chirography expands into placard capitals. Give me a condor's quill! Give me Vesuvius' crater for an inkstand! Friends, hold my arms! For in the mere act of penning my thoughts of this Leviathan, they weary me, and make me faint with their out-reaching comprehensiveness of sweep, as if to include the whole circle of the sciences, and all the generations of whales, and men, and mastodons, past, present, and to come, with all the revolving panoramas of empire on earth, and throughout

the whole universe, not excluding its suburbs. Such, and so magnifying, is the virtue of a large and liberal theme! We expand to its bulk. To produce a mighty book, you must choose a mighty theme. No great and enduring volume can ever be written on the flea, though many there be who have tried it.

Melville, Moby Dick, CIV

52 For what are the classics but the noblest recorded thoughts of man? They are the only oracles which are not decayed.

Thoreau, Walden: Reading

53 Camerado, this is no book.
Who touches this touches a man.

Whitman, So Long!

54 Who can tell how many of the most original thoughts put forth by male writers, belong to a woman by suggestion, to themselves only by verifying and working out? If I may judge by my own case, a very large proportion indeed.

Miff, Subjection of Women, III

55 To read to good purpose we must read a great deal, and be content not to use a great deal of what we read. We shall never be content not to use the whole, or nearly the whole, of what we read, unless we read a great deal. Yet things are on such a scale, and progress is so gradual, and what one man can do is so bounded, that the moment we press the whole of what any writer says, we fall into error. He touches a great deal: the thing to know is where he is all himself and his best self, where he

shows his power, where he goes to the heart of the matter, where he gives us what no other man gives us, or gives us so well.

Arnold, Literature and Dogma, Pref.

56 A classic is something that everybody wants to have read and nobody wants to read.

Mark Twain, The Disappearance of Literature

57 Tom's most well now, and got his bullet around his neck on a watch-guard for a watch, and is always seeing what time it is, and so there ain't nothing more to write about, and I am rotten glad of it, because if I'd 'a' knowed what a trouble it was to make a book I wouldn't 'a' tackled it, and ain't a-going to no more.

Mark Twain, Huckleberry Finn, XLIII

58 *Write without pay until somebody offers pay.* If nobody offers pay within three years, the candidate may look upon this circumstance with the most implicit confidence as the sign that sawing wood is what he was intended for.

Mark Twain, Life as I Find It: General Reply

59 In human life, art may arise from almost any activity, and once it does so, it is launched on a long road of exploration, invention, freedom to the limits of extravagance, interference to the point of frustration, finally discipline, controlling constant change and growth.

Langer, Mind, 1,5

16.3 Poetry and Poets

This section includes quotations of two main sorts: one consists of statements about poetry in general—about the writing of verses and the telling of stories; the other, of statements about poets as men and as writers.

With regard to poetry in general, it must be observed that this term, like the term "art," has gradually become more restricted in its meaning. The reader will find passages from Plato in which "poetry" has the same generality as "art," signifying making and things made. The Greek word for making is *poiesis*. Less general than that, yet much less restricted than its current usage, is its employment by the ancients to refer to any form of imaginative writing, whether in verse or in prose—the telling of stories, in either the epic or the dramatic form of narration, as well as the singing of songs. It is in this sense of the term that poetry is contrasted with history and with philosophy or science, especially with respect to its mode of truth. Only in the last few centuries has "poetry," like the word "art," been narrowed down to name one type of imaginative literature—lyric poems, usually written in verse.

Many of the critical comments on the work of particular poets gathered here come from the poets themselves. Most of them are laudatory and appreciative, though not all, as, for example, Dryden's comments on Chaucer, and Blake's on Milton. Virgil on Homer, Ben Johnson and Samuel Johnson on Shakespeare, Dryden on Milton and Chaucer, T. S. Eliot on Dante, and Dante on Virgil—these are but a few of the

examples of the warm and loving tributes that later writers pay to earlier ones.

Other quotations about poetry and literature appear in other sections, notably Section 16.2 on Books AND Reading and 16.4 on Tragedy and Comedy. The reader should also consult the index under appropriate terms for passages that appear in other chapters.

■ ■ ■

- 1 *Odysseus*. All men owe honor to the poets—honor and awe, for they are dearest to the Muse who puts upon their lips the ways of life.

Homer, Odyssey, VIII, 479

- 2 *Adrastus*. The poet bringing songs into the world
Should labor in joy. If this is not his mood,
He cannot—being inwardly distressed—
Give pleasure outwardly,

Euripides, Suppliant Women, 180

- 3 *Servant*. Did you see any wandering in the air
Besides yourself?

Trygaeus. No; nothing much to speak of,
Two or three souls of dithyrambic poets.

S. What were they after?

Tr. Flitting round for odes.

Those floating-on-high-in-the-airy-sky affairs.

S. Then 't isn't true what people say about it,
That when we die, we straightway turn to stars?

Tr. O yes it is.

S. And who's the star there now?

Tr. Ion of Chios, who on earth composed "Star o' the Morn," and when he came there, all At once saluted him as "Star o' the Morn."

S. And did you learn about those falling stars
Which sparkle as they run?

Tr. Yes, those are some
Of the rich stars returning home from supper,
Lanterns in hand, and in the lanterns fire.

Aristophanes, Peace, 825

- 4 *Socrates*. The third kind is the madness of those who are possessed by the Muses; which taking hold of a delicate and virgin soul, and there inspiring frenzy, awakens lyrical and all other numbers; with these adorning the myriad actions of ancient heroes for the instruction of posterity. But he who, having no touch of the Muses' madness in his soul, comes to the door and thinks that he will get into the temple by the help of art--he, I say, and his poetry' are not admitted; the sane man disappears and is nowhere when he enters into rivalry with the madman.

Plato, Phaedrus, 245A

- 5 *Socrates*. All good poets, epic as well as lyric, compose their beautiful poems not by art, but because they are inspired and possessed.... For the poet is a light and winged and holy thing, and there is no invention in him until he has been inspired and is out of his senses, and the mind is no longer in him: when he has not attained to this state, he is powerless and is unable to utter his oracles.

Many are the noble words in which poets speak concerning the actions of men; but like yourself when speaking about Homer, they do not speak of them by any rules of art: they are simply inspired to utter that to which the Muse impels them, and that only; and when inspired, one of them will make dithyrambs, another hymns of praise, another choral strains, another epic or iambic verses—and he who is good at one is not good at any other kind of verse: for not by art does the poet sing, but by power divine. Had he learned by rules of art, he would have known how to speak not of one theme only, but of all; and therefore God takes away the minds of poets, and uses them as his ministers, as he also uses diviners and holy prophets, in order that we who hear them may know them to be speaking not of themselves who utter these priceless words in a state of unconsciousness, but that God himself is the speaker, and that through them he is conversing with us. And Tynnichus the Chalcidian affords a striking instance of what I am saying: he wrote nothing that any one would care to remember but the famous paeon which is in every one's mouth, one of the finest poems ever written, simply an invention of the Muses, as he himself says. For in this way the God would seem to indicate to us and not allow us to doubt that these beautiful poems are not human, or the work of man, but divine and the work of God; and that the poets are only the interpreters of the Gods by whom they are severally possessed. Was not this the lesson which the God intended to teach when by the mouth of the worst of poets he sang the best of songs? Am I not right, Ion?

Ion. Yes, indeed, Socrates, I feel that you are; for your words touch my soul, and I am persuaded that good poets

by a divine inspiration interpret the things of the Gods to us.

Plato, Ion, 533B

6 If you consider, I [Socrates] said, that when in misfortune we feel a natural hunger and desire to relieve our sorrow by weeping and lamentation, and that this feeling which is kept under control in our own calamities is satisfied and delighted by the poets—the better nature in each of us, not having been sufficiently trained by reason or habit, allows the sympathetic element to break loose because the sorrow is another's; and the spectator fancies that there can be no disgrace to himself in praising and pitying any one who comes telling him what a good man he is, and making a fuss about his troubles; he thinks that the pleasure is a gain, and why should he be supercilious and lose this and the poem too? Few persons ever reflect, as I should imagine, that from the evil of other men something of evil is communicated to themselves. And so the feeling of sorrow which has gathered strength at the sight of the misfortunes of others is with difficulty repressed in our own,

Glaucon. How very true!

And does not the same hold also of the ridiculous? There are jests which you would be ashamed to make yourself, and yet on the comic stage, or indeed in private, when you hear them, you are greatly amused by them, and are not at all disgusted at their unseemliness—the case of pity is repeated—there is a principle in human nature which is disposed to raise a laugh, and this which you once restrained by reason, because you were afraid of being thought a buffoon, is now let out again; and having stimulated the risible faculty at the theatre, you

are betrayed unconsciously to yourself into playing the comic poet at home.

Quite true, he said.

And the same may be said of lust and anger and all the other affections, of desire and pain and pleasure, which are held to be inseparable from every action—in all of them poetry feeds and waters the passions instead of drying them up; she lets them rule, although they ought to be controlled, if mankind are ever to increase in happiness and virtue.

I cannot deny it.

Therefore, Glaucon, I said, whenever you meet with any of the eulogists of Homer declaring that he has been the educator of Hellas, and that he is profitable for education and for the ordering of human things, and that you should take him up again and again and get to know him and regulate your whole life according to him, we may love and honour those who say these things—they are excellent people, as far as their lights extend; and we are ready to acknowledge that Homer is the greatest of poets and first of tragedy writers; but we must remain firm in our conviction that hymns to the gods and praises of famous men are the only poetry which ought to be admitted into our State. For if you go beyond this and allow the honeyed muse to enter, either in epic or lyric verse, not law and the reason of mankind, which by common consent have ever been deemed best but pleasure and pain will be the rulers in our State.

That is most true, he said.

And now since we have reverted to the subject of poetry, let this our defence serve to show the reasonableness of our former judgment in sending away out of our State an art having the tendencies which we

have described; for reason constrained us. But that she may not impute to us any harshness or Want of politeness, let us tell her that there is an ancient quarrel between philosophy and poetry; of which there are many proofs, such as the saying of "the yelping hound howling at her lord," or of one "mighty in the vain talk of fools," and "the mob of sages circumventing Zeus," and the "subtle thinkers who are beggars after all"; and there are innumerable other signs of ancient enmity between them. Notwithstanding this, let us assure our sweet friend and the sister arts of imitation, that if she will only prove her title to exist in a well-ordered State we shall be delighted to receive her—we are very conscious of her charms; but we may not on that account betray the truth, I dare say, Glaucon, that you are as much charmed by her as I am, especially when she appears in Homer?

Yes, indeed, I am greatly charmed.

Shall I propose, then, that she be allowed to return from exile, but upon this condition only— that she make a defence of herself in lyrical or some other metre?

Certainly.

And We may further grant to those of her defenders who are lovers of poetry and yet not poets the permission to speak in prose on her behalf: let them show not only that she is pleasant but also useful to States and to human life, and we will listen in a kindly spirit; for if this can be proved we shall surely be the gainers—I mean, if there is a use in poetry as well as a delight?

Plato, Republic, X, 606A

- 7 The general origin of poetry was due to two causes, each of them part of human nature. Imitation is natural to man from childhood, one of his advantages over the lower

animals being this, that he is the most imitative creature in the world, and learns at first by imitation. And it is also natural for all to delight in works of imitation. The truth of this Second point is shown by experience: though the objects themselves may be painful to see, we delight to view the most realistic representations of them in art, the forms for example of the lowest animals and dead bodies. The explanation is to be found in a further fact; to be learning something is the greatest of pleasures not only to the philosopher but also to the rest of mankind, however small their capacity for it; the reason of the delight in seeing the picture is that one is at the same time learning—gathering the meaning of things, for example, that the man there is so-and-so; for if one has not seen the thing before, one's pleasure will not be in the picture as an imitation of it, but will be due to the execution or colouring or some similar cause. Imitation, then, being natural to us—as also the sense of harmony and rhythm, the metres being obviously species of rhythms—it was through their original aptitude, and by a series of improvements for the most part gradual on their first efforts, that they created poetry out of their improvisations.

Aristotle, Poetics, 1448N

- 8 The distinction between historian and poet is not in the one writing prose and the other verse—you might put the work of Herodotus into verse, and it would still be a species of history; it consists really in this, that the one describes the thing that has been, and the other a kind of thing that might be. Hence poetry is something more philosophic and of graver import than history, since its statements are of the nature rather of universals, whereas

those of history are singulars. By a universal statement I mean one as to what such or such a kind of man will probably or necessarily say or do— which is the aim of poetry... by a singular statement, one as to what, say, Alcibiades did or had done to him.

Aristotle, Poetics, 1451a40

- 9 Poetry demands a man with a special gift for it, or else one with a touch of madness in him.

Aristotle, Poetics, 1455a35

- 10 It is a great thing, indeed, to make a proper use of... poetical forms, as also of compounds and strange words. But the greatest thing by far is to be a master of metaphor. It is the one thing that cannot be learnt from others; and it is also a sign of genius, since a good metaphor implies an intuitive perception of the similarity in dissimilars.

Aristotle, Poetics, 1459a3

- 11 Homer, admirable as he is in every other respect, is especially so in this, that he alone among epic poets is not unaware of the part to be played by the poet himself in the poem. The poet should say very little *in propria persona*, as he is no imitator when doing that.

Aristotle, Poetics, 1460a5

- 12 For the purposes of poetry a convincing impossibility is preferable to an unconvincing possibility.

Aristotle, Poetics, 1461b11

13 I traverse the pathless haunts of the Pierides never yet trodden by sole of man, I love to approach the untasted springs and to quaff, I love to cull fresh flowers and gather for my head a distinguished crown from spots whence the Muses have yet veiled the brows of none; first because I teach of great things and essay to release the mind from the fast bonds of religious scruples, and next because on a dark subject I pen such lucid verses o'erlaying all with the Muses' charm. For that too would seem to be not without good grounds: even as physicians when they propose to give nauseous wormwood to children, first smear the rim round the bowl with the sweet yellow juice of honey, that the unthinking age of children may be fooled as far as the lips, and meanwhile drink up the bitter draught of wormwood and though beguiled yet not be betrayed, but rather by such means recover health and strength: so I now, since this doctrine seems generally somewhat bitter to those by whom it has not been handled, and the multitude shrinks back from it in dismay, have resolved to set forth to you our doctrine in sweet-toned Pierian verse and o'erlay it as it were with the pleasant honey of the Muses, if haply by such means I might engage your mind on my verses, till such time as you apprehend all the nature of things and thoroughly feel what use it has.

Lucretius, Nature of Things, IV

14 Thus have I sung of fields, of flocks, and trees,
And of the waxen work of labouring bees:
While mighty Cassar, thundering from afar.
Seeks on Euphrates' banks the spoils of war;
With conquering arts asserts his country's cause.
With arts of peace the willing people draws;

On the glad earth the golden age renews,
And his great father's path to heaven pursues;
While I at Naples pass my peaceful days,
Affecting studies of less noisy praise;
And, bold through youth, beneath the beechen shade,
The lays of shepherds, and their loves, have played.

Virgil, Georgics, IV

15 Oft before Agamemnon brave men warred;
But all unwept they lie in endless night.
Lacking, to deck their deeds with light,
Song of a heaven-taught bard.

Horace, Odes, IV, 9

16 Let poets match their subject to their strength,
And often try what weight they can support,
And what their shoulders are too weak to bear,
After a serious and judicious choice,
Method and eloquence will never fail.

Horace, Ars Poetica

17 Sound judgment is the ground of writing well:
And when philosophy directs your choice
To proper subjects rightly understood,
Words from your pen will naturally flow;
He only gives the proper characters,
Who knows the duty of all ranks of men,
And what we owe to country, parents, friends.
How judges, and how senators should act,
And what becomes a general to do;
Those are the likeliest copies, which are drawn
By the original of human life.

Horace, Ars Poetica

18 A poet should instruct, or please, or both;
Let all your precepts be succinct and clear,
That ready wits may comprehend them soon,
And faithful memories retain them long;
For superfluities are soon forgot.
Never be so conceited of your parts,
To think you may persuade us what you please.

Horace, Ars Poetica

19 Poems, like pictures, are of diff'rent sorts,
Some better at a distance, others near,
Some love the dark, some choose the clearest light,
And boldly challenge the most piercing eye,
Some please for once, some will for ever please.

Horace, Ars Poetica

20 Yet if it ever be your fate to write,
Let your productions pass the strictest hands,
Mine and your father's, and not see the light,
'Till time and care have ripen'd ev'ry line.

Horace, Ars Poetica

21 With such vigorous resolutions, and his mind thus
disposed, he [Alexander] passed the Hellespont, and at
Troy sacrificed to Minerva, and honoured the memory of
the heroes who were buried there, with solemn libations;
especially Achilles, whose gravestone he anointed, and
with his friends, as the ancient custom is, ran naked
about his sepulchre, and crowned it with garlands,
declaring how happy he esteemed him, in having while
he lived so faithful a friend, and when he was dead, so

famous a poet to proclaim his actions. While he was viewing the rest of the antiquities and curiosities of the place, being told he might see Paris's harp, if he pleased, he said he thought it not worth looking on, but he should be glad to see that of Achilles, to which he used to sing the glories and great actions of brave men.

Plutarch, Alexander

22 When she (Philosophy] saw that the Muses of poetry were present by my couch giving words to my lamenting, she was stirred a while; her eyes flashed fiercely, and said she, "Who has suffered these seducing mummers to approach this sick man? Never do they support those in sorrow by any healing remedies, but rather do ever foster the sorrow by poisonous sweets. These are they who stifle the fruit-bearing harvest of reason with the barren briars of the passions: they free not the minds of men from disease, but accustom them thereto. I would think it less grievous if your allurements drew away from me some uninitiated man, as happens in the vulgar herd. In such an one my labours would be naught harmed, but this man has been nourished in the lore of Eleatics and Academics; and to him have ye reached? Away with you, Sirens, seductive unto destruction! leave him to my Muses to be cared for and to be healed."

Their band thus rated cast a saddened glance upon the ground, confessing their shame in blushes, and passed forth dismally over the threshold.

Boethius, Consolation of Philosophy, I

23 Just as human reason fails to grasp poetical expressions because they are lacking in truth, so does it fail to grasp

Divine things perfectly on account of the sublimity of the truth they contain. And therefore in both cases there is need of signs by means of sensible figures,

Aquinas, Summa Theologica, I-II, 101, 2

24 "O thou, that honourest every science and art; who are these, who have such honour, that it separates them from the manner of the rest?"

And he to me: "The honoured name, which sounds of them, up in that life of thine, gains favour in heaven which thus advances them."

Meanwhile a voice was heard by me: "Honour the great Poet! His shade returns that was departed."

After the voice had paused, and was silent, I saw four great shadows come to us; they had an aspect neither sad nor joyful.

The good Master began to speak: "Mark him with that sword in hand, who comes before the three as their lord: that is Homer, the sovereign Poet; the next who comes is Horace the satirist; Ovid is the third, and the last *is* Lucan.

Because each agrees with me in the name, which the one voice sounded, they do me honour: and therein they do well."

Thus I saw assembled the goodly school of [those] lord[s] of highest song, [which], like an eagle, soars above the rest.

After they had talked a space together, they turned to me with sign of salutation; and my Master smiled thereat.

And greatly more besides they honoured me; for they made me of their number, so I was a sixth amid such intelligences.

Dante, Inferno, IV, 73

25 And therefore, figuring Paradise, needs must the sacred poem make a leap, as who should find his pathway intercepted.

But whoso thinketh of the weighty theme and of the mortal shoulder which hath charged itself therewith, will think no blame if under it it trembleth.

It is no voyage for a little barque, that which my daring keel cleaveth as it goeth, nor for a helmsman who doth spare himself.

Dante, Paradiso XXIII, 61

26 We must discuss what things are greatest; and first in respect of what is useful. Now in this matter, if we carefully consider the object of all those who are in search of what is useful, we shall find that it is nothing else but safety. Secondly, in respect of what is pleasurable; and here we say that that is most pleasurable which gives pleasure by the most exquisite object of appetite, and this is love. Thirdly, in respect of what is right; and here no one doubts that virtue has the first place. Wherefore these three things, namely, safety, love, and virtue, appear to be those capital matters which ought to be treated of supremely, I mean the things which are most important in respect of them, as prowess in arms, the fire of love, and the direction of the will. And if we duly consider, we shall find that the illustrious writers have written poetry in the vulgar tongue on these subjects exclusively.

Dante, De Vulgari Eloquentia, II, 2

27 Be it known that the sense of this work (the Divine Comedy] is not simple, but on the contrary it may be called polysemous, that is to say, 'of more senses than one'; for it is one sense which we get through the letter, and another which we get through the thing the letter signifies; and the first is called literal, but the second allegorical or mystic. And this mode of treatment, for its better manifestation, may be considered in this verse: 'When Israel came out of Egypt, and the house of Jacob from a people of strange speech, Judaea became his sanctification, Israel his power.' For if we inspect the letter alone the departure of the children of Israel from Egypt in the time of Moses is presented to us; if the allegory, our redemption wrought by Christ; if the moral sense, the conversion of the soul from the grief and misery of sin to the state of grace is presented to us; if the anagogical, the departure of the holy soul from the slavery of this corruption to the liberty of eternal glory is presented to us. And although these mystic senses have each their special denominations, they may all in general be called allegorical, since they differ from the literal and historical.... When we understand this we see clearly that the *subject* round which the alternative senses play must be twofold. And we must therefore consider the subject of this work as literally understood, and then its subject as allegorically intended. The subject of the whole work, then, taken in the literal sense only, is 'the state of souls after death,' without qualification, for the whole progress of the work hinges on it and about it. Whereas if the work be taken allegorically the subject is 'man, as by good or ill deserts, in the exercise of the freedom of his choice, he becomes liable to rewarding or punishing justice.'

Dante, Letter to Can Grande

28 Just as sound, when pent up in the narrow channel of a trumpet, comes out sharper and stronger, so it seems to me that a thought, when compressed into the numbered feet of poetry, springs forth much more violently and strikes me a much stiffer jolt.

Montaigne, Essays, I, 26, Education of Children

29 I am not one of those who think that good rhythm makes a good poem. Let him make a short syllable long if he wants, that doesn't matter; if the inventions are pleasant, if wit and judgment have done their work well, I shall say: There is a good poet, but a bad versifier.

Montaigne, Essays, I, 26, Education of Children

30 As, in exploits of war, the heat of combat often impels high-souled soldiers to go through such dangers that when they have come back to themselves they are the first to be struck with amazement; as also poets are often rapt in wonder at their own works and no longer recognize the track over which they ran so fine a race. That is what is called poetic frenzy and madness. And as Plato says that a sedate man knocks in vain on the door of poetry, so Aristotle says that no excellent soul is free from an admixture of madness. And he is right to call madness any transport, however laudable, that transcends our own judgment and reason; inasmuch as wisdom is an orderly management of our soul, which she conducts with measure and proportion and is responsible for.

Montaigne, Essays, II, 2, Of Drunkenness

31 *Theseus*. Lovers and madmen have such seething brains,
Such shaping fantasies, that apprehend
More than cool reason ever comprehends.
The lunatic, the lover, and the poet
Are of imagination all compact:
One sees more devils than vast hell can hold,
That is, the madman: the lover, all as frantic,
Sees Helen's beauty in a brow of Egypt:
The poet's eye, in a fine frenzy rolling,
Doth glance from heaven to earth, from earth to heaven;
And as imagination bodies forth
The forms of things unknown, the poet's pen
Turns them to shapes and gives to airy nothing
A local habitation and a name.

Shakespeare, Midsummer-Night's Dream, V, i, 4

32 *Hotspur*. I had rather be a kitten and cry mew
Than one of these same metre ballad-mongers;
I had rather hear a brazen canstick turn'd.
Or a dry wheel grate on the axle-tree;
And that would set my teeth nothing on edge,
Nothing so much as mincing poetry:
'Tis like the forced gait of a shuffling nag.

Shakespeare, I Henry IV, III, i, 129

33 Not marble nor the gilded monuments
Of princes shall outlive this powerful rhyme;
But you shall shine more bright in these contents
Than unswept stone besmear'd with sluttish time.
When wasteful war shall statues overturn,
And broils root out the work of masonry,
Nor Mars his sword nor war's quick fire shall burn

The living record of your memory.
'Gainst death and all-oblivious enmity
Shall you pace forth; your praise shall still find room
Even in the eyes of all posterity
That wear this world out to the ending doom.
So, till the judgement that yourself arise.
You live in this, and dwell in lovers' eyes.

Shakespeare, Sonnet LV

34 The Canon rid forward with him, and his Men follow'd, while the Curate made them a Relation of Don *Quixote's* Life and Quality, his Madness and Adventures, with the original Cause of his Distraction, and the whole Progress of his Affairs, till his being shut up in the Cage, to get him home, in order to have him cur'd. They all admired at this strange Account; and then the Canon turning to the Curate: Believe me, Mr Curate, said he, I am fully convinc'd, that these they call Books of Knight-Errantry are very prejudicial to the Publick. And tho' I have been led away with an idle and false Pleasure, to read the Beginnings of almost as many of 'em as have been Printed, I could never yet persuade myself to go through with any one to the End; for to me they all seem to contain one and the same thing; and there is as much in one of them as in all the rest. The whole Composition and Stile resemble that of the *Milesian* Fables, which are a sort of idle Stories, design'd only for Diversion, and not for Instruction. It is not so with those Fables which are call'd Apologues, that at once delight and instruct. But tho' the main Design of such Books is to please; yet I cannot conceive how it is possible they should perform it, being fill'd with such a Multitude of unaccountable Extravagancies. For the Pleasure which strikes the Soul,

must be deriv'd from the Beauty and Congruity it sees or conceives in those things the Sight or Imagination lay before it; and nothing in itself deform'd or incongruous can give us any real Satisfaction. Now what Beauty can there be, or what Proportion of the Parts of the Whole, or of the Whole to the several Parts, in a Book, or Fable, where a Stripling of Sixteen Years of Age at one Cut of a Sword cleaves a Giant, as tall as a Steeple, through the Middle, as easily as if he were made of Paste-Board? Or when they give us the Relation of a Battle, having said the Enemy's Power consisted of a Million of Combatants, yet provided the Hero of the Book be against them, we must of necessity, tho' never so much against our Inclination, conceive that the said Knight obtain'd the Victory only by his own Valour, and the Strength of his Powerful Arm? And what shall we say of the great Ease and Facility with which an absolute Queen or Empress casts herself into the Arms of an Errant and unknown Knight? What Mortal, not altogether barbarous and unpolish'd, can be pleased to read, that a great Tower, full of armed Knights, cuts thro' the Sea like a Ship before the Wind, and setting out in the Evening from the Coast of *Italy*, lands by Break of Day in *Prestor John's* Country, or in some other, never known to *Ptolomy* or seen by *Marcus Paulus*? If it shou'd be answer'd, That the Persons who compose these Books, write them as confess'd Lies; and therefore are not oblig'd to observe Niceties, or to have regard to Truth; I shall make this Reply, That Falshood is so much the more commendable, by how much it more resembles Truth; and is the more pleasing the more it is doubtful and possible. Fabulous Tales ought to be suited to the Reader's Understanding, being so contrived, that all Impossibilities ceasing, all great

Accidents appearing feasible and the Mind wholly hanging in Suspence, they may at once surprize, astonish, please and divert; so that Pleasure and Admiration may go hand in hand. This cannot be performed by him that flies from Probability and Imitation, which is the Perfection of what is written. I have not seen any Book of Knight-Errantry that composes an entire Body of a Fable with all its Parts, so that the Middle is answerable to the Beginning, and the End to the Beginning and Middle; but on the contrary, they form them of so many Limbs, that they rather seem a Chimaera or Monster, than a well-proportion'd Figure. Besides all this, their Stile is uncouth, their Exploits incredible, their Love immodest, their Civility impertinent, their Battles tedious, their Language absurd, their Voyages preposterous; and in short, they are altogether void of solid Ingenuity, and therefore fit to be banish'd a Christian Commonwealth as useless and prejudicial.

Cervantes, Don Quixote, I, 47

35 Poetry, Sir, in my Judgment, is like a tender Virgin in her Bloom, Beautiful and Charming to Amazement: All the other Sciences are so many Virgins, whose Care it is to Enrich, Polish and Adorn her, and as she is to make use of them all, so are they all to have from her a grateful Acknowledgment. But this Virgin must not be roughly handl'd, nor dragg'd along the Street, nor expos'd to every Marketplace, and Corner of great Men's Houses. A good Poet is a kind of an Alchymist, who can turn the Matter he prepares into the purest Gold and an inestimable Treasure. But he must keep his Muse within the Rules of Decency, and not let her prostitute her

Excellency in lewd Satires and Lampoons, nor in licentious Sonnets. She must not be Mercenary, though she need not give away the Profits she may claim from Heroick Poems, deep Tragedies, and Pleasant and Artful Comedies. She is not to be attempted by Buffoons, nor by the Ignorant Vulgar, whose Capacity can never reach to a due Sense of the Treasures that are lock'd up in her. And know, Sir, that when I mention the Vulgar, I don't mean only the common Rabble; for whoever is ignorant, be he Lord or Prince, is to be listed in the Number of the Vulgar. But whoever shall apply himself to the Muses with those Qualifications, which, as I said, are essential to the Character of a good Poet, his Name shall be Famous, and valu'd in all the polish'd Nations of the World.

Cervantes, Don Quixote, II, 16

36 Yet must I not give Nature all; thy Art,
My gentle Shakespeare, must enjoy a part.
For though the poet's matter Nature be,
His Art doth give the fashion; and that he
Who casts to write a living line must sweat
(Such as thine are) and strike the second heat
Upon the muses' anvil; turn the same,
And himself with it, that he thinks to frame,
Or for the laurel he may gain a scorn;
For a good poet's made as well as born.

Jonson, To the Memory of My Beloved Master William Shakespeare

37 I remember the players have often mentioned it as an honour to Shakespeare, that In his writing, whatsoever he penned, he never blotted out a line. My answer hath

been, "Would he had blotted a thousand," which they thought a malevolent speech. I had not told posterity this but for their ignorance, who chose that circumstance to commend their friend by wherein he most faulted; and to justify mine own candour, for I loved the man, and do honour his memory, on this side idolatry, as much as any. He was, indeed, honest, and of an open and free nature; had an excellent fancy, brave notions, and gentle expressions, wherein he Bowed with that facility that sometime it was necessary' he should be stopped.

"*Sufflaminandus erat*," as Augustus said of Haterius. His wit was in his own power; would the rule of it had been so too. Many times he fell into those things, could not escape laughter, as when he said in the person of Caesar, one speaking to him; "Caesar, thou dost me wrong." He replied: "Caesar did never wrong but with just cause"; and such like, which were ridiculous. But he redeemed his vices with his virtues. There was ever more in him to be praised than to be pardoned.

Jonson, Discoveries: De Shakespeare Nostrat.

- 38 Poetry and picture are arts of a like nature, and both are busy about imitation. It was excellently said of Plutarch, poetry was a speaking picture, and picture a mute poesy. For they both invent, feign, and devise many things, and accommodate all they invent to the use and service of Nature. Yet of the two the pen is more noble than the pencil; for that can speak to the understanding, the other but to the sense. They both behold pleasure and profit as their common object; but should abstain from all base pleasures, lest they should err from their end, and, while they seek to better men's minds, destroy their manners.

They both are born artificers, not made. Nature is more powerful in them than study.

Jonson, Discoveries: Poesis et Pictura

39 I esteemed eloquence most highly and I was enamoured of poesy, but I thought that both were gifts of the mind rather than fruits of study. Those who have the strongest power of reasoning, and who most skillfully arrange their thoughts in order to render them clear and intelligible, have the best power of persuasion even if they can but speak the language of Lower Brittany and have never learned rhetoric. And those who have the most delightful original ideas and who know how to express them with the maximum of style and suavity, would not fail to be the best poets even if the art of poetry were unknown to them.

Descartes, Discourse on Method, I

40 In a good poem, whether it be epic or dramatic, as also in sonnets, epigrams, and other pieces, both judgement and fancy are required; but the fancy must be more eminent; because they please for the extravagancy, but ought not to displease by indiscretion.

Hobbes, Leviathan, I, 8

41 As we speak of poetical beauty, so ought we to speak of mathematical beauty and medical beauty. But we do not do so; and the reason is that we know well what is the object of mathematics, and that it consists in proofs, and what is the object of medicine, and that it consists in healing. But we do not know in what grace consists, which is the object of poetry.

Pascal, Pensees, I, 33

42 Or call up him that left half told
The story of *Cambuscan* bold,
Of *Camball* and of *Algarsife*,
And who had *Canace* to wife,
That own'd the vertuous Ring and Glass,
And of the wondrous Hors of Brass,
On which the *Tartar* King did ride;
And if ought els, great *Bards* beside,
In sage and solemn tunes have sung,
Of Turneys and of Trophies hung;
Of Forests, and inchantments drear,
Where more is meant then meets the ear.

Milton, Il Penseroso, 109

43 Alas! What boots it with uncessant care
To tend the homely slighted Shepherds trade,
And strictly meditate the thankles Muse,
Were it not better don as others use.
To sport with *Amaryllis* in the shade,
Or with the tangles of *Neaera's* hair?

Milton, Lycidas, 64

44 Of mans First Disobedience, and the Fruit
Of that Forbidden Tree, whose mortal tast
Brought Death into the World, and all our woe,
With loss of *Eden*, till one greater Man
Restore us, and regain the blissful Seat,
Sing Heav'nly Muse, that on the secret top
Of *Oreb*, or of *Sinai*, didst inspire
That Shepherd, who first taught the chosen Seed,
In the Beginning how the Heav'ns and Earth

Rose out of *Chaos*: or if *Sion* Hill
Delight thee more, and *Siloe's* Brook that flow'd
Fast by the Oracle of God; I thence
Invoke thy aid to my adventurous Song,
That with no middle flight intends to soar
Above th' *Aonian* Mount, while it pursues
Things unattempted yet in Prose or Rhime.

Milton, Paradise Lost, I, 1

45 If answerable style I can obtaine
Of my Celestial Patroness, who deignes
Her nightly visitation unimplor'd.
And dictates to me slumbering, or inspires
Easie my unpremeditated Verse:
Since first this Subject for Heroic Song
Pleas'd me long choosing, and beginning late
Not sedulous by Nature to indite
Warrs, hitherto the onely Argument
Heroic deem'd, chief maistrie to dissect
With long and tedious havoc fabl'd Knights
In Battels feign'd; the better fortitude
Of Patience and Heroic Martyrdom
Unsung; or to describe Races and Games,
Or tilting Furniture, emblazon'd Shields,
Impreses quaint, Caparisons and Steeds;
Bases and tinsel Trappings, gorgeous Knights
At Joust and Torneament; then marshal'd Feast
Serv'd up in Hall with Sewers, and Seneshals;
The skill of Artifice or Office mean,
Not that which justly gives Heroic name
To Person or to Poem. Mee of these
Nor skil'd nor studious, higher Argument
Remaines, sufficient of it self to raise

That name, unless an age too late, or cold
Climat, or Years damp may intended wing
Deprest, and much they may, if all be mine,
Not Hers who brings it nightly to my Ear.

Milton, Paradise Lost, IX, 20

- 46 He who would not be frustrate of his hope to write well
hereafter in laudable things, ought himself to be a true
poem; that is, a composition and pattern of the best and
honourablest things; not presuming to sing high praises
of heroic men, or famous cities, unless he have in himself
the experience and the practice of all that which is
praiseworthy.

Milton, Apology for Smectymnuus

- 47 Three poets, in three distant ages born,
Greece, Italy, and England did adorn.
The first in loftiness of thought surpass'd.
The next in majesty, in both the last:
The force of Nature could no farther go;
To make a third, she join'd the former two.

Dryden, Epigram on Milton

- 48 To begin, then, with Shakespeare: he was the man who of
all modern, and perhaps ancient poets, had the largest
and most comprehensive soul. All the images of nature
were still present to him, and he drew them, not
laboriously, but luckily; when he describes any thing, you
more than see it, you feel it too. Those who accuse him to
have wanted learning, give him the greater
commendation: he was naturally learned; he needed not
the spectacles of books to read nature; he looked

inwards, and found her there, I cannot say he is everywhere alike; were he so, I should do him injury to compare him with the greatest of mankind. He is many times flat, insipid; his comic wit degenerating into clenches, his serious swelling into bombast. But he is always great, when some great occasion is presented to him; no man can say he ever had a fit subject for his wit, and did not then raise himself as high above the rest of poets.

[As do cypresses among the bending shrubs— *Virgil*]

Dryden, Essay of Dramatic Poesy

49 It remains that I say somewhat of Chaucer in particular.

In the first place, as he is the father of English poetry, so I hold him in the same degree of veneration as the Grecians held Homer, or the Romans Virgil. He is a perpetual fountain of good sense; learned in all sciences; and, therefore, speaks properly on all subjects. As he knew what to say, so he knows also when to leave off; a continence which is practised by few writers, and scarcely by any of the ancients, excepting Virgil and Horace.... The verse of Chaucer, I confess, is not harmonious to us... . They who lived with him, and some time after him, thought it musical; and it continues so, even in our judgment, if compared with the numbers of Lydgate and Gower, his contemporaries:—there is the rude sweetness of a Scotch tune in it, which is natural and pleasing, though not perfect. ... We can only say, that he lived in the infancy of our poetry, and that nothing is brought to perfection at the first. We must be children before we grow men....

He must have been a man of a most wonderful comprehensive nature, because, as it has been truly

observed of him, he has taken into the compass of his *Canterbury Tales* the various manners and humours (as we now call them) of the whole English nation, in his age. Not a single character has escaped him. All his pilgrims are severally distinguished from each other; and not only in their inclinations, but in their very physiognomies and persons.... The matter and manner of their tales, and of their telling, are so suited to their different educations, humours, and callings, that each of them would be improper in any other mouth. Even the grave and serious characters are distinguished by their several sorts of gravity: their discourses are such as belong to their age, their calling, and their breeding; such as are becoming of them, and of them only. Some of his persons are vicious, and some virtuous; some are unlearned, or (as Chaucer calls them) lewd, and some are learned. Even the ribaldry of the low characters is different: the Reeve, the Miller, and the Cook, are several men, and distinguished from each other as much as the mincing Lady-Prioress and the broad-speaking, gap-toothed Wife of Bath. But enough of this; there is such a variety of game springing up before me, that I am distracted in my choice, and know not which to follow. It is sufficient to say, according to the proverb, that here is God's plenty. We have our forefathers and great-grand-dames all before us, as they were in Chaucer's days: their general characters are still remaining in mankind, and even in England, though they are called by other names than those of monks, and friars, and canons, and lady-abbesses, and nuns; for mankind is ever the same, and nothing lost out of nature, though everything is altered.

Dryden, Preface to the Fables

50 Yet lest you think I rally more than teach,
Or praise malignly arts I cannot reach,
Let me for once presume t' instruct the times,
To know the poet from the man of rhymes:
'T is he, who gives my breast a thousand pains,
Can make me feel each passion that he feigns;
Enrage, compose, with more than magic art,
With pity, and with terror, tear my heart;
And snatch me, o'er the earth, or thro' the air,
To Thebes, to Athens, when he will, and where.

Pope, Epistle to Augustus

51 As truth distinguishes our writings from those idle
romances which are filled with monsters, the productions,
not of nature, but of distempered brains; and which have
been therefore recommended by an eminent critic to the
sole use of the pastry-cook; so, on the other hand, we
would avoid any resemblance to that kind of history
which a celebrated poet seems to think is no less
calculated for the emolument of the brewer, as the
reading it should be always attended with a tankard of
good ale—

While—history with her comrade ale.

Soothes the sad series of her serious tale.

For as this is the liquor of modern historians, nay,
perhaps their muse, if we may believe the opinion of
Butler, who attributes inspiration to ale, it ought likewise
to be the potation of their readers, since every book
ought to be read with the same spirit and in the same
manner as it is writ. Thus the famous author of
Hurlothrumbo told a learned bishop, that the reason his
lordship could not taste the excellence of his piece was,
that he did not read it with a fiddle in his hand; which

instrument he himself had always had in his own, when he composed it.

That our work, therefore, might be in no danger of being likened to the labours of these historians, we have taken every occasion of interspersing through the whole sundry similes, descriptions, and other kind of poetical embellishments. These are, indeed, designed to supply the place of the said ale, and to refresh the mind, whenever those slumbers, which in a long work are apt to invade the reader as well as the writer, shall begin to creep upon him. Without interruptions of this kind, the best narrative of plain matter of fact must overpower every reader; for nothing but the everlasting watchfulness, which Homer has ascribed only to Jove himself, can be proof against a newspaper of many volumes.

Fielding, Tom Jones, IV, 1

52 To invent good stories, and to tell them well, are possibly very rare talents, and yet I have observed few persons who have scrupled to aim at both: and if we examine the romances and novels with which the world abounds, I think we may fairly conclude, that most of the authors would not have attempted to show their teeth (if the expression may be allowed me) in any other way of writing; nor could indeed have strung together a dozen sentences on any other subject whatever. [Each desperate blockhead dares to write: Verse is the trade of every living wight.] may be more truly said of the historian and biographer, than of any other species of writing; for all the arts and sciences (even criticism itself) require some little degree of learning and knowledge. Poetry indeed, may perhaps be thought an exception; but

then it demands numbers, or something like numbers: whereas, to the composition of novels and romances, nothing is necessary but paper, pens, and ink, with the manual capacity of using them. This, I conceive, their productions show to be the opinion of the authors themselves: and this must be the opinion of their readers, if indeed there be any such.

Fielding, Tom Jones, IX, 1

53 I have cast my eyes on an edition of Shakespeare issued by Master Samuel Johnson. I saw there that foreigners who are astonished that in the plays of the great Shakespeare a Roman senator plays the buffoon, and that a king appears on the stage drunk, are treated as little-minded. I do not desire to suspect Master Johnson of being a sorry jester, and of being too fond of wine; but I find it somewhat extraordinary that he counts buffoonery and drunkenness among the beauties of the tragic stage: and no less singular is the reason he gives, that the poet disdains accidental distinctions of circumstance and country, like a painter who, content with having painted the figure, neglects the drapery. The comparison would be more just if he were speaking of a painter who in a noble subject should introduce ridiculous grotesques, should paint Alexander the Great mounted on an ass in the battle of Arbela, and Darius' wife drinking at an inn with rascallions.

But there is one thing more extraordinary than all, that is that Shakespeare is a genius. The Italians, the French, the men of letters of all other countries, who have not spent some time in England, take him only for a clown, for a joker far inferior to Harlequin, for the most contemptible buffoon who has ever amused the

populace. Nevertheless, it is in this same man that one finds pieces which exalt the imagination and which stir the heart to its depths. It is Truth, it is Nature herself who speaks her own language with no admixture of artifice. It is of the sublime, and the author has in no wise sought it.

Voltaire, Philosophical Dictionary: On the English Theatre

54 Nothing can please many, and please long, but just representations of general nature. Particular manners can be known to few, and therefore few only can judge how nearly they are copied. The irregular combinations of fanciful invention may delight awhile, by that novelty of which the common satiety of life sends us all in quest; but the pleasures of sudden wonder are soon exhausted, and the mind can only repose on the stability of truth.

Shakespeare is above all writers, at least above all modern writers, the poet of nature; the poet that holds up to his readers a faithful mirror of manners and of life. His characters are not modified by the customs of particular places, unpractised by the rest of the world; by the peculiarities of studies or professions, which can operate but upon small numbers; or by the accidents of transient fashions or temporary opinions: they are the genuine progeny of common humanity, such as the world will always supply, and observation will always find. His persons act and speak by the influence of those general passions and principles by which all minds are agitated, and the whole system of life is continued in motion. In the writings of other poets a character is too often an individual; in those of Shakespeare it is commonly a species.

Johnson, Preface to Shakespeare

55 A quibble is to Shakespeare what luminous vapours are to the traveller; he follows it at all adventures; it is sure to lead him out of his way, and sure to engulf him in the mire. It has some malignant power over his mind, and its fascinations are irresistible. Whatever be the dignity or profundity of his disquisition, whether he be enlarging knowledge or exalting affection, whether he be amusing attention with incidents, or enchaining it in suspense, let but a quibble spring up before him, and he leaves his work unfinished. A quibble is the golden apple for which he will always turn aside from his career, or stoop from his elevation. A quibble, poor and barren as it is, gave him such delight that he was content to purchase it, by the sacrifice of reason, propriety and truth. A quibble was to him the fatal Cleopatra for which he lost the world, and was content to lose it.

Johnson, Preface to Shakespeare

56 The business of a poet, said Imlac, is to examine, not the individual, but the species; to remark general properties and large appearances: he does not number the streaks of the tulip, or describe the different shades in the verdure of the forest.

Johnson, Rasselas, X

57 *Johnson.* You may translate books of science exactly. You may also translate history, in so far as it is not embellished with oratory, which is poetical. Poetry, indeed, cannot be translated; and, therefore, it is the poets that preserve languages; for we would not be at the trouble to learn a language, if we could have all that is written in it just as well in a translation. But as the

beauties of poetry cannot be preserved in any language except that in which it was originally written, we learn the language.

Boswell, Life of Johnson (Apr. 11, 1776)

58 *Johnson*. It has been said, there is pleasure in writing, particularly in writing verses. I allow you may have pleasure from writing, after it is over, if you have written well; but you don't go willingly to it again. I know when I have been writing verses, I have run my finger down the margin, to see how many I had made, and how few I had to make.

Boswell, Life of Johnson (May 1, 1753)

59 Among a polished people, a taste for poetry is rather an amusement of the fancy than a passion of the soul. And yet, when in calm retirement we peruse the combats described by Homer or Tasso, we are insensibly seduced by the fiction, and feel a momentary glow of martial ardour. But how faint, how cold is the sensation which a peaceful mind can receive from solitary study! It was in the hour of battle, or in the feast of victory, that the bards celebrated the glory of heroes of ancient days, the ancestors of those warlike chieftains who listened with transport to their artless but animated strains.

Gibbon, Decline and Fall of the Roman Empire, IX

60 In the apprehension of modern times Petrarch is the Italian songster of Laura and love. In the harmony of his Tuscan rhymes Italy applauds, or rather adores, the father of her lyric poetry; and his verse, or at least his name, is repeated by the enthusiasm or affectation of amorous

sensibility. Whatever may be the private taste of a stranger, his slight and superficial knowledge should humbly acquiesce in the judgment of a learned nation; yet I may hope or presume that the Italians do not compare the tedious uniformity of sonnets and elegies with the sublime compositions of their epic muse, the original wildness of Dante, the regular beauties of Tasso, and the boundless variety of the incomparable Ariosto.

Gibbon, Decline and Fall of the Roman Empire, LXX

- 61 Poetry (which owes its origin almost entirely to genius and is least willing to be led by precepts or example) holds the first rank among all the arts. It expands the mind by giving freedom to the imagination and by offering, from among the boundless multiplicity of possible forms accordant with a given concept, to whose bounds it is restricted, that one which couples with the presentation of the concept a wealth of thought to which no verbal expression is completely adequate, and by thus rises aesthetically to ideas.

Kant, Critique of Aesthetic Judgement, 53

- 62 It is in the fundamental idea of poetry that the poet is everywhere the guardian of nature. When he can no longer entirely fill this part, and has already in himself suffered the deleterious influence of arbitrary and factitious forms, or has had to struggle against this influence, he presents himself as the witness of nature and as its avenger. The poet will, therefore, be the expression of nature itself, or his part will be to seek it, if men have lost sight of it.

Schiller, Simple and Sentimental Poetry

63 The reason Milton wrote in fetters when he wrote of Angels and God, and at liberty when of Devils and Hell, is because he was a true Poet, and of the Devil's party without knowing it.

Blake, Marriage of Heaven and Hell, 5

64 Shall the poet take that highest right,
The Right of Man, that Right which Nature gave,
And wantonly for your sake trifle it away?
How doth he over every heart hold sway?
How doth he every element enslave?
Is it not the harmony that from his breast doth start,
Then winds the world in turn back in his heart?
When Nature forces lengths of thread unending
In careless whirling on the spindle round,
When all Life's inharmonic throngs unblending
In sullen, harsh confusion sound,
Who parts the changeless series of creation,
That each, enlivened, moves in rhythmic time?
Who summons each to join the general ordination,
In consecrated, noble harmonies to chime?
Who bids the storm with raging passion lower? The
sunset with a solemn meaning glow?
Who scatters Springtime's every lovely flower
Along the pathway where his love may go?
Who twines the verdant leaves, unmeaning, slighted,
Into a wreath of honour, meed of every field?
Who makes Olympus sure, the gods united?
That power of Man the Poet has revealed!

Goethe, Faust, Prelude on the Stage, 135

65 *Chorus*. Hallowed Poesy,
Soar aloft heavenly,
Shine on, thou fairest star,
Farther and still more far,
Yet dost thou reach us still,
Yet do we hear and thrill,
Joyous we are.

Goethe, Faust, II, 3, 9863

66 The first page which I read in Shakespeare already served to win him my lifelong adherence. And when I had reached the end of the first play, I stood like one who, blind from birth, finds himself suddenly blest with sight by a beneficent Providence. In the clearest and most vivid manner I realised that my existence had been infinitely expanded. Everything now appeared new and strange to me, and the unwonted light dazzled and hurt my eyes. Little by little I came to see, and I can still feel distinctly, thanks to my spirit of gratitude, how much I had gained.

Goethe, Thoughts on Shakespeare

67 As for me, I am often put to blush by Shakespeare; for from time to time it happens that at a first glance I say to myself: I should have done this or that differently; and then afterwards I discover that I am but a poor sinner, that through Shakespeare Nature herself gives utterance to her prophecies, and that my characters are, so to speak, mere soap-bubbles blown in a caprice of romanticism.

Goethe, Thoughts on Shakespeare

68 If everything written in this vein that has been handed down to us were destroyed, poetry and rhetoric could yet be entirely restored out of that one play.

Goethe, Thoughts on Shakespeare [Henry IV]

69 It will perhaps be urged that, although poetry is held to be an art, it is not mechanical. But I deny that it is an art; nor is it a science. Arts and sciences are attained through reflection; but not so poetry, for this is an inspiration; it was infused into the soul when first it manifested itself. It should, consequently, be called neither art nor science, but genius.

Goethe, Reflections and Maxims

70 What is a Poet? To whom does he address himself? And what language is to be expected from him? He is a man speaking to men: a man, it is true, endued with more lively sensibility, more enthusiasm and tenderness, who has a greater knowledge of human nature, and a more comprehensive soul than are supposed to be common among mankind; a man pleased with his own passions and volitions, and who rejoices more than other men in the spirit of life that is in him; delighting to contemplate similar volitions and passions as manifested in the goings-on of the Universe, and habitually impelled to create them where he does not find them.

Wordsworth, Preface to Lyrical Ballads (1802)

71 Aristotle, I have been told, hath said that Poetry is the most philosophic of all writing: it is so: its object is truth, not individual and local, but general, and operative; not standing upon external testimony, but carried alive into

the heart by passion; truth which is its own testimony,
which gives strength and divinity to the tribunal to which
it appeals, and receives them from the same tribunal.
Poetry is the image of man and nature.

Wordsworth, Preface to Lyrical Ballads (1802)

- 72 Poetry is the spontaneous overflow of powerful feelings:
it takes its origin from emotion recollected in tranquillity:
the emotion is contemplated till, by a species of re-action,
the tranquillity gradually disappears, and an emotion,
kindred to that which v/as before the subject of
contemplation, is gradually produced, and does itself
actually exist in the mind. In this mood successful
composition generally begins.

Wordsworth, Preface to Lyrical Ballads (1802)

- 73 Scorn not the Sonnet; Critic, you have frowned,
Mindless of its just honours; with this key
Shakspeare unlocked his heart; the melody
Of this small lute gave ease to Petrarch's wound;
A thousand times this pipe did Tasso sound;
With it Camoens soothed an exile's grief;
The Sonnet glittered a gay myrtle leaf
Amid the cypress with which Dante crowned
His visionary brow: a glow-worm lamp,
It cheered mild Spenser, called from Faeryland
To struggle through dark ways; and, when a damp
Fell round the path of Milton, in his hand
The Thing became a trumpet; when he blew
Soul-animating strains—alas, too few!

Wordsworth, Scorn Not the Sonnet

74 Milton! thou should'st be living at this hour;
England hath need of thee: she is a fen
Of stagnant waters: altar, sword, and pen,
Fireside, the heroic wealth of hall and bower,
Have forfeited their ancient English dower
Of inward happiness. We are selfish men;
Oh! raise us up, return to us again;
And give us manners, virtue, freedom, power.
Thy soul was like a Star, and dwelt apart:
Thou hadst a voice whose sound was like the sea:
Pure as the naked heavens, majestic, free,
So didst thou travel on life's common way,
In cheerful godliness; and yet thy heart
The lowliest duties on herself did lay.

Wordsworth, London, 1802

75 A damsel with a dulcimer
In a vision once I saw:
It was an Abyssinian maid,
And on her dulcimer she played,
Singing of Mount Abora.
 Could I revive within me
Her symphony and song,
To such a deep delight 'twould win me,
That with music loud and long,
I would build that dome in air,
That sunny dome! those caves of ice!
And all who heard should see them there.
And all should cry. Beware! Beware!
His flashing eyes, his floating hair!
Weave a circle round him thrice,
And close your eyes with holy dread,

For he on honey-dew hath fed,
And drunk the milk of Paradise.

Coleridge, Kubla Khan

76 In this idea originated the plan of the *Lyrical Ballads*; in which it was agreed that my endeavors should be directed to persons and characters supernatural, or at least romantic; yet so as to transfer from our inward nature a human interest and a semblance of truth sufficient to procure for these shadows of imagination that willing suspension of disbelief for the moment, which constitutes poetic faith.

Coleridge, Biographia Literaria, XIV

77 A poem is that species of composition which is opposed to works of science by proposing for its *immediate* object pleasure, not truth; and from all other species (having *this* object in common with it) it is discriminated by proposing to itself such delight from the *whole* as is compatible with a distinct gratification from each component *part*.

Coleridge, Biographia Literaria, XIV

78 Poets are the hierophants of an unapprehended inspiration; the mirrors of the gigantic shadows which futurity casts upon the present; the words which express what they understand not; the trumpets which sing to battle and feel not what they inspire; the influence which is moved not, but moves. Poets are the unacknowledged legislators of the world.

Shelley, Defence of Poetry

79 Fade far away, dissolve, and quite forget
What thou among the leaves hast never known,
The weariness, the fever, and the fret
Here, where men sit and hear each other groan;
Where palsy shakes a few, sad, last gray hairs,
Where youth grows pale, and spectre-thin, and dies;
Where but to think is to be full of sorrow
And leaden-eyed despairs,
Where Beauty cannot keep her lustrous eyes,
Or new Love pine at them beyond tomorrow.
 Away! away! for I will fly to thee,
Not charioted by Bacchus and his pards,
But on the viewless wings of Poesy,
Though the dull brain perplexes and retards:
Already with thee! tender is the night,
And haply the Queen-Moon is on her throne,
Cluster'd around by all her starry Fays;
But here there is no light.
Save what from heaven is with the breezes blown
Through verdurous glooms and winding mossy' ways.

Keats, Ode to a Nightingale

80 Much have I travell'd in the realms of gold,
And many' goodly states and kingdoms seen;
Round many western islands have I been
Which bards in fealty to Apollo hold.
Oft of one wide expanse had I been told
That deep-brow'd Homer ruled as his demesne:
Yet did I never breathe its pure serene
Till I heard Chapman speak out loud and bold:
Then felt I like some watcher of the skies
When a new planet swims into his ken;
Or like stout Cortez when with eagle eyes

He star'd at the Pacific—and all his men
Look'd at each other with a wild surmise—
Silent, upon a peak in Darien.

Keats, On First Looking Into Chapman's Homer

81 Souls of Poets dead and gone,
What Elysium have ye known,
Happy field or mossy cavern,
Choicer than the Mermaid Tavern?

Keats, Lines on the Mermaid Tavern

82 Poetry should surprise by a fine excess, and not by singularity; It should strike the reader as a wording of his own highest thoughts, and appear almost a remembrance.

Its touches of beauty should never be half-way, thereby making the reader breathless, instead of content. The rise, the progress, the setting of Imagery should, like the sun, come natural to him.

Keats, Letter to John Taylor (Feb. 27j 1818)

83 I salute thee, Mantovano,
I that loved thee since my day began,
Wielder of the stateliest measure
Ever moulded by the lips of man.

Tennyson, To Virgil

84 Other poets have warbled the praises of the soft eye of the antelope, and the lovely plumage of the bird that never alights; less celestial, I celebrate a tail.

Melville, Moby Dick, LXXXVI

85 The poet is a man who lives ... by watching his moods. An old poet comes at last to watching his moods as narrowly as a cat does a mouse.

Thoreau, Journal (Aug. 28, 1851)

86 The Americans of all nations at any time upon the earth, have probably the fullest poetical nature. The United States themselves are essentially the greatest poem.

Whitman, Leaves of Grass, Pref.

87 I have said that in one respect my mind has changed during the last twenty or thirty years. Up to the age of thirty, or beyond it, poetry of many kinds, such as the works of Milton, Gray, Byron, Wordsworth, Coleridge, and Shelley, gave me great pleasure, and even as a schoolboy I took intense delight in Shakespeare, especially in the historical plays. I have also said that formerly pictures gave me considerable, and music very great, delight. But now for many years I cannot endure to read a line of poetry: I have tried lately to read Shakespeare, and found it so intolerably dull that it nauseated me. I have also almost lost my taste for pictures or music. Music generally sets me thinking too energetically on what I have been at work on, instead of giving me pleasure. I retain some taste for fine scenery', but it does not cause me the exquisite delight which it formerly did. On the other hand, novels which are works of the imagination, though not of a very high order, have been for years a wonderful relief and pleasure to me, and I often bless all novelists. A surprising number have been read aloud to me, and I like all if moderately good, and if they do not end unhappily—against which a law ought to be passed.

A novel, according to my taste, does not come into the first class unless it contains some person whom one can thoroughly love, and if a pretty woman all the better.

This curious and lamentable loss of the higher aesthetic tastes is all the odder, as books on history, biographies, and travels (independently of any scientific facts which they may contain), and essays on all sorts of subjects interest me as much as ever they did. My mind seems to have become a kind of machine for grinding general laws out of large collections of facts, but why this should have caused the atrophy of that part of the brain alone on which the higher tastes depend I cannot conceive. A man with a mind more highly organized or better constituted than mine would not, I suppose, have thus suffered; and if I had to live my life again, I would have made a rule to read some poetry and listen to some music at least once every week; for perhaps the parts of my brain now atrophied would thus have been kept active through use. The loss of these tastes is a loss of happiness, and may possibly be injurious to the intellect, and more probably to the moral character, by enfeebling the emotional part of our nature.

Darvin, Autobiography

- 88 What made Wordsworth's poems a medicine for my state of mind, was that they expressed, not mere outward beauty, but states of feeling, and of thought coloured by feeling, under the excitement of beauty. They seemed to be the very culture of the feelings, which I was in quest of. In them I seemed to draw from a source of inward joy, of sympathetic and imaginative pleasure, which could be shared in by all human beings; which had no connexion with struggle or imperfection, but would be made richer

by every improvement in the physical or social condition of mankind. From them I seemed to learn what would be the perennial sources of happiness, when all the greater evils of life shall have been removed.

Mill, Autobiography, V

89 The poet makes Truth the daughter of Time.

Newman, Essay on the Development of Christian Doctrine, Pt. I, I, 2

90 The future of poetry is immense, because in poetry, where it is worthy of its high destinies, our race, as time goes on, will find an ever surer and surer stay. There is not a creed which is not shaken, not an accredited dogma which is not shown to be questionable, not a received tradition which does not threaten to dissolve. Our religion has materialized itself in the fact, in the supposed fact; it has attached its emotion to the fact, and now the fact is failing it. But for poetry the idea is everything; the rest is a world of illusion, of divine illusion. Poetry attaches its emotion to the idea; the idea *is* the fact. The strongest part of our religion today is its unconscious poetry.... More and more mankind will discover that we have to turn to poetry to interpret life for us, to console us, to sustain us. Without poetry, our science will appear incomplete; and most of what now passes with us for religion and philosophy will be replaced by poetry.

Arnold, Study of Poetry

91 Only one thing we may add as to the substance and matter of poetry, guiding ourselves by Aristotle's profound observation that the superiority of poetry over

history consists in its possessing a higher truth and a higher seriousness. Let us add, therefore, to what we have said, this: that the substance and matter of the best poetry acquire their special character from possessing, in an eminent degree, truth and seriousness. We may add yet further, what is in itself evident, that to the style and manner of the best poetry their special character, their accent, is given by their diction, and, even yet more, by their movement. And though we distinguish between the two characters, the two accents, of superiority, yet they are nevertheless vitally connected one with the other. The superior character of truth and seriousness, in the matter and substance of the best poetry, is inseparable from the superiority of diction and movement marking its style and manner. The two superiorities are closely related, and are in steadfast proportion one to the other. So far as high poetic truth and seriousness are wanting to a poet's matter and substance, so far also, we may be sure, will a high poetic stamp of diction and movement be wanting to his style and manner. In proportion as this high stamp of diction and movement, again, is absent from a poet's style and manner, we shall find, also, that high poetic truth and seriousness are absent from his substance and matter.

Arnold, Study of Poetry

92 But be his

My special thanks, whose even-balanced soul,
From first youth tested up to extreme old age,
Business could not make dull, nor Passion wild;
Who saw life steadily, and saw it whole;
The mellow glory of the Attic stage,
Singer of sweet Colonus, and its child.

Arnold, To a Friend [Sophocles]

- 93 The difference between genuine poetry and the poetry of Dryden, Pope, and all their school, is briefly this: their poetry is conceived and composed in their wits, genuine poetry is conceived and composed in the soul.

Arnold, Thomas Gray

- 94 The translator of Homer should above all be penetrated by a sense of four qualities of his author;—that he is eminently rapid; that he is eminently plain and direct, both in the evolution of his thought and in the expression of it, that is, both in his syntax and in his words; that he is eminently plain and direct in the substance of his thought, that is, in his matter and ideas; and, finally, that he is eminently noble.

Arnold, On Translating Homer, I

- 95 The sphere of poetry does not lie outside the world as a fantastic impossibility spawned by a poet's brain: it desires to be just the opposite, the unvarnished expression of the truth, and must precisely for that reason discard the mendacious finery of that alleged reality of the man of culture.

The contrast between this real truth of nature and the lie of culture that poses as if it were the only reality is similar to that between the eternal core of things, the thing-in-itself, and the whole world of appearances.

Nietzsche, Birth of Tragedy, VIII

- 96 With the single exception of Homer, there is no eminent writer, not even Sir Walter Scott, whom I can despise so entirely as I despise Shakespeare when I measure my

mind against his. The intensity of my impatience with him occasionally reaches such a pitch, that it would positively be a relief to me to dig him up and throw stones at him, knowing as I do how incapable he and his worshippers are of understanding any less obvious form of indignity....

But I am bound to add that I pity the man who cannot enjoy Shakespeare. He has outlasted thousands of abler thinkers, and will outlast a thousand more. His gift of telling a story (provided some one else told it to him first); his enormous power over language, as conspicuous in his senseless and silly abuse of it as in his miracles of expression; his humor; his sense of idiosyncratic character; and his prodigious fund of that vital energy which is, it seems, the true differentiating property' behind the faculties, good, bad, or indifferent, of the man of genius, enable him to entertain us so effectively that the imaginary scenes and people he has created become more real to us than our actual life.

Shaw, Dramatic Opinions and Essays, II

- 97 The relation of our typical dreams to fairytales and other fiction and poetry is neither sporadic nor accidental. Sometimes the penetrating insight of the poet has analytically recognized the process of transformation of which the poet is otherwise the instrument, and has followed it up in the reverse direction; that is to say, has traced a poem to a dream.

Freud, Interpretation of Dreams, V, D

- 98 Shakespeare gives the greatest width of human passion; Dante the greatest altitude and greatest depth.

T, S. Eliot, Dante

99 The business of the poet is not to find new emotions, but to use the ordinary ones and, in working them up into poetry, to express feelings which are not in actual emotions at all. And emotions which he has never experienced will serve his turn as well as those familiar to him. Consequently, we must believe that "emotion recollected in tranquillity" is an inexact formula. For it is neither emotion, nor recollection, nor, without distortion of meaning, tranquillity. It is a concentration, and a new thing resulting from the concentration, of a very great number of experiences which to the practical and active person would not seem to be experiences at all.

T. S. Eliot, Tradition and the Individual Talent

100 When a poet's mind is perfectly equipped for its work, it is constantly amalgamating disparate experience; the ordinary man's experience is chaotic, irregular, fragmentary. The latter falls in love, or reads Spinoza, and these two experiences have nothing to do with each other, or with the noise of the typewriter or the smell of cooking; in the mind of the poet these experiences are always forming new wholes.

T, S. Eliot, The Metaphysical Poets

101 Art necessarily divides itself into three forms progressing from one to the next. These forms are: the lyrical form, the form wherein the artist presents his image in immediate relation to himself; the epical form, the form wherein he presents his image in mediate relation to himself and to others; the dramatic form, the

form wherein he presents his image in immediate relation to others....

In literature, the highest and most spiritual art, the forms are often confused. The lyrical form is in fact the simplest verbal vesture of an instant of emotion, a rhythmical cry such as ages ago cheered on the man who pulled at the oar or dragged stones up a slope. He who utters it is more conscious of the instant of emotion than of himself as feeling emotion. The simplest epical form is seen emerging out of lyrical literature when the artist prolongs and broods upon himself as the centre of an epical event and this form progresses till the centre of emotional gravity is equidistant from the artist himself and from others. The narrative is no longer purely personal. The personality of the artist passes into the narration itself, flowing round and round the persons and the action like a vital sea. This progress you will see easily in that old English ballad *Turpin Hero* which begins in the first person and ends in the third person. The dramatic form is reached when the vitality which has flowed and eddied round each person fills every person with such vital force that he or she assumes a proper and intangible esthetic life. The personality of the artist, at first a cry or a cadence or a mood and then a fluid and lambent narrative, finally refines itself out of existence, impersonalises itself, so to speak. The esthetic image in the dramatic form is life purified in and reprojected from the human imagination. The mystery of esthetic like that of material creation is accomplished. The artist, like the God of the creation, remains within or behind or beyond or above his handiwork, invisible, refined out of existence, indifferent, paring his fingernails.

Joyce, Portrait of the Artist as a Young Man, V

102 For mark you, Phaedrus, beauty alone is both divine and visible; and so it is the sense way, the artist's way, little Phaedrus, to the spirit. But, now tell me, my dear boy, do you believe that such a man can ever attain wisdom and true manly worth, for whom the path to the spirit must lead through the senses? Or do you rather think—for I leave the point to you—that it is a path of perilous sweetness, a way of transgression, and must surely lead him who walks in it astray? For you know that we poets cannot walk the way of beauty without Eros as our companion and guide. We may be heroic after our fashion, disciplined warriors of our craft, yet are we all like women, for we exult in passion, and love is still our desire—our craving and our shame. And from this you will perceive that we poets can be neither wise nor worthy citizens. We must needs be wanton, must needs rove at large in the realm of feeling. Our magisterial style is all folly and pretense, our honorable repute a farce, the crowd's belief in us is merely laughable. And to teach youth, or the populace, by means of art is a dangerous practice and ought to be forbidden. For what good can an artist be as a teacher, when from his birth up he is headed direct for the pit? We may want to shun it and attain to honor in the world; but however we turn, it draws us still. So, then, since knowledge might destroy us, we will have none of it. For knowledge, Phaedrus, does not make him who possesses it dignified or austere. Knowledge is all-knowing, understanding, forgiving; it takes up no position, sets no store by form. It has compassion with the abyss—it is the abyss. So we reject it, firmly, and henceforward our concern shall be with

beauty only. And by beauty we mean simplicity, largeness, and renewed severity of discipline; we mean a return to detachment and to form. But detachment, Phaedrus, and preoccupation with form lead to intoxication and desire; they may lead the noblest among us to frightful emotional excesses, which his own stern cult of the beautiful would make him the first to condemn. So they too, they too, lead to the bottomless pit. Yes, they lead us thither, I say, us who are poets— who by our natures are prone not to excellence but to excess. And now, Phaedrus, I will go. Remain here; and only when you can no longer see me, then do you depart also.

Mann, Death in Venice

103 Poetry (like metaphysics) is spiritual nourishment; but of a savor which has been created and which is insufficient. There is but one eternal nourishment. Unhappy you who think yourselves ambitious, and who whet your appetites for anything less than the three Divine Persons and the humanity of Christ.

It is a mortal error to expect from poetry the supersubstantial nourishment of man.

Maritain, Frontiers of Poetry

104 "At Pisa," he said, "I was, many years ago, present when our glorious Monti, the poet, drew out his pistol and shot down Monsignor Talbot, It happened at a supper party, just like ours here.

. . . , And it all arose from an argument on eternal damnation.

"Monti, who had just then finished his *Don Giovanni*, had for some time been sunk in a deep melancholy, and

would neither drink nor talk, and Monsignor Talbot asked him what was the matter with him, and wondered that he was not happy after having achieved so great a success. So Monti asked him whether he did not think that it might weigh upon the mind of a man to have created a human being who was to burn through eternity in hell. Talbot smiled at him and declared that this could only happen to real people. Whereupon the poet cried out and asked him if his Don Giovanni was not real. . . . Monsignor Talbot asked him if he did really believe himself a creator in the same sense as God.

" 'God!' Monti cried, 'God! Do you not know that what God really wants to create is my Don Giovanni, and the Odysseus of Homer, and Cervantes' knight? Very likely those are the only people for whom heaven and hell have ever been made, for you cannot imagine that an Almighty God would go on forever and ever, world without end, with my mother-in-law and the Emperor of Austria? Humanity, the men and women of this earth, are only the plaster of God, and we, the artists, are his tools, and when the statue is finished in marble or bronze, he breaks us all up. When you die you will probably go out like a candle, with nothing left, but in the mansions of eternity will walk Orlando, the Misanthrope and my Donna Elvira. Such is God's plan of work, and if we find it somehow' slow, who are we that we should criticize him, seeing that we know nothing whatever of time or eternity?'

"Monsignor Talbot, although himself a great admirer of the arts, began to feel uncomfortable about such heretical views, and took the poet to task over them. 'Oh, go and find out for yourself then!' Monti cried, and

resting the barrel of the pistol . . . upon the edge of the table, he fired straight at the *monsignore*."

Isak Dinesen, The Roads Around Risa, V

16.4 Tragedy and Comedy

This section might have been headed "Drama," or even "Theatre," as a more appropriate cover for certain of the quotations included here that deal with drama in general, with the effect of stage plays on the spectator, and with their value for society or their deleterious influence on it. But the majority of the passages deal quite specifically with the two forms of dramatic literature known as "tragedy" and "comedy," both as written in books and as performed in theatres. In addition, there are statements about the tragic and the comic in life itself, as well as in literature or on the stage.

So far as we can tell, the distinction between tragedy and comedy originated with the Greeks, as well as the famous cryptic statement that challenges the distinction—the observation by Socrates, overheard by an admittedly sleepy reporter, that the genius of tragedy and of comedy are the same. Few writers, with the possible exception of Shakespeare, have manifested the genius to be able to write both great tragedies and sparkling comedies. Whether or not the statement by Socrates is true, the great tragic and comic works of ancient and modern times have, for the most part, come to us from the pens of different men.

The passages dealing with tragedy reflect sharp contrasts between the ancient and modern conceptions of it, and raise such questions as whether nondramatic forms of narration,

such as the ancient epic or the modern novel, can be tragic or comic as well as stage plays, and whether tragedy is inherent in every human life or is attendant only on the lives of those who attain a sufficient eminence to suffer a grievous reversal of fortune. The passages dealing with comedy verge on such related subjects as wit, humor, and laughter. The passages that express concern about the questionable and even definitely baneful influence of the stage on the conduct of the individual and the morals of society will be more sympathetically appreciated by contemporary readers if they apply the questions raised to the effects of television on both young and old today.

A few quotations relevant to certain aspects of drama appear in other sections of this chapter, principally Section 16.3.

■ ■ ■

- 1 *Xanthias*. Tell me by Zeus, our rascaldom's own god,
What's all that noise within? What means this hubbub
And row?
Aeacus. That's Aeschylus and Euripides.
Xa. Eh?
Ae. Wonderful, wonderful things are going on. The
dead are rioting, taking different sides.
Xa. Why, what's the matter?
Ae. There's a custom here
With all the crafts, the good and noble crafts,
That the chief master of his art in each
Shall have his dinner in the assembly hall.
And sit by Pluto's side.

Xa. I understand.

Ae. Until another comes, more wise than he In the same art: then must the first give way.

Xa. And how has this disturbed our Aeschylus?

Ae. 'Twas he that occupied the tragic chair,
As, in his craft, the noblest.

Xa. Who does now?

Ae. But when Euripides came down, he kept
Flourishing off before the highwaymen,
Thieves, burglars, parricides—these form our mob
In Hades—till with listening to his twists
And turns, and pleas and counterpleas, they went
Mad on the man, and hailed him first and wisest:
Elate with this, he claimed the tragic chair
Where Aeschylus was seated.

Xa. Wasn't he pelted?

Ae. Not he: the populace clamoured out to try Which
of the twain was wiser in his art.

Xa. You mean the rascals?

Ae. Aye, as high as heaven!

Xa. But were there none to side with Aeschylus?

Ae. Scanty and sparse the good, the same as here.

Xa. And what does Pluto now propose to do?

Ae. He means to hold a tournament, and bring Their
tragedies to the proof.

Xa. But Sophocles,
How came not he to claim the tragic chair?

Ae. Claim it? Not he! When *he* came down, he kissed
With reverence Aeschylus, and clasped his hand,
And yielded willingly the chair to him.
But now he's going, says Cleidemides,
To sit third-man: and then if Aeschylus win,

He'll stay content: if not, for his art's sake,
He'll fight to the death against Euripides.

Xa. Will it come off?

Ae. O yes, by Zeus, directly.

And then, I hear, will wonderful things be done,
The art poetic will be weighed in scales.

Xa. What! weigh out tragedy, like butcher's meat?

Ae. Levels they'll bring, and measuring-tapes for
words,

And moulded oblongs,

Xa. Is it bricks they are making?

Ae. Wedges and compasses: for Euripides
Vows that he'll test the dramas, word by word.

Xa. Aeschylus chafes at this, I fancy.

Ae. Well,

He lowered his brows, upglaring like a bull.

Xa. And who's to be the judge?

Ae. There came the rub.

Skilled men were hard to find: for with the Athenians
Aeschylus, somehow, did not hit it oil,

Xa. Too many burglars, I expect, he thought.

Ae. And ail the rest, he said, were trash and nonsense
To judge poetic wits. So then at last
They chose your lord [Dionysus], an expert in the art.

Aristophanes, Frogs, 735

2 *Aeschylus.* Come, tell me what are the points for which
a noble poet our praise obtains.

Euripides. For his ready wit, and his counsels sage,
and because the citizen folk he trains
To be better townsmen and worthier men.

Aes. If then you have done the very reverse,
Found noble-hearted and virtuous men,

and altered them, each and all, for the worse,
Pray what is the meed you deserve to get?

Dionysus. Nay, ask not *him*. He deserves to die.

Aes. For just consider what style of men
he received from me, great six-foot-high
Heroical souls, who never would blench
from a townsman's duties in peace or war;
Not idle loafers, or low buffoons,
or rascally scamps such as now they are.
But men who were breathing spears and helmets,
and the snow-white plume in its crested pride,
The greave, and the dart, and the warrior's heart
in its sevenfold casing of tough bull-hide.

Di. He'll stun me, I know, with his armoury-work;
this business is going from bad to worse.

Eu. And how did you manage to make them so grand,
exalted, and brave with your wonderful verse?

Di. Come, Aeschylus, answer, and don't stand mute
in your self-willed pride and arrogant spleen.

Aes. A drama I wrote with the War-god filled.

Di. Its name?

Aes. 'Tis the Seven against Thebes that I mean.
Which whoso beheld, with eagerness swelled
to rush to the battlefield there and then.

Di. O that was a scandalous thing you did!
You have made the Thebans mightier men,
More eager by far for the business of war.
Now, therefore, receive this punch on The head.

Aes. Ah, ye might have practised the same yourselves,
but ye turned to other pursuits instead.
Then next the *Persians* I wrote, in praise
of the noblest deed that the world can show,

And each man longed for the victor's wreath,
to fight and to vanquish his country's foe.

Di. I was pleased, I own, when I heard their moan
for Old Darius, their great king, dead;
When they smote together their hands, like this,
and "Evir alake" the Chorus said.

Aes. Aye, such are the poet's appropriate works:
and just consider how all along
From the very first they have wrought you good,
the noble bards, the masters of song.
First, Orpheus taught you religious rites,
and from bloody murder to stay your hands:
Musaeus healing and oracle lore;
and Hesiod all the culture of lands,
The time to gather, the time to plough.
And gat not Homer his glory divine
By singing of valour, and honour, and right,
and the sheen of the battle-extended line,
The ranging of troops and the arming of men?

Di. O ay, but he didn't teach *that*, I opine,
To Pantacles; when he was leading the show
I couldn't imagine what he was at,
He had fastened his helm on the top of his head,
he was trying to fasten his plume upon that.

Aes. But others, many and brave, he taught,
of whom was Lamachus, hero true;
And thence my spirit the impress took,
and many a lion-heart chief I drew,
Patrocluses, Teucers, illustrious names;
for I fain the citizen-folk would spur
To stretch themselves to their measure and height,
whenever the trumpet of war they hear.
But Phaedras and Stheneboeas? No!

no harlotry business deformed my plays.
And none can say that ever I drew
a love-sick woman in all my days.

Eu. For *you* no lot or portion had got
in Queen Aphrodite.

Aes. Thank Heaven for that.
But ever on you and yours, my friend,
the mighty goddess mightily sat;
Yourself she cast to the ground at last.

Di. O ay, that uncommonly pat.
You showed how cuckolds are made, and lo,
you were struck yourself by the very same fate.

Eu. But say, you cross-grained censor of mine,
how *my* Stheneboeas could harm the state.

Aes. Full many a noble dame, the wife
of a noble citizen, hemlock took.
And died, unable the shame and sin
of your Bellerophon-scenes to brook.

Eu. Was then, I wonder, the tale I told
of Phaedra's passionate love untrue?

Aes. Not so: but tales of incestuous vice
the sacred poet should hide from view,
Nor ever exhibit and blazon forth
on the public stage to the public ken.
For boys a teacher at school is found,
but we, the poets, are teachers of men.
We are *bound* things honest and pure to speak.

Eu. And to speak great Lycabettuses, pray, And
massive blocks of Parnassian rocks,
is *that* things honest and pure to say?
In human fashion we ought to speak.

Aes. Alas, poor witling, and can't you see
That for mighty thoughts and heroic aims,

the words themselves must appropriate be?
And grander belike on the ear should strike
the speech of heroes and godlike powers,
Since even the robes that invest their limbs
are statelier, grander robes than ours.
Such was *my* plan: but when *you* began,
you spoilt and degraded it all.

Eu. How so?

Aes. Your kings in tatters and rags you dressed,
and brought them on, a beggarly show,
To move, forsooth, our pity and ruth.

Eu. And what was the harm, I should like to know.

Aes. No more will a wealthy citizen now
equip for the state a galley of war.
He wraps his limbs in tatters and rags,
and whines he is "poor, too poor by far."

Di. But under his rags he is wearing a vest,
as woolly and soft as a man could wish.
Let him gull the state, and he's off to the mart;
an eager, extravagant buyer of fish.

Aes. Moreover to prate, to harangue, to debate,
is now the ambition of all in the state.
Each exercise-ground is in consequence found
deserted and empty: to evil repute
Your lessons have brought our youngsters, and taught
our sailors to challenge, discuss, and refute
The orders they get from their captains and yet,
when I was alive, I protest that the knaves
Knew nothing at all, save for rations to call,
and to sing "Rhyppapae" as they pulled
through the waves.

Di. And bedad to let fly from their sterns in the eye
of the fellow who tugged at the undermost oar,

And a jolly young messmate with filth to besmirch,
and to land for a filching adventure ashore;
But now they harangue, and dispute, and won't row
And idly and aimlessly float to and fro.

Aes. Of what ills is he *not* the creator and cause?
Consider the scandalous scenes that he draws,
His bawds, and his panders, his women who give
Give birth in the sacredest shrine.
Whilst others with brothers are wedded and bedded.
And others opine
That "not to be living" is truly "to live."
And therefore our city is swarming to-day
With clerks and with demagogue-monkeys, who play
Their jackanape tricks at all times, in all places,
Deluding the people of Athens; but none
Has training enough in athletics to run
With the torch in his hand at the races.

Aristophanes, Frogs, 1012

- 3 Agathon arose in order that he might take his place on the couch by Socrates, when suddenly a band of revellers entered, and spoiled the order of the banquet. Some one who was going out having left the door open, they had found their way in, and made themselves at home; great confusion ensued, and every one was compelled to drink large quantities of wine. Aristodemus said that Eryximachus, Phaedrus, and others went away—he himself fell asleep, and as the nights were long took a good rest: he was awakened towards daybreak by a crowing of cocks, and when he awoke, the others were either asleep, or had gone away; there remained only Socrates, Aristophanes, and Agathon, who were drinking out of a large goblet which they passed round, and

Socrates was discoursing to them. Aristodemus was only half awake, and he did not hear the beginning of the discourse; the chief thing which he remembered was Socrates compelling the other two to acknowledge that the genius of comedy was the same with that of tragedy, and that the true artist in tragedy was an artist in comedy also. To this they were constrained to assent, being drowsy, and not quite following the argument.

Plato, Symposium, 223A

- 4 *Socrates*. There are combinations of pleasure and pain in lamentations, and in tragedy and comedy, not only on the stage, but on the greater stage of human life.

Plato, Philebus, 50A

- 5 *Athenian Stranger*. It is necessary ... to consider and know uncomely persons and thoughts, and those which are intended to produce laughter in comedy, and have a comic character in respect of style, song, and dance, and of the imitations which these afford. For serious things cannot be understood without laughable things, nor opposites at all without opposites, if a man is really to have intelligence of either; but he can not carry out both in action, if he is to have any degree of virtue. And for this very reason he should learn them both, in order that he may not in ignorance do or say anything which is ridiculous and out of place—he should command slaves and hired strangers to imitate such things, but he should never take any serious interest in them himself, nor should any freeman or freewoman be discovered taking pains to learn them; and there should always be some element of novelty in the imitation. Let these then be laid

down, both in law and in our discourse, as the regulations of laughable amusements which are generally called comedy. And, if any of the serious poets, as they are termed, who write tragedy, come to us and say— "O strangers, may we go to your city and country or may we not, and shall we bring with us our poetry—what is your will about these matters?"— how shall we answer the divine men? I think that our answer should be as follows: —Best of strangers, we will say to them, we also according to our ability are tragic poets, and our tragedy is the best and noblest; for our whole state is an imitation of the best and noblest life, which we affirm to be indeed the very truth of tragedy. You are poets and we are poets, both makers of the same strains, rivals and antagonists in the noblest of dramas, which true law can alone perfect, as our hope is. Do not then suppose that we shall all in a moment allow you to erect your stage in the agora, or introduce the fair voices of your actors, speaking above our own, and permit you to harangue our women and children, and the common people, about our institutions, in language other than our own, and very often the opposite of our own. For a state would be mad which gave you this licence, until the magistrates had determined whether your poetry might be recited, and was fit for publication or not. Wherefore, O ye sons and scions of the softer Muses, first of all show your songs to the magistrates, and let them compare them with our own, and if they are the same or better we will give you a chorus; but if not, then, my friends, we cannot. Let these, then, be the customs ordained by law about all dances and the teaching of them, and let matters relating to slaves be separated from those relating to masters, if you do not object.

Plato, Laws, VII, 816B

6 The buffoon ... is the slave of his sense of humour, and spares neither himself nor others if he can raise a laugh, and says things none of which a man of refinement would say, and to some of which he would not even listen. The boor ... is useless for such social intercourse; for he contributes nothing and finds fault with everything. But relaxation and amusement are thought to be a necessary element in life.

Aristotle, Ethics, 1128a34

7 Comedy ... is an imitation of men worse than the average; worse, however, not as regards any and every sort of fault, but only as regards one particular kind, the ridiculous, which is a species of the ugly. The ridiculous may be defined as a mistake or deformity not productive of pain or harm to others; the mask, for instance, that excites laughter, is something ugly and distorted without causing pain.

Aristotle, Poetics, 1449a32

8 A tragedy ... is the imitation of an action that is serious and also, as having magnitude, complete in itself; in language with pleasurable accessories, each kind brought in separately in the parts of the work; in a dramatic, not in a narrative form; with incidents arousing pity and fear, wherewith to accomplish its catharsis of such emotions.

Aristotle, Poetics, 1449b23

9 Tragedy is essentially an imitation not of persons but of action and life, of happiness and misery. All human

happiness or misery takes the form of action; the end for which we live is a certain kind of activity, not a quality. Character gives us qualities, but it is in our actions—what we do—that we are happy or the reverse. In a play accordingly they do not act in order to portray the characters; they include the characters for the sake of the action. So that it is the action in it, that is, its fable or plot, that is the end and purpose of the tragedy; and the end is everywhere the chief thing. Besides this, a tragedy is impossible without action, but there may be one without character. . . . And again: one may string together a series of characteristic speeches of the utmost finish as regards diction and thought, and yet fail to produce the true tragic effect; but one will have much better success with a tragedy which, however inferior in these respects, has a plot, a combination of incidents, in it. And again: the most powerful elements of attraction in tragedy, the peripeties and discoveries, are parts of the plot. A further proof is in the fact that beginners succeed earlier with the diction and characters than with the construction of a story; and the same may be said of nearly all the early dramatists. We maintain, therefore, that the first essential, the life and soul, so to speak, of tragedy is the plot; and that the characters come second.

Aristotle, Poetics, 1450a17

- 10 Just in the same way, then, as a beautiful whole made up of parts, or a beautiful living creature, must be of some size, but a size to be taken in by the eye, so a story or plot must be of some length, but of a length to be taken in by the memory. As for the limit of its length, so far as that is relative to public performances and spectators, it does not fall within the theory of poetry. If they had to

perform a hundred tragedies, they would be timed by water-clocks, as they are said to have been at one period. The limit, however, set by the actual nature of the thing is this: the longer the story, consistently with its being comprehensible as a whole, the finer it is by reason of its magnitude. As a rough general formula, 'a length which allows of the hero passing by a series of probable or necessary stages from misfortune to happiness, or from happiness to misfortune', may suffice as a limit for the magnitude of the story.

The unity of a plot does not consist, as some suppose, in its having one man as its subject. An infinity of things befall that one man, some of which is impossible to reduce to unity; and in like manner there are many actions of one man which cannot be made to form one action. . . . The truth is that, just as in the other imitative arts one imitation is always of one thing, so in poetry the story, as an imitation of action, must represent one action, a complete whole, with its several incidents so closely connected that the transposal or withdrawal of any one of them will disjoin and dislocate the whole. For that which makes no perceptible difference by its presence or absence is no real part of the whole.

Aristotle, Poetics, 1451a3

- 11 The next points after what we have said above will be these: (1) What is the poet to aim at, and what is he to avoid, in constructing his plots? and (2) What are the conditions on which the tragic effect depends?

We assume that, for the finest form of tragedy, the plot must be not simple but complex; and further, that it must imitate actions arousing fear and pity, since that is the distinctive function of this kind of imitation. It follows,

therefore, that there are three forms of plot to be avoided. (1) A good man must not be seen passing from happiness to misery, or (2) a bad man from misery to happiness. The first situation is not fear-inspiring or piteous, but simply odious to us. The second is the most untragic that can be; it has no one of the requisites of tragedy; it does not appeal either to the human feeling in us, or to our pity, or to our fears. Nor, on the other hand, should (3) an extremely bad man be seen falling from happiness into misery. Such a story may arouse the human feeling in us, but it will not move us to either pity or fear; pity is occasioned by undeserved misfortune, and fear by that of one like ourselves; so that there will be nothing either piteous or fear-inspiring in the situation. There remains, then, the intermediate kind of personage, a man not preeminently virtuous and just, whose misfortune, however, is brought upon him not by vice and depravity but by some error of judgment, of the number of those in the enjoyment of great reputation and prosperity; for example, Oedipus, Thyestes, and the men of note of similar families. The perfect plot, accordingly, must have a single, and not (as some tell us) a double issue; the change in the hero's fortunes must be not from misery to happiness, but on the contrary from happiness to misery; and the cause of it must lie not in any depravity, but in some great error on his part; the man himself being either such as we have described, or better, not worse, than that. Fact also confirms our theory. Though the poets began by accepting any tragic story that came to hand, in these days the finest tragedies are always on the story of some few houses, on that of Alcmeon, Oedipus, Orestes, Meleager, Thyestes, Telephus, or any others that may have been involved, as either agents or sufferers, in

some deed of horror. The theoretically best tragedy, then, has a plot of this description. The critics, therefore, are wrong who blame Euripides for taking this line in his tragedies, and giving many of them an unhappy ending. It is, as we have said, the right line to take. The best proof is this: on the stage, and in the public performances, such plays, properly worked out, are seen to be the most truly tragic; and Euripides, even if his execution be faulty in every other point, is seen to be nevertheless the most tragic certainly of the dramatists. After this comes the construction of plot which some rank first, one with a double story (like the *Odyssey*) and an opposite issue for the good and the bad personages. It is ranked as first only through the weakness of the audiences; the poets merely follow their public, writing as its wishes dictate. But the pleasure here is not that of tragedy. It belongs rather to comedy, where the bitterest enemies in the piece (for example, Orestes and Aegisthus) walk off good friends at the end, with no slaying of anyone by anyone.

Aristotle, Poetics, 1452b27

- 12 At first tragedies were brought on the stage as means of reminding men of the things which happen to them, and that it is according to nature for things to happen so, and that, if you are delighted with what is shown on the stage, you should not be troubled with that which takes place on the larger stage. For you see that these things must be accomplished thus, and that even they bear them who cry out "O Cithaeron." And, indeed, some things are said well by the dramatic writers....

After tragedy the old comedy was introduced, which had a magisterial freedom of speech, and by its very plainness of speaking was useful in reminding men to

beware of insolence; and for this purpose too Diogenes used to take from these writers.

But as to the middle comedy which came next, observe what it was, and again, for what object the new comedy was introduced, which gradually sunk down into a mere mimic artifice. That some good things are said even by these writers, everybody knows: but the whole plan of such poetry and dramaturgy, to what end does it look!

Marcus Aurelius, Meditations, XI, 6

13 I developed a passion for stage plays, with the mirror they held up to my own miseries and the fuel they poured on my flame. How is it that a man wants to be made sad by the sight of tragic sufferings that he could not bear in his own person? Yet the spectator does want to feel sorrow, and it is actually his feeling of sorrow that he enjoys. Surely this is the most wretched lunacy? For the more a man feels such sufferings in himself, the more he is moved by the sight of them on the stage. Now when a man suffers himself, it is called misery; when he suffers in the suffering of another, it is called pity. But how can the unreal sufferings of the stage possibly move pity? The spectator is not moved to aid the sufferer but merely to be sorry for him; and the more the author of these fictions makes the audience grieve, the better they like him. If the tragic sorrows of the characters— whether historical or entirely fictitious—be so poorly represented that the spectator is not moved to tears, he leaves the theatre unsatisfied and full of complaints; if he *is* moved to tears, he stays to the end, fascinated and revelling in it. So that tears and sorrow, it would seem, are things to be sought. Yet surely every man prefers to be joyful. May it be that

whereas no one wants to be miserable, there is real pleasure in pitying others—and we love their sorrows because without them we should have nothing to pity?

Augustine, Confessions, III, 2

- 14 We appear ... to make use of the tragic style when the stateliness of the lines as well as the loftiness of the construction and the excellence of the words agree with the weight of the subject. And because, if we remember rightly, it has already been proved that the highest things are worthy of the highest, and because the style which we call tragic appears to be the highest style, those things which we have distinguished as being worthy of the highest song are to be sung in that style alone, namely, safety, love, and virtue, and those other things, our conceptions of which arise from these; provided that they be not degraded by any accident.... And therefore let those who, innocent of art and science, and trusting to genius alone, rush forward to sing of the highest subjects in the highest style, confess their folly and cease from such presumption; and if in their natural sluggishness they are but geese, let them abstain from imitating the eagle soaring to the stars.

Dante, De Vulgari Eloquentia, II, 4

- 15 Comedy is a certain kind of poetic narration differing from all others. It differs... from tragedy in its content, in that tragedy begins admirably and tranquilly, whereas its end or exit is foul and terrible;... whereas comedy introduces some harsh complication, but brings its matter to a prosperous end.. . , The title of the present work is '*the Comedy*.' For if we have respect to its content, at the

beginning it is horrible and fetid, for it is hell; and in the end it is prosperous, desirable, and gracious, for it is *Paradise*. If we have respect to the method of speech the method is lax and humble, for it is the vernacular speech in which very women communicate.

Dante, Letter to Can Grande

- 16 Tragedy is to say a certain story
From ancient books which have preserved the glory
Of one that stood in great prosperity
And is now fallen out of high degree
In misery, where he ends wretchedly.
Such tales are versified most commonly
In six feet, which men call hexameter.
In prose are many written; some prefer
A quantitative metre, sundry wise.

Chaucer, Canterbury Tales: Monk's Prologue

- 17 "Hold!" cried the knight. "Good sir, no more of this,
What you have said is right enough, and is
Very much more; a little heaviness
Is plenty for the most of us, I guess.
For me, I say it's saddening, if you please,
As to men who've enjoyed great wealth and ease,
To hear about their sudden fall, alas!
But the contrary's joy and great solace,
As when a man has been in poor estate
And he climbs up and waxes fortunate,
And there abides in all prosperity.
Such things are gladsome, as it seems to me,
And of such things it would be good to tell."

Chaucer, Canterbury Tales: Nun's Priest's Prologue

18 *Hamlet*. I have heard

That guilty creatures sitting at a play
Have by the very cunning of the scene
Been struck so to the soul that presently
They have proclaim'd their malefactions. . . .

The play's the thing
Wherein I'll catch the conscience of the King.

Shakespeare, Hamlet, II, ii, 617

19 *Hamlet*. Speak the speech, I pray you, as I pronounced it to you, trippingly on the tongue: but if you mouth it, as many of your players do, I had as lief the town-crier spoke my lines. Nor do not saw the air too much with your hand, thus, but use all gently; for in the very torrent, tempest, and, as I may say, the whirlwind of passion, you must acquire and beget a temperance that may give it smoothness. O, it offends me to the soul to hear a robustious periwig-pated fellow tear a passion to tatters, to very rags, to split the ears of the groundlings, who for the most part are capable of nothing but inexplicable dumbshows and noise. I would have such a fellow whipped for o'erdoing Termagant. It out-herods Herod. Pray you, avoid it.

1st Player. I warrant your honour.

Ham. Be not too tame neither, but let your own discretion be your tutor. Suit the action to the word, the word to the action; with this special observance, that you o'erstep not the modesty of nature; for anything so overdone is from the purpose of playing, whose end, both at the first and now, was and is, to hold, as 'twere, the mirror up to nature; to show virtue her own feature, scorn her own image, and the very age and body of the time his form and pressure. Now this overdone, or come tardy off,

though it make the unskilful laugh, cannot but make the judicious grieve; the censure of the which one must in your allowance o'erweigh a whole theatre of others. O, there be players that I have seen play, and heard others praise, and that highly, not to speak it profanely, that, neither having the accent of Christians nor the gait of Christian, pagan, nor man, have so strutted and bellowed that I have thought some of nature's journeymen had made men and not made them well, they imitated humanity so abominably.

1st Play. I hope we have reformed that indifferently with us, sir.

Ham. O, reform it altogether. And let those that play your clowns speak no more than is set down for them; for there be of them that will themselves laugh, to set on some quantity of barren spectators to laugh too; though, in the meantime, some necessary question of the play be then to be considered: that's villainous, and shows a most pitiful ambition in the fool that uses it.

Shakespeare, Hamlet, III, ii, 1

- 20 The parts of a comedy are the same with a tragedy, and the end is partly the same, for they both delight, and teach; the comicks are called teachers of the Greeks no less than the tragicks. Nor is the moving of laughter always the end of comedy; that is rather a fowling for the people's delight, or their fooling. For, as Aristotle says rightly, the moving of laughter is a fault in comedy, a kind of turpitude that depraves some part of a man's nature without a disease. As a wry face without pain moves laughter, or a deformed vizard, or a rude clown dressed in a lady's habit and using her actions; we dislike and scorn such representations which made the ancient

philosophers ever think laughter unfitting in a wise man. And this induced Plato to esteem of Homer as a sacrilegious person, because he presented the gods sometimes laughing. As also it is divinely said of Aristotle, that to seem ridiculous is a part of dishonesty, and foolish. So that what either in the words or sense of an author, or in the language or actions of men, is awry or depraved doth strangely stir mean affections, and provoke for the most part to laughter. And therefore it was clear that all insolent and obscene speeches, jests upon the best men, injuries to particular persons, perverse and sinister sayings and the rather unexpected in the old comedy did move laughter, especially where it did imitate any dishonesty; and scurrility came forth in the place of wit, which, who understands the nature and genius of laughter cannot but perfectly know.

Of which Aristophanes affords an ample harvest, having not only outgone Plautus or any other in that kind, but expressed all the moods and figures of what is ridiculous oddly. In short, as vinegar is not accounted good until the wine be corrupted, so jests that are true and natural seldom raise laughter with the best, the multitude. They love nothing that is right and proper. The farther it runs from reason or possibility with them the better it is. What could have made them laugh, like to see Socrates presented, that example of all good life, honesty, and virtue, to have him hoisted up with a pulley, and there play the philosopher in a basket; measure how many foot a flea could skip geometrically, by a just scale, and edify the people from the engine? This was theatrical wit, right stage jesting, and relishing a playhouse, invented for scorn and laughter; whereas, if it had savoured of equity, truth, perspicuity, and candour, to

have tasten a wise or a learned palate,—spit it out presently! this is bitter and profitable: this instructs and would inform us! what need we know anything, that are nobly born, more than a horse-race, or a hunting-match, our day to break with citizens, and such innate mysteries?

Jonson, Discoveries: Comedy and Tragedy

- 21 Whole we call that, and perfect, which hath a beginning, a midst, and an end. So the place of any building may be whole and entire for that work, though too little for a palace. As to a tragedy or a comedy, the action may be convenient and perfect that would not fit an epic poem in magnitude. So a lion is a perfect creature in himself, though it be less than that of a buffalo or a rhinocerote. They differ but *in specie*: either in the kind is absolute; both have their parts, and either the whole. Therefore, as in every body so in every action, which is the subject of a just work, there is required a certain proportionable greatness, neither too vast nor too minute. For that which happens to the eyes when we behold a body, the same happens to the memory when we contemplate an action. I look upon a monstrous giant, as Titans, whose body covered nine acres of land, and mine eye sticks upon every part; the whole That consists of those parts will never be taken in at one entire view. So in a fable, if the action be too great, we can never comprehend the whole together in our imagination. Again, if it be too little, there ariseth no pleasure out of the object; it affords the view no stay; it is beheld, and vanisheth at once. As if we should look upon an ant or pismire, the parts fly the sight, and the whole considered is almost notliing,

Jonson, Discoveries: The Fable

22 All great amusements are dangerous to the Christian life; but among all those which the world has invented there is none more to be feared than the theatre. It is a representation of the passions so natural and so delicate that it excites them and gives birth to them in our hearts, and, above all, to that of love, principally when it is represented as very chaste and virtuous. For the more innocent it appears to innocent souls, the more they are likely to be touched by it. Its violence pleases our self-love, which immediately forms a desire to produce the same effects which are seen so well-represented; and, at the same time, it makes ourselves a conscience founded on the propriety of the feelings which we see there, by which the fear of pure souls is removed, since they imagine that it cannot hurt their purity to love with a love which seems to them so reasonable.

So we depart from the theatre with our heart so filled with all the beauty and tenderness of love, the soul and the mind so persuaded of its innocence, that we are quite ready to receive its first impressions, or rather to seek an opportunity of awakening them in the heart of another, in order that we may receive the same pleasures and the same sacrifices which we have seen so well-represented in the theatre.

Pascal, Pensées, I, 11

23 Then to the well-trod stage anon,
If *Jonsons* learned Sock be on,
Or sweetest *Shakespear* fancies childe.
Warble his native Wood-notes walde.

Milton, L'Allegro, 131

24 Som time let Gorgeous Tragedy
In Scepter'd Pall com sweeping by,
Presenting *Thebs*, or *Pelops* line,
Or the talc of *Troy* divine.
Or what (though rare) of later age,
Ennobled hath the Buskind stage.

Milton, Il Penseroso, 97

25 Tragedy, as it was antiently compos'd, hath been ever held the gravest, moralest, and most profitable of all other Poems: therefore said by *Aristotle* to be of power by raising pity and fear, or terror, to purge the mind of those and such like passions, that is to temper and reduce them to just measure with a kind of delight, stirr'd up by reading or seeing those passions well imitated. Nor is Nature wanting in her own effects to make good his assertion: for so in Physic things of melancholic hue and quality are us'd against melancholy, sowt against sowr, salt to remove salt humours. Hence Philosophers and other gravest Writes, as *Cicero*, *Plutarch* and others, frequently cite out of Tragic Poets, both to adorn and illustrate thir discourse. The Apostle *Paul* himself thought it not unworthy to insert a verse of *Euripides* into the Text of Holy Scripture, I *Cor.* 15. 33. and *Paraeus* commenting on the Revelation, divides the whole Book as a Tragedy, into Acts distinguish'd each by a Chorus of Heavenly Harpings and Song between. . . . This is mention'd to vindicate Tragedy from the small esteem, or rather infamy, which in the account of many it undergoes at this day with other common Interludes; hap'ning through the Poets error of intermixing Comic stuff with Tragic sadness

and gravity; or introducing trivial and vulgar persons, which by all judicious hath bin counted absurd; and brought in without discretion, corruptly to gratifie the people.

Milton, Samson Agonistes, Pref.

- 26 A scene of mirth, mixed with tragedy, has the same effect upon us which our music has betwixt the acts; which we find a relief to us from the best plots and language of the stage, if the discourses have been long. I must therefore have stronger arguments, ere I am convinced that compassion and mirth in the same subject destroy each other; and in the mean time cannot but conclude, to the honour of our nation, that we have invented, increased, and perfected a more pleasant way of writing for the stage, than was ever known to the ancients or moderns of any nation, which is tragicomedy.

Dryden, Essay of Dramatic Poesy

- 27 Who ever demanded the reasons of that nice unity of time or place which is now established to be so essential to dramatic poetry? What critic hath been ever asked, why a play may not contain two days as well as one? Or why the audience (provided they travel, like electors, without any expense) may not be wafted fifty miles as well as five? Hath any commentator well accounted for the limitation which an antient critic hath set to the drama, which he will have contain neither more nor less than five acts? Or hath anyone living attempted to explain what the modern judges of our theatres mean by that word low; by which they have happily succeeded in

banishing all humour from the stage, and have made the theatre as dull as a drawing-room!

Fielding, Tom Jones, V, 1

28 The theatrical stage is nothing more than a representation, or, as Aristotle calls it, an imitation of what really exists; and hence, perhaps, we might fairly pay a very high compliment to those who by their writings or actions have been so capable of imitating life, as to have their pictures in a manner confounded with, or mistaken for, the originals.

But, in reality, we are not so fond of paying compliments to these people, whom we use as children frequently do the instruments of their amusement; and have much more pleasure in hissing and buffeting them, than in admiring their excellence. There are many other reasons which have induced us to see this analogy between the world and the stage.

Some have considered the larger part of mankind in the light of actors, as personating characters no more their own, and to which in fact they have no better title, than the player hath to be in earnest thought the king or emperor whom he represents. Thus the hypocrite may be said to be a player; and indeed the Greeks called them both by one and the same name....

In all these, however, and in every other similitude of life to the theatre, the resemblance hath been always taken from the stage only. None, as I remember, have at all considered the audience at this great drama.

But as Nature often exhibits some of her best performances to a very full house, so will the behaviour of her spectators no less admit the above-mentioned comparison than that of her actors. In this vast theatre of

time are seated the friend and the critic; here are claps and shouts, hisses and groans; in short, everything which was ever seen or heard at the Theatre-Royal.

Fielding, Tom Jones, VII, 1

29 Now, a comic romance is a comic epic poem in prose; differing from comedy, as the serious epic from tragedy: its action being more extended and comprehensive; containing a much larger circle of incidents, and introducing a greater variety of characters. It differs from the serious romance in its fable and action, in this; that as in the one these are grave and solemn, so in the other they are light and ridiculous; it differs in its characters by introducing persons of inferior rank, and consequently, of inferior manners, whereas the grave romance sets the highest before us: lastly, in its sentiments and diction; by preserving the ludicrous instead of the sublime. In the diction, I think, burlesque itself may be sometimes admitted; of which many instances will occur in this work, dS in the description of the battles, and some other places, not necessary to be pointed out to the classical reader, for whose entertainment those parodies or burlesque imitations are chiefly calculated.

But, though we have sometimes admitted this in our diction, we have carefully excluded it from our sentiments and characters; for there it is never properly introduced, unless in writings of the burlesque kind, which this is not intended to be. Indeed, no two species of writing can differ more widely than the comic and the burlesque; for as the latter is ever the exhibition of what is monstrous and unnatural, and where our delight, if we examine it, arises from the surprising absurdity, as in appropriating the mannere of the highest to the lowest,

or *e converso*; so in the former we should ever confine ourselves strictly to nature, from the just imitation of which will flow all the pleasure we can this way convey to a sensible reader. And perhaps there is one reason why a comic writer should of all others be the least excused for deviating from nature, since it may not be always so easy for a serious poet to meet with the great and the admirable; but life everywhere furnishes an accurate observer with the ridiculous.

Fielding, Joseph Andrews, Pref.

30 The only source of the true ridiculous (as it appears to me) is affectation. But though it arises from one spring only, when we consider the infinite streams into which this one branches, we shall presently cease to admire at the copious field it affords to an observer. Now, affectation proceeds from one of these two causes, vanity or hypocrisy: for as vanity puts us on affecting false characters in order to purchase applause; so hypocrisy sets us on an endeavour to avoid censure, by concealing our vices under an appearance of their opposite virtues. And though these two causes are often confounded (for there is some difficulty in distinguishing them), yet, as they proceed from very different motives, so they are as clearly distinct in their operations; for indeed, the affectation which arises from vanity is nearer to truth than the other, as it hath not that violent repugnancy of nature to struggle with, which that of the hypocrite hath. It may be likewise noted, that affectation doth not imply an absolute negation of those qualities which are affected; and, therefore, though, when it proceeds from hypocrisy, it be nearly allied to deceit; yet when it comes from vanity only, it partakes of the nature of ostentation:

for instance, the affectation of liberality in a vain man differs visibly from the same affectation in the avaricious; for though the vain man is not what he would appear, or hath not the virtue he affects, to the degree he would be thought to have it; yet it sits less awkwardly on him than on the avaricious man, who is the very reverse of what he would seem to be.

From the discovery of this affectation arises the ridiculous, which always strikes the reader with surprize and pleasure; and that in a higher and stronger degree when the affectation arises from hypocrisy, than when from vanity; for to discover any one to be the exact reverse of what he affects, is more surprizing, and consequently more ridiculous, than to find him a little deficient in the quality he desires the reputation of.

Fielding, Joseph Andrews, Pref.

- 31 Shakespeare's plays are not in the rigorous and critical sense either tragedies or comedies, but compositions of a distinct kind; exhibiting the real state of sublunary nature, which partakes of good and evil, joy and sorrow, mingled with endless variety of proportion and innumerable modes of combination; and expressing the course of the world, in which the loss of one is the gain of another; in which, at the same time, the reveller is hasting to his wine, and the mourner burying his friend; in which the malignity of one is sometimes defeated by the frolic of another; and many mischiefs and many benefits are done and hindered without design.

Johnson, Preface to Shakespeare

32 The necessity of observing the unities of time and place arises from the supposed necessity of making the drama credible. The critics hold it impossible that an action of months or years can be possibly believed to pass in three hours; or that The spectator can suppose himself to sit in the theatre, while ambassadors go and return between distant kings, while armies are levied and towns besieged, while an exile wanders and returns, or till he whom they saw courting his mistress, shall lament the untimely fall of his son. The mind revolts from evident falsehood, and fiction loses its force when it departs from the resemblance of reality.

From the narrow limitation of time necessarily arises the contraction of place. The spectator, who knows that he saw the first act at Alexandria, cannot suppose that he sees the next at Rome, at a distance to which not the dragons of Medea could, in so short a time, have transported him; he knows with certainty that he has not changed his place, and he knows that place cannot change itself; that what was a house cannot become a plain; that what was Thebes can never be Persepolis.

Such is the triumphant language with which a critic exults over the misery of an irregular poet, and exults commonly without resistance or reply. It is time therefore to tell him by the authority of Shakespeare that he assumes, as an unquestionable principle, a position which, while his breath is forming it into words, his understanding pronounces to be false. It is false that any representation is mistaken for reality; that any dramatic fable in its materiality was ever credible, or, for a single moment, was ever credited.

The objection arising from the impossibility of passing the first hour at Alexandria, and the next at Rome,

supposes that when the play opens, the spectator really imagines himself at Alexandria, and believes that his walk to the theatre has been a voyage to Egypt, and that he lives in the days of Antony and Cleopatra, Surely he that imagines this may imagine more. He that can take the stage at one time for the palace of the Ptolemies may take it in half an hour for the promontory of Actium.

Delusion, if delusion be admitted, has no certain limitation; if the spectator can be once persuaded that his old acquaintances are Alexander and Caesar, that a room illuminated with candles is the plain of Pharsalia, or the bank of Granicus, he is in a state of elevation above the reach of reason, or of truth, and from the heights of empyrean poetry, may despise the circumscriptions of terrestrial nature. There is no reason why a mind thus wandering in ecstasy should count the clock, or why an hour should not be a century in that calenture of the brains that can make the stage a field.

The truth is that the spectators are always in their senses, and know, from the first act to the last, that the stage is only a stage, and that the players are only players. They came to hear a certain number of lines recited with just gesture and elegant modulation. The lines relate to some action, and an action must be in some place; but the different actions that complete a story may be in places very remote from each other; and where is the absurdity of allowing that space to represent first Athens, and then Sicily which was always known to be neither Sicily nor Athens, but a modern theatre.

By supposition, as place is introduced, time may be extended; the time required by the fable elapses for the most part between the acts; for, of much of the action as is represented, the real and poetical duration is the same.

If, in the first act, preparations for war against Mithridates are represented to be made in Rome, the event of the war may, without absurdity, be represented, in the catastrophe, as happening in Pontus; we know that there is neither war, nor preparation for war; we know that we are neither in Rome nor Pontus; that neither Mithridates nor Lucullus are before us. The drama exhibits successive imitations of successive actions; and why may not the second imitation represent an action that happened years after the first, if it be so connected with it that nothing but time can be supposed to intervene? Time is, of all modes of existence, most obsequious to the imagination; a lapse of years is as easily conceived as a passage of hours. In contemplation we easily contract the time of real actions, and therefore willingly permit it to be contracted when we only see their imitation.

It will be asked how the drama moves if it is not credited. It is credited with all the credit due to a drama. It is credited, whenever it moves, as a just picture of a real original; as representing to the auditor what he would himself feel if he were to do or suffer what is there feigned to be suffered or to be done. The reflection that strikes the heart is not that the evils before us are real evils but that they are evils to which we ourselves may be exposed. If there be any fallacy, it is not that we fancy the players, but that we fancy ourselves unhappy for a moment; but we rather lament the possibility than suppose the presence of misery, as a mother weeps over her babe when she remembers that death may take it from her. The delight of tragedy proceeds from our consciousness of fiction; if we thought murders and treasons real, they would please no more.

Johnson, Preface to Shakespeare

33 I introduced Aristotle's doctrine in his Art of Poetry, of "...the purging of the passions," as the purpose of tragedy. "But how are the passions to be purged by terrour and pity?" (said I, with an assumed air of ignorance, to incite him to talk, for which it was often necessary to employ some address). *Johnson*. "Why, Sir, you are to consider what is the meaning of purging in the original sense. It is to expel impurities from the human body. The mind is subject to the same imperfection. The passions are the great movers of human actions; but they are mixed with such impurities, that it is necessary they should be purged or refined by means of terrour and pity. For instance, the ambition is a noble passion; but by seeing upon e that a man who is so excessively ambitious as to raise himself by injustice, is punished, we are terrified at the fatal consequences of such a passion. In the same manner a certain degree of resentment is necessary; but if we see that a man carries it too far, we pity the object of it, and are taught to moderate that passion." My record upon this occasion does great injustice to Johnson's expression, which was so forcible and brilliant, that Mr. Cradock whispered me, "O that his words were written in a book!"

Boswell, Life of Johnson (Apr. 12, 1776)

34 The state, by encouraging, that is by giving entire liberty to all those who for their own interest would attempt, without scandal or indecency, to amuse and divert the people by painting, poetry, music, dancing; by all sorts of dramatic representations and exhibitions; would easily dissipate, in the greater part of them, that melancholy

and gloomy humour which is almost always the nurse of popular superstition and enthusiasm. Public diversions have always been the objects of dread and hatred to all the fanatical promoters of those popular [religious] frenzies. The gaiety and good humour which those diversions inspire were altogether inconsistent with that temper of mind which was fittest for their purpose, or which they could best work upon. Dramatic representations, besides, frequently exposing their artifices to public ridicule, and sometimes even to public execration, were upon that account, more than all other diversions, the objects of their peculiar abhorrence.

Adam Smith, Wealth of Nations, V, 1

35 Voltaire said that heaven has given us two things to compensate us for the many miseries of life, hope and sleep. He might have added laughter to the list—if only the means of exciting it in men of intelligence were as ready to hand, and the wit or originality of humour which it requires were not just as rare as the talent is common for inventing stuff that splits the head, as mystic speculators do, or that breaks your neck, as the genius does, or that harrows the heart as sentimental novelists do (aye, and moralists of the same type).

Kant, Critique of Aesthetic Judgement, 54

36 The humorous manner may also be ranked as a thing which in its enlivening influence is clearly allied to the gratification provoked by laughter. It belongs to originality of mind, though not to the talent for fine art. Humour, in a good sense, means the talent for being able to put oneself at will into a certain frame of mind in which

everything is estimated on lines that go quite off the beaten track (a topsy-turvy view of things), and yet on lines that follow certain principles, rational in the case of such a mental temperament. A person with whom such variations are not a matter of choice is said to have humours; but if a person can assume them voluntarily and of set purpose (on behalf of a lively presentation drawn from a ludicrous contrast), he and his way of speaking are termed humorous. This manner belongs, however, to agreeable rather than to fine art, because the object of the latter must always have an evident intrinsic worth about it, and thus demands a certain seriousness in its presentation, as taste does in estimating it.

Kant, Critique of Aesthetic Judgement, 54

- 37 The aim that comedy has in view is the same as that of the highest destiny of man, and this consists in liberating himself from the influence of violent passions, and taking a calm and lucid survey of all that surrounds him, and also of his own being, and of seeing everywhere occurrence rather than fate or hazard, and ultimately rather smiling at the absurdities than shedding tears and feeling anger at sight of the wickedness of man.

Schiller, Simple and Sentimental Poetry

- 38 Nothing serves better to illustrate a man's character than the things which he finds ridiculous.

The ridiculous arises from a moral contrast which is innocently placed before the senses.

The sensual man will often laugh when there is nothing to laugh at. Whatever it may be that moves him,

he will always reveal the fact that he is pleased with himself.

Goethe, Reflections and Maxims

39 All tragedies are finish'd by a death.
All comedies are ended by a marriage;
The future states of both are left to faith.

Byron, Don Juan, III, 9

40 Success is counted sweetest
By those who ne'er succeed.
To comprehend a nectar
Requires sorest need.
Not one of all the purple host
Who took the flag today
Can tell the definition
So clear of victory
As he defeated, dying,
On whose forbidden ear
The distant strains of triumph
Burst agonized and clear.

Emily Dickinson, Success Is Counted Sweetest

41 The drama in our time is a great man fallen, who has reached the last degree of his degradation, and at the same time continues to pride himself on his past of which nothing now remains.

Tolstoy, Critical Essay on Shakespeare, VI11

42 The metaphysical comfort—with which, I am suggesting even now, every true tragedy leaves us—that life is at the bottom of things, despite all the changes of appearances,

indestructibly powerful and pleasurable—this comfort appears in incarnate clarity in the chorus of satyrs, a chorus of natural beings who live ineradicably, as it were behind all civilization and remain eternally the same, despite the changes of generations and of the history of nations.

With this chorus the profound Hellene, uniquely susceptible to the tenderest and deepest suffering, comforts himself, having looked boldly right into the terrible destructiveness of so-called world history as well as the cruelty of nature, and being in danger of longing for a Buddhistic negation of the will. Art saves him, and through art—life.

Nietzsche, Birth of Tragedy, VII

- 43 We talk so abstractly about poetry because all of us are usually bad poets. At bottom, the aesthetic phenomenon is simple: let anyone have the ability to behold continually a vivid play and to live constantly surrounded by hosts of spirits, and he will be a poet; let anyone feel the urge to transform himself and to speak out of other bodies and souls, and he will be a dramatist.

Nietzsche, Birth of Tragedy, VIII

- 44 The tradition is undisputed that Greek tragedy in its earliest form had for its sole theme the sufferings of Dionysus and that for a long time the only stage hero was Dionysus himself. But it may be claimed with equal confidence that until Euripides, Dionysus never ceased to be the tragic hero; that all the celebrated figures of the Greek stage—Prometheus, Oedipus, etc.—are mere masks of this original hero, Dionysus. That behind all

these masks there is a deity, that is one essential reason for the typical "ideality" of these famous figures which has caused so much astonishment. Somebody, I do not know who, has claimed that all individuals, taken as individuals, are comic and hence untragic—from which it would follow that the Greeks simply could not suffer individuals on the tragic stage. In fact, this is what they seem to have felt; and the Platonic distinction and evaluation of the "idea" and the "idol," the mere image, is very deeply rooted in the Hellenic character.

Nietzsche, Birth of Tragedy, X

- 45 The essence of dramatic tragedy is not unhappiness. It resides in the solemnity of the remorseless working of things. This inevitableness of destiny can only be illustrated in terms of human life by incidents which in fact involve unhappiness. For it is only by them that the futility of escape can be made evident in the drama.

Whitehead, Science and the Modern World, I

- 46 Another of the great poetic tragedies, Shakespeare's *Hamlet*, is rooted in the same soil as *Oedipus Rex*. But the whole difference in the psychic life of the two widely separated periods of civilization, and the progress, during the course of time, of repression in the emotional life of humanity, is manifested in the differing treatment of the same material. In *Oedipus* the basic wish-phantasy of the child is brought to light and realized as it is in dreams; in *Hamlet*, it remains repressed, and we learn of its existence--as we discover the relevant facts in a neurosis--only through the inhibitory effects which proceed from it. In the more modern drama, the curious fact that it is

possible to remain in complete uncertainty as to the character of the hero has proved to be quite consistent with the overpowering effect of the tragedy. The play is based upon Hamlet's hesitation in accomplishing the task of revenge assigned to him; the text does not give the cause or the motive of this hesitation, nor have the manifold attempts at interpretation succeeded in doing so. According to the still prevailing conception, a conception for which Goethe was first responsible, Hamlet represents the type of man whose active energy is paralysed by excessive intellectual activity: "Sicklied o'er with the pale cast of thought." According to another conception, the poet has endeavoured to portray a morbid, irresolute character, on the verge of neurasthenia. The plot of the drama, however, shows us that Hamlet is by no means intended to appear as a character wholly incapable of action. On two separate occasions we see him assert himself: once in a sudden outburst of rage, when he stabs the eavesdropper behind the arras, and on the other occasion when he deliberately, and even craftily, with the complete unscrupulousness of a prince of the Renaissance, sends the two courtiers to the death which was intended for himself. What is it, then, that inhibits him in accomplishing the task which his father's ghost has laid upon him? Here the explanation offers itself that it is the peculiar nature of this task. Hamlet is able to do anything but take vengeance upon the man who did away with his father and has taken his father's place with his mother—the man who shows him in realization the repressed desires of his own childhood. the loathing which should have driven him to revenge is thus replaced by self-reproach, by conscientious scruples, which tell him that

he himself is no better than the murderer whom he is required to punish. I have here translated into consciousness what had to remain unconscious in the mind of the hero; if anyone wishes to call Hamlet an hysterical subject I cannot but admit that this is the deduction to be drawn from my Interpretation. The sexual aversion which Hamlet expresses in conversation with Ophelia is perfectly consistent with this deduction—the same sexual aversion which during the next few years was increasingly to take possession of the poet's soul, until it found its supreme utterance in *Timon of Athens*. It can, of course, be only the poet's own psychology with which we are confronted in *Hamlet*; and in a work on Shakespeare by Georg Brandes (1896) I find the statement that the drama was composed immediately after the death of Shakespeare's father (1601)—that is to say, when he was still mourning his loss, and during a revival, as we may fairly assume, of his own childish feelings in respect of his father. It is known, too, that Shakespeare's son, who died in childhood, bore the name of Hamnet (identical with Hamlet). Just as *Hamlet* treats of the relation of the son to his parents, so *Macbeth*, which was written about the same period, is based upon the theme of childlessness. Just as all neurotic symptoms, like dreams themselves, are capable of hyper-interpretation, and even require such hyper-interpretation before they become perfectly intelligible, so every genuine poetical creation must have proceeded from more than one motive, more than one impulse in the mind of the poet, and must admit of more than one interpretation. I have here attempted to interpret only the deepest stratum of impulses in the mind of the creative poet.

Freud, Interpretation of Dreams, V, I)

47 The pleasure of wit originates from an economy of expenditure in inhibition, of the comic from an economy of expenditure in thought, and of humor from an economy of expenditure in feeling. All three modes of activity of our psychic apparatus derive pleasure from economy. All three present methods strive to bring back from the psychic activity a pleasure which has really been lost in the development of this activity. For the euphoria which we are thus striving to obtain is nothing but the state of a bygone time, in which we were wont to defray our psychic work with slight expenditure. It is the state of our childhood in which we did not know the comic, were incapable of wit, and did not need humor to make us happy.

Freud, Wit and Its Relation to the Unconscious, VII

48 The comic does not exist outside the pale of what is strictly *human*. A landscape may be beautiful, charming and sublime, or insignificant and ugly; it will never be laughable. You may laugh at an animal, but only because you have detected in it some human altitude or expression. You may laugh at a hat, but what you are making fun of, in this case, is not the piece of felt or straw, but the shape that men have given it—the human caprice whose mould it has assumed. It is strange that so important a fact, and such a simple one too, has not attracted to a greater degree the attention of philosophers. Several have defined man as "an animal which laughs." They might equally well have defined him as an animal which is laughed at; for if any other animal, or some lifeless object, produces the same effect, it is

always because of some resemblance to man. of the stamp he gives it or the use he puts it to.

Bergson, Laughter, I, 1

49 You would hardly appreciate the comic if you felt yourself isolated from others. Laughter appears to stand in need of an echo. Listen to it carefully: it is not an articulate, clear, well-defined sound; it is something which would fain be prolonged by reverberating from one to another, something beginning with a crash, to continue in successive rumblings, like thunder in a mountain. Still, this reverberation cannot go on for ever. It can travel within as wide a circle as you please; the circle remains, none the less, a closed one.

Bergson, Laughter, I, 1

50 Look closely: you will find that the art of the comic poet consists in making us so well acquainted with the particular vice, in introducing us, the spectators, to such a degree of intimacy with it, that in the end we get hold of some of the strings of the marionette with which he is playing, and actually work them ourselves; this it is that explains part of the pleasure we feel. Here, too, it is really a kind of automatism that makes us laugh—an automatism, as we have already remarked, closely akin to mere absentmindedness. To realise this more fully, it need only be noted that a comic character is generally comic in proportion to his ignorance of himself. The comic person is unconscious.

Bergson, Laughter, I, 2

51 A comedy is far more like real life than a drama is. The more sublime the drama, the more profound the analysis to which the poet has had to subject the raw materials of daily life in order to obtain the tragic element in its unadulterated form. On the contrary, it is only in its lower aspects, in light comedy and farce, that comedy is in striking contrast to reality: the higher it rises, the more it approximates to life; in fact, there are scenes in real life so closely bordering on high-class comedy that the stage might adopt them without changing a single word.

Bergson, Laughter, III, 1

52 In this sense, laughter cannot be absolutely just. Nor should it be kind-hearted either. Its function is to intimidate by humiliating. Now, it would not succeed in doing this, had not nature implanted for that very purpose, even in the best of men, a spark of spitefulness or, at all events, of mischief. Perhaps we had better not investigate this point too closely, for we should not find anything very flattering to ourselves.

Bergson, Laughter, III, 5

53 What fabulous creatures these artists are! Are they really human at all? Take the clowns, for example, those basically alien beings, funmakers, with little red hands, little thin-shod feet, red wigs under conical felt hats, their impossible lingo, their handstands, their stumbling and falling over everything, their mindless running to and fro and unserviceable attempts to help, their hideously unsuccessful efforts to imitate their serious colleagues—in tightrope-walking, for instance— which bring the crowd to a pitch of mad merriment. Are these ageless,

half-grown sons of absurdity, at whom Stanko and I laughed so heartily (I, however, with a thoughtful fellow-feeling), are they human at all? With their chalk-white faces and utterly preposterous painted expressions—triangular eyebrows and deep perpendicular grooves in their cheeks under the reddened eyes, impossible noses, mouths twisted up at the corners into insane smiles—masks, that is, which stand in inconceivable contrast to the splendour of their costumes—black satin, for example, embroidered with silver butterflies, a child's dream—are they, I repeat, human beings, men that could conceivably find a place in everyday daily life? In my opinion it is pure sentimentality to say that they are "human too," with the sensibilities of human beings and perhaps even with wives and children. I honour them and defend them against ordinary bad taste when I say no, they are not, they are exceptions, side-splitting monsters of preposterousness, glittering, world-renouncing monks of unreason, cavorting hybrids, part human and part insane art.

Mann, Confessions of Felix Krull

16.5 Music

We have already noted that, of all the fine arts other than imaginative literature, music alone receives special treatment in this chapter. One reason for this is that both the poets and the moralists regard music as exerting an extraordinary influence over the emotions and conduct of human beings. Closely related to that is the concern, especially in antiquity, with the part that music plays in the rearing and training of the young. Plato, for example, assigns to gymnastic and to music the basic roles in the early education of children—one for the training of the body, the other for the discipline of the emotions and the cultivation of the sensibilities. Aristotle broadens the discussion by considering the enjoyment of music as one of the occupations of leisure and as a result of liberal education.

These texts and others raise questions about the censorship of music, or at least about control of the kind of music young people should be allowed to hear—a question that should strike a responsive chord in those who today are troubled by the effects on the young of the earsplitting blasts and the emotional violence of the music to which they are addicted.

There are one or two passages that reflect the conception of music as a liberal rather than a fine art—a mathematical art that belongs to the *quadrivium* along with arithmetic, geometry, and astronomy. But the mathematical treatment of music, or harmonics, is not represented here; nor is the

discussion of music in the tradition of musicology. Both are too technical for a collection of this kind.

■ ■ ■

- 1 *Chorus*. There's nothing like the flute's sound when
We dance and sing and cat our fill
And love in all its sweetness.

Euripides, Heracleidae, 892

- 2 *Socrates*. Musical training is a more potent instrument than any other, because rhythm and harmony find their way into the inward places of the soul, on which they mightily fasten, imparting grace, and making the soul of him who is rightly educated graceful, or of him who is ill-educated ungraceful; and also because he who has received this true education of the inner being will most shrewdly perceive omissions or faults in art and nature, and with a true taste, while he praises and rejoices over and receives into his soul the good, and becomes noble and good, he will justly blame and hate the bad, now in the days of his youth, even before he is able to know the reason why; and when reason comes he will recognise and salute the friend with whom his education has made him long familiar.

Plato, Republic, III, 401B

- 3 *Socrates*. When a man allows music to play upon him and to pour into his soul through the funnel of his ears those sweet and soft and melancholy airs... and his whole life is passed in warbling and the delights of song, in the first

stage of the process the passion or spirit which is in him is tempered like iron, and made useful, instead of brittle and useless. But, if he carries on the softening and soothing process, in the next stage he begins to melt and waste, until he has wasted away his spirit and cut out the sinews of his soul.

Plato, Republic, III, 411A

- 4 *Socrates*. The State, if once started well, moves with accumulating force like a wheel. For good nurture and education implant good constitutions, and these good constitutions taking root in a good education improve more and more, and this improvement affects the breed in man as in other animals....

This is the point to which, above all, the attention of our rulers should be directed—that music and gymnastic be presented in their original form, and no innovation made. They must do their utmost to maintain them intact. And when any one says that mankind most regard

The newest song which the singers have,

they will be afraid that he may be praising, not new songs, but a new kind of song; and this ought not to be praised, or conceived to be the meaning of the poet; for any musical innovation is full of danger to the whole State, and ought to be prohibited. So Damon tells me, and I can quite believe him—he says that when modes of music change, the fundamental laws of the State always change with them.

Plato, Republic, IV, 424A

- 5 *Athenian Stranger*. We must assert that imitation is not to be judged of by pleasure and false opinion; and this is

true of all equality, for the equal is not equal or the symmetrical symmetrical, because somebody thinks or likes something, but they are to be judged of by the standard of truth, and by no other whatever.

Cleinias. Quite true.

Ath. Do we not regard all music as representative and imitative?

Cle. Certainly.

Ath. Then, when any one says that music is to be judged of by pleasure, his doctrine cannot be admitted; and if there be any music of which pleasure is the criterion, such music is not to be sought out or deemed to have any real excellence, but only that other kind of music which is an imitation of the good,

Cle. Very true.

Ath. And those who seek for the best kind of song and music ought not to seek for that which is pleasant, but for that which is true; and the truth of imitation consists, as we were saying, in rendering the thing imitated according to quantity and quality.

Plato, Laws, II, 667B

- 6 Our fathers admitted music into education, not on the ground either of its necessity or utility, for it is not necessary, nor indeed useful in the same manner as reading and writing, which are useful in money-making, in the management of a household, in the acquisition of knowledge and in political life, nor like drawing, useful for a more correct judgement of the works of artists, nor again like gymnastic, which gives health and strength; for neither of these is to be gained from music. There remains, then, the use of music for intellectual enjoyment in leisure; which is in fact evidently the reason of its

introduction, this being one of the ways in which it is thought that a freeman should pass his leisure.

Aristotle, Politics, 1338a13

7 All men agree that music is one of the pleasantest things, whether with or without song.... Hence and with good reason it is introduced into social gatherings and entertainments, because it makes the hearts of men glad: so that on this ground alone we may assume that the young ought to be trained in it. For innocent pleasures are not only in harmony with the perfect end of life, but they also provide relaxation. And whereas men rarely attain the end, but often rest by the way and amuse themselves, not only with a view to a further end, but also for the pleasure's sake, it may be well at times to let them find a refreshment in music. It sometimes happens that men make amusement the end, for the end probably contains some element of pleasure, though not any ordinary or lower pleasure; but they mistake the lower for the higher, and in seeking for the one find the other, since every pleasure has a likeness to the end of action. For the end is not eligible for the sake of any future good, nor do the pleasures which we have described exist for the sake of any future good but of the past; that is to say, they are the alleviation of past toils and pains. And we may infer this to be the reason why men seek happiness from these pleasures. But music is pursued, not only as an alleviation of past toil, but also as providing recreation. And who can say whether, having this use, it may not also have a nobler one? In addition to this common pleasure, felt and shared in by all (for the pleasure given by music is natural, and therefore adapted to all ages and characters), may it not have also some

influence over the character and the soul? It must have such an influence if characters are affected by it. And that they are so affected is proved in many ways, and not least by the power which the songs of Olympus exercise; for beyond question they inspire enthusiasm, and enthusiasm is an emotion of the ethical part of the soul. Besides, when men hear imitations, even apart from the rhythms and tunes themselves, their feelings move in sympathy. Since then music is a pleasure, and virtue consists in rejoicing and loving and hating aright, there is clearly nothing which we are so much concerned to acquire and to cultivate as the power of forming right judgments, and of taking delight in good dispositions and noble actions. Rhythm and melody supply imitations of anger and gentleness, and also of courage and temperance, and of all the qualities contrary to these, and of the other qualities of character, which hardly fall short of the actual affections, as we know from our own experience, for in listening to such strains our souls undergo a change. The habit of feeling pleasure or pain at mere representations is not far removed from the same feeling about realities.... The objects of no other sense, such as taste or touch, have any resemblance to moral qualities; in visible objects there is only a little, for there are figures which are of a moral character, but only to a slight extent, and all do not participate in the feeling about them.... On the other hand, even in mere melodies there is an imitation of character.... Some of them make men sad and grave... others enfeeble the mind... another, again, produces a moderate and settled temper.... Enough has been said to show that music has a power of forming the character, and should therefore be introduced into the education of the young. The study is

suited to the stage of youth, for young persons will not, if they can help, endure anything which is not sweetened by pleasure, and music has a natural sweetness. There seems to be in us a sort of affinity to musical modes and rhythms, which makes some philosophers say that the soul is a tuning, others, that it possesses tuning.

Aristotle, Politics, 1339b20

- 8 And now we have to determine the question which has been already raised, whether children should be themselves taught to sing and play or not. Clearly there is a considerable difference made in the character by the actual practice of the art. It is difficult, if not impossible, for those who do not perform to be good judges of the performances of others. Besides, children should have something to do, and the rattle of Archytas, which people give to their children in order to amuse them and prevent them from breaking anything in the house, was a capital invention, for a young thing cannot be quiet. The rattle is a toy suited to the infant mind, and education is a rattle or a toy for children of a larger growth. We conclude then that they should be taught music in such a way as to become not only critics but performers.

Aristotle, Politics, 13401b20

- 9 There is a meaning ... in the myth of the ancients, which tells how Athene invented the flute and then threw it away. It was not a bad idea of theirs, that the Goddess disliked the instrument because it made the face ugly; but with still more reason may we say that she rejected it because the acquirement of flute-playing contributes

nothing to the mind, since to Athene we ascribe both knowledge and art.

Thus then we reject the professional instruments and also the professional mode of education in music (and by professional we mean that which is adopted in contests), for in this the performer practises the art, not for the sake of his own improvement, but in order to give pleasure, and that of a vulgar sort, to his hearers. For this reason the execution of such music is not the part of a freeman but of a paid performer, and the result is that the performers are vulgarized, for the end at which they aim is bad. The vulgarity of the spectator tends to lower the character of the music and therefore of the performers; they look to him—he makes them what they are, and fashions even their bodies by the movements which he expects them to exhibit.

Aristotle, Politics, 1341b2

10 Imitating with the mouth the clear notes of birds was in use long before men were able to sing in tune smooth-running verses and give pleasure to the ear. And the whistlings of the zephyr through the hollow's of reeds first taught peasants to blow into hollow stalks. Then step by step they learned sweet plaintive ditties, which the pipe pours forth pressed by the fingers of the players, heard through pathless woods and forests and lawns, through the unfrequented haunts of shepherds and abodes of unearthly calm. These things would soothe and gratify their minds when sated with food; for then all things of this kind are welcome. Often therefore stretched in groups on the soft grass beside a stream of water under the boughs of a high tree at no great cost they would pleasantly refresh their bodies, above all when the

weather smiled and the seasons of the year painted the green grass with flowers. Then went round the jest, the tale, the peals of merry laughter; for the peasant muse was then in its glory; then frolick mirth would prompt to entwine head and shoulders with garlands plaited with flowers and leaves, and to advance in the dance out of step and move the limbs clumsily and with clumsy foot beat mother earth; which would occasion smiles and peals of merry laughter, because all these things then from their greater novelty and strangeness were in high repute. And the wakeful found a solace for want of sleep in this, in drawing out a variety of notes and going through tunes and running over the reeds with curving lip; whence even at the present day watchmen observe these traditions and have lately learned to keep the proper tune; and yet for all this receive not a jot more of enjoyment, than erst the rugged race of sons of earth received.

Lucretius, Nature of Things, V

- 11 Pale Phoebe, drawn by verse, from heaven descends;
And Circe changed with charms Ulysses' friends.
Verse breaks the ground, and penetrates the brake,
And in the winding cavern splits the snake.
Verse fires the frozen veins.

Virgil, Eclogues, VIII

- 12 The musician we may think of as being exceedingly quick to beauty, drawn in a very rapture to it: somewhat slow to stir of his own impulse, he answers at once to the outer stimulus: as the timid are sensitive to noise so he to tones and the beauty they convey; all that offends against

unison or harmony in melodies and rhythms repels him; he longs for measure and shapely pattern.

Plotinus, First Ennead, III, I

- 13 It is the reasonless soul, not the will or wisdom, that is beguiled by music, a form of sorcery which raises no question, whose enchantment, indeed, is welcomed, exacted, from the performers.

Plotinus, Fourth Ennead, IV, 40

- 14 Any skill which, beginning with the observation of the symmetry of living things, grows to the symmetry of all life, will be a portion of the Power There which observes and meditates the symmetry reigning among all beings in the Intellectual Kosmos. Thus all music—since its thought is upon melody and rhythm—must be the earthly representation of the music there is in the rhythm of the Ideal Realm.

Plotinus, Fifth Ennead, IX, 11

- 15 On the whole I am inclined—though I am not propounding any irrevocable opinion—to approve the custom of singing in church, that by the pleasure of the ear the weaker minds may be roused to a feeling of devotion. Yet whenever it happens that I am more moved by the singing than by the thing that is sung, I admit that I have grievously sinned, and then I should wish rather not to have heard the singing.

Augustine, Confessions, X, 33

- 16 I always loved music; whoso has skill in this art, is of a good temperament, fitted for all things. We must teach

music in schools; a schoolmaster ought to have skill in music, or I would not regard him; neither should we ordain young men as preachers, unless they have been well exercised in music.

Luther, Table Talk, H838

17 *King Richard*. Music do I hear?

Ha, ha! keep time: how sour sweet music is,
When time is broke and no proportion kept!
So is it in the music of men's lives.

Shakespeare, Richard II, V, v, 41

18 *Oberon*. My gentle Puck, come hither. Thou rememb'rest

Since once I sat upon a promontory.
And heard a mermaid on a dolphin's back
Uttering such dulcet and harmonious breath
That the rude sea grew civil at her song
And certain stars shot madly from their spheres,
To hear the sea-maid's music.

Puck. I remember.

Shakespeare, Midsummer-Night's Dream, II, i, 148

19 *Theseus*. Go, one of you, find out the forester;

For now our observation is perform'd;
And since we have the vaward of the day,
My love shall hear the music of my hounds.
Uncouple in the western valley; let them go:
Dispatch, I say, and find the forester.

[*Exit an Attendant.*]

We will, fair queen, up to the mountain's top
And mark the musical confusion
Of hounds and echo in conjunction.

Hippolyta. I was with Hercules and Cadmus once,
When in a wood of Crete they bay'd the bear
With hounds of Sparta: never did I hear
Such gallant chiding; for, besides the groves,
The skies, the fountains, every region near
Seem'd all one mutual cry; I never heard
So musical a discord, such sweet thunder.

The. My hounds are bred out of the Spartan kind,
So flew'd, so sanded, and their heads are hung
With ears that sweep away the morning dew;
Crook-knee'd, and dew-lapp'd like Thessalian bulls;
Slow in pursuit, but match'd in mouth like bells,
Each under each. A cry more tuneable
Was never holla'd to, nor cheer'd with horn,
In Crete, in Sparta, nor in Thessaly;
Judge when you hear.

Shakespeare, Midsummer-Night's Dream, IV, i, 107

20 *Lorenzo.* The man that hath no music in himself,
Nor is not moved with concord of sweet sounds,
Is fit for treasons, stratagems and spoils;
The motions of his spirit are dull as night
And his affections dark as Erebus:
Let no such man be trusted. Mark the music.

Shakespeare, Merchant of Venice, V, i, 83

21 *Benedick.* Is it not strange that sheeps' guts should hale
souls out of men's bodies?

Shakespeare, Much Ado About Nothing, 11, iii, 61

22 *Duke.* If music be the food of love, play on;
Give me excess of it, that, surfeiting,

The appetite may sicken, and so die.

Shakespeare, Twelfth Night, I, i, 1

23 *Cleopatra*. Give me some music; music, moody food
Of us that trade in love.

Shakespeare, Antony and Cleopatra, 11, v, 1

24 *Caliban*. Be not afeard; the isle is full of noises,
Sounds and sweet airs, that give delight and hurt not.
Sometimes a thousand twangling instruments
Will hum about mine ears, and sometimes voices
That, if I then had waked after long sleep,
Will make me sleep again; and then, in dreaming,
The clouds methought would open and show riches
Ready to drop upon me, that, when I waked,
I cried to dream again.

Shakespeare, Tempest, III, ii, 144

25 Music to hear, why hear'st thou music sadly?
Sweets with sweets war not, joy delights in joy.

Shakespeare, Sonnet VIII

26 Generally, music feedeth the disposition of spirit which it
findeth.

Bacon, Sylva Sylvarum, II

27 Sure there is musick even in the beauty, and the silent
note which Cupid strikes, far sweeter than the sound of
an instrument. For there is a musick where ever there is a
harmony, order or proportion; and thus far we may
maintain the musick of the Sphears: for those well-
ordered motions, and regular paces, though they give no

sound unto the ear, yet to the understanding they strike
a note most full of harmony.

Sir Thomas Browne, Religio Medici, II, 9

28 Ring out ye Crystall sphears,
Once bless our human ears,
(If ye have power to touch our senses so)
And let your silver chime
Move in melodious time;
And let the Base of Heav'ns deep Organ blow,
And with your ninefold harmony
Make up full consort to th'Angelike symphony.
For if such holy Song
Enwrap our fancy long,
Time will run back, and fetch the age of gold,
And speckl'd vanity
Will sicken soon and die,
And leprous sin will melt from earthly mould,
And Hell it self will pass away,
And leave her dolorous mansions to the peering day.

Milton, On the Morning of Chrisis Nativity, 125

29 Blest pair of *Sirens*, pledges of Heav'ns joy,
Sphear-born harmonious Sisters, Voice, and Vers,
Wed your divine sounds, and mixt power employ
Dead things with inbreath'd sense able to pierce,
And to our high-rais'd phantasie present,
That undisturbed Song of pure content,
Ay sung before the saphire-colour'd throne
To him that sits thereon
With Saintly shout, and solemn Jubily,
Where the bright Seraphim in burning row

Their loud up-lifted Angel trumpets blow,
And the Chcrubick host in thousand quires
Touch their immortal Harps of golden wires,
With those just Spirits that wear victorious Palms,
Hymns devout and holy Psalms
Singing everlastingly;
That we on Earth with undiscording voice
May rightly answer that melodious noise;
As once we did, till disproportion'd sin
Jarr'd against natures chime, and with harsh din
Broke the fair musick that all creatures made
To their great Lord, whose love their motion sway'd
In perfect Diapason, whilst they stood
In first obedience, and their state of good.
O may we soon again renew that Song,
And keep in tune with Heav'n, till God ere long
To his celestial consort us unite,
To live with him, and sing in endles morn of light.

Milton, At a Solemn Musick

30 And ever against eating Cares,
Lap me in soft *Lydian* Aires,
Married to immortal verse
Such as the meeting soul may pierce
In notes, with many a winding bout
Of lincked sweetnes long drawn out.
With wanton heed, and giddy cunning,
The melting voice through mazes running;
Untwisting all the chains that ty
The hidden soul of harmony.
That *Orpheus* self may heave his head
From golden slumber on a bed
Of heapt *Elysian* flowres, and hear

Such streins as would have won the ear
Of *Pluto*, to have quite set free
His half regain'd *Eurydice*.

Milton, L'Allegro, 135

- 31 Bid the soul of *Orpheus* sing
Such notes as warbled to the string,
Drew Iron tears down *Pluto's* cheek.
And made Hell grant what Love did seek.

Milton, Il Penseroso, 105

- 32 Such sweet compulsion doth in musick ly,
To lull the daughters of *Necessity*,
And keep unsteddy Nature to her law,
And the low world in measur'd motion draw
After the heavenly tune.

Milton, Arcades, 68

- 33 From harmony, from heavenly harmony
This universal frame began:
When Nature underneath a heap
Of jarring atoms lay,
And could not heave her head.
The tuneful voice was heard from high:
"Arise, ye more than dead."
Then cold, and hot, and moist, and dry,
In order to their stations leap,
And Music's power obey.
From harmony, from heavenly harmony
This universal frame began:
From harmony to harmony

Through all the compass of the notes it ran,
The diapason closing full in man.

Dryden, A Song for St. Cecilia's Day

- 34 *Almeria*. Music has charms to soothe a savage breast,
To soften rocks, or bend a knotted oak.
I've read that things inanimate have moved,
And, as with living souls, have been informed
By magic numbers and persuasive sound.

Congreve, The Mourning Bride, I, i

- 35 *Johnson*. There is nothing, I think, in which the power of art is shown so much as in playing on the fiddle. In all other things we can do something at first. Any man will forge a bar of iron, if you give him a hammer; not so well as a smith, but tolerably, A man will saw a piece of wood, and make a box, though a clumsy one; but give him a fiddle and a fiddlestick, and he can do nothing.

Boswell, Life of Johnson (Apr. 15, 1773)

- 36 In the evening our gentleman-farmer, and two others, entertained themselves and the company with a great number of tunes on the fiddle. Johnson desired to have "Let ambition fire thy mind," played over again, and appeared to give a patient attention to it; though he owned to me that he was very insensible to the power of musick. I told him, that it affected me to such a degree, as often to agitate my nerves painfully, producing in my mind alternate sensations of pathetick dejection, so that I was ready to shed tears; and of daring resolution, so that I was inclined to rush into the thickest part of the battle.

"Sir, (said he,) I should never hear it, if it made me such a fool."

Boswell, Life of Johnson (Sept. 23, 1777)

37 Every expression in language has an associated tone suited to its sense. This tone indicates, more or less, a mode in which the speaker is affected, and in turn evokes it in the hearer also, in whom conversely it then also excites the idea which in language is expressed with such a tone. Further, just as modulation is, as it were, a universal language of sensations intelligible to every man, so the art of tone wields the full force of this language wholly on its own account, namely, as a language of the affections, and in this way, according to the law of association, universally communicates the aesthetic ideas that are naturally combined therewith. But, further, inasmuch as those aesthetic ideas are not concepts or determinate thoughts, the form of the arrangement of these sensations (harmony and melody), taking the place of the form of a language, only serves the purpose of giving an expression to the aesthetic idea of an integral whole of an unutterable wealth of thought that fills the measure of a certain theme forming the dominant affection in the piece....

If... we estimate the worth of the fine arts by the culture they supply to the mind, and adopt for our standard the expansion of the faculties whose confluence, in judgement, is necessary for cognition, music, then, since it plays merely with sensations, has the lowest place among the fine arts— just as it has perhaps the highest among those valued at the same time for their agreeableness. Looked at in this light, it is far excelled by the formative arts. For, in putting the

imagination into a play which is at once free and adapted to the understanding, they all the while carry on a serious business, since they execute a product which serves the concepts of understanding as a vehicle, permanent and appealing to us on its own account, for effectuating their union with sensibility, and thus for promoting, as it were, the urbanity of the higher powers of cognition. The two kinds of art pursue completely different courses. Music advances from sensations to indefinite ideas: formative art from definite ideas to sensations. The latter gives a lasting impression, the former one that is only fleeting. The former sensations imagination can recall and agreeably entertain itself with, while the latter either vanish entirely, or else, if involuntarily repeated by the imagination, are more annoying to us than agreeable. Over and above all this, music has a certain lack of urbanity about it. For owing chiefly to the character of its instruments, it scatters its influence abroad to an uncalled-for extent (through the neighbourhood), and thus, as it were, becomes obtrusive and deprives others, outside the musical circle, of their freedom. This is a thing that the arts that address themselves to the eye do not do, for if one is not disposed to give admittance to their impressions, one has only to look the other way.

Kant, Critique of Aesthetic Judgement, 53

38 Music... stands quite alone. It is cut off from all the other arts.... It does not express a particular and definite joy, sorrow, anguish, horror, delight, or mood of peace, but joy, sorrow, anguish, horror, delight, peace of mind *themselves*, in the abstract, in their essential nature, without accessories, and therefore without their

customary motives. Yet it enables us to grasp and share them fully in this quintessence.

Schopenhauer, The World as Will and Idea, Vol. I, 52

39 If it be... asked why musical tones in a certain order and rhythm give man and other animals pleasure, we can no more give the reason than for the pleasantness of certain tastes and smells. That they do give pleasure of some kind to animals, we may infer from their being produced during the season of courtship by many insects, spiders, fishes, amphibians, and birds; for unless the females were able to appreciate such sounds and were excited or charmed by them, the persevering efforts of the males, and the complex structures often possessed by them alone, would be useless; and this it is impossible to believe.

Human song is generally admitted to be the basis or origin of instrumental music. As neither the enjoyment nor the capacity of producing musical notes are faculties of the least use to man in reference to his daily habits of life, they must be ranked amongst the most mysterious with which he is endowed.

Darwin, Descent of Man, III, 19

40 The only one of the imaginative arts in which I had from childhood taken great pleasure, was music; the best effect of which (and in this it surpasses perhaps every other art) consists in exciting enthusiasm; in winding up to a high pitch those feelings of an elevated kind which are already in the character, but to which this excitement gives a glow and a fervour, which, though transitory at its

utmost height, is precious for sustaining them at other times.

Mill, Autobiography, V

- 41 A terrible thing is music in general. What is it? Why does it do what it does? They say that music stirs the soul. Stupidity! A lie! It acts, it acts frightfully (I speak for myself). but not in an ennobling way. It acts neither in an ennobling nor a debasing way, but in an irritating way. How shall I say it? Music makes me forget my real situation. It transports me into a state which is not my own. Under the influence of music I really seem to feel what I do not feel, to understand what I do not understand, to have powers which I cannot have.

Tolstoy, The Kreutzer Sonata, XXIII

- 42 There is perhaps no emotion incident to human life that music cannot render in its abstract medium by suggesting the pang of it; though of course music cannot describe the complex situation which lends earthly passions their specific colour. The passions, as music renders them, are always general. But music has its own substitute for distinct representation. It makes feeling specific, nay, more delicate and precise than association with things could make it, by uniting it with musical form.

Santayana, Music

- 43 Music is... like mathematics, very nearly a world by itself; it contains a whole gamut of experience, from sensuous elements to ultimate intellectual harmonies. Yet this second existence, this life in music, is no mere ghost of the other; it has its own excitements, its quivering

alternatives, its surprising turns; the abstract energy of it takes on so much body, that in progression or declension it seems quite as impassioned as any animal triumph or any moral drama.

That a pattering of sounds on the ear should have such moment is a fact calculated to give pause to those philosophers who attempt to explain consciousness by its utility, or who wish to make physical and moral processes march side by side from all eternity. Music is essentially useless, as life is: but both have an ideal extension which lends utility to its conditions.

Santayana, Life of Reason, IV, 4

16.6 Beauty and the Beautiful

The word "aesthetics" that appears in the title of this chapter appears in very few of the passages assembled in this section. It is a very recent invention as a name for the branch of philosophy that deals with the appreciation of works of fine art and develops theories of sensible beauty and the criteria of the beautiful in both art and nature. Aesthetics, as a recognized branch of philosophy, does not come into existence until the nineteenth century but speculation concerning beauty begins with the Greeks and runs through the whole tradition of Western thought, in which it is accorded the status of membership in that familiar triad of fundamental values—the good, the true, and the beautiful.

The pivotal texts are those that attempt to define beauty and to distinguish it from, as well as relate it to, truth and goodness. The pivotal notions that enter into the definitions

are such terms as desire and love, pleasure and interest, and knowledge or vision. And the pivotal questions raised are those that concern the objectivity and subjectivity of beauty—the sense in which it can be said to inhere in the object itself as an intrinsic excellence and the sense in which it can be said to exist in the eye of the beholder and to depend on his sensibility or taste. In this last connection, some of the passages here included might have been placed in the following section on Criticism and the Standards of Taste, and passages placed there might have been included here.

The issue concerning the objectivity and subjectivity of beauty, if not resolved, is certainly surrounded by the divers point of view expressed; and a very close reading of the difficult passages taken from Aquinas and Kant may discover a resolution of the problem through an understanding of the relation between the degree of intrinsic excellence possessed by a work of art and the degree of good taste possessed by the person who appreciates its beauty. This does not preclude the relativity of the appreciation of beauty to the sensibility of the person, nor the truth of the proposition *de gustibus non disputandum*, but it does challenge those who too simply identify the beautiful with what they happen to like.

Beauty or excellence in works of art, and especially in poetry, is touched on in other sections of this chapter, to which the reader should refer for a fuller treatment of the subject. The reader should also refer to the index under appropriate terms.

■ ■ ■

1 I am black, but comely, O ye daughters of Jerusalem, as the tents of Kedar, as the curtains of Solomon.

Song of Solomon 1:5

2 Behold, thou art fair, my love; behold, thou art fair; thou hast doves' eyes within thy locks: thy hair is as a flock of goats, that appear from mount Gil-e-ad.

Thy teeth are like a flock of sheep that are even shorn, which came up from the washing; whereof every one bear twins, and none is barren among them.

Thy lips are like a thread of scarlet, and thy speech is comely: thy temples are like a piece of a pomegranate within thy locks.

Thy neck is like the tower of David builded for an armoury, whereon there hang a thousand bucklers, all shields of mighty men.

Thy two breasts are like two young roes that are twins, which feed among the lilies.

Until the day break, and the shadows flee away, I will get me to the mountain of myrrh, and to the hill of frankincense.

Thou art all fair, my love; there is no spot in thee.

Song of Solomon 4:1—7

3 Now those who sat with Priam: Panthoos and Thymoites, Lampos and Klytios, Hiketaon, scion of Ares, with Antenor and Oukalegon, both men of good counsel: these were seated by the Skaian gates, ciders of the people.

Now through old age these fought no longer, yet were they excellent speakers still, and clear, as cicadas who through the forest settle on trees, to issue their delicate voice of singing.

Such were they who sat on the tower, chief men of the Trojans. And these, as they saw Helen along the tower approaching, murmuring softly to each other uttered their winged words:

"Surely there is no blame on Trojans and strong-greaved Achaians if for long time they suffer hardship for a woman like this one.

Terrible is the likeness of her face to immortal goddesses. Still, though she be such, let her go away in the ships, lest she be left behind, a grief to us and our children."

Homer, Iliad, III, 146

- 4 He who is fair to look upon is good, and he who is good will soon be fair also.

Sappho, Fragment

- 5 *Socrates*. Beauty is certainly a soft, smooth, slippery thing, and therefore of a nature which easily slips in and permeates our souls. For I affirm that the good is the beautiful.

Plato, Lysis, 216B

- 6 *Socrates*. I have been speaking of the fourth and last kind of madness, which is imputed to him who, when he sees the beauty of earth, is transported with the recollection of the true beauty; he would like to fly away, but he cannot; he is like a bird fluttering and looking upward and careless of the world below; and he is therefore thought to be mad. And I have shown this of all inspirations to be the noblest and highest and the offspring of the highest of him who has or shares in it, and that he who loves the

beautiful is called a lover because he partakes of it. For, as has been already said, every soul of man has in the way of nature beheld true being; this was the condition of her passing into the form of man. But all souls do not easily recall the things of the other world; they may have seen them for a short time only, or they may have been unfortunate in their earthly lot, and, having had their hearts turned to unrighteousness through some corrupting influence, they may have lost the memory of the holy things which once they saw. Few only retain an adequate remembrance of them; and they, when they behold here any image of that other world, are rapt in amazement; but they are ignorant of what this rapture means, because they do not clearly perceive. For there is no light of justice or temperance or any of the higher ideas which are precious to souls in the earthly copies of them: they are seen through a glass dimly, and there are few who, going to the images, behold in them the realities, and these only with difficulty. There was a time when with the rest of the happy band they saw beauty shining in brightness,—we philosophers following in the train of Zeus, others in company with other gods; and then we beheld the beatific vision and were initiated into a mystery which may be truly called most blessed, celebrated by us in our state of innocence, before we had any experience of evils to come, when we were admitted to the sight of apparitions innocent and simple and calm and happy, which we beheld shining in pure light, pure ourselves and not yet enshrined in that living tomb which we carry about, now that we are imprisoned in the body, like an oyster in his shell. Let me linger over the memory' of scenes which have passed away.

But of beauty, I repeat again that we saw her there shining in company with the celestial forms; and coming to earth we find her here too, shining in clearness through the clearest aperture of sense. For sight is the most piercing of our bodily senses; though not by that is wisdom seen; her loveliness would have been transporting if there had been a visible image of her, and the other ideas, if they had visible counterparts, would be equally lovely. But this is the privilege of beauty, that being the loveliest she is also the most palpable to sight. Now he who is not newly initiated or who has become corrupted, does not easily rise out of this world to the sight of true beauty in the other; he looks only at her earthly namesake, and instead of being awed at the sight of her, he is given over to pleasure, and like a brutish beast he rushes on to enjoy and beget; he consorts with wantonness, and is not afraid or ashamed of pursuing pleasure in violation of nature. But he whose initiation is recent, and who has been the spectator of many glories in the other world, is amazed when he sees any one having a godlike face or form, which is the expression of divine beauty; and at first a shudder runs through him, and again the old awe steals over him; then looking upon the face of his beloved as of a god he reverences him, and if he were not afraid of being thought a downright madman, he would sacrifice to his beloved as to the image of a god.

Plato, Phaedrus, 249B

- 7 *Diotima*. He who would proceed aright. . . should begin in youth to visit beautiful forms... and soon he will of himself perceive that the beauty of one form is akin to the beauty of another; and then if beauty of form in general is his

pursuit, how foolish would he be not to recognize that the beauty in every form is one and the same! And when he perceives this he will abate his violent love of the one, which he will despise and deem a small thing, and will become a lover of all beautiful forms; in the next stage he will consider that the beauty of the mind is more honourable than the beauty of the outward form. So that if a virtuous soul have but a little comeliness, he will be content to love and tend him, and will search out and bring to the birth thoughts which may improve the young, until he is compelled to contemplate and see the beauty of institutions and laws, and to understand that the beauty of them all is of one family, and that personal beauty is a trifle; and after laws and institutions he will go on to the sciences, that he may see their beauty, being not like a servant in love with the beauty of one youth or man or institution, himself a slave mean and narrow-minded, but drawing towards and contemplating the vast sea of beauty, he will create many fair and noble thoughts and notions in boundless love of wisdom; until on that shore he grows and waxes strong, and at last the vision is revealed to him of a single science, which is the science of beauty everywhere.

Plato, Symposium, 210A

- 8 *Socrates*. Let me ask a question of you: When you speak of beautiful things, such as bodies, colours, figures, sounds, institutions, do you not call them beautiful in reference to some standard: bodies, for example, are beautiful in proportion as they are useful, or as the sight of them gives pleasure to the spectators; can you give any other account of personal beauty?

Polus. I cannot.

Soc. And you would say of figures or colours generally that they were beautiful, either by reason of the pleasure tvhich they give, or of their use, or both?

Pol. Yes, I should.

Soc. And you would call sounds and music beautiful for the same reason?

Pol. I should.

Soc. Laws and institutions also have no beauty in them except in so far as they are useful or pleasant or both?

Pol. I think not.

Soc. And may not the same be said of the beauty of knowledge?

Pol. To be sure, Socrates; and I very much approve of your measuring beauty by the standard of pleasure and utility.

Soc. And deformity or disgrace may be equally measured by the opposite standard of pain and evil?

Pol. Certainly.

Soc. Then when of two beautiful things one exceeds in beauty, the measure of the excess is to be taken in one or both of these; that is to say, in pleasure or utility or both?

Pol. Very true.

Plato, Gorgias, 474B

- 9 Since the good and the beautiful are different (for the former always implies conduct as its subject, while the beautiful is found also in motionless things), those who assert that the mathematical sciences say nothing of the beautiful or the good are in error. For these sciences say and prove a great deal about them; if they do not expressly mention them, but prove attributes which are their results or their definitions, it is not true to say that

they tell us nothing about them. The chief forms of beauty are order and symmetry and definiteness, which the mathematical sciences demonstrate in a special degree. And since these (e.g. order and definiteness) are obviously causes of many things, evidently these sciences must treat this sort of causative principle also (i.e. the beautiful) as in some sense a cause.

Aristotle, Metaphysics, 1078a32

- 10 A nose which varies from the ideal of straightness to a hook or snub may still be of good shape and agreeable to the eye; but if the excess be very great, all symmetry is lost, and the nose at last ceases to be a nose at all on account of some excess in one direction or defect in the other; and this is true of every part of the human body.

Aristotle, Politics, 1309b23

- 11 To be beautiful, a living creature, and every whole made up of parts, must not only present a certain order in its arrangement of parts, but also be of a certain definite magnitude. Beauty is a matter of size and order, and therefore impossible either (1) in a very minute creature, since our perception becomes indistinct as it approaches instantaneity; or (2) in a creature of vast size—one, say, 1,000 miles long—as in that case, instead of the object being seen all at once; the unity and wholeness of it is lost to the beholder.

Aristotle, Poetics, 1450b34

- 12 There are two kinds of beauty. Loveliness is dominant in the one and dignity in the other. Of these two, we ought

to consider loveliness the attribute of woman and dignity the attribute of man.

Cicero, De Officiis, I, 36

13 [*Cleopatra*] received several letters, both from Antony and from his friends, to summon her, but she took no account of these orders; and at last, as if in mockery of them, she came sailing up the river Cydnus, in a barge with gilded stern and outspread sails of purple, while oars of silver beat time to the music of flutes and fifes and harps. She herself lay all along under a canopy of cloth of gold, dressed as Venus in a picture, and beautiful young boys, like painted Cupids, stood on each side to fan her. Her maids were dressed like sea nymphs and graces, some steering at the rudder, some working at the ropes. The perfumes diffused themselves from the vessel to the shore, which was covered with multitudes, part following the galley up the river on either bank, part running out of the city to see the sight. The market-place was quite emptied, and Antony at last was left alone sitting upon the tribunal; while the word went through all the multitude, that Venus was come to feast with Bacchus, for the common good of Asia.

On her arrival, Antony sent to invite her to supper. She thought it fitter he should come to her; so, willing to show his good-humour and courtesy, he complied, and went. He found the preparations to receive him magnificent beyond expression, but nothing so admirable as the great number of lights; for on a sudden there was let down altogether so great a number of branches with lights in them so ingeniously disposed, some in squares, and some in circles, that the whole thing was a spectacle that has seldom been equalled for beauty. The next day, Antony

invited her to supper, and was very desirous to outdo her as well in magnificence as contrivance; but he found he was altogether beaten in both, and was so well convinced of it that he was himself the first to jest and mock at his poverty of wit and his rustic awkwardness. She, perceiving that his raillery was broad and gross, and savoured more of the soldier than the courtier, rejoined in the same taste, and fell into it at once, without any sort of reluctance or reserve.

For her actual beauty, it is said, was not in itself so remarkable that none could be compared with her, or that no one could see her without being struck by it, but the contact of her presence, if you lived with her, was irresistible; the attraction of her person, joining with the charm of her conversation, and the character that attended all she said or did, was something bewitching.

Plutarch, Antony

- 14 A certain young man a rhetorician came to see Epictetus, with his hair dressed more carefully than was usual and his attire in an ornamental style; whereupon Epictetus said: Tell me if you do not think that some dogs are beautiful and some horses, and so of all other animals, "I do think so," the youth replied. are not then some men also beautiful and others ugly? "Certainly," Do we, then, for the same reason call each of them in the same kind beautiful, or each beautiful for something peculiar? And you will judge of this matter thus. Since we see a dog naturally formed for one thing, and a horse for another, and for another still, as an example, a nightingale, we may generally and not improperly declare each of them to be beautiful then when it is most excellent according to its nature; but since the nature of each is different,

each of them seems to me to be beautiful in a different way. Is it not so? He admitted that it was. That then which makes a dog beautiful, makes a horse ugly; and that which makes a horse beautiful, makes a dog ugly, if it is true that their natures are different. "It seems to be so." For I think that what makes a pancratiast beautiful, makes a wrestler to be not good, and a runner to be most ridiculous; and he who is beautiful for the Pentathlon, is very ugly for wrestling. "It is so," said he. What, then, makes a man beautiful? Is it that which in its kind makes both a dog and a horse beautiful? "It is," he said. What, then makes a dog beautiful? The possession of the excellence of a dog. And what makes a horse beautiful? The possession of the excellence of a horse. What then makes a man beautiful? Is it not the possession of the excellence of a man? And do you, then, if you wish to be beautiful, young man, labour at this, the acquisition of human excellence. But what is this? Observe whom you yourself praise, when you praise many persons without partiality: do you praise the just or the unjust? "The just." Whether do you praise the moderate or the immoderate? "The moderate." And the temperate or the intemperate? "The temperate." If, then, you make yourself such a person, you will know that you will make yourself beautiful: but so long as you neglect these things, you must be ugly, even though you contrive all you can to appear beautiful.

Epictetus, Discourses, III, 1

- 15 We ought to observe also that even the things which follow after the things which are produced according to nature contain something pleasing and attractive. For instance, when bread is baked some parts are split at the

surface, and these parts which thus open, and have a certain fashion contrary to the purpose of the baker's art, are beautiful in a manner, and in a peculiar way excite a desire for eating. And again, figs, when they are quite ripe, gape open; and in the ripe olives the very circumstance of their being near to rottenness adds a peculiar beauty to the fruit. And the ears of corn bending down, and the lion's eyebrows, and the foam which flows from the mouth of wild boars, and many other things—though they are far from being beautiful, if a man should examine them severally—still, because they are consequent upon the things which are formed by nature, help to adorn them, and they please the mind; so that if a man should have a feeling and deeper insight with respect to the things which are produced in the universe, there is hardly one of those which follow by way of consequence which will not seem to him to be in a manner disposed so as to give pleasure. And so he will see even the real gaping jaws of wild beasts with no less pleasure than those which painters and sculptors show by imitation; and in an old woman and an old man he will be able to see a certain maturity and comeliness; and the attractive loveliness of young persons he will be able to look on with chaste eyes; and many such things will present themselves, not pleasing to every man, but to him only who has become truly familiar with nature and her works.

Marcus Aurelius, Meditations, III, 2

- 16 Everything which is in any way beautiful is beautiful in itself, and terminates in itself, not having praise as part of itself. Neither worse than nor better is a thing made by being praised. I affirm this also of the things which are

called beautiful by the vulgar, for example, material things and works of art. That which is really beautiful has no need of anything; not more than law, not more than truth, not more than benevolence or modesty. Which of these things is beautiful because it is praised, or spoiled by being blamed? Is such a thing as an emerald made worse than it was, if it is not praised? Or gold, ivory, purple, a lyre, a little knife, a flower, a shrub?

Marcus Aurelius, Meditations, IV, 20

- 17 We ourselves possess beauty when we are true to our own being; our ugliness is in going over to another order; our self-knowledge, that is to say, is our beauty; in self-ignorance we are ugly.

Plotinus, Fifth Ennead, VIII, 13

- 18 Beauty is that which irradiates symmetry rather than symmetry itself and is that which truly calls out our love.

Why else is there more of the glory of beauty upon the living and only some faint trace of it upon (he dead, though the face yet retains all its fulness and symmetry? Why are the most living portraits the most beautiful, even though the others happen to be more symmetric? Why is the living ugly more attractive than the sculptured handsome? It is that the one is more nearly what we are looking for, and this because there is soul there, because there is more of the idea of the good, because there is some glow of the light of the good and this illumination awakens and lifts the soul and all that goes with it so that the whole man is won over to goodness, and in the fullest measure stirred to life.

Plotinus, Sixth Ennead, VII, 22

19 In writing to you, good friend, who are well skilled in culture, I need hardly premise in many words that sublimity is a certain consummateness and preeminence of phrase, and that the greatest poets and prose writers gained the first rank, and grasped an eternity of fame, by no other means than this. For what is out of the common leads an audience, not to persuasion, but to ecstasy.... The startling effect of the wonderful always and everywhere has the better of the merely persuasive and the merely pleasing; for to be persuaded depends, as a rule, on ourselves, but this other quality applies irresistible authority and force, and gets the better of all hearers. Inventive skill, orderly disposition of matter, we see struggling to appear as the effect, not of this or that thing, but of the whole tissue of the work in letters. But the sublime, shooting forth at the nick of time, scatters everything like a levin bolt and shows the whole power of the author at once.

Longinus, On the Sublime, I, 4

20 There is an appeal to the eye in beautiful things, in gold and silver and all such; the sense of touch has its own powerful pleasures; and the other senses find qualities in things suited to them. Worldly success has its glory, and the power to command and to overcome.. . . But in our quest of all these things, we must not depart from You, Lord, or deviate from Your Law. This life we live here below has its own attractiveness, grounded in the measure of beauty it has and its harmony with the beauty of all lesser things. The bond of human friendship is admirable, holding many souls as one. Yet in the enjoyment of all such things we commit sin if through immoderate inclination to them—for though they are

good, they are of the lowest order of good—things higher and better are forgotten, even You, O Lord our God, and Your Truth and Your Law. These lower things have their delights but not such as my God has, for He made them all.

Augustine, Confessions, II, 5

21 But... I did not at that time know, and I was in love with those lower beauties. I was sinking into the very depths and I said to my friends: "Do we love anything save what is beautiful? What then is beautiful? and what is beauty? What is it that allures us and delights us in the things we love? Unless there were grace and beauty in them they could not possibly draw us to them." Looking deeper I saw that in things themselves we must distinguish between the beauty which belongs to the whole in itself, and the becomingness which results from right relation to some other thing, as a part of the body to the whole body, or a shoe to the foot, and such like. This thought surged up into my mind from the very depths of my heart and I composed certain books *De Pulchro et Apto*-- on the beautiful and the fitting —two books or three, I fancy; You know, O God, for I do not remember. I no longer have them. Somehow or other they have been lost.

Augustine, Confessions, IV, 13

22 My eyes love the diverse forms of beauty, brilliant and pleasing colors. Let these things not take possession of my soul; let God possess it, who made these things and made them exceedingly good: yet He is my good, not they. For they affect me in all the waking hours of every day, nor do I find any respite from them such as I do

sometimes find in silence from all the voices of song. For light, the queen of colors, suffusing all the things I see whenever I am abroad in daylight, entices me as it flows before my sight in all its variousness, even though I am busy upon something else and not observing it. For it works its way into me with such power that if it is suddenly withdrawn, I desire it with great longing; and if it is absent too long, it saddens my mind....

How innumerable are the things made by every kind of art and workmanship in clothes, shoes, vessels and such like, in pictures also and every kind of statue—far beyond necessary and moderate use and any meaning of devotion—that men have added for the delight of their eyes, going abroad from themselves after the things they have themselves made, interiorly abandoning Him by whom they were made and destroying what He made in them. But I, O my God and my Glory, I too utter a hymn to Thee and offer my praise as sacrifice to Him who sanctifies me; for all that loveliness which passes through men's minds into their skillful hands comes from that supreme loveliness which is above our souls, which my soul sighs for day and night. From the supreme beauty those who make and seek after exterior beauty derive the measure by which they judge of it, but not the measure by which it should be used. Yet this measure too is there, and they do not see it: for if they did they would not wander far from it, but would preserve their strength only for Thee and would not dissipate it upon delights that grow wearisome. But I, who speak thus and see thus, yet entangle my feet in these lower things of beauty; but Thou wilt pluck me forth. Lord, Thou wilt pluck me forth, because Thy mercy is before my eyes.

Augustine, Confessions, X, 34

23 Beauty and good in a subject are the same, for they are based upon the same thing, namely; the form; and consequently good is praised as beauty. But they differ logically, for good properly relates to the appetite (good being what all things desire), and therefore it has the aspect of an end (for the appetite is a kind of movement towards a thing). On the other hand, beauty relates to the knowing power, for beautiful things are those which please when seen. Hence beauty consists in due proportion, for the senses delight in things duly proportioned, as in what is after their own kind—because even sense is a sort of reason, just as is every knowing power.

Aquinas, Summa Theologica, 1, 5, 4

24 Beauty includes three conditions: integrity or perfection, since those things which are impaired are by the very fact ugly; due proportion or harmony; and lastly, brightness, or clarity, whence things are called beautiful which have an elegant colour.

Aquinas, Summa Theologica, I, 39, 8

25 Beauty... consists in a certain clarity and due proportion. Now each of these has its roots in the reason, because both the light that makes beauty seen, and the establishing of due proportion among things belong to reason. Hence since the contemplative life consists in an act of the reason, there is beauty in it per se and essentially; therefore it is written (Wis. 8.2) of the contemplation of wisdom: *I became a lover of her beauty*. On the other hand, beauty is in the moral virtues by

participation, in so far that is as they share the order of reason; and above all is it in temperance, which restrains the concupiscences which especially darken the light of reason. Hence it is that the virtue of chastity most of all makes man apt for contemplation, since sexual pleasures most of all weigh the mind down to sensible objects.

Aquinas, Summa Theologica, II-II, 180, 2

26 Ptolemy, the son of Lagus, one day amongst (he many spoils and booties, which by his victories he had acquired, presenting to the Egyptians, in the open view of the people, a Bactrian camel all black, and a party-coloured slave, in such sort, as that the one half of his body was black, and the other white, not in partition of breadth by the diaphragm, as was that woman consecrated to the Indian Venus, whom the Tyanean philosopher did see between the River Hydaspes and Mount Caucasus, but in a perpendicular dimension of altitude; which were things never before that seen in Egypt. He expected by the show of these novelties to win the love of the people. But what happened thereupon? At the production of the camel they were all affrighted, and offended at the sight of the party-coloured man—some scoffed at him as a detestable monster brought forth by the error of nature—in a word, of the hope which he had to please these Egyptians, and by such means to increase the affection which they naturally bore him, he was altogether frustrated and disappointed; understanding fully by their deportments, that they took more pleasure and delight in things that were proper, handsome, and perfect, than in misshapen, monstrous, and ridiculous creatures.

Rabelais, Gargantua and Pantagruel, III, Prologue

27 As for bodily beauty,. . . it is likely that we know little about what beauty is in nature and in general, since to our own human beauty we give so many different forms. If there was any natural prescription for it, we should recognize it in common, like the heat of fire. We imagine its forms to suit our fancy.... The Indies paint it black and dusky, with large swollen lips and a wide flat nose. And they load the cartilage between the nostrils with big gold rings, to make it hang down to the mouth; as also the lower lip with large hoops enriched with precious stones, so that it falls down over their chin; and their charm is to show their teeth down to the base of the roots. In Peru, the biggest ears are the fairest, and they stretch them artificially as much as they can; and a man of this day says he saw in one oriental nation this care for enlarging them and loading them with heavy jewels in such favor, that time and again he could pass his arm, fully clothed, through the hole in an ear. Elsewhere there are nations that blacken their teeth with great care, and scorn to see white ones; elsewhere they stain them red.

Not only in the Basque country do women consider themselves more beautiful with heads shaven, but in plenty of other places, and what is more, in certain glacial countries, so Pliny says. Mexican women count among their beauties a small forehead; and whereas they trim their hair on all other parts of the body, on their forehead they cultivate it and increase it by art; and they have such great esteem for large breasts, that they aspire to be able to suckle their children over their shoulder. We would represent ugliness that way.

The Italians make beauty plump and massive, the Spaniards hollow and gaunt; and among us, one man makes it fair, the other dark; one soft and delicate, the other strong and vigorous; one demands daintiness and sweetness, another pride and majesty. Even as the preference in beauty, which Plato attributes to the spherical figure, the Epicureans give rather to the pyramidal or the square, and cannot swallow a god in the shape of a ball.

Montaigne, Essays, II, 12, Apology for Raymond Sebond

28 Beauty is a great recommendation in dealings with men; it is the prime means of conciliation between them, and there is no man so barbarous and surly as not to be somewhat struck by its charm. The body has a great part in our being, it holds a high rank in it; so its structure and composition are well worth consideration. Those who want to split up our two principal parts and sequester them from each other are wrong. On the contrary, we must couple and join them together again. We must order the soul not to draw aside and entertain itself apart, not to scorn and abandon the body (nor can it do so except by some counterfeit monkey trick), but to rally to the body, embrace it, cherish it, assist it, control it, advise it, set it right and bring it back when it goes astray; in short, to marry it and be a husband to it, so that their actions may appear not different and contrary, but harmonious and uniform.

Montaigne, Essays, II, 17, Of Presumption

29 The beauty of stature is the only beauty of men. Where smallness dwells, neither breadth and roundness of

forehead, nor clarity and softness of eyes, nor the moderate form of the nose, nor small size of ears and mouth, nor regularity and whiteness of teeth, nor the smooth thickness of a beard brown as the husk of a chestnut, nor curly hair, nor proper roundness of head, nor freshness of color, nor a pleasant facial expression, nor an odorless body, nor just proportion of limbs, can make a handsome man.

Montaigne, Essays, II, 17, Of Presumption

30 I cannot say often enough how much I consider beauty a powerful and advantageous quality. Socrates called it "a short tyranny," and Plato, "the privilege of nature." We have no quality that surpasses it in credit. It holds the first place in human relations; it presents itself before the rest, seduces and prepossesses our judgment with great authority and a wondrous impression. Phryne would have lost her case even in the hands of an excellent attorney, if, opening her robe, she had not corrupted her judges by her dazzling beauty. And I find that Cyrus, Alexander, Caesar, those three masters of the world, did not forget beauty in carrying out their great affairs; nor did Scipio the Elder.

One and the same word in Greek embraces the beautiful and the good. And the Holy Ghost often calls good those whom it means to call beautiful. I would readily uphold the ranking of good things found in a song, taken from some ancient poet, which Plato says was widely known: health, beauty, riches.

Aristotle says that to the beautiful belongs the right to command, and that when there are any whose beauty approaches that of the images of the gods, veneration is likewise their due. To one who asked him why people

frequented beautiful persons longer and more often, he said: "That question is proper only for a blind man." Most philosophers, and the greatest, paid for their schooling, and acquired wisdom, by the mediation and favor of their beauty.

Not only in the men w'ho serve me, but also in animals, I consider it as within two fingers' breath o' goodness.

Montaigne, Essays, III, 12, Of Physiognomy

- 31 *Biron*. Where is any author in the world
Teaches such beauty as a woman's eye?

Shakespeare, Love's Labour's Lost, IV, iii, 312

- 32 *Rosalind*. Beauty provoketh thieves sooner than gold.

Shakespeare, As You Like It, I, iii, 112

- 33 *Jaques*. If ladies be but young and fair,
They have the gift to know it.

Shakespeare, As You Like It, II, vii, 37

- 34 *Ophelia*. Could beauty, my lord, have better commerce
than with honesty?

Hamlet. Ay, truly; for the power of beauty will sooner transform honesty from what it is to a bawd than the force of honesty can translate beauty into his likeness.

Shakespeare, Hamlet, III, i, 109

- 35 *Perdita*. Now, my fair'st friend,
I would I had some flowers o' the spring that might
Become your time of day; and yours, and yours,
That wear upon your virgin branches yet

Your maidenheads growing. O Proserpina,
For the flowers now, that frightened thou let'st fall
From Dis's waggon! daffodils,
That come before the swallow dares, and take
The winds of March with beauty; violets dim,
But sweeter than the lids of Juno's eyes
Or Cytherea's breath; pale primroses,
That die unmarried, ere they can behold
Bright Phoebus in his strength—a malady
Most incident to maids; bold oxlips and
The crown imperial; lilies of all kinds.
The flower-de-luce being one! O, these I lack,
To make you garlands of, and my sweet friend,
To strew him o'er and o'er!

Florizel. What, like a corse?

Per. No, like a bank for love to lie and play on;
Not like a corse; or if, not to be buried.
But quick and in mine arms. Come, take your flowers.
Methinks I play as I have seen them do
In Whitsun pastorals. Sure this robe of mine
Does change my disposition.

Flo. What you do
Still betters what is done. When you speak, sweet,
I'd have you do it ever. When you sing,
I'd have you buy and sell so, so give alms,
Pray so; and, for the ordering your affairs,
To sing them too. When you do dance, I wish you
A wave o' the sea, that you might ever do
Nothing but that; move still, still so,
And own no other function. Each your doing,
So singular in each particular,
Crowns what you are doing in the present deed,
That all your acts are queens.

Shakespeare, Winters Tale, IV, iv, 112

36 From fairest creatures we desire increase
That thereby beauty's rose might never die,
But as the ripper should by time decease,
His tender heir might bear his memory.

Shakespeare, Sonnet I

37 Shall I compare thee to a summer's day?
Thou art more lovely and more temperate.
Rough winds do shake the darling buds of May,
And summer's lease hath all too short a date.
Sometime too hot the eye of heaven shines.
And often is his gold completion dimm'd;
And every fair from fair sometime declines,
By chance, or nature's changing course, untrimm'd;
But thy eternal summer shall not fade Nor lose possession
of that fair thou ow'st,
Nor shall Death brag thou wand'rest in his shade
When in eternal lines to time thou grow'st.

Shakespeare, Sonnet XVIII

38 When in the chronicle of wasted time
I see descriptions of the fairest wights,
And beauty making beautiful old rhyme
In praise of ladies dead and lovely knights,
Then, in the blazon of sweet beauty's best,
Of hand, of foot, of lip, of eye, of brow,
I see their antique pen would have express'd
Even such a beauty as you master now.

Shakespeare, Sonnet CVI

39 That is the best part of beauty, which a picture cannot express; no nor the first sight of life. There is no excellent beauty that hath not some strangeness in the proportion. A man cannot tell whether Apelles or Albert Durcr were the more trifler; whereof the one would make a personage by geometrical proportions; the other, by taking the best parts out of divers faces, to make one excellent. Such personages, I think, would please nobody but the painter that made them. Not but I think a painter may make a better face than ever was; but he must do it by a kind of felicity (as a musician that maketh an excellent air in music) and not by rule. A man shall see faces, that if you examine them part by part, you shall find never a good; and yet altogether do well.

If it be true that the principal part of beauty is in decent motion, certainly it is no mars'cl though persons in years seem many times more amiable... [autumn is the beauty of beauties} —for no youth can be comely but by pardon, and considering the youth as to make up the comeliness. Beauty is as summer fruits, which are easy to corrupt, and cannot last; and for the most part it makes a dissolute youth, and an age a little out of countenance; but yet certainly again, if it light well, it maketh virtue shine, and vices blush.

Bacon, Of Beauty

40 *Comus*. List Lady be not coy, and be not cosen'd
With that same vaunted name Virginitie,
Beauty is natures coyn, must not be hoorded,
But must be currant, and the good thereof
Consists in mutual and partak'n bliss,
Unsavoury in tb'injoyment of it self
If you let slip time, like a neglected rose

It withers on the stalk wiith languish't head.
Beauty is natures brag, and must be shown
In courts, at feasts, and high solemnities
Where most may wonder at the workmanship;
It is for homely features to keep home,
They had their name thence; course complexions
And checks of sorry grain will serve to ply
The sampler, and to teize the huswifes wooll.
What need a vermeil-tinctured lip for that
Love-darting eyes, or tresses like the Morn?
There was another meaning in these gifts,
Think what, and be adviz'd, you are but young yet.

Milton, Comus, 737

41 *Mirabell*. Nay, 'tis true: you are no longer handsome when you've lost your lover, your beauty dies upon the instant: for beauty is the lover's gift; 'tis he bestows your charms —your glass is all a cheat. The ugly and the old, whom the looking glass mortifies, yet after commendation can be flattered by it, and discover beauties in it: for that reflects our praises, rather than your fare.

Millamant O, the vanity of these men' Fainall, d'ye hear him? If they did not commend us, we were not handsome! Now you must know they could not commend one, if one was not handsome. Beauty the lover's gift?— Lord, what is a lover, that it can give? Why, one makes lovers as fast as one pleases, and they live as long as one pleases, and they die as son as one pleases: and then if one pleases one makes more.

Congreve. Way of the World, II, v

42 Now the agonies which affected the mind of Sophia, rather augmented than impaired her beauty; for her tears added brightness to her eyes, and her breasts rose higher with her sighs. Indeed, no one hath seen beauty in its highest lustre who hath never seen it in distress.

Fielding, Tom Jones, VII, 6

43 To say the truth, perfect beauty in both sexes is a more irresistible object than it is generally thought; for, notwithstanding some of us are contented with more homely lots, and learn by rote (as children to repeat what gives them no Idea) to despise outside, and to value more solid charms; yet I have always observed, at the approach of consummate beauty, that these more solid charms only shine with that kind of lustre which the stars have after the rising of the sun.

Fielding, Tom Jones, XVI, 9

44 No Dolphin came, no Nereid stirr'd:
Nor cruel *Tom*, nor *Susan* heard.
A Fav'rite has no friend!
From hence, ye Beauties, undeceiv'd,
Know, one false step is ne'er retriev'd,
And be with caution bold.
Not all that tempts your wand'ring eyes
And heedless hearts, is lawful prize;
Nor all, that glisters, gold.

Gray, Ode on the Death of a Favourite Cat

45 Ask a toad what beauty is, the *to kalon*? He will answer you that it is his toad wife with two great round eyes issuing from her little head, a wide, flat mouth, a yellow

belly, a brown back. Interrogate a Guinea negro, for him beauty is a black oily skin, deep-set eyes, a flat nose. Interrogate the devil; he will tell you that beauty is a pair of horns, four claws and a tail. Consult, lastly, the philosophers, they will answer you with gibberish: they have to have something conforming to the arch-type of beauty in essence, to the *to kalon*.

Voltaire, Philosophical Dictionary: Beauty

- 46 We then fell into a disquisition whether there is any beauty independent of utility. The General maintained there was not. Dr. Johnson maintained that there was; and he instanced a coffee-cup which he held in his hand, the painting of which was of no real use, as the cup would hold the coffee equally well if plain; yet the painting was beautiful.

Boswell, Life of Johnson (Mar. 31, 1772)

- 47 The beautiful is that which, apart from concepts, is represented as the object of a universal delight.... For where any one is conscious that his delight in an object is with him independent of interest, it is inevitable that he should look on the object as one containing a ground of delight for all men. For, since the delight is not based on any inclination of the subject (or on any other deliberate interest), but the subject feels himself completely free in respect of the liking which he accords to the object, he can find as reason for his delight no personal conditions to which his own subjective self might alone be party. Hence he must regard it as resting on what he may also presuppose in every other person; and therefore he must believe that he has reason for demanding a similar

delight from every one. Accordingly he will speak of the beautiful as if beauty were a quality of the object and the judgement logical (forming a cognition of the object by concepts of it); although it is only aesthetic, and contains merely a reference of the representation of the object to the subject; because it still bears this resemblance to the logical judgement, that it may be presupposed to be valid for all men. But this universality cannot spring from concepts. For from concepts there is no transition to the feeling of pleasure or, displeasure (save in the case of pure practical laws, which, however, carry an interest with them; and such an interest does not attach to the pure judgement of taste). The result is that the judgement of taste, with its attendant consciousness of detachment from all interest, must involve a claim to validity for all men, and must do so apart from universality attached to objects, i.e., there must be coupled with it a claim to subjective universality.

Kant, Critique of Aesthetic Judgement, 6

- 48 The most important and vital distinction between the sublime and the beautiful is certainly this: that if, as is allowable, we here confine our attention in the first instance to the sublime in objects of nature (that of art being always restricted by the conditions of an agreement with nature), we observe that whereas natural beauty (such as is self-subsisting) conveys a finality in its form making the object appear, as it were, preadapted to our power of judgement, so that it thus forms of itself an object of our delight, that which, without our indulging in any refinements of thought, but, simply in our apprehension of it, excites the feeling of the sublime, may appear, indeed, in point of form to contravene the

ends of our power of judgement, to be ill-adapted to our faculty of presentation, and to be, as it were, an outrage on the imagination, and yet it is judged all the more sublime on that account.

From this it may be seen at once that we express ourselves on the whole inaccurately if we term any object of nature sublime, although we may with perfect propriety call many such objects beautiful. For how can that which is apprehended as inherently contra-final be noted with an expression of approval? All that we can say is that the object lends itself to the presentation of a sublimity discoverable in the mind. For the sublime, in the strict sense of the word, cannot be contained in any sensuous form, but rather concerns ideas of reason, which, although no adequate presentation of them is possible, may be excited and called into the mind by that very inadequacy itself which does admit of sensuous presentation. Thus the broad ocean agitated by storms cannot be called sublime. Its aspect is horrible, and one must have stored one's mind in advance with a rich stock of ideas, if such an intuition is to raise it to the pitch of a feeling which is itself sublime—sublime because the mind has been incited to abandon sensibility and employ itself upon ideas involving higher finality.

Self-subsisting natural beauty reveals to us a technic of nature which shows it in the light of a system ordered in accordance with laws the principle of which is not to be found within the range of our entire faculty of understanding. This principle is that of a finality relative to the employment of judgement in respect of phenomena which have thus to be assigned, not merely to nature regarded as aimless mechanism, but also to nature regarded after the analogy of art. Hence it gives a

veritable extension, not, of course, to our knowledge of objects of nature, but to our conception of nature itself—nature as mere mechanism being enlarged to the conception of nature as art—an extension inviting profound inquiries as to the possibility of such a form. But in what we are wont to call sublime in nature there is such an absence of anything leading to particular objective principles and corresponding forms of nature that it is rather in its chaos, or in its wildest and most irregular disorder and desolation, provided it gives signs of magnitude and power, that nature chiefly excites the ideas of the sublime. Hence we see that the concept of the sublime in nature is far less important and rich in consequences than that of its beauty. It gives on the whole no indication of anything final in nature itself, but only in the possible employment of our intuitions of it in inducing a feeling in our own selves of a finality quite independent of nature. For the beautiful in nature we must seek a ground external to ourselves, but for the sublime one merely in ourselves and the attitude of mind that introduces sublimity into the representation of nature. This is a very needful preliminary remark. It entirely separates the ideas of the sublime from that of a finality of nature, and makes the theory of the sublime a mere appendage to the aesthetic estimate of the finality of nature, because it does not give a representation of any particular form in nature, but involves no more than the development of a final employment by the imagination of its own representation.

Kant, Critique of Aesthetic Judgement, 23

- 49 There is no science of the beautiful, but only a critique.
Nor, again, is there an elegant science, but only a fine art.

For a science of the beautiful would have to determine scientifically, that is, by means of proofs, whether a thing was to be considered beautiful or not; and the judgement upon beauty, consequently, would, if belonging to science, fail to be a judgement of taste. As for a beautiful science—a science which, as such, is to be beautiful, is a nonentity.

Kant, Critique of Aesthetic Judgement, 44

50 Once the teleological estimate of nature, supported by the physical ends, actually presented to us in organic beings, has entitled us to form the idea of a vast system of natural ends, we may regard even natural beauty from this point of view, such beauty being an accordance of nature with the free play of our cognitive faculties as engaged in grasping and estimating its appearance. For then we may look upon it as an objective finality of nature in its entirety as a system of which man is a member. We may regard it as a favour that nature has extended to us, that besides giving us what is useful it has dispensed beauty and charms in such abundance, and for this we may love it, just as we view it with respect because of its immensity, and feel ourselves ennobled by such contemplation—just as if nature had erected and decorated its splendid stage with this precise purpose in its mind.

Kant, Critique of Teleological Judgement, 67

51 *Faust*. Have I still eyes? Is Beauty's spring, outpouring,
Revealed most richly to my inmost soul?
My dread path brought me to this loftiest goal!
Void was the world and barred to my exploring!

What is it now since this my priesthood's hour?
Worth wishing for, firm-based, a lasting dower!
Vanish from me my every vital power
If I forsake thee, treacherous to my duty!
The lovely form that once my fancy captured,
That in the magic glass enraptured,
Was but a foam-born phantom of such beauty!—
To thee alone I render up with gladness
The very essence of my passion,
Fancy, desire, love, worship, madness!

Goethe, Faust, II, I, 6487

52 *Chiron*. Woman's beauty? That is not worth telling.
Too oft a rigid image do we see;
I praise alone a being welling
With love of life and gaiety.
Self-blest is beauty, cold and listless,
'Tis winsomeness that makes resistless.

Goethe, Faust, II, 2, 7399

53 *Chorus*. O lady glorious, do not disdain
Honoured possession of highest estate!
For to thee alone is the greatest boon given:
The fame of beauty transcending all else.
The hero's name resounds ere he comes,
Hence proudly he strides,
Yet bows at once the stubbornest man
At the throne of Beauty, the all-conquering.

Goethe, Faust, II, 3, 8516

54 *Phorkyas*. Old is the word, yet high and late remains the
sense,

That Modesty and Beauty never, hand in hand.
Pursue their way along the verdant paths of earth.
Deep-rooted dwells in both of them an ancient hate,
That wheresoever on the way they chance to meet,
Each on the other turns her back in enmity.
Then each one hastens on with greater vehemence,
Modesty sad but Beauty insolent of mood,
Till Orcus' hollow night at last envelops them,
Unless old age has fettered them before that time.

Goethe, Faust, II, 3, 8754

55 *Lynceus*. Easy are the lord's commands,
Child's-play to the servant's hands:
Beauty in such fair excess
Rules all wealth, rules blood no less.
All the army now is tame,
All the swords are blunt and lame.
By this glorious form, behold!
Even the sun seems faint and cold.
By this wealth of loveliness
All is empty nothingness.

Goethe, Faust, II, 3, 9346

56 A marriageable girl, whose natural destiny is to bear and suckle children, will not be beautiful without the proper breadth of the pelvis and the necessary fullness of the breasts.

Goethe, Conversations with Eckermann (Apr. 18, 1827)

57 She walks in beauty, like the night
Of cloudless climes and starry skies;

And all that's best of dark and bright
Meet in her aspect and her eyes.

Byron, She Walks in Beauty

58 O Attic shape! Fair attitude! with brede
Of marble men and maidens overwrought,
With forest branches and the trodden weed;
Thou, silent form, dost tease us out of thought
As doth eternity: Cold Pastoral!
When old age shall this generation waste,
Thou shalt remain, in midst of other woe
Than ours, a friend to man, to whom thou say'st,
'Beauty is truth, truth beauty,'—that is all
Ye know on earth, and all ye need to know.

Keats, Ode on a Grecian Urn

59 The voice I hear this passing night was heard
In ancient days by emperor and clown:
Perhaps the self-same song that found a path
Through the sad heart of Ruth, when, sick for home,
She stood in tears amid the alien corn;
The same that oft-times hath
Charm'd magic casements, opening on the foam
Of perilous seas, in faery lands forlorn.

Keats, Ode to a Nightingale

60 A thing of beauty is a joy for ever:
Its loveliness increases; it will never
Pass into nothingness; but still will keep
A bower quiet for us, and a sleep
Full of sweet dreams, and health, and quiet breathing.

Keats, Endymion, I, 1

61 There is a beauty of a peculiar kind in women, in which their countenance presents a transparency of skin, a light and lovely roseate hue, which is unlike the complexion of mere health and vital vigor—a more refined bloom, breathed, as it were, by the soul within—and in which the features, the light of the eye, the position of the mouth, appear soft, yielding, and relaxed. This almost unearthly beauty is perceived in women in those days which immediately succeed childbirth; when freedom from the burden of pregnancy and the pains of travail is added to the joy of soul that welcomes the gift of a beloved infant. A similar tone of beauty is seen also in women during the magical somnambulist sleep, connecting them with a world of superterrestrial beauty. A great artist (Schoreel) has moreover given this tone to the dying Mary, whose spirit is already rising to the regions of the blessed, but once more, as it were, lights up her dying countenance for a farewell kiss. Such a beauty we find also in its loveliest form in the Indian world; a beauty of enervation in which all that is rough, rigid, and contradictory is dissolved, and we have only the soul in a state of emotion; a soul, however, in which the death of free self-reliant spirit is perceptible. For should we approach the charm of this flower-life, a charm rich in imagination and genius, in which its whole environment and all its relations are permeated by the rose-breath of the soul, and the world is transformed into a garden of love—should we look at it more closely, and examine it in the light of human dignity and freedom—the more attractive the first sight of it had been, so much the more unworthy shall we ultimately find it in every respect.

Hegel, Philosophy of History, I, 2

62 It is true that in common life we are in the habit of speaking of beautiful colour, a beautiful sky, a beautiful river, and, moreover, of beautiful flowers, beautiful animals, and, above all, of beautiful human beings. We will not just now enter into the controversy how far such objects can justly have the attribute of beauty ascribed to them. . . . We may, however, begin at once by asserting that artistic beauty stands *higher* than nature. For the beauty of art is the beauty that is born—born again, that is—of the mind; and by as much as the mind and its products are higher than nature and its appearances, by so much the beauty of art is higher than the beauty of nature.

Hegel, Philosophy of Fine Art, I

63 The beauty' of a work of art consists in the fact that it holds up a clear mirror to certain ideas inherent in the world in general; the beauty of a work of poetic art in particular is that it renders the ideas inherent in mankind, and thereby leads it to a knowledge of these ideas. The means which poetry uses for this end are the exhibition of significant characters and the invention of circumstances which will bring about significant situations, giving occasion to the characters to unfold their peculiarities and show what is in them; so that by some such representation a clearer and fuller knowledge of the many-sided idea of humanity may be attained. Beauty, however, in its general aspect, is the inseparable characteristic of the idea when it has become known. In other words, everything is beautiful in which an idea is revealed, for to be beautiful means no more than clearly to express an idea.

Schopenhauer, Interest and Beauty in Works of Art

64 We ascribe beauty to that which is simple; which has no superfluous parts; which exactly answers its end; which stands related to all things; which is the mean of many extremes.

Emerson, Considerations by the Way

65 Tell them, dear, that if eyes were made for seeing,
Then Beauty is its own excuse for being:
Why thou wert there, O rival of the rose!
I never thought to ask, I never knew:
But, in my simple ignorance, suppose
The self-same Power that brought me there brought you.

Emerson, The Rhodora

66 The perfection of a process—that is, its utility—is the better point of beauty about it.

Faraday, Chemical History of a Candle, I

67 The young woman was tall, with a figure of perfect elegance on a large scale. She had dark and abundant hair, so glossy that it threw off the sunshine with a gleam, and a face which, besides being beautiful from regularity of feature and richness of complexion, had the impressiveness belonging to a marked brow and deep black eyes. She was lady-like, too, after the manner of the feminine gentility of those days; characterized by a certain state and dignity, rather than by the delicate, evanescent, and indescribable grace, which is now recognized as its indication. And never had Hester Prynne appeared more ladylike, in the antique interpretation of the term, than as she issued from the prison. Those who

had before known her, and had expected to behold her dimmed and obscured by a disastrous cloud, were astonished, and even startled, to perceive how her beauty shone out, and made a halo of the misfortune and ignominy in which she was enveloped. It may be true, that, to a sensitive observer, there was something exquisitely painful in it. Her attire, which, indeed, she had wrought for the occasion, in prison, and had modelled much after her own fancy, seemed to express the attitude of her spirit, the desperate recklessness of her mood, by its wild and picturesque peculiarity. But the point which drew all eyes, and, as it were, transfigured the wearer—so that both men and women, who had been familiarly acquainted with Hester Prynne, were now impressed as if they beheld her for the first time—was that Scarlet Letter, so fantastically embroidered and illuminated upon her bosom. It had the effect of a spell, taking her out of the ordinary relations with humanity, and enclosing her in a sphere by herself.

Hawthorne, Scarlet Letter, II

68 Real strength never impairs beauty or harmony, but it often bestows it; and in everything imposingly beautiful, strength has much to do with the magic. Take away the tied tendons that all over seem bursting from the marble in the carved Hercules, and its charm would be gone. As devout Eckerman lifted the linen sheet from the naked corpse of Goethe, he was overwhelmed with the massive chest of the man, that seemed as a Roman triumphal arch. When Angelo paints even God the Father in human form, mark what robustness is there. And whatever they may reveal of the divine love in the Son, the soft, curled hermaphroditical Italian pictures, in which his idea has

been most successfully embodied; these pictures, so destitute as they are of all brawniness, hint nothing of any power, but the mere negative, feminine one of submission and endurance, which on all hands it is conceded, form the peculiar practical virtues of his teachings.

Melville, Moby Dick, LXXXVI

69 With respect to the belief that organic beings have been created beautiful for the delight of man—a belief which it has been pronounced is subversive of my whole theory—I may first remark that the sense of beauty obviously depends on the nature of the mind, irrespective of any real quality in the admired object; and that the idea of what is beautiful is not innate or unalterable. We see this, for instance, in the men of different races admiring an entirely different standard of beauty in their women. If beautiful objects had been created solely for man's gratification, it ought to be shown that before man appeared, there was less beauty on the face of the earth than since he came on the stage....

On the other hand, I willingly admit that a great number of male animals, as all our most gorgeous birds, some fishes, reptiles, and mammals, and a host of magnificently coloured butterflies, have been rendered beautiful for beauty's sake; but this has been effected through sexual selection, that is, by the more beautiful males having been continually preferred by the females, and not for the delight of man. So it is with the music of birds. We may infer from all this that a nearly similar taste for beautiful colours and for musical sounds runs through a large part of the animal kingdom. When the female is as beautifully coloured as the male, which is not

rarely the case with birds and butterflies, the cause apparently lies in the colours acquired through sexual selection having been transmitted to both sexes, instead of to the males alone. How the sense of beauty in its simplest form—that is, the reception of a peculiar kind of pleasure from certain colours, forms, and sounds—was first developed in the mind of man and of the lower animals, is a very obscure subject. The same sort of difficulty is presented, if we enquire how it is that certain flavours and odours give pleasure, and others displeasure. Habit in all these cases appears to have come to a certain extent into play; but there must be some fundamental cause in the constitution of the nervous system in each species.

Darwin, Origin of Species, VI

70 Everyone who admits the principle of evolution, and yet feels great difficulty in admitting that female mammals, birds, reptiles, and fish, could have acquired the high taste implied by the beauty of the males, and which generally coincides with our own standard, should reflect that the nerve-cells of the brain in the highest as well as in the lowest members of the vertebrate series, are derived from those of the common progenitor of this great kingdom. For we can thus see how it has come to pass that certain mental faculties, in various and widely distinct groups of animals, have been developed in nearly the same manner and to nearly the same degree.

Darwin, Descent of Man, III, 21

71 I died for Beauty, but was scarce
Adjusted in the tomb

When one who died for Truth was lain
In an adjoining room.

He questioned softly "Why I failed"?
"For Beauty," I replied.

"And I for Truth. The two are one,
We brethren are," he said.

And so, as kinsmen met a night,
We talked between the rooms.
Until the moss had reached our lips
And covered up our names.

Emily Dickinson, I Died for Beauty

72 *Mitya*. Beauty is a terrible and awful thing! It is terrible because it has not been fathomed and never can be fathomed, for God sets us nothing but riddles. Here the boundaries meet and all contradictions exist side by side. I am not a cultivated man, brother, but I've thought a lot about this. It's terrible what mysteries there are! Too many riddles weigh men down on earth. We must solve them as we can, and try to keep a dry skin in the water. Beauty! I can't endure the thought that a man of lofty mind and heart begins with the ideal of the Madonna and ends with the ideal of Sodom. What's still more awful is that a man with the ideal of Sodom in his soul does not renounce the ideal of the Madonna, and his heart may be on fire with that ideal, genuinely on fire, just as in his days of youth and innocence. Yes, man is broad, too broad, indeed. I'd have him narrower. The devil only knows what to make of it! What to the mind is shameful is beauty and nothing else to the heart. Is there beauty in Sodom? Believe me that for the immense mass of mankind beauty is found in Sodom. Did you know that secret? The awful thing is that beauty is mysterious as

well as terrible. God and the devil are fighting there and the battlefield is the heart of man. But a man always talks of his own ache. Listen, now to come to facts.

Dostoevsky, Brothers Karamazov, Pt. I, III, 3

73 He [Pierre] half rose, meaning to go round, but the aunt handed him the snuffbox, passing it across Helene's back. Helene stooped forward to make room, and looked round with a smile. She was, as always at evening parties, wearing a dress such as was then fashionable, cut very low at front and back. Her bust, which had always seemed like marble to Pierre, was so close to him that his shortsighted eyes could not but perceive the living charm of her neck and shoulders, so near to his lips that he need only have bent his head a little to have touched them. He was conscious of the warmth of her body, the scent of perfume, and the creaking of her corset as she moved. He did not see her marble beauty forming a complete whole with her dress, but all the charm of her body only covered by her garments. And having once seen this he could not help being aware of it, just as we cannot renew an illusion we have once seen through.

"So you have never noticed before how beautiful I am?" Helene seemed to say, "You had not noticed that I am a woman? Yes, I am a woman who may belong to anyone—to you too," said her glance. And at that moment Pierre felt that Helene not only could, but must, be his wife, and that it could not be otherwise.

Tolstoy, War and Peace, III, 1

74 The despairing, dejected expression of Natasha's face caught his [Prince Andrew's] eye. He recognized her,

guessed her feelings, saw that it was her debut, remembered her conversation at the window, and with an expression of pleasure on his face approached Countess Rostova.

"Allow me to introduce you to my daughter," said the countess, with heightened color.

"I have the pleasure of being already acquainted, if the countess remembers me," said Prince Andrew with a low and courteous bow quite belying Peronskaya's remarks about his rudeness, and approaching Natasha he held out his arm to grasp her waist before he had completed his invitation. He asked her to waltz. That tremulous expression on Natasha's face, prepared either for despair or rapture, suddenly brightened into a happy, grateful, childlike smile.

"I have long been waiting for you," that frightened happy little girl seemed to say by the smile that replaced the threatened tears, as she raised her hand to Prince Andrew's shoulder. They were the second couple to enter the circle. Prince Andrew was one of the best dancers of his day and Natasha danced exquisitely. Her little feet in their white satin dancing shoes did their work swiftly, lightly, and independently of herself, while her face beamed with ecstatic happiness. Her slender bare arms and neck were not beautiful—compared to Helene's her shoulders looked thin and her bosom undeveloped. But Helene seemed, as it were, hardened by a varnish left by the thousands of looks that had scanned her person, while Natasha was like a girl exposed for the first time, who would have felt very much ashamed had she not been assured that this was absolutely necessary.

Prince Andrew liked dancing, and wishing to escape as quickly as possible from the political and clever talk

which everyone addressed to him, wishing also to break up the circle of restraint he disliked, caused by the Emperor's presence, he danced, and had chosen Natasha because Pierre pointed her out to him and because she was the first pretty girl who caught his eye; but scarcely had he embraced that slender supple figure and felt her stirring so close to him and smiling so near him than the wine of her charm rose to his head, and he felt himself revived and rejuvenated when after leaving her he stood breathing deeply and watching the other dancers.

Tolstoy, War and Peace, VI, 16

75 What a strange illusion it is to suppose that beauty is goodness.

Tolstoy, The Kreutzer Sonata, V

76 The 'beautiful in itself' is not even a concept, merely a phrase. In the beautiful, man sets himself up as the standard of perfection; in select cases he worships himself in it. A species cannot do otherwise than affirm itself alone in this manner.

Nietzsche, Twilight of the Idols: Expeditions of an Untimely Man

77 The aesthetic principles are at bottom such axioms as that a note sounds good with its third and fifth, or that potatoes need salt. We are once for all so made that when certain impressions come before our mind, one of them will seem to call for or repel the others as its companions. To a certain extent the principle of habit will explain these aesthetic connections. When a conjunction is repeatedly experienced, the cohesion of its terms grows

grateful, or at least their disruption grows unpleasant. But to explain *all* aesthetic judgments in this way would be absurd; for it is notorious how seldom natural experiences come up to our aesthetic demands. Many of the so-called metaphysical principles are at bottom only expressions of aesthetic feeling. Nature is simple and invariable; makes no leaps, or makes nothing but leaps; is rationally intelligible; neither increases nor diminishes in quantity; flows from one principle, etc., etc.,—what do all such principles express save our sense of how pleasantly our intellect would feel if it had a Nature of that sort to deal with? The subjectivity of which feeling is of course quite compatible with Nature also turning out objectively to be of that sort, later on.

William James, Psychology, XXVIII

78 *Louis*. I know that in an accidental sort of way, struggling through the unreal part of life, I haven't always been able to live up to my ideal. But in my own real world I have never done anything wrong, never denied my faith, never been untrue to myself. I've been threatened and blackmailed and insulted and starved. But I've played the game. I've fought the good fight. And now it's all over, there's an indescribable peace. [*He feebly folds his hands and utters his creed*] I believe in Michael Angelo, Velasquez, and Rembrandt; in the might of design, the mystery of color, the redemption of all things by Beauty everlasting, and the message of Art that has made these hands blessed. Amen.

Shaw, Doctor's Dilemma, IV

79 Truth derives [its] self-justifying power from its services in the promotion of Beauty. Apart from Beauty, Truth is neither good, nor bad.

Whitehead, Adventures of Ideas, XVIII, 2

80 The enjoyment of beauty produces a particular, mildly intoxicating kind of sensation. There is no very evident use in beauty; the necessity of it for cultural purposes is not apparent, and yet civilization could not do without it. The science of aesthetics investigates the conditions in which things are regarded as beautiful; it can give no explanation of the nature or origin of beauty; as usual, its lack of results is concealed under a flood of resounding and meaningless words.

Freud, Civilization and Its Discontents, II

81 There is an old formula for beauty in nature and art: Unity in variety. Everything depends upon how the preposition "in" is understood. There may be many articles in a box, many figures in a single painting, many coins in one pocket, and many documents in a safe. The unity is extraneous and the many are unrelated. The significant point is that unity and manyness are always of this sort or approximate it when the unity of the object or scene is morphological and static. The formula has meaning only when its terms are understood to concern a relation of energies. There is no fullness, no many parts, without distinctive differentiations. But they have esthetic quality, as in the richness of a musical phrase, only when distinctions depend upon reciprocal resistances. There is unity only when the resistances create a suspense that is resolved through cooperative

interaction of the opposed energies. The "one" of the formula is the realization through interacting parts of their respective energies. The "many" is the manifestation of the defined individualizations due to opposed forces that finally sustain a balance. Thus the next theme is the organization of energies in a work of art. For the unity in variety that characterizes a work of art is dynamic.

Dewey, Art As Experience, VII

82 Why should I blame her that she filled my days
With misery, or that she would of late
Have taught to ignorant men most violent ways,
Or hurled the little streets upon the great,
Had they but courage equal to desire?
What could have made her peaceful with a mind
That nobleness made simple as a fire,
With beauty like a tightened bow, a kind
That is not natural in an age like this,
Being high and solitary and most stern?
Why, what could she have done, being what she is?
Was there another Troy for her to burn?

Yeats, No Second Troy

83 This satisfaction of our reason, due to the harmony between our nature and our experience, is partially realised already. The sense of beauty is its realisation. When our senses and imagination find what they crave, when the world so shapes itself or so moulds the mind that the correspondence between them is perfect, then perception is pleasure, and existence needs no apology. The duality which is the condition of conflict disappears.

There is no inward standard different from the outward fact with which that outward fact may be compared. A unification of this kind is the goal of our intelligence and of our affection, quite as much as of our aesthetic sense; but we have in those departments fewer examples of success. In the heat of speculation or of love there may come moments of equal perfection, but they are very unstable. The reason and the heart remain deeply unsatisfied. But the eye finds in nature, and in some supreme achievements of art, constant and fuller satisfaction. For the eye is quick, and seems to have been more docile to the education of life than the heart or the reason of man, and able sooner to adapt itself to the reality. Beauty therefore seems to be the clearest manifestation of perfection, and the best evidence of its possibility. If perfection is, as it should be, the ultimate justification of being, we may understand the ground of the moral dignity of beauty. Beauty is a pledge of the possible conformity between the soul and nature, and consequently a ground of faith in the supremacy of the good.

Santayana, Sense of Beauty, IV

- 84 Such affinity as there is between truth and beauty has various sources. When the word truth is coloured idealistically, to mean the types or potential perfections of things, as when we speak of a true friend, evidently if this latent "truth" could only be brought out and raised to actual fact, it would also realize the beautiful. Love and charity are quick to perceive the latent perfections of the imperfect; and if we call this (perhaps imaginary) potentiality the truth, we indeed divine the principle of beauty also; of that beauty which the organic impulses of

nature would bring to light if they had their way and did not interfere with one another. . . Nature is necessarily full of beauties, since our faculties of perception and sympathy would not subsist if they were not adapted to the facts of nature; and the truth is necessarily satisfying, for the same reason. Yet nature is also full of ugly, cruel and horrible things, and the truth in many ways is desolating: because our nature, though sufficiently harmonious with the universe to exist within it, is nevertheless finite and specific, with essential interests which nature and truth at large cannot but disregard. The truth, then, is often, in many ways, interesting, beautiful and sublime: but it is not identical with beauty either in quality or extension or status.

Santayana, Realm of Truth, XII

16.7 Criticism and the Standards of Taste

The passages assembled in this section are rather a mixed bag. Some are about critics as such, and express the dislike they evoke from the authors who are subject to their barbs. Some are about criticism as such; and some are examples of criticism. The one art that predominates in all these texts is literature; yet, perhaps, the points made can be generalized by the reader so that he sees their applicability to other arts, at least to the extent of understanding that a critical as contrasted with an uncritical appreciation of any work of art involves an appeal to principles or criteria that have something to do with the excellence of the work being considered.

This obviously leads to questions already mentioned in connection with beauty— questions about taste as responsive to the characteristics of the work being appreciated, about the distinction between good and bad taste, and about the process by which good taste is cultivated. The quotations that bear on these questions should be related by the reader to the passages in the preceding section that are concerned with the objectivity and subjectivity of beauty.

There are a few passages that deal with style—both in literature and in life. They are placed here because of the relation of differences in style to differences in taste.

For passages that might have appeared here instead of in other sections of this chapter, or in other chapters, the reader should consult the index under appropriate terms of interest.

■ ■ ■

1 *Socrates*. Then beauty of style and harmony and grace and good rhythm depend on simplicity—I mean the true simplicity of a rightly and nobly ordered mind and character, not that other simplicity which is only an euphemism for folly?

Very true, he [Glaucón] replied.

And if our youth are to do their work in life, must they not make these graces and harmonies their perpetual aim?

They must.

And surely the art of the painter and every other creative and constructive art are full of them—weaving,

embroidery, architecture, and every kind of manufacture; also nature, animal and vegetable—in all of them there is grace or the absence of grace. And ugliness and discord and inharmonious motion are nearly allied to ill words and ill nature, as grace and harmony are the twin sisters of goodness and virtue and bear their likeness.

That is quite true, he said.

Plato, Republic, III, 400B

2 *Socrates*. This is the distinction which I draw between the sight-loving, art-loving, practical class and those of whom I am speaking, and who are alone worthy of the name of philosophers.

How do you distinguish them? he [Glaucón] said.

The lovers of sounds and sights, I replied, are, as I conceive, fond of fine tones and colours and forms and all the artificial products that are made out of them, but their mind is incapable of seeing or loving absolute beauty.

True, he replied.

Few are they who are able to attain to the sight of this. Very true.

And he who, having a sense of beautiful things has no sense of absolute beauty, or who, if another lead him to a knowledge of that beauty is unable to follow—of such an one I ask, Is he awake or in a dream only? Reflect: is not the dreamer, sleeping or waking, one who likens dissimilar things, who puts the copy in the place of the real object?

I should certainly say that such an one was dreaming.

But take the case of the other, who recognises the existence of absolute beauty and is able to distinguish the idea from the objects which participate in the idea,

neither putting the objects in the place of the idea nor the idea in the place of the objects—is he a dreamer, or is he awake?

He is wide awake.

Plato, Republic, V, 476A

3 *Athenian Stranger*. Are beautiful things not the same to us all, or are they the same in themselves, but not in our opinion of them? For no one will admit that forms of vice in the dance are more beautiful than forms of virtue, or that he himself delights in the forms of vice, and others in a muse of another character. And yet most persons say, that the excellence of music is to give pleasure to our souls. But this is intolerable and blasphemous; there is, however, a much more plausible account of the delusion.

Cleinias. What?

Ath. The adaptation of art to the characters of men. Choric movements are imitations of manners occurring in various actions, fortunes, dispositions—each particular is imitated, and those to whom the words, or songs, or dances are suited, either by nature or habit or both, cannot help feeling pleasure in them and applauding them, and calling them beautiful. But those whose natures, or ways, or habits are unsuited to them, cannot delight in them or applaud them, and they call them base. There are others, again, whose natures are right and their habits wrong, or whose habits are right and their natures wrong, and they praise one thing, but are pleased at another. For they say that all these imitations are pleasant, but not good. And in the presence of those whom they think wise, they are ashamed of dancing and singing in the baser manner, or of deliberately lending

any countenance to such proceedings; and yet, they have a secret pleasure in them.

Plato, Laws, II, 655A

4 *Athenian Stranger*. The excellence of music is to be measured by pleasure. But the pleasure must not be that of chance persons; the fairest music is that which delights the best and best educated, and especially that which delights the one man who is pre-eminent in virtue and education. And therefore the judges must be men of character, for they will require both wisdom and courage; the true judge must not draw his inspiration from the theatre, nor ought he to be unnerved by the clamour of the many and his own incapacity; nor again, knowing the truth, ought he through cowardice and unmanliness carelessly to deliver a lying judgment, with the very same lips which have just appealed to the Gods before he judged. He is sitting not as the disciple of the theatre, but, in his proper place, as their instructor, and he ought to be the enemy of all pandering to the pleasure of the spectators. The ancient and common custom of Hellas, which still prevails in Italy and Sicily, did certainly leave the judgment to the body of spectators, who determined the victor by show of hands. But this custom has been the destruction of the poets; for they are now in the habit of composing with a view to please the bad taste of their judges, and the result is that the spectators instruct themselves;—and also it has been the ruin of the theatre; they ought to be having characters put before them better than their own, and so receiving a higher pleasure, but now by their own act the opposite result follows.

Plato, Laws, II, 658B

5 A master of any art avoids excess and defect, but seeks the intermediate and chooses this—the intermediate not in the object but relatively to us.

If it is thus, then, that every art does its work well—by looking to the intermediate and judging its works by this standard—so that we often say of good works of art that it is not possible either to take away or to add anything, implying that excess and defect destroy the goodness of works of art, while the mean preserves it; and good artists as we say, look to this in their work.

Aristotle, Ethics, 1106b5

6 The many are better judges than a single man of music and poetry; for some understand one part, and some another, and among them they understand the whole.

Aristotle, Politics, 1281b7

7 What to one man is food, to another is rank poison.

Lucretius, Nature of Things, IV

8 Be not too rigidly censorious,
A string may jar in the best master's hand,
And the most skilful archer miss his aim;
But in a poem elegantly writ,
I will not quarrel with a slight mistake,
Such as our nature's frailty may excuse;
But he that hath been often told his fault,
And still persists, is as impertinent,
As a musician that will always play,
And yet is always out at the same note;
When such a positive abandon'd fop
(Among his numerous absurdities)

Stumbles upon some tolerable line,
I fret to see them in such company,
And wonder by what magic they came there.
But in long works sleep will sometimes surprise,
Homer himself hath been observ'd to nod.

Horace, Ars Poetica

- 9 All language demonstrates three kinds of excellence; correctness, precision, and elegance (for to speak with propriety, its highest quality, is usually included by writers under elegance). Language also has the same number of faults, and these are the opposites of the qualities just mentioned.

Quintilian, Institutio Oratoria, I, 5

- 10 I know that there are some writers who would gladly ignore the importance of composition altogether, because they contend that unpolished language, presenting itself spontaneously, is more natural and manly. But if such writers actually contend that the natural is only that which has sprung from nature which preceded culture, then all oratory is at an end. ...

As the current of a river is more forcible in a descending channel which offers no obstruction to its course, than amidst rocks that oppose the broken and struggling waters; so also language that is properly corrected and flows smoothly is preferable to that which is rugged and fragmentary. Why then should anyone think that vigor is diminished when attention is paid to beauty? Nothing attains its natural strength without art, and beauty always accompanies art.

Quintilian, Institutio Oratoria, IX, 4

- 11 Many people admire what is bad, but no one condemns what is good.

Quintilian, Institutio Oratoria, XII, 10

- 12 Beauty, unlike greatness, we regard as absolute and as a quality; "more beautiful" is the relative. Yet even the term "beautiful" may be attached to something which in a given relation may appear ugly: the beauty of man, for example, is ugliness when compared with that of the gods; "the most beautiful of monkeys," we may quote, "is ugly in comparison with any other type." Nonetheless, a thing is beautiful in itself; as related to something else it is either more or less beautiful.

Similarly, an object is great in itself, and its greatness is due, not to any external, but to its own participation in the Absolute Great.

Are we actually to eliminate the beautiful on the pretext that there is a more beautiful? No more than must we eliminate the great because of the greater; the greater can obviously have no existence whatever apart from the great, just as the more beautiful can have no existence without the beautiful.

Plotinus, Sixth Ennrad, III, 11

- 13 Reason stands in different relations to the productions of art and to moral actions. In matters of art, reason is directed to a particular end, which is something devised by reason, while in moral matters, it is directed to the general end of all human life. Now a particular end is ordered to the general end. Since therefore sin is a departure from the order to the end ... sin may occur in two ways in a production of art. First, by a departure from

the particular end intended by the artist, and this sin will be proper to the art; for instance, if an artist produce a bad thing while intending to produce something good, or produce something good while intending to produce something bad. Secondly, by a departure from the general end of human life, and then he will be said to sin if he intend to produce a bad work, and does so in effect, so that another is thus deceived. But this sin is not proper to the artist as such, but as a man. Consequently for the former sin the artist is blamed as an artist, while for the latter he is blamed as a man. On the other hand, in moral matters, where we take into consideration the order of reason to the general end of human life, sin and evil are always due to a departure from the order of reason to the general end of human life. Therefore man is blamed for such a sin both as man and as a moral being. Hence the Philosopher [Aristotle] says that "in art, he who sins voluntarily is preferable"; but in prudence, as in the moral virtues, which prudence directs, he is less preferable.

Aquinas, Summa Theologica, I-II, 21, 2

- 14 Here is a wonder: we have many more poets than judges and interpreters of poetry. It is easier to create it than to understand it. On a certain low level it can be judged by precepts and by art. But the good, supreme, divine poetry is above the rules and reason.

Montaigne, Essays, I, 37, Of Cato the Younger

- 13 When I want to judge someone, I ask him how satisfied he is with himself, to what extent he is pleased with his words or his work. I want to get away from those fine

excuses: "I did it in play ... I was not an hour at it; I have not looked at it since." Well, then, I say, let us put these pieces aside, give me something that represents you fully, by which you would like to be measured. And then, what do you think is finest in your work? Is it this part or that? Is it the charm, or the matter, or the originality, or the judgment, or the knowledge? For I notice generally that people are as mistaken in judging their own work as that of others, not only because of the affection that is involved, but also because they have not the capacity to know and distinguish it for what it is. The work, by its own power and fortune, may second the workman beyond his inventiveness and knowledge and outstrip him. For my part, I do not judge the value of any other work less clearly than my own; and I place the *Essays* now low, now high, very inconsistently and uncertainly.

There are many books that are useful by reason of their subjects, from which the author derives no commendation; and there are good books, like good works, which shame the workman.

Montaigne, Essays, III, 8, Of the Art of Discussion

- 16 Though men in learned tongues do tie themselves to the ancient measures, yet in modern languages it seemeth to me as free to make new measures of verses as of dances: for a dance is a measured pace, as a verse is a measured speech. In these things the sense is better judge than the art.

Bacon, Advancement of Learning, Bk. 11, XVI, 5

- 17 There is a certain standard of grace and beauty which consists in a certain relation between our nature, such as

it is, weak er strong, and the thing which pleases us.

Whatever is formed according to this standard pleases us, be it house, song, discourse, verse, prose, woman, birds, rivers, trees, rooms, dress, etc. Whatever is not made according to this standard displeases those who have good taste.

And as there is a perfect relation between a song and a house which are made after a good model, because they are like this good model, though each after its kind; even so there is a perfect relation between things made after a bad model. Not that the bad model is unique, for there are many; but each bad sonnet, for example, on whatever false model it is formed, is just like a woman dressed after that model.

Nothing makes us understand better the ridiculousness of a false sonnet than to consider nature and the standard and, then, to imagine a woman or a house made according to that standard.

Pascal, Pensées, I, 32

- 18 Men consider all things as made for themselves, and call the nature of a thing, good, evil, sound, putrid, or corrupt, just as they are affected by it. For example, if the motion by which the nerves are affected by means of objects represented to the eye conduces to well-being, the objects by which it is caused are called beautiful; while those exciting a contrary motion are called deformed. Those things, too, which stimulate the senses through the nostrils are called sweet-smelling or thinking; those which act through the taste are called sweet or bitter, full-flavoured or insipid; those which act through the touch, hard or soft, heavy or light; those, lastly, which act through the ears are said to make a noise, sound, or

harmony, the last having caused men to lose their senses to such a degree that they have believed that God even is delighted with it. Indeed, philosopher may be found who have persuaded themselves that the celestial motions beget a harmony. All these things sufficiently show that every one judges things by the constitution of his brain, or rather accepts the affections of his imagination in the place of things. It is not, therefore, to be wondered at, as we may observe in passing, that all those controversies which we see have arisen amongst men, so that at last scepticism has been the result. For although human bodies agree in many things, they differ in more, and therefore that which to one person is good will appear to another evil, that which to one is well arranged to another is confused, that which pleases one will displease another, and so on in other cases which I pass by both because we cannot notice them at length here, and because they are within the experience of every one. For every one has heard the expressions: So many heads, so many ways of thinking; Every one is satisfied with his own way of thinking; Differences of brains are not less common than differences of taste;—all which maxims show that men decide upon matters according to the constitution of their brains, and imagine rather than understand things,

Spinoza, Ethics, I, Appendix

19 Each Poet of inferior size

On you shall rail and criticize. . . .

So, Nat'ralists observe, a Flea

Hath smaller Fleas that on him prey,

And these have smaller Fleas to bite 'em,

And so proceed *ad infinitum*:

Thus ev'ry Poet in his Kind,
Is bit by him that comes behind.

Swift, On Poetry: A Rhapsody

- 20 Some have conceived it would be very expedient for the public good of learning that every true critic, as soon as he had finished his task assigned, should immediately deliver himself up to ratsbane, or hemp, or leap from some convenient altitude; and that no man's pretensions to so illustrious a character should by any means be received before that operation were performed.

Swift, Tale of a Tub, III

- 21 These reasonings will furnish us with an adequate definition of a true critic: that he is a discoverer and collector of writers faults. Which may be farther put beyond dispute by the following demonstration:—That whoever will examine the writings in all kinds, wherewith this ancient sect has honoured the world, shall immediately find, from the whole thread and tenor of them, that the ideas of the authors have been altogether conversant and taken up with the faults, and blemishes, and oversights, and mistakes of other writers; and, let the subject treated on be whatever it will, their imaginations are so entirely possessed and replete with the defects of other pens, that the very quintessence of what is bad does of necessity distil into their own; by which means the whole appears to be nothing else but an abstract of the criticisms themselves have made.

Swift, Tale of a Tub, III

22 'Tis hard to say, if greater want of skill
Appear in writing or in judging ill;
But of the two less dangerous is the offense
To tire our patience than mislead our sense.
Some few in that, but numbers err in this,
Ten censure wrong for one who writes amiss;
A fool might once himself alone expose,
Now one in verse makes many more in prose.

Pope, Essay on Criticism, I, 1

23 Be Homer's works your study and delight,
Read them by day, and meditate by night;
Thence form your judgment, thence your maxims bring,
And trace the Muses upward to their spring.
Still with itself compared, his text peruse;
And let your comment be the Mantuan Muse.

Pope, Essay on Criticism, I, 124

24 But most by numbers judge a poet's song,
And smooth or rough with them is right or wrong.
In the bright Muse though thousand charms conspire,
Her voice is all these tuneful fools admire,
Who haunt Parnassus but to please their ear,
Not mend their minds; as some to church repair,
Not for the doctrine, but the music there.
These equal syllables alone require,
Though oft the ear the open vowels tire,
While expletives their feeble aid do join,
And ten low words oft creep in one dull line:
While they ring round the same unvaried chimes,
With sure returns of still expected rhymes;
Where'er you find "the cooling western breeze,"

In the next line, it "whispers through the trees";
If crystal streams "with pleasing murmurs creep,"
The reader's threatened (not in vain) with "sleep";
Then, at the last and only couplet fraught
With some unmeaning thing they call a thought,
A needless Alexandrine ends the song
That, like a wounded snake, drags its slow length along.
Leave such to tune their own dull rhymes, and know
What's roundly smooth or languishingly slow;
And praise the easy vigor of a line
Where Denham's strength and Waller's sweetness join.
True ease in writing comes from art, not chance,
As those move easiest who have learned to dance.
'Tis not enough no harshness gives offense,
The sound must seem an echo to the sense.
Soft is the strain when Zephyr gently blows,
And the smooth stream in smoother numbers flows;
But when loud surges lash the sounding shore,
The hoarse, rough verse should like the torrent roar.
When Ajax strives some rock's vast weight to throw,
The line too labors, and the words move slow;
Not so when swift Camilla scours the plain,
Flies o'er the unbending com, and skims along the main.

Pope, Essay on Criticism, II, 337

25 Ah, ne'er so dire a thirst of glory boast,
in the critic let the man be lost!
Good nature and good sense must ever join;
To err is human, to forgive divine.

Pope, Essay on Criticism, II, 522

26 The world have paid too great a compliment to critics, and have imagined them men of much greater profundity than they really are. From this complacence, the critics have been emboldened to assume a dictatorial power, and have so far succeeded, that they are now become the masters, and have the assurance to give laws to those authors from whose predecessors they originally received them.

The critic, rightly considered, is no more than the clerk, whose office it is to transcribe the rules and laws laid down by those great judges whose vast strength of genius hath placed them in the light of legislators, in the several sciences over which they presided. This office was all which the critics of old aspired to; nor did they ever dare to advance a sentence, without supporting it by the authority of the judge from whence it was borrowed.

But in process of time, and in ages of ignorance, the clerk began to invade the power and assume the dignity of his master. The laws of writing were no longer founded on the practice of the author, but on the dictates of the critic. The clerk became the legislator, and those very peremptorily gave laws whose business it was, at first, only to transcribe them.

Hence arose an obvious, and perhaps an unavoidable error; for these critics being men of shallow capacities, very easily mistook mere form for substance. They acted as a judge would, who should adhere to the lifeless letter of law, and reject the spirit. Little circumstances, which were perhaps accidental in a great author, were by these critics considered to constitute his chief merit, and transmitted as essentials to be observed by all his successors. To these encroachments, time and ignorance, the two great supporters of imposture, gave authority;

and thus many rules for good writing have been established, which have not the least foundation in truth or nature; and which commonly serve for no other purpose than to curb and restrain genius, in the same manner as it would have restrained the dancing-master, had the many excellent treatises on that art laid it down as an essential rule that every man must dance in chains.

Fielding, Tom Jones, V, 1

27 This word critic is of Greek derivation, and signifies judgment. Hence I presume some persons who have not understood the original, and have seen the English translation of the primitive, have concluded that it meant judgment in the legal sense, in which it is frequently used as equivalent to condemnation.

I am rather inclined to be of that opinion, as the greatest number of critics hath of late years been found amongst the lawyers. Many of these gentlemen, from despair, perhaps, of ever rising to the bench in Westminster-hall, have placed themselves on the benches at the playhouse, where they have exerted their judicial capacity, and have given judgment, i.e., condemned without mercy.

Fielding, Tom Jones, XI, 1

28 The great variety of Taste, as well as of opinion, which prevails in the world, is too obvious not to have fallen under every one's observation. Men of the most confined knowledge are able to remark a difference of taste in the narrow circle of their acquaintance, even where the persons have been educated under the same government, and have early imbibed the same

prejudices. But those who can enlarge their view to contemplate distant nations and remote ages, are still more surprised at the great inconsistency and contrariety. We are apt to call *barbarous* whatever departs widely from our own taste and apprehension; but soon find the epithet of reproach retorted on us. And the highest arrogance and self-conceit is at last startled, on observing an equal assurance on all sides, and scruples, amidst such a contest of sentiment, to pronounce positively in its own favour.

Hume, Of the Standard of Taste

29 Though it be certain that beauty and deformity, more than sweet and bitter, are not qualities in objects, but belong entirely to the sentiment, internal or external, it must be allowed that there are certain qualities in objects which are fitted by nature to produce those particular feelings. Now, as these qualities may be found in a small degree, or may be mixed and confounded with each other, it often happens that the taste is not affected with such minute qualities, or is not able to distinguish all the particular flavours, amidst the disorder in which they are presented. Where the organs are so fine as to allow nothing to escape them, and at the same time so exact as to perceive every ingredient in the composition, this we call delicacy of taste, whether we employ these terms in the literal or metaphorical sense. Here then the general rules of beauty are of use, being drawn from established models, and from the observation of what pleases or displeases, when presented singly and in a high degree; and if the same qualities, in a continued composition, and in a smaller degree, affect not the organs with a

sensible delight or uneasiness, we exclude the person from all pretensions to this delicacy.

Hume, Of the Standard of Taste

30 Though the principles of taste be universal, and nearly, if not entirely, the same in all men, yet few are qualified to give judgment on any work of art, or establish their own sentiment as the standard of beauty. The organs of internal sensation are seldom so perfect as to allow the general principles their full play, and produce a feeling correspondent to those principles. They either labour under some defect, or are vitiated by some disorder; and by that means excite a sentiment, which may be pronounced erroneous. When the critic has no delicacy, he judges without any distinction, and is only affected by the grosser and more palpable qualities of the object: the finer touches pass unnoticed and disregarded. Where he is not aided by practice, his verdict is attended with confusion and hesitation. Where no comparison has been employed, the most frivolous beauties, such as rather merit the name of defects, are the object of his admiration. Where he lies under the influence of prejudice, all his natural sentiments are perverted. Where good sense is wanting, he is not qualified to discern the beauties of design and reasoning, which are the highest and most excellent. Under some or other of these imperfections, the generality of men labour; and hence a true judge in the finer arts is observed, even during the most polished ages, to be so rare a character: strong sense, united to delicate sentiment, improved by practice, perfected by comparison, and cleared of all prejudice, can alone entitle critics to this valuable

character; and the joint verdict of such, wherever they are to be found, is the true standard of taste and beauty.

Hume, Of the Standard of Taste

- 31 Grant me patience, just Heaven! Of all the cants which are canted in the canting world— though the cant of hypocrites may be the worst— the cant of criticism is the most tormenting!

Sterne, Tristram Shandy, III, 12

- 32 I mentioned Mallet's tragedy of Elvira, which had been acted the preceding winter at Drurylane, and that the Honourable Andrew Erskine, Mr. Dempster, and myself, had joined in writing a pamphlet, entitled, *Critical Strictures*, against it. That the mildness of Dempster's disposition had, however, relented; and he had candidly said, "We have hardly a right to abuse this tragedy: for bad as it is, how vain should either of us be to write one not near so good." *Johnson*. "Why no. Sir; this is not just reasoning. You *may* abuse a tragedy, though you cannot write one. You may scold a carpenter who has made you a bad table, though you cannot make a table. It is not your trade to make tables."

Boswell, Life of Johnson (June 25, 1763)

- 33 Fielding being mentioned, Johnson exclaimed, "he was a blockhead"; and upon my expressing my astonishment at so strange an assertion, he said, "What I mean by his being a blockhead is that he was a barren rascal." *Boswell*. "Will you not allow, Sir, that he draws very natural pictures of human life?" *Johnson*. "Why, Sir, it is of very low life. Richardson used to say, that had he not

known who Fielding was, he should have believed he was an ostler. Sir, there is more knowledge of the heart in one letter of Richardson's, than in all *Tom Jones*. I, indeed, never read *Joseph Andrews*." *Erskine*. "Surely, Sir, Richardson is very tedious." *Johnson*. "Why, Sir, if you were to read Richardson for the story, your impatience would be so much fretted that you would hang yourself. But you must read him for the sentiment, and consider the story as only giving occasion to the sentiment."

Boswell, Life of Johnson (Apr. 6, 1772)

34 Talking on the subject of taste in the arts, he said, that difference of taste was, in truth, difference of skill.

Boswell. "But, Sir, is there not a quality called taste, which consists merely in perception or in liking? For instance, we find people differ much as to what is the best style of English composition. Some think Swift's the best; others prefer a fuller and grander way of writing."

Johnson. "Sir, you must first define what you mean by style, before you can judge who has a good taste in style, and who has a bad. The two classes of persons whom you have mentioned don't differ as to good and bad. They both agree that Swift has a good neat style; but one loves a neat style, another loves a style of more splendour. In like manner, one loves a plain coat, another loves a laced coat; but neither will deny that each is good in its kind."

Boswell, Life of Johnson (Apr. 19, 1772)

35 We talked of the styles of different painters, and how certainly a connoisseur could distinguish them; I asked, if there was as clear a difference of styles in language as in painting, or even as in hand-writing, so that the

composition of every individual may be distinguished?
Johnson. "Yes. Those who have a style of eminent excellence, such as Dryden and Milton, can always be distinguished." I had no doubt of this, but what I wanted to know was, whether there was really a peculiar style to every man whatever, as there is certainly a peculiar hand-writing, a peculiar countenance, not widely different in many, yet always enough to be distinctive.... The Bishop thought not; and said, he supposed that many pieces in Dodsley's collection of poems, though all very pretty, had nothing appropriated in their style, and in that particular could not be at all distinguished.
Johnson. "Why, Sir, I think every man whatever has a peculiar style, which may be discovered by nice examination and comparison with others: but a man must write a great deal to make his style obviously discernible."

Boswell, Life of Johnson (Apr. 13, 1778)

- 36 Everyone must allow that a judgement on the beautiful which is tinged with the slightest interest, is very partial and not a pure judgement of taste. One must not be in the least prepossessed in favour of the real existence of the thing, but must preserve complete indifference in this respect, in order to play the part of judge in matters of taste.

Kant, Critique of Aesthetic Judgement, 2

- 37 So far as the interest of inclination in the case of the agreeable goes, every one says "Hunger is the best sauce; and people with a healthy appetite relish everything, so long as it is something they can eat." Such

delight, consequently, gives no indication of taste having anything to say to the choice. Only when men have got all they want can we tell who among the crowd has taste or not.

Kant, Critique of Aesthetic Judgement, 5

- 38 A principle of taste would mean a fundamental premiss under the condition of which one might subsume the concept of an object, and then, by a syllogism, draw the inference that it is beautiful. That, however, is absolutely impossible. For I must feel the pleasure immediately in the representation of the object, and I cannot be talked into it by any grounds of proof. Thus although critics, as Hume says, are able to reason more plausibly than cooks, they must still share the same fate. For the determining ground of their judgement they are not able to look to the force of demonstrations, but only to the reflection of the subject upon his own state (of pleasure or displeasure), to the exclusion of precepts and rules.

Kant, Critique of Aesthetic Judgement, 34

- 39 Taste is, in the ultimate analysis, a critical faculty that judges of the rendering of moral ideas in terms of sense (through the intervention of a certain analogy in our reflection on both); and it is this rendering also, and the increased sensibility, founded upon it, for the feeling which these ideas evoke (termed *moral sense*), that are the origin of that pleasure which taste declares valid for mankind in general and not merely for the private feeling of each individual. This makes it clear that the true propaedeutic for laying the foundations of taste is the development of moral ideas and the culture of the moral

feeling. For only when sensibility is brought into harmony with moral feeling can genuine taste assume a definite unchangeable form.

Kant, Critique of Aesthetic Judgement, 60

40 Nothing is more common than for scholars to make a ridiculous figure, in regard to a question of beauty, beside cultured men of the world; and technical critics are especially the laughing-stock of connoisseurs. Their opinion, from exaggeration, crudeness, or carelessness guides them generally quite awry, and they can only devise a technical judgment, and not an aesthetical one, embracing the whole work, in which feeling should decide. If they would kindly keep to technicalities, they might still be useful, for the poet in moments of inspiration and readers under his spell are little inclined to consider details. But the spectacle which they afford us is only the more ridiculous inasmuch as we see these crude natures—with whom all labour and trouble only develop at the most a particular aptitude—when we see them set up their paltry individualities as the representation of universal and complete feeling, and in the sweat of their brow pronounce judgment on beauty.

Schiller, Simple and Sentimental Poetry

41 *Manager.* Men come to look, to see they most prefer.
If, as they gaze, much is reeled off and spun,
So that the startled crowd gapes all it can,
A multitude you will at once have won;
You then will be a much-loved man.
You can compel the mass by mass alone;
Each in the end will seek out something as his own.

Bring much and you'll bring this or that to everyone
And each will leave contented when the play is done.
If you will give a piece, give it at once in pieces!
Ragout like this your fame increases.
Easy it is to stage, as easy to invent.
What use is it, a whole to fashion and present?
The Public still will pick it all to pieces.

Goethe, Faust, Prelude on the Stage, 90

42 We find... it is true, among all world-historical peoples, poetry, plastic art, science, even philosophy; but not only is there a diversity in style and bearing generally, but still more remarkably in subject-matter; and this is a diversity of the most important kind, affecting the rationality of that subject-matter. It is useless for a pretentious aesthetic criticism to demand that our good pleasure should not be made the rule for the matter—the substantial part of their contents—and to maintain that it is the beautiful form as such, the grandeur of the fancy, and so forth, which fine art aims at, and which must be considered and enjoyed by a liberal taste and cultivated mind. A healthy intellect does not tolerate such abstractions, and cannot assimilate productions of the kind above referred to. Granted that the Indian epopees might be placed on a level with the Homeric, on account of a number of those qualities of form—grandeur of invention and imaginative power, liveliness of images and emotions, and beauty of diction; yet the infinite difference of matter remains; consequently one of substantial importance and involving the interest of reason, which is immediately concerned with the consciousness of the idea of freedom, and its expression in individuals. There is not only a classical form, but a

classical order of subject-matter; and in a work of art form and subject-matter are so closely united that the former can only be classical to the extent to which the latter is so. With a fantastical, indeterminate material—and rule is the essence of reason—the form becomes measureless and formless, or mean and contracted.

Hegel, Philosophy of History, Introduction, 3

- 43 Style is the physiognomy of the mind, and a safer index to character than the face. To imitate another man's style is like wearing a mask, which, be it never so fine, is not long in arousing disgust and abhorrence, because it is lifeless; so that even the ugliest living face is better. Hence those who write in Latin and copy the manner of ancient authors may be said to speak through a mask; the reader, it is true, hears what they say, but he cannot observe their physiognomy too; he cannot see their style.

Schopenhauer, Style

- 44 The taste for the beautiful, at least as far as female beauty is concerned, is not of a special nature in the human mind; for it differs widely in the different races of man, and is not quite the same even in the different nations of the same race. Judging from the hideous ornaments, and the equally hideous music admired by most savages, it might be urged that their esthetic faculty was not so highly developed as in certain animals, for instance, as in birds. Obviously no animal would be capable of admiring such scenes as the heavens at night, a beautiful landscape, or refined music; but such high tastes are acquired through culture, and depend on

complex associations; they are not enjoyed by barbarians or by uneducated persons.

Darwin, Descent of Man, I, 3

45 The senses of man and of the lower animals seem to be so constituted that brilliant colours and certain forms, as well as harmonious and rhythmical sounds, give pleasure and are called beautiful; but why this should be so we know not. It is certainly not true that there is in the mind of man any universal standard of beauty with respect to the human body. It is, however, possible that certain tastes may in the course of time become inherited, though there is no evidence in favour of this belief; and if so, each race would possess its own innate ideal standard of beauty. It has been argued that ugliness consists in an approach to the structure of the lower animals, and no doubt this is partly true with the more civilised nations, in which intellect is highly appreciated; but this explanation will hardly apply to all forms of ugliness. The men of each race prefer what they are accustomed to; they cannot endure any great change; but they like variety, and admire each characteristic carried to a moderate extreme. Men accustomed to a nearly oval face, to straight and regular features, and to bright colours, admire, as we Europeans know, these points when strongly developed. On the other hand, men accustomed to a broad face, with high cheek-bones, a depressed nose, and a black skin, admire these peculiarities when strongly marked. No doubt characters of all kinds may be too much developed for beauty. Hence a perfect beauty, which implies many characters modified in a particular manner, will be in every race a prodigy. As the great anatomist Bichat long ago said, if every one were cast in

the same mould, there would be no such thing as beauty. If all our women were to become as beautiful as the Venus de' Medici, we should for a time be charmed; but we should soon wish for variety; and as soon as we had obtained variety, we should wish to see certain characters a little exaggerated beyond the then existing common standard.

Darwin, Descent of Man, III, 19

- 46 Taste is not only a part and an index of morality—it is the only morality. The first, and last, and closest trial question to any living creature is, "What do you like?" Tell me what you like, and I'll tell what you are.

Ruskin, The Crown of Wild Olive, II

- 47 It is noticeable that the word curiosity, which in other languages is used in a good sense, to mean, as a high and fine quality of man's nature, just this disinterested love of a free play of the mind on all subjects, for its own sake,—it is noticeable, I say, that this word has in our language no sense of the kind, no sense but a rather bad and disparaging one. But criticism, real criticism, is essentially the exercise of this very quality. It obeys an instinct prompting it to try to know the best that is known and thought in the world, irrespectively of practice, politics, and everything of the kind; and to value knowledge and thought as they approach this best, without the intrusion of any other considerations whatever.

Arnold, Function of Criticism at the Present Time

48 Constantly in reading poetry, a sense for the best, the really excellent, and of the strength and joy to be drawn from it should be present in our minds and should govern our estimate of what we read. But this real estimate, the only true one, is liable to be superseded, if we are not watchful, by two other kinds of estimate, the historic estimate and the personal estimate, both of which are fallacious. A poet or a poem may count to us historically, they may count to us on grounds personal to ourselves, and they may count to us really. They may count to us historically. The course of development of a nation's language, thought, and poetry is profoundly interesting; and by regarding a poet's work as a stage in this course of development we may easily bring ourselves to make it of more importance as poetry than in itself it really is, we may come to use a language of quite exaggerated praise in criticizing it; in short, to overrate it. So arises in our poetic judgments the fallacy caused by the estimate which we may call historic. Then, again, a poet or a poem may count to us on grounds personal to ourselves. Our personal affinities, likings, and circumstances have great power to sway our estimate of this or that poet's work, and to make us attach more importance to it as poetry than in itself it really possesses, because to us it is, or has been, of high importance. Here also we overrate the object of our interest, and apply to it a language of praise which is quite exaggerated. And thus we get the source of a second fallacy in our poetic judgments—the fallacy caused by an estimate which we may call personal.

Arnold. Study of Poetry

49 Over immense departments of our thought we are still, all of us, in the savage state. Similarity operates in us, but

abstraction has not taken place. We know what the present case is like, we know what it reminds us of, we have an intuition of the right course to take, if it be a practical matter. But analytic thought has made no tracks, and we cannot justify ourselves to others. In ethical, psychological, and aesthetic matters, to give a clear reason for one's judgment is universally recognized as a mark of rare genius. The helplessness of uneducated people to account for their likes and dislikes is often ludicrous. Ask the first Irish girl why she likes this country better or worse than her home, and see how much she can tell you. But if you ask your most educated friend why he prefers Titian to Paul Veronese, you will hardly get more of a reply; and you will probably get absolutely none if you inquire why Beethoven reminds him of Michelangelo, or how it comes that a bare figure with unduly flexed joints, by the latter, can so suggest the moral tragedy of life. His thought obeys a *nexus*, but cannot name it. And so it is with all those judgments of *experts*, which even though unmotivated are so valuable.

William James, Psychology, XXII

50 I remember seeing an English couple sit for more than an hour on a piercing February day in the Academy at Venice before the celebrated *Assumption* by Titian; and when I, after being chased from room to room by the cold, concluded to get into the sunshine as fast as possible and let the pictures go, but before leaving drew reverently near to them to learn with what superior forms of susceptibility they might be endowed, all I overheard was the woman's voice murmuring: "What a *deprecatory* expression her face wears! What *self-abnegation*! How *unworthy* she feels of the honor she is receiving!" Their

honest hearts had been kept warm all the time by a glow of spurious sentiment that would have fairly made old Titian sick. Mr. Ruskin somewhere makes the (for him terrible) admission that religious people as a rule care little for pictures, and that when they do care for them they generally prefer the worst ones to the best. Yes! in every art, in every science, there is the keen perception of certain relations being *right* or not, and there is the emotional flush and thrill consequent thereupon. And these are two things, not one. In the former of them it is that experts and masters are at home. The latter accompaniments are bodily commotions that they may hardly feel, but that may be experienced in their fulness by *cretins* and philistines in whom the critical judgment is at its lowest ebb.

William James, Psychology, XXV

51 In my own experience of the appreciation of poetry I have always found that the less I knew about the poet and his work, before I began to read it, the better.

T. S. Eliot, Dante

52 Every nation, every race, has not only its own creative, but its own critical turn of mind; and is even more oblivious of the shortcomings and limitations of its critical habits than of those of its creative genius.

T. S. Eliot, Tradition and the Individual Talent

53 No poet, no artist of any art, has his complete meaning alone. His significance, his appreciation is the appreciation of his relation to the dead poets and artists. You cannot value him alone-you must set him, for

contrast and comparison, among the dead. I mean this as a principle of aesthetic, nor merely historical, criticism.

T. S. Eliot, Tradition and the Individual Talent

54 A musical education is necessary for musical judgment. What most people relish is hardly music; it is rather a drowsy revery relieved by nervous thrills.

Santayana, Life of Reason, IV, 4

Chapter 17

PHILOSOPHY, SCIENCE, and MATHEMATICS

Chapter 17 is divided into three sections: 17.1 Philosophy and Philosophers, 17.2 Science and Scientific Method, and 17.3 The Discipline of Mathematics.

Of the three terms that constitute the title of this chapter, only one has sufficient clarity of meaning to need no comment. That is mathematics. The other two have been so variously used in the literature from which our quotations are taken that the reader needs some notification about the policy we have adopted in allocating passages to Section 17.1 or Section 17.2.

Until the end of the seventeenth century, and perhaps even well into the eighteenth, the same disciplines were often referred to as branches of philosophy or as particular sciences. On the one hand, physics, mathematics, and metaphysics or theology were called sciences, and so, too, were ethics, politics, and logic; yet these same disciplines were regarded as branches or divisions of philosophy. On the other hand, at the beginning of the modern era, men who engaged in experimental inquiry or the empirical investigation of natural phenomena usually referred to themselves as "natural philosophers" rather than as "natural scientists," and used the word "philosophy" rather than the word "science" in the titles of their books.

It is only toward the end of the eighteenth century and since then that the word "science" has come to be used more and more restrictedly for disciplines the method of which involves special observational procedures and techniques of investigation, in addition to theorizing, mathematical formulations, and the construction of hypotheses. When used with this meaning, the word "science" cannot be applied to such disciplines as mathematics or logic, metaphysics, theology, or ethics. They can be called sciences only in the much broader sense of the word which connotes an organized body of knowledge or of theories involving systematic reasoning from principles to conclusions.

The restriction of the word "science" to experimental or empirical inquiries was accompanied by a restriction of the word "philosophy" to disciplines that, whether or not they appealed to experience in any way, did not engage in special efforts to investigate the phenomena by observational techniques of one sort or another. Students of nature employing the experimental method no longer call themselves "natural philosophers"; while those who speculate about the structure of nature and the order of the cosmos call themselves "philosophers of nature"; and those who develop theories about science itself call themselves "philosophers of science."

In view of these shifts in the meaning of the words, we have adopted the following policy. We have placed in Section 17.1 quotations that discuss philosophy in that restricted sense of the term which applies only to disciplines that do not employ special observational techniques; and we have done so whether or not the authors themselves used the word "science" in referring to these disciplines. Accordingly, Section 17.2 contains quotations that are

relevant to science as an investigative enterprise involving methodical efforts to observe the phenomena, again whether or not the authors call themselves "philosophers" or refer to their work as "philosophy."

■ ■ ■

17.1 Philosophy and Philosophers

As the title of this section indicates, the quotations included here deal either with the nature, scope, and value of philosophy as a discipline or with the character and the virtues or vices of the philosopher as a man. Only some of the passages that consider philosophy itself regard it as a body of knowledge, a mode of inquiry, an intellectual discipline or way of thinking; many of them speak of philosophy as a way of life, as a vocation that sets certain men apart from others, just as a religious vocation does. When philosophy is thus considered, the character of the philosopher as a man is inextricably connected with the manner of life he leads. To be philosophical in this sense is to take a certain attitude toward life or to adopt certain rules of conduct rather than to profess certain beliefs or to promulgate theories about the nature of things.

It is only in the latter sense that philosophy is the object of both praise and censure—accorded by some an honorable place in the sphere of human inquiry and ridiculed by others as nothing but sham or pretension. Philosophy is not alone in this respect; other human undertakings or professions—law and medicine, for example—have been the objects of

satirical attack or derisive comment. But philosophy is uniquely distinguished by the fact that many of its detractors, and often the most abusive, are persons who have called themselves or would be regarded as philosophers.

The reader will also find that the philosophers quoted seldom agree with one another about the definition of their subject, the scope of their discipline, the method to be employed by them, or the claims that can be made for their conclusions. Nor do they agree about whether it is necessary for a man to have certain moral virtues in order to be a philosopher; whether he is a man of wisdom or only a lover of or seeker after wisdom; and whether the history of philosophy shows evidence of any progress in the development of philosophical thought.

However, on three points, the reader will find a certain measure of agreement. One is that, whatever its positive values or contributions may be, philosophy does not build bridges, cure diseases, or result in new inventions: it has no technological applications whatsoever. A second point is the concern common among philosophers about the relation of their discipline to religion or theology, on the one hand, and to mathematics and science, on the other. Closely connected with that is the third point; namely, that philosophy, like religion and unlike the natural sciences and mathematics, extends beyond the consideration of what is to what ought to be—to considerations of good and evil, right and wrong, and the ultimate values that constitute the ends or objectives of human life.

■ ■ ■

- 1 Protagoras was the first to maintain that there are two sides to every question, opposed to each other, and he even argued in this fashion, being the first to do so. Furthermore he began a work thus; "Man is the measure of all things, of things that are that they are, and of things that are not that they are not." He used to say that soul was nothing apart from the senses... and that everything is true.

Diogenes Laertius, Lives and Opinions of Eminent Philosophers, IX, 8

- 2 *Strepsiades*. Hallo! who's that? that fellow in the basket?

Student of Socrates. That's *he*.

St. Who's *he*.

Stu. Socrates.

St. Socrates!

You sir, call out to him as loud as you can.

Stu. Call him yourself: I have not leisure now.

The machine swings Socrates in.

St. Socrates! Socrates!

Sweet Socrates!

Socrates. Mortal! why call'st thou me?

St. O, first of all, please tell me what you are doing.

So. I walk on air, and contem-plate the Sun.

St. O then from a basket you condemn the Gods,
And not from the earth, at any rate?

So. Most true.

I could not have searched out celestial matters
Without suspending judgement, and infusing
My subtle spirit with the kindred air.
If from the ground I were to seek these things,
I could not find; so surely doth the earth
Draw to herself the essence of our thought.

Aristophanes, Clouds, 218

- 3 *Socrates*. The mind of the philosopher alone has wings; and this is just, for he is always, according to the measure of his abilities, clinging in recollection to those things in which God abides, and in beholding which He is what He is. And he who employs aright these memories is ever being initiated into perfect mysteries and alone becomes truly perfect. But, as he forgets earthly interests and is rapt in the divine, the vulgar deem him mad, and rebuke him; they do not see that he is inspired.

Plato, Phaedrus, 249B

- 4 *Alcibiades*. I have been bitten by a more than viper's tooth; I have known in my soul, or in my heart, or in some other part, that worst of pangs— more violent in ingenuous youth than any serpent's tooth—the pang of philosophy, which will make a man say or do anything.

Plato, Symposium, 218A

- 5 *Socrates*. The lovers of knowledge are conscious that the soul was simply fastened and glued to the body—until philosophy received her, she could only view real existence through the bars of a prison, not in and through herself; she was wallowing in the mire of every sort of ignorance, and by reason of lust had become the principal accomplice in her own captivity. This was her original state; and then, as I was saying, and as the lovers of knowledge are well aware, philosophy, seeing how terrible was her confinement, of which she was to herself the cause, received and gently comforted her and sought to release her, pointing out that the eye and the ear and the other senses are full of deception, and persuading her

to retire from them, and abstain from all but the necessary use of them, and be gathered up and collected into herself, bidding her trust in herself and her own pure apprehension of pure existence, and to mistrust whatever comes to her through other channels and is subject to variation; for such things are visible and tangible, but what she sees in her own nature is intelligible and invisible.

Plato, Phaedo, 82B

6 Let me [Socrates] next endeavour to show what is that fault in States which is the cause of their present maladministration, and what is the least change which will enable a State to pass into the truer form; and let the change, if possible, be of one thing only, or, if not, of two; at any rate, let the changes be as few and slight as possible.

Certainly, he [Glaucón] replied.

I think, I said, that there might be a reform of the State if only one change were made, which is not a slight or easy though still a possible one.

What is it? he said.

Now then, I said, I go to meet that which I liken to the greatest of the waves; yet shall the word be spoken, even though the wave break and drown me in laughter and dishonour; and do you mark my words.

Proceed.

I said: Until philosophers are kings, or the kings and princes of this world have the spirit and power of philosophy, and political greatness and wisdom meet in one, and those commoner natures who pursue either to the exclusion of the other are compelled to stand aside, cities will never have rest from their evils—no, nor the

human race, as I believe—and then only will this our State have a possibility of life and behold the light of day. Such was the thought, my dear Glaucon, which I would fain have uttered if it had not seemed too extravagant; for to be convinced that in no other State can there be happiness private or public is indeed a hard thing.

Plato, Republic, V, 473A

7 Adeimantus, I [Socrates] said, the worthy disciples of philosophy will be but a small remnant: perchance some noble and well-educated person, detained by exile in her service, who in the absence of corrupting influences remains devoted to her; or some lofty' soul born in a mean city, the politics of which he contemns and neglects; and there may be a gifted few who leave the arts, which they justly despise, and come to her—or peradventure there are some who are restrained by our friend Theages' bridle; for everything in the life of Theages conspired to divert him from philosophy; but ill-health kept him away from politics. My own case of the internal sign is hardly worth mentioning, for rarely, if ever, has such a monitor been given to any other man. Those who belong to this small class have tasted how sweet and blessed a possession philosophy is, and have also seen enough of the madness of the multitude; and they know that no politician is honest, nor is there any champion of justice at whose side they may fight and be saved. Such an one may be compared to a man who has fallen among wild beasts—he will not join in the wickedness of his fellows, but neither is he able singly to resist all their fierce natures, and therefore seeing that he would be of no use to the State or to his friends, and reflecting that he would have to throw away his life

without doing any good either to himself or others, he holds his peace, and goes his own way. He is like one who, in the storm of dust and sleet which the driving wind hurries along, retires under the shelter of a wall; and seeing the rest of mankind full of wickedness, he is content, if only he can live his own life and be pure from evil or unrighteousness and depart in peace and goodwill, with bright hopes.

Yes, he said, and he will have done a great work before he departs.

A great work—yes; but not the greatest, unless he find a State suitable to him; for in a State which is suitable to him, he will have a larger growth and be the saviour of his country, as well as of himself.

Plato, Republic, 496A

- 8 *Socrates*. Wonder is the feeling of a philosopher, and philosophy begins in wonder.

Plato, Theaetetus, 155B

- 9 *Socrates*. I will illustrate my meaning, Theodoras, by the jest which the clever witty Thracian handmaid is said to have made about Thales, when he fell into a well as he was looking up at the stars. She said, that he was so eager to know what was going on in heaven, that he could not see what was before his feet. This is a jest which is equally applicable to all philosophers. For the philosopher is wholly unacquainted with his next-door neighbour; he is ignorant, not only of what he is doing, but he hardly knows whether he is a man or an animal; he is searching into the essence of man, and busy in enquiring what belongs to such a nature to do or suffer

different from any other;—I think that you understand me, Theodorus?

Theodorus. I do, and what you say is true.

Soc. And thus, my friend, on every occasion, private as well as public, as I said at first, when he appears in a law-court, or in any place in which he has to speak of things which are at his feet and before his eyes, he is the jest, not only of Thracian handmaids but of the general herd, tumbling into wells and every sort of disaster through his inexperience. His awkwardness is fearful, and gives the impression of imbecility. When he is reviled, he has nothing personal to say in answer to the civilities of his adversaries, for he knows no scandals of any one, and they do not interest him; and therefore he is laughed at for his sheepishness; and when others are being praised and glorified, in the simplicity of his heart he cannot help going into fits of laughter, so that he seems to be a downright idiot.... But, O my friend, when he draws the other into upper air, and gets him out of his pleas and rejoinders into the contemplation of justice and injustice in their own nature and in their difference from one another and from all other things; or from the commonplaces about the happiness of a king or of a rich man to the consideration of government, and of human happiness and misery in general—what they are, and how a man is to attain the one and avoid the other— when that narrow, keen, little legal mind is called to account about all this, he gives the philosopher his revenge; for dizzied by the height at which he is hanging, whence he looks down into space, which is a strange experience to him, he being dismayed, and lost, and stammering broken words, is laughed at, not by Thracian handmaidens or any other uneducated persons, for they

have no eye for the situation, but by every man who has not been brought up a slave.

Plato, Theaetetus, 174A

10 On my arrival [at Syracuse], I thought that first I must put to the test the question whether Dionysios had really been kindled with the fire of philosophy, or whether all the reports which had come to Athens were empty rumours. Now there is a way of putting such things to the test which is not to be despised and is well suited to monarchs, especially to those who have got their heads full of erroneous teaching, which immediately on my arrival I found to be very much the case with Dionysios. One should show such men what philosophy is in all its extent, what the range of studies is by which it is approached, and how much labour it involves. For the man who has heard this, if he has the true philosophic spirit and that godlike temperament which makes him akin to philosophy and worthy of it, thinks that he has been told of a marvellous road lying before him, that he must forthwith press on with all his strength, and that life is not worth living if he does anything else. After this he uses to the full his own powers and those of his guide in the path, and relaxes not his efforts, till he has either reached the end of the whole course of study or gained such power that he is not incapable of directing his steps without the aid of a guide. This is the spirit and these are the thoughts by which such a man guides his life, carrying out his work, whatever his occupation may be, but throughout it all ever cleaving to philosophy, and to such rules of diet in his daily life as will give him inward sobriety and therewith quickness in learning, a good memory, and reasoning power; the kind of life which is

opposed to this he consistently hates. Those who have not the true philosophic temper, but a mere surface colouring of opinions penetrating, like sunburn, only skin deep, when they see how great the range of studies is, how much labour is involved in it, and how necessary to the pursuit it is to have an orderly regulation of the daily life, come to the conclusion that the thing is difficult and impossible for them, and are actually incapable of carrying out the course of study; while some of them persuade themselves that they have sufficiently studied the whole matter and have no need of any further effort. This is the sure test and is the safest one to apply to those who live in luxury and are incapable of continuous effort; it ensures that such a man shall not throw the blame upon his teacher but on himself, because he cannot bring to the pursuit all the qualities necessary to it.

Plato, Seventh Letter

- 11 That it [philosophy] is not a science of production is clear even from the history of the earliest philosophers. For it is owing to their wonder that men both now begin and at first began to philosophize; they wondered originally at the obvious difficulties, then advanced little by little and stated difficulties about the greater matters, e.g. about the phenomena of the moon and those of the sun and of the stars, and about the genesis of the universe. And a man who is puzzled and wonders thinks himself ignorant (whence even the lover of myth is in a sense a lover of wisdom, for the myth is composed of wonders); therefore since they philosophized in order to escape from ignorance, evidently they were pursuing science in order to know, and not for any utilitarian end. And this is

confirmed by the facts; for it was when almost all the necessities of life and the things that make for comfort and recreation had been secured, that such knowledge began to be sought. Evidently then we do not seek it for the sake of any other advantage; but as the man is free, we say, who exists for his own sake and not for another's, so we pursue this as the only free science, for it alone exists for its own sake. ... All the sciences, indeed, are more necessary than this, but none is better.

Aristotle, Metaphysics, 982b11

- 12 It is plain, then, that philosophic wisdom is scientific knowledge, combined with intuitive reason, of the things that are highest by nature. This is why we say Anaxagoras, Thales, and men like them have philosophic but not practical wisdom, when we see them ignorant of what is to their own advantage, and why we say that they know things that are remarkable, admirable, difficult, and divine, but useless; viz. because it is not human goods that they seek.

Aristotle, Ethics, 1141b2

- 13 Where there is no contract of service, those who give up something for the sake of the other party cannot ... be complained of (for that is the nature of the friendship of virtue), and the return to them must be made on the basis of their purpose (for it is purpose that is the characteristic thing in a friend and in virtue). And so too, it seems, should one make a return to those with whom one has studied philosophy; for their worth cannot be measured against money, and they can get no honour which will balance their services, but still it is perhaps

enough, as it is with the gods and with one's parents, to give them what one can.

Aristotle, Ethics, 1164b33

- 14 The activity of philosophic wisdom is admittedly the pleasantest of virtuous activities; at all events the pursuit of it is thought to offer pleasures marvellous for their purity and their enduringness, and it is to be expected that those who know will pass their time more pleasantly than those who inquire. And the self-sufficiency that is spoken of must belong most to the contemplative activity. For while a philosopher, as well as a just man or one possessing any other virtue, needs the necessities of life, when they are sufficiently equipped with things of that sort the just man needs people towards whom and with whom he shall act justly, and the temperate man, the brave man, and each of the others is in the same case, but the philosopher, even when by himself, can contemplate truth, and the better the wiser he is; he can perhaps do so better if he has fellow-workers, but still he is the most self-sufficient. And this activity alone would seem to be loved for its own sake; for nothing arises from it apart from the contemplating, while from practical activities we gain more or less apart from the action.

Aristotle, Ethics, 1177a24

- 15 It is evident that the form of government is best in which every man, whoever he is, can act best and live happily. But even those who agree in thinking that the life of virtue is the most eligible raise a question, whether the life of business and politics is or is not more eligible than one which is wholly independent of external goods, I

mean than a contemplative life, which by some is maintained to be the only one worthy of a philosopher. For these two lives—the life of the philosopher and the life of the statesman—appear to have been preferred by those who have been most keen in the pursuit of virtue, both in our own and in other ages. Which is the better is a question of no small moment; for the wise man, like the wise state, will necessarily regulate his life according to the best end.

Aristotle, Politics, 1324a23

- 16 Let no one when young delay to study philosophy, nor when he is old grow weary of his study. For no one can come too early or too late to secure the health of his soul. And the man who says that the age for philosophy has either not yet come or has gone by is like the man who says that the age for happiness is not yet come to him, or has passed away. Wherefore both when young and old a man must study philosophy, that as he grows old he may be young in blessings through the grateful recollection of what has been, and that in youth he may be old as well, since he will know no fear of what is to come. We must then meditate on the things that make our happiness, seeing that when that is with us we have all, but when it is absent we do all to win it.

Epicurus, Letter to Menoeceus

- 17 When human life to view lay foully prostrate upon earth crushed down under the weight of religion, who showed her head from the quarters of heaven with hideous aspect lowering upon mortals, a man of Greece [Epicurus]

ventured first to lift up his mortal eyes to her face and first to withstand her to her face.

Lucretius, Nature of Things, I

18 Who is able with powerful genius to frame a poem worthy of the grandeur of the things and these discoveries? Or who is so great a master of words as to be able to devise praises equal to the deserts of him [Epicurus] who left to us such prizes won and earned by his own genius? None methinks who is formed of mortal body. For if we must speak as the acknowledged grandeur of the things itself demands, a god he was, a god, most noble Memmius, who first found out that plan of life which is now termed wisdom, and who by trained skill rescued life from such great billows and such thick darkness and moored it in so perfect a calm and in so brilliant a light. Compare the godlike discoveries of others in old times: Ceres is famed to have pointed out to mortals corn, and Liber the vine-born juice of the grape; though life might well have subsisted without these things, as we are told some nations even now live without them. But a happy life was not possible without a clean breast; wherefore with more reason this man is deemed by us a god, from whom come those sweet solaces of existence which even now are distributed over great nations and gently soothe men's minds.... He therefore who shall have subdued all these and banished them from the mind by words, not arms, shall he not have a just title to be ranked among the gods? And all the more so that he was wont to deliver many precepts in beautiful and godlike phrase about the immortal gods themselves and to open up by his teachings all the nature of things.

Lucretius, Nature of Things, V

19 Philosophy is the physician of the soul. It takes away a load of empty troubles, frees us from desires, and banishes fear.

Cicero, Disputations, II, 4

20 Anyone who considers the aspects of nature, the variety of life, and the weakness of humanity cannot but be saddened by his reflections. Nevertheless he fulfills the task of wisdom, and in so doing he gains doubly. In his awareness of the vicissitudes of human life, he has discharged a peculiar obligation of philosophy. And in adversity he discovers a threefold remedy to aid his restoration. Because he has all along been aware of the possibility of mishap, he is less dismayed when it occurs. Second, he understands that the lot of man must be endured in a manly spirit. Third, he knows that guilt is the only evil; but no guilt accrues when the issue is one against which there are no guarantees.

Cicero, Disputations, III, 16

21 O philosophy, thou guide of life, explorer of the universe, and expeller of vice! Without thee, what would become of me and of the whole life of mankind? Thou hast begotten cities. Thou hast gathered together the scattered human race into the bonds of social life. Thou hast united them first in common dwelling places, then in marriage, and lastly in the bonds of a common literature and language. Thou hast revealed law. Thou hast been the teacher of morality and order. To thee I flee for refuge. I seek thine aid. I entrust myself to thee, as formerly by degrees, now wholly and entirely. One day well spent in accordance

with thy lessons is preferable to an eternity committed to error. Whose aid are we to seek, if not thine? Thou hast freely granted us a peaceable life and destroyed the dread of death.

Cicero, Disputations, V, 2

22 Somehow or other no assertion is too ridiculous for some philosophers to make.

Cicero, Divination, II, 58

23 Philosophy is not an occupation of a popular nature, nor is it pursued for the sake of self-advertisement. Its concern is not with words, but with facts. It is not carried on with the object of passing the day in an entertaining sort of way and taking the boredom out of leisure. It moulds and builds the personality, orders one's life, regulates one's conduct, shows one what one should do and what one should leave undone, sits at the helm and keeps one on the correct course as one is tossed about in perilous seas. Without it no one can lead a life free of fear or worry. Every hour of the day countless situations arise that call for advice, and for that advice we have to look to philosophy.

Seneca, Letters to Lucilius, 16

24 What has the philosopher investigated? What has the philosopher brought to light? In the first place, truth and nature (having, unlike the rest of the animal world, followed nature with more than just a pair of eyes, things slow to grasp divinity); and secondly, a rule of life, in which he has brought life into line with things universal. And he has taught us not just to recognize but to obey

the gods, and to accept all that happens exactly as if it were an order from above. He has told us not to listen to false opinions, and has weighed and valued everything against standards which are true. He has condemned pleasures an inseparable element of which is subsequent regret, has commended the good things which will always satisfy, and for all to see has made the man who has no need of luck the luckiest man of all, and the man who is master of himself the master of all.

Seneca, Letters to Lucilius, 90

- 25 The life of a contemplative philosopher and that of an active statesman are, I presume, not the same thing; for the one merely employs, upon great and good objects of thought, an intelligence that requires no aid of instruments nor supply of any external materials; whereas the other, who tempers and applies his virtue to human uses, may have occasion for affluence, not as a matter of necessity, but as a noble thing.

Plutarch, Pericles

- 26 Many public ministers and philosophers came from all parts to visit him and congratulated him on his election, but contrary to his expectation, Diogenes of Sinope, who then was living at Corinth, thought so little of him, that instead of coming to compliment him, he never so much as stirred out of the suburb called the Cranium, where Alexander found him lying alone in the sun. When he saw so much company near him, he raised himself a little, and vouchsafed to look upon Alexander, and when he kindly asked him whether he wanted anything, "Yes," said he, "I would have you stand from between me and the sun."

Alexander was so struck at this answer, and surprised at the greatness of the man, who had taken so little notice of him, that as he went away he told his followers, who were laughing at the moroseness of the philosopher, that if he were not Alexander, he would choose to be Diogenes.

Plutarch, Alexander

27 Of all the advantages that accrue from philosophy these I reckon the chiefest. To bear prosperity like a gentleman is the mark of a man, to deprecate envy the mark of a disciplined character, to rise superior to pleasure by reason the mark of a sage, to govern anger the mark of an extraordinary man. But as perfect men I regard those who are able to mingle and fuse political capacity with philosophy.

Plutarch, Education of Children

28 Observe, this is the beginning of philosophy, a perception of the disagreement of men with one another, and an inquiry into the cause of the disagreement, and a condemnation and distrust of that which only "seems," and a certain investigation of that which "seems" whether it "seems" rightly, and a discovery- of some rule, as we have discovered a balance in the determination of weights, and a carpenter's rule in the case of straight and crooked things. This is the beginning of philosophy. "Must we say that all things are right which seem so to all?" And how is it possible that contradictions can be right? "Not all then, but all which seem to us to be right." How more to you than those which seem right to the Syrians? why more than what seem right to the Egyptians? why more

than what seems right to me or to any other man? "Not at all more." What then "seems" to every man is not sufficient for determining what "is"; for neither in the case of weights or measures are we satisfied with the bare appearance, but in each case we have discovered a certain rule. In this matter then is there no rule superior to what "seems?" And how is it possible that the most necessary things among men should have no sign, and be incapable of being discovered? There is then some rule. And why then do we not seek the rule and discover it, and afterward use it without varying from it, not even stretching out the finger without it? For this, I think, is that which when it is discovered cures of their madness those who use mere "seeming" as a measure, and misuse it; so That for the future proceeding from certain things known and made clear we may use in the case of particular things the preconceptions which are distinctly fixed.

Epictetus, Discourses, II , 11

- 29 What is the first business of him who philosophizes? To throw away self-conceit. For it is impossible for a man to begin to learn that which he thinks that he knows.

Epictetus, Discourses, II, 17

- 30 When a man sees another handling an ax badly, he does not say, "What is the use of the carpenter's art? See how badly carpenters do their work"; but he says just the contrary, "This man is not a carpenter, for he uses an ax badly." In the same way if a man hears another singing badly, he does not say, "See how musicians sing"; but rather, "This man is not a musician." But it is in the

matter of philosophy only that people do this. When they see a man acting contrary to the profession of a philosopher, they do not take away his title, but they assume him to be a philosopher, and from his acts deriving the fact that he is behaving indecently they conclude that there is no use in philosophy.

Epictetus, Discourses, IV, 8

- 31 Do you think that you can act as you do and be a philosopher, that you can eat, drink, be angry, be discontented, as you are now? You must watch, you must labor, you must get the better of certain appetites, must quit your acquaintances, be despised by your servant, be laughed at by those you meet; come off worse than others in every thing— in offices, in honors, before tribunals. When you have fully considered all these things, approach, if you please—that is, if, by parting with them, you have a mind to purchase serenity, freedom, and tranquillity. If not, do not come hither; do not, like children, be now a philosopher, then a publican, then an orator, and then one of Caesar's officers. These things are not consistent. You must be one man, either good or bad. You must cultivate either your own reason or else externals; apply yourself either to things within or without you— that is, be either a philosopher or one of the mob.

Epictetus, Encheiridion, XXIX

- 32 Philosophy... consists in keeping the daemon within a man free from violence and unharmed, superior to pains and pleasures, doing nothing without a purpose, nor yet falsely and with hypocrisy, not feeling the need of

another man's doing or not doing anything; and besides, accepting all that happens, and all that is allotted, as coming from thence, wherever it is, from whence he himself came; and, finally, waiting for death with a cheerful mind.

Marcus Aurelius, Meditations, II, 17

33 *Zeus*. Now get those benches straight there, and make the place fit to be seen. Bring up the lots, one of you, and put them in line. Give them a rub up first, though; we must have them looking their best, to attract bidders. *Hermes*, you can declare the sale-room open, and a welcome to all comers.—*For Sale! A varied assortment of Live Creeds. Tenets of every description.—Cash on delivery; or credit allowed on suitable security.*

Hermes. Here they come, swarming in. No time to lose; we must not keep them waiting.

Zeus. Well, let us begin.

Her. What are we to put up first?

Zeus. The Ionic fellow, with the long hair. He seems a showy piece of goods.

Her. Step up, Pythagorean ism, and show yourself.

Zeus. Go ahead.

Her. Now here is a creed of the first water. Who bids for this handsome article? What gentleman says Superhumanity? Harmony of the Universe! Transmigration of souls! Who bids?

First Dealer. He looks all right. And what can he do?

Her. Magic, music, arithmetic, geometry, astronomy, jugglery. Prophecy in all its branches. . . .

First D. Admirable! A very feast of reason. Now just strip, and let me see what y'ou are like. Bless me, here is

a creed with a golden thigh! He is no mortal, he is a God.
I must have him at any price. What do you start him at?

Her. Forty pounds.

First D. He is mine for forty pounds.

Lucian, Sale of Creeds

34 *Zeus.* Next lot.

Hermes. The Athenian there? Old Chatterbox?

Zeus. By all means.

Her. Come forward!—A good sensible creed this. Who
buys Holiness?

Fifth Dealer. Let me see. What are you good for?

Socrates. I teach the art of love.

Fifth D. A likely bargain for me! I want a tutor for my
young Adonis.

Soc. And could he have a better? The Jove I teach is of
the spirit, not of the flesh. Under my roof, be sure, a boy
will come to no harm.

Fifth D. Very unconvincing that. A teacher of the art of
love, and never meddle with anything but the spirit?
Never use the opportunities your office gives you?

Soc. Now by Dog and Plane-tree, it is as I say!

Fifth D. Heracles! What strange Gods are these?

Soc. Why, the Dog is a God, I suppose? Is not Anubis
made much of in Egypt? Is there not a Dog-star in
Heaven, and a Cerberus in the lower world?

Fifth D. Quite so. My mistake. Now what is your manner
of life?

Soc. I live in a city of my own building; I make my own
laws, and have a novel constitution of my own.

Fifth D. I should like to hear some of your statutes.

Soc. You shall hear the greatest of them all. No woman shall be restricted to one husband. Every man who likes is her husband.

Fifth D. What! Then the laws of adultery are clean swept away?

Soc. I should think they were! and a world of hair-splitting with them.

Fifth D. And what do you do with the handsome boys?

Soc. Their kisses are the reward of merit, of noble and spirited actions.

Fifth D. Unparalleled generosity!—And now, what are the main features of your philosophy?

Soc. Ideas and types of things. All things that you see, the earth and all that is upon it, the sea, the sky,—each has its counterpart in the invisible world.

Fifth D. And where are they?

Soc. Nowhere. Were they anywhere, they were not what they are.

Fifth D. I see no signs of these 'types' of yours.

Soc. Of course not; because you are spiritually blind. I see the counterparts of all things; an invisible you, an invisible me; everything is in duplicate.

Fifth D. Come, such a shrewd and lynx-eyed creed is worth a bid. Let me see. What do you want for him?

Her. Five hundred.

Fifth D. Done with you. Only I must settle the bill another day.

Lucian, Sale of Creeds

35 *Zeus.* Don't waste time. Next lot,—the Peripatetic!

Hermes. Now, my beauty, now, Affluence! Gentlemen, if you want Wisdom for your money, here is a creed that comprises all knowledge.

Eighth Dealer. What is he like?

Her. He is temperate, good-natured, easy to get on with; and his strong point is, that he is twins.

Eighth D. How can that be?

Her. Why, he is one creed outside, and another inside. So remember, if you buy him, one of him is called Esoteric, and the other Exoteric.

Eighth D. And what has he to say for himself?

Her. He has to say that there are three kinds of good: spiritual, corporeal, circumstantial.

Eighth D. *There's* something a man can understand. How much is he?

Her. Eighty pounds.

Eighth D. Eighty pounds is a long price.

Her. Not at all, my dear sir, not at all. You see, there is some money with him, to all appearance. Snap him up before it is too late. Why, from him you will find out in no time how long a gnat lives, to how many fathoms' depth the sunlight penetrates the sea, and what an oyster's soul is like.

Eighth D. Heracles! Nothing escapes him.

Her. Ah, these are trifles. You should hear some of his more abstruse speculations, concerning generation and birth and the development of the embryo; and his distinction between man, the laughing creature, and the ass, which is neither a laughing nor a carpentering nor a shipping creature.

Eighth D. Such knowledge is as useful as it is ornamental. Eighty pounds be it, then.

Her. He is yours.

Lucian, Sale of Creeds

36 *Lucian*. Where is Philosophy to be found? I do not know where she lives, myself. I once spent a long time wandering about in search of her house, wishing to make her acquaintance. Several times I met some long-bearded people in threadbare cloaks who professed to be fresh from her presence; I took their word for it, and asked them the way; but they knew considerably less about it than I, and either declined to answer, by way of concealing their ignorance, or else pointed to one door after another. I have never been able to find the right one to this day.

Lucian, The Fisher

37 Following the normal order of study I had come to a book of one Cicero, whose tongue practically everyone admires, though not his heart. That particular book is called *Hortensius* and contains an exhortation to philosophy. Quite definitely it changed the direction of my mind, altered my prayers to You, O Lord, and gave me a new purpose and ambition. Suddenly all the vanity I had hoped in I saw as worthless, and with an incredible intensity of desire I longed after immortal wisdom. I had begun that journey upwards by which I was to return to You. My father was now dead two years; I was eighteen and was receiving money from my mother for the continuance of my study of eloquence. But I used that book not for the sharpening of my tongue; what won me in it was what it said, not the excellence of its phrasing.

How did I then burn, my God, how did I burn to wing upwards from earthly delights to You. But I had no notion what You were to do with me. For with You is wisdom. Now love of wisdom is what is meant by the Greek word philosophy, and it was to philosophy that that book set

me so ardently. There are those who seduce men's minds by philosophy, colouring and covering their errors with its great and fine and honourable name; almost all who in Cicero's own time and earlier had been of that sort are listed in his book and shown for what they are. Indeed it illustrates the wholesome advice given by the Spirit through Your good and loving servant: *Beware lest any man cheat you by philosophy, and vain deceits; according to the tradition of men, according to the elements of the world, and not according to Christ: for in Him dwelleth all the fulness of the Godhead corporeally.* At that time. You know, O Light of my heart, those writings of the Apostle were not yet known to me. But the one thing that delighted me in Cicero's exhortation was that I should love, and seek, and win, and hold, and embrace, not this or that philosophical school but Wisdom itself, whatever it might be. The book excited and inflamed me; in my ardour the only thing I found lacking was that the name of Christ was not there. For with my mother's milk my infant heart had drunk in, and still held deep down in it, that name according to Your mercy, O Lord, the name of Your Son, my Saviour; and Whatever lacked that name, no matter how learned and excellently written and true, could not win me wholly.

Augustine, Confessions, III, 4

- 38 Among the disciples of Socrates, Plato was the one who shone with a glory which far excelled that of the others and who not unjustly eclipsed them all. By birth an Athenian of honourable parentage, he far surpassed his fellow-disciples in natural endowments, of which he was possessed in a wonderful degree. Yet, deeming himself and the Socratic discipline far from sufficient for bringing

philosophy to perfection, he travelled as extensively as he was able, going to every place famed for the cultivation of any science of which he could make himself master. Thus he learned from the Egyptians whatever they held and taught as important; and from Egypt, passing into those parts of Italy which were filled with the fame of the Pythagoreans, he mastered, with the greatest facility, and under the most eminent teachers, all the Italic philosophy which was then in vogue. And, as he had a peculiar love for his master Socrates, he made him the speaker in all his dialogues, putting into his mouth whatever he had learned, either from others, or from the efforts of his own powerful intellect, tempering even his moral disputations with the grace and politeness of the Socratic style. And, as the study of wisdom consists in action and contemplation, so that one part of it may be called active, and the other contemplative-- the active part having reference to the conduct of life, that is, to the regulation of morals, and the contemplative part to the investigation into the causes of nature and into pure truth—Socrates is said to have excelled in the active part of that study, while Pythagoras gave more attention to its contemplative part, on which he brought to bear all the force of his great intellect. To Plato is given the praise of having perfected philosophy by combining both parts into one. He then divides it into three parts—the first moral, which is chiefly occupied with action; the second natural, of which the object is contemplation; and the third rational, which discriminates between the true and the false. And though this last is necessary both to action and contemplation, it is contemplation, nevertheless, which lays peculiar claim to the office of investigating the nature of truth. Thus this tripartite division is not contrary

to that which made the study of wisdom to consist in action and contemplation. Now, as to what Plato thought with respect to each of these parts—that is, what he believed to be the end of all actions, the cause of all natures, and the light of all intelligences—it would be a question too long to discuss and about which we ought not to make any rash affirmation. For, as Plato liked and constantly affected the well-known method of his master Socrates, namely, that of dissimulating his knowledge or his opinions, it is not easy to discover clearly what he himself thought on various matters, any more than it is to discover what were the real opinions of Socrates. We must, nevertheless, insert into our work certain of those opinions which he expresses in his writings, whether he himself uttered them, or narrates them as expressed by others, and seems himself to approve of—opinions sometimes favourable to the true religion, which our faith takes up and defends, and sometimes contrary to it, as, for example, in the questions concerning the existence of one God or of many, as it relates to the truly blessed life which is to be after death. For those who are praised as having most closely followed Plato, who is justly preferred to all the other philosophers of the Gentiles, and who are said to have manifested the greatest acuteness in understanding him, do perhaps entertain such an idea of God as to admit that in Him are to be found the cause of existence, the ultimate reason for the understanding, and the end in reference to which the whole life is to be regulated. Of which three things, the first is understood to pertain to the natural, the second to the rational, and the third to the moral part of philosophy. For if man has been so created as to attain, through that which is most excellent in him, to that which excels all things—that is,

to the one true and absolutely good God, without Whom no nature exists, no doctrine instructs, no exercise profits—let Him be sought in Whom all things are secure to us, let Him be discovered in Whom all truth becomes certain to us, let Him be loved in Whom all becomes right to us.

Augustine, City of God, VIII, 4

39 Plato determined the final good to be to live according to virtue, and affirmed that he only can attain to virtue who knows and imitates God— which knowledge and imitation are the only cause of blessedness. Therefore he did not doubt that to philosophize is to love God, whose nature is incorporeal. Whence it certainly follows that the student of wisdom, that is, the philosopher, will then become blessed when he shall have begun to enjoy God. For though he is not necessarily blessed who enjoys that which he loves (for many are miserable by loving that which ought not to be loved and still more miserable when they enjoy it), nevertheless no one is blessed who does not enjoy that which he loves. For even they who love things which ought not to be loved do not count themselves blessed by loving merely, but by enjoying them. Who, then, but the most miserable will deny that he is blessed, who enjoys that which he loves and loves the true and highest good? But the true and highest good, according to Plato, is God, and therefore he would call him a philosopher who loves God; for philosophy is directed to the obtaining of the blessed life, and he who loves God is blessed in the enjoyment of God.

Augustine, City of God, VIII, 8

40 While I was pondering thus in silence, and using my pen to set down so tearful a complaint, there appeared standing over my head a woman's form, whose countenance was full of majesty, whose eyes shown as with fire and in power of insight surpassed the eyes of men, whose colour was full of life, whose strength was yet intact though she was so full of years that none would ever think that she was subject to such age as ours. One could but doubt her varying stature, for at one moment she repressed it to the common measure of a man, at another she seemed to touch with her crown the very heavens: and when she had raised higher her head, it pierced even the sky and baffled the sight of those who would look upon it. Her clothing was wrought of the finest thread by subtle workmanship brought to an indivisible piece. This had she woven with her own hands, as I afterwards did learn by her own shewing. Their beauty was somewhat dimmed by the dulness of long neglect, as is seen in the smoke-grimed masks of our ancestors. On the border below was inwoven the symbol Π, on that above was to be read a Θ. And between the two letters there could be marked degrees, by which, as by the rungs of a ladder, ascent might be made from the lower principle to the higher. Yet the hands of rough men had torn this garment and snatched such morsels as they could therefrom. In her right hand she carried books, in her left was a sceptre brandished.

Boethius, Consolation of Philosophy, I

41 This [sacred] science [i.e., theology] can in a sense take from the philosophical sciences, not as though it stood in need of them, but only in order to make its teaching clearer. For it takes its principles not from other sciences,

but immediately from God, by revelation. Therefore it does not take from the other sciences as from the higher, but makes use of them as of the lesser, and as handmaidens; just as the master sciences make use of the sciences that supply their materials, as political of military science. That it thus uses them is not due to its own defect or insufficiency, but to the defect of our intellect, which is more easily led by what is known through natural reason (from which proceed the other sciences), to that which is above reason, such as are the teachings of this science.

Aquinas, Summa Theologica, I, 1, 5

- 42 It is necessary for man to accept by faith not only things which are above reason, but also those which can be known by reason, and this for three reasons. First, in order that man may arrive more quickly at the knowledge of Divine truth. Because the science to which it pertains to prove the existence of God is the last of all to offer itself to human inquiry, since it presupposes many other sciences so that it would not be until late in life that man would arrive at the knowledge of God. The second reason is, in order that the knowledge of God may be more general. For many are unable to make progress in the study of science, either through dulness of mind, or through having a number of occupations and temporal needs, or even through laziness in learning, all of whom would be altogether deprived of the knowledge of God, unless Divine things were brought to their knowledge after the manner of faith. The third reason is for the sake of certitude. For human reason is very deficient in things concerning God. A sign of this is that philosophers in their researches, by natural investigation, into human

affairs, have fallen into many errors, and have disagreed among themselves. And consequently, in order that men might have knowledge of God, free of doubt and uncertainty, it was necessary for Divine matters to be delivered to them by way of faith, being told to them, as it were, by God Himself Who cannot lie.

Aquinas, Summa Theologica, II-II, 2, 4

43 When I raised my eyelids a little higher, I saw the Master of those that know [Aristotle], sitting amid a philosophic family.

All regard him; all do him honour; here I saw Socrates and Plato, who before the rest stand nearest to him.

Dante, Inferno, IV, 130

44 We do not escape philosophy by stressing immoderately the sharpness of pain and the weakness of man. For we force her to fall back on these unanswerable replies:

If it is bad to live in need, at least there is no need to live in need.

No one suffers long except by his own fault.

He who has not the courage to suffer either death or life, who will neither resist nor flee, what can we do with him?

Montaigne, Essays, I, 14, That the Taste of Good

45 It is a strange fact that things should be in such a pass in our century that philosophy, even with people of understanding, should be an empty and fantastic name, a thing of no use and no value, both in common opinion and in fact. I think those quibblings which have taken possession of all the approaches to her are the cause of

this. It is very wrong to portray her as inaccessible to children, with a surly, frowning, and terrifying face. Who has masked her with this false face, pale and hideous? There is nothing more gay, more lusty, more sprightly, and I might almost say more frolicsome. She preaches nothing but merrymaking and a good time. A sad and dejected look shows that she does not dwell there.

Montaigne, Essays, I, 26, Education of Children

- 46 Whoever seeks anything comes to this point: he says either that he has found it, or that it cannot be found, or that he is still in quest of it. All philosophy is divided into these three types. Its purpose is to seek out truth, knowledge, and certainty.

Montaigne, Essays, II, 12, Apology for Raymond Sebond

- 47 *Romeo*. No sudden mean of death, though ne'er so mean.
But "banished" to kill me?—"banished"?
O friar, the damned use that word in hell;
Howlings attend it: how hast thou the heart,
Being a divine, a ghostly confessor,
A sin-absolver, and my friend profess'd,
To mangle me with that word "banished"?

Friar Laurence. Thou fond mad man, hear me but
speak a word.

Rom. O, thou wilt speak again of banishment.

Fri. L. I'll give thee armour to keep off that word;
Adversity's sweet milk, philosophy,
To comfort thee, though thou art banished.

Rom. Yet "banished"? Hang up philosophy!
Unless philosophy can make a Juliet,

Displant a town, reverse a prince's doom,
It helps not, it prevails not; talk no more.

Shakespeare, Romeo and Juliet, III, iii, 45

48 *Hamlet*. There are more things in heaven and earth,
Horatio,
Than are dreamt of in your philosophy.

Shakespeare, Hamlet, I, v, 166

49 Aristotle was the first accurate critic and truest judge,
nay, the greatest philosopher the world ever had; for he
noted the vices of all knowledges in all creatures, and out
of many men's perfections in a science he formed still
one art.

Jonson, Discoveries: Poeta, Etc.

50 It is the property of good and sound knowledge to putrify
and dissolve into a number of subtle, idle, unwholesome,
and (as I may term them) vermiculate questions, which
have indeed a kind of quickness and life of spirit, but no
soundness of matter or goodness of quality. This kind of
degenerate learning did chiefly reign amongst the
schoolmen: who having sharp and strong wits, and
abundance of leisure, and small variety of reading, but
their wits being shut up in the cells of a few authors
(chiefly Aristotle their dictator) as their persons were shut
up in the cells of monasteries and colleges, and knowing
little history, either of nature or time, did out of no great
quantity of matter and infinite agitation of wit spin out
unto us those laborious webs of learning which are extant
in their books. For the wit and mind of man, if it work
upon matter, which is the contemplation of the creatures

of God, worketh according to the stuff and is limited thereby; but if it work upon itself, as the spider worketh his web, then it is endless, and brings forth indeed cobwebs of learning, admirable for the fineness of thread and work, but of no substance or profit.

Bacon, Advancement of Learning, Bk. I, IV, 5

51 The wisdom of the Greeks was professional and disputatious, and thus most adverse to the investigation of truth. The name, therefore, of sophists, which the contemptuous spirit of those who deemed themselves philosophers, rejected and transferred to the rhetoricians—Gorgias, Protagoras, Hippias, Polus—might well suit the whole tribe, such as Plato, Aristotle, Zeno, Epicurus, Theophrastus, and their successors—Chrysippus, Carneades, and the rest. There was only this difference between them: the former were mercenary vagabonds, travelling about to different states, making a show of their wisdom, and requiring pay; the latter more dignified and noble, in possession of fixed habitations, opening schools, and teaching philosophy gratuitously. Both, however (though differing in other respects), were professorial, and reduced every subject to controversy establishing and defending certain sects and dogmas of philosophy, so that their doctrines were nearly (what Dionysius not unaptly objected to Plato) the talk of idle old men to ignorant youths. But the more ancient Greeks, as Empedocles, Anaxagoras, Leucippus, Democritus, Parmenides, Heraclitus, Xenophanes, Philolaus, and the rest (for I omit Pythagoras as being superstitious), did not (that we are aware) open schools, but betook themselves to the investigation of truth with greater silence and with more severity and simplicity, that is, with less affectation

and ostentation. Hence in our opinion they acted more advisedly, however their works may have been eclipsed in course of time by those lighter productions which better correspond with and please the apprehensions and passions of the vulgar; for time, like a river, bears down to us that which is light and inflated, and sinks that which is heavy and solid.

Bacon, Novum Organum, I, 71

52 I am sure that those who most passionately follow Aristotle now-a-days would think themselves happy if they had as much knowledge of nature as he had, even if this were on the condition that they should never attain to any more, they are like the monkey that never tries to mount above the trees which give it support, and which often even descends again after it has reached their summit; for it appears to me that such men also sink again—that is to say, somehow render themselves more ignorant than they would have been had they abstained from study altogether. For, not content with knowing all that is intelligibly explained in their author, they wish in addition to find in him the solution of many difficulties of which he says nothing, and in regard to which he possibly had no thought at all.

Descartes, Discourse on Method, VI

53 The faculty of reasoning being consequent to the use of speech, it was not possible but that there should have been some general truths found out by reasoning, as ancient almost as language itself. The savages of America are not without some good moral sentences; also they have a little arithmetic, to add and divide in numbers not

too great; but they are not therefore philosophers. For as there were plants of corn and wine in small quantity dispersed in the fields and woods, before men knew their virtueso also there have been diverse true, general, and profitable speculations from the beginning, as being the natural plants of human reason. But they were at first but few in number; men lived upon gross experience;

there was no method; that is to say, no sowing nor planting of knowledge by itself, apart from the weeds and common plants of error and conjecture. And the cause of it being the want of leisure from procuring the necessities of life, and defending themselves against their neighbours, it was impossible, till the erecting of great commonwealths it should be otherwise. Leisure is the mother of philosophy; and commonwealth, the mother of peace and leisure. Where first were great and flourishing cities, there was first the study of philosophy.

Hobbes, Leviathan, IV, 46

54 To make light of philosophy is to be a true philosopher.

Pascal, Pensées, I, 4

55 What good there is in Montaigne can only have been acquired with difficulty. The evil that is in him, I mean apart from his morality, could have been corrected in a moment, if he had been informed that he made too much of trifles and spoke too much of himself.

Pascal, Pensées, II, 65

56 I cannot forgive Descartes. In all his philosophy he would have been quite willing to dispense with God. But he had

to make Him give a fillip to set the world in motion;
beyond this, he has no further need of God.

Pascal, Pensées, 11. 77

57 We can only think of Plato and Aristotle in grand academic robes. They were honest men, like others, laughing with their friends, and, when they diverted themselves with writing their *Laws* and the *Politics*, they did it as an amusement. That part of their life was the least philosophic and the least serious; the most philosophic was to live simply and quietly. If they wrote on politics, it was as if laying down rules for a lunatic asylum; and if they presented the appearance of speaking of a great matter, it was because they knew that the madmen, to whom they spoke, thought they were kings and emperors. They entered into their principles in order to make their madness as little harmful as possible.

Pascal, Pensées, V, 331

58 *Brother*. How charming is divine Philosophy!
Not harsh, and crabbed as dull fools suppose,
But musical as is *Apollo's* lute,
And a perpetual feast of nectar'd sweets,
Where no crude surfet reigns.

Milton, Comus, 476

59 Plato, a man of high authority, indeed, but least of all for his commonwealth, in the book of his *Laws*, which no city ever yet received, fed his fancy by making many edicts to his airy burgomasters, which they who otherwise admire

him wish had been rather buried and excused in the genial cups of an Academic night sitting.

Milton, Areopagitica

60 Another great abuse of words, is the taking them for things. This, though it in some degree concerns all names in general, yet more particularly affects those of substances. To this abuse those men are most subject who most confine their thoughts to any one system, and give themselves up into a firm belief of the perfection of any received hypothesis: whereby they come to be persuaded that the terms of that sect are so suited to the nature of things, that they perfectly correspond with their real existence,... There is scarce any sect in philosophy has not a distinct set of terms that others understand not. But yet this gibberish, which, in the weakness of human understanding, serves so well to palliate men's ignorance, and cover their errors, comes, by familiar use amongst those of the same tribe, to seem the most important part of language, and of all other the terms the most significant.

Locke, Concerning Human Understanding, Bk. III, X, 14

61 Philosophy being nothing else but the study of wisdom and truth, it may with reason be expected that those who have spent most time and pains in it should enjoy a greater calm and serenity of mind, a greater clearness and evidence of knowledge, and be less disturbed with doubts and difficulties than other men. Yet so it is, we see the illiterate bulk of mankind that walk the high-road of plain common sense, and are governed by the dictates of nature, for the most part easy and undisturbed. To them

nothing that is familiar appears unaccountable or difficult to comprehend. They complain not of any want of evidence in their senses, and are out of all danger of becoming Sceptics. But no sooner do we depart from sense and instinct to follow the light of a superior principle, to reason, meditate, and reflect on the nature of things, but a thousand scruples spring up in our minds concerning those things which before we seemed fully to comprehend.

*Berkeley, Principles of Human Knowledge, Introduction,
1*

62 There is nothing so extravagant and irrational which some philosophers have not maintained for truth.

Swift, Gulliver's Travels, III, 6

63 Philosophers are composed of flesh and blood as well as other human creatures; and however sublimated and refined the theory of these may be, a little practical frailty is as incident to them as to other mortals. It is, indeed, in theory only, and not in practice, as we have before hinted, that consists the difference: for though such great beings think much better and more wisely, they always act exactly like other men. They know very well how- to subdue all appetites and passions, and to despise both pain and pleasure; and this knowledge affords much delightful contemplation, and is easily acquired; but the practice would be vexatious and troublesome; and, therefore, the same wisdom which teaches them to know this, teaches them to avoid carrying it into execution.

Fielding, Tom Jones, V, 5

64 It is certain that the easy and obvious philosophy will always, with the generality of mankind, have the preference above the accurate and abstruse; and by many will be recommended, not only as more agreeable, but more useful than the other. It enters more into common life; moulds the heart and affections; and, by touching those principles which actuate men, reforms their conduct, and brings them nearer to that model of perfection which it describes. On the contrary the abstruse philosophy being founded on a turn of mind, which cannot enter into business and action, vanishes when the philosopher leaves the shade, and comes into open day; nor can its principles easily retain any influence over our conduct and behaviour. The feelings of our heart, the agitation of our passions, the vehemence of our affections, dissipate all its conclusions, and reduce the profound philosopher to a mere plebeian.

Hume, Concerning Human Understanding, I, 3

65 It is easy for a profound philosopher to commit a mistake in his subtle reasonings; and one mistake is the necessary parent of another, while he pushes on his consequences, and is not deterred from embracing any conclusion, by its unusual appearance, or its contradiction to popular opinion. But a philosopher, who purposes only to represent the common sense of mankind in more beautiful and more engaging colours, if by accident he falls into error, goes no farther; but renewing his appeal to common sense, and the natural sentiments of the mind, returns into the right path, and secures himself from any dangerous illusions.

Hume, Concerning Human Understanding, I, 4

66 Be a philosopher; but, amidst all your philosophy, be still a man.

Hume, Concerning Human Understanding, I, 4

67 All the philosophy ... in the world, and all the religion, which is nothing but a species of philosophy, will never be able to carry us beyond the usual course of experience, or give us measures of conduct and behaviour different from those which are furnished by reflections on common life.

Hume, Concerning Human Understanding, XI, 113

68 There cannot be two passions more nearly resembling each other, than those of hunting and philosophy, whatever disproportion may at first sight appear betwixt them. 'Tis evident, that the pleasure of hunting consists in the action of the mind and body; the motion, the attention, the difficulty, and the uncertainty. 'Tis evident likewise, that these actions must be attended with an idea of utility, in order to their having any effect upon us. A man of the greatest fortune, and the farthest remov'd from avarice, tho' he takes a pleasure in hunting after partridges and pheasants, feels no satisfaction in shooting crows and magpies; and that because he considers the first as fit for the table, and the other as entirely useless. Here 'tis certain, that the utility or importance of itself causes no real passion, but is only requisite to support the imagination; and the same person, who over-looks a ten times greater profit in any other subject, is pleas'd to bring home half a dozen woodcocks or plovers, after having employ'd several hours in hunting after them. To make the parallel betwixt

hunting and philosophy more compleat, we may observe, that tho' in both cases the end of our action may in itself be despis'd, yet in the heat of the action we acquire such an attention to this end, that we are very uneasy under any disappointments, and are sorry when we either miss our game, or fall into any error in our reasoning.

Hume, Treatise of Human Nature, Bk. II, III, 10

69 Philosopher, lover of wisdom, that is to say, of truth. All philosophers have had this dual character; there is not one in antiquity who has not given mankind examples of virtue and lessons in moral truths. They have all contrived to be deceived about natural philosophy; but natural philosophy is so little necessary for the conduct of life, that the philosophers had no need of it. It has taken centuries to learn a part of nature's laws. One day was sufficient for a wise man to learn the duties of man.

Voltaire, Philosophical Dictionary: Philosopher

70 I do not think that there has ever been a philosopher with a system who did not at the end of his life avow that he had wasted his time. It must be admitted that the inventors of the mechanical arts have been much more useful to mankind than the inventors of syllogisms: the man who invented the shuttle surpasses with a vengeance the man who imagined innate ideas.

Voltaire, Philosophical Dictionary: Precis of Ancient Philosophy

71 (Micromegas) promised to compose for them a choice book of philosophy which would demonstrate the very essence of things. Accordingly, before his departure, he

made them a present of the book, which was brought to the Academy of Sciences at Paris, but when the old secretary came to open it he saw nothing but blank paper.

"Ay, ay," said he, "this is just what I suspected."

Voltaire, Micromegas, VII

72 In the progress of society, philosophy or speculation becomes, like every other employment, the principal or sole trade and occupation of a particular class of citizens. Like every other employment too, it is subdivided into a great number of different branches, each of which affords occupation to a peculiar tribe or class of philosophers; and this subdivision of employment in philosophy, as well as in every other business, improves dexterity, and saves time. Each individual becomes more expert in his own peculiar branch, more work is done upon the whole, and the quantity of science is considerably increased by it.

Adam Smith, Wealth of Nations, I, 1

73 So equal, yet so opposite, are the merits of Plato and Aristotle, that they may be balanced in endless controversy.

Gibbon, Decline and Fall of the Roman Empire, LXVI

74 Human reason, in one sphere of its cognition, is called upon to consider questions, which it cannot decline, as they are presented by its own nature, but which it cannot answer, as they transcend every faculty of the mind.

It falls into this difficulty without any fault of its own. It begins with principles, which cannot be dispensed with in the field of experience, and the truth and sufficiency of

which are, at the same time, insured by experience. With these principles it rises, in obedience to the laws of its own nature, to ever higher and more remote conditions. But it quickly discovers that, in this way, its labours must remain ever incomplete, because new questions never cease to present themselves; and thus it finds itself compelled to have recourse to principles which transcend the region of experience, while they are regarded by common sense without distrust. It thus falls into confusion and contradictions, from which it conjectures the presence of latent errors, which, however, it is unable to discover, because the principles it employs, transcending the limits of experience, cannot be tested by that criterion. The arena of these endless contests is called *Metaphysic*.

Kant, Critique of Pure Reason, Pref. to 1st Ed.

75 Both Epicurus and Plato assert more in their systems than they know. The former encourages and advances science—although to the prejudice of the practical; the latter presents us with excellent principles for the investigation of the practical, but, in relation to everything regarding which we can attain to speculative cognition, permits reason to append idealistic explanations of natural phenomena, to the great injury of physical investigation.

Kant, Critique of Pure Reason, Transcendental Dialectic

76 The mathematician, the natural philosopher, and the logician—how far soever the first may have advanced in rational, and the two latter in philosophical knowledge—are merely artists, engaged in the arrangement and

formation of conceptions; they cannot be termed philosophers. Above them all, there is the ideal teacher, who employs them as instruments for the advancement of the essential aims of human reason. Him alone can we call philosopher; but he nowhere exists. But the idea of his legislative power resides in the mind of every man, and it alone teaches us what kind of systematic unity philosophy demands in view of the ultimate aims of reason. This idea is, therefore, a cosmical conception [one in which all men necessarily take an interest].

In view of the complete systematic unity of reason, there can only be one ultimate end of all the operations of the mind. To this all other aims are subordinate, and nothing more than means for its attainment. This ultimate end is the destination of man, and the philosophy which relates to it is termed moral philosophy. The superior position occupied by moral philosophy, above all other spheres for the operations of reason, sufficiently indicates the reason why the ancients always included the idea—and in an especial manner—of moralist in that of philosopher. Even at the present day, we call a man who appears to have the powder of self-government, even although his knowledge may be very limited, by the name of philosopher.

Kant, Critique of Pure Reason, Transcendental Method

- 77 It would be no harm to deter the self-conceit of one who ventures to claim the title of philosopher by holding before him in the very definition a standard of self-estimation which would very much lower his pretensions. For a teacher of wisdom would mean something more than a scholar who has not come so far as to guide himself, much less to guide others, with certain

expectation of attaining so high an end: it would mean a master in the knowledge of wisdom, which implies more than a modest man would claim for himself. Thus philosophy as well as wisdom would always remain an ideal, which objectively is presented complete in reason alone, while subjectively for the person it is only the goal of his unceasing endeavours; and no one would be justified in professing to be in possession of it so as to assume the name of philosopher who could not also show its infallible effects in his own person as an example (in his self-mastery and the unquestioned interest that he takes preeminently in the general good), and this the ancients also required as a condition of deserving that honourable title.

Kant, Critique of Practical Reason, Pt. I, II, 1

78 That kings should become philosophers, or philosophers kings, can scarce be expected; nor 'tis to be wished, since the enjoyment of power inevitably corrupts the judgment of reason, and perverts its liberty. But that kings, or people-kings, that is to say, the people who govern themselves by laws of equality, should not suffer that the class of philosophers be reduced to disappear, or to maintain silence, but, on the contrary, should permit them to be freely heard. This is what the well administration of a government exacts; which can never be sufficiently enlightened.

Kant, Perpetual Peace, Supplement II

79 Do not all charms fly
At the mere touch of cold philosophy?
There was an awful rainbow once in heaven:

We know her woof, her texture; she is given
In the dull catalogue of common things.
Philosophy will clip an Angel's wings,

Keats, Lamia, II, 229

80 Axioms in philosophy are not axioms until they are
proved upon our pulses. We read fine things, but never
feel them to the full until we have gone the same steps as
the author.

Keats, Letter to John H. Reynolds (May 3, 1818)

81 To comprehend what is, this is the task of philosophy,
because what is, is reason. Whatever happens, every
individual is a child of his time; so philosophy too is its
own time apprehended in thoughts.

Hegel, Philosophy of Right, Pref.

82 There are two kinds of history; the history of politics and
the history of literature and art. The one is the history of
the will; the other, that of the intellect. The first is a tale
of woe, even of terror: it is a record of agony, struggle,
fraud, and horrible murder *en masse*. The second is
everywhere pleasing and serene, like the intellect when
left to itself, even though its path be one of error. Its chief
branch is the history of philosophy. This is, in fact, its
fundamental bass, and the notes of it are heard even in
the other kind of history. These deep tones guide the
formation of opinion, and opinion rules the world. Hence
philosophy, rightly understood, is a material force of the
most powerful kind, though very slow in its working. The
philosophy of a period is thus the fundamental bass of its
history.

Schopenhauer, Some Forms of Literature

83 Two Chinamen travelling in Europe went to the theatre for the first time. One of them did nothing but study the machinery, and he succeeded in finding out how it was worked. The other tried to get at the meaning of the piece in spite of his ignorance of the language. Here you have the astronomer and the philosopher.

Schopenhauer, A Few Parables

84 Among secular books, Plato only is entitled to Omar's fanatical compliment to the Koran, when he said, "Burn the libraries; for their value is in this book." These sentences contain the culture of nations; these are the corner-stone of schools; these are the fountain-head of literatures. A discipline it is in logic, arithmetic, taste, symmetry, poetry, language, rhetoric, ontology, morals or practical wisdom. There was never such range of speculation. Out of Plato come all things that are still written and debated among men of thought. Great havoc makes he among our originalities. We have reached the mountain from which all these drift boulders were detached.

Emerson, Plato; or, The Philosopher

85 Now, had Tashtego perished in that head, it had been a very precious perishing; smothered in the very whitest and daintiest of fragrant spermaceti; confined, hearsed, and tombed in the secret inner chamber and sanctum sanctorum of the whale. Only one sweeter end can readily be recalled—the delicious death of an Ohio honey-hunter, who seeking honey in the crotch of a hollow tree, found such exceeding store of it, that leaning

too far over, it sucked him in, so that he died embalmed. How many, think ye, have likewise fallen into Plato's honey head, and sweetly perished there?

Melville, Moby Dick, LXXVIII

86 To be a philosopher is not merely to have subtle thoughts, nor even to found a school, but so to love wisdom as to live according to its dictates, a life of simplicity, independence, magnanimity, and trust. It is to solve some of the problems of life, not only theoretically, but practically. The success of great scholars and thinkers is commonly a courtier-like success, not kingly, not manly. They make shift to live merely by conformity, practically as their fathers did, and are in no sense the progenitors of a noble race of men. But why do men degenerate ever? What makes families run out? What is the nature of the luxury which enervates and destroys nations? are we sure that there is none of it in our own lives? The philosopher is in advance of his age even in the outward form of his life. He is not fed, sheltered, clothed, warmed, like his contemporaries. How can a man be a philosopher and not maintain his vital heat by better methods than other men?

Thoreau, Walden: Economy

87 Of the three varieties of mental excellence, intellectual, practical, and moral, there never could be any doubt in regard to the first two which side had the advantage. All intellectual superiority is the fruit of active effort. Enterprise, the desire to keep moving, to be trying and accomplishing new things for our own benefit or that of others, is the parent even of speculative, and much more

of practical, talent. The intellectual culture compatible with the other type is of that feeble and vague description which belongs to a mind that slops at amusement, or at simple contemplation. The test of real and vigourous thinking, the thinking which ascertains truths instead of dreaming dreams, is successful application to practice. Where that purpose does not exist, to give definiteness, precision, and an intelligible meaning to thought, it generates nothing better than the mystical metaphysics of the Pythagoreans or the Vedas.

Mill, Representative Government, III

88 Schools of philosophy arise and fall; their bands of adherents inevitably dwindle; no master can long persuade a large body of disciples that they give to themselves just the same account of the world as he does; it is only the very young and the very enthusiastic who can think themselves sure that they possess the whole mind of Plato, or Spinoza, or Hegel, at all. The very mature and the very sober can even hardly believe that these philosophers possessed it themselves enough to put it all into their works, and to let us know entirely how the world seemed to them. What a remarkable philosopher really does for human thought, is to throw into circulation a certain number of new and striking ideas and expressions, and to stimulate with them the thought and imagination of his century or of after-times. So Spinoza has made his distinction between adequate and inadequate ideas a current notion for educated Europe. So Hegel seized a single pregnant sentence of Heracleitus, and cast it, with a thousand striking applications, into the world of modern thought. But to do this is only enough to make a philosopher noteworthy; it

is not enough to make him great. To be great, he must have something in him which can influence character, which is edifying; he must, in short, have a noble and lofty character himself, a character,—to recur to that much-criticised expression of mine,—*in the grand style*.

Arnold, Spinoza and the Bible

89 While in all productive men it is instinct that is the creative-affirmative force, and consciousness acts critically and dissuasively, in Socrates it is instinct that becomes the critic, and consciousness that becomes the creator—truly a monstrosity *per defectum*! Specifically, we observe here a monstrous *defectus* of any mystical disposition, so Socrates might be called the typical non-mystic, in whom, through a hypertrophy, the logical nature is developed as excessively as instinctive wisdom is in the mystic. But the logical urge that became manifest in Socrates was absolutely prevented from turning against itself; in its unbridled flood it displays a natural power such as we encounter to our awed amazement only in the very greatest instinctive forces. Anyone who, through the Platonic writings, has experienced even a breath of the divine naivete and sureness of the Socratic way of life, will also feel how the enormous driving-wheel of logical Socratism is in motion, as it were, behind Socrates, and that it must be viewed through Socrates as through a shadow.

Nietzsche, Birth of Tragedy, XIII

90 There are questions whose truth or untruth cannot be decided by man; all the supreme questions, all the supreme problems of value are beyond human reason,...

To grasp the limits of reason— only this is truly philosophy.

Nietzsche, Antichrist, LV

91 Metaphysics means nothing but an unusually obstinate effort to think clearly.

William James, Psychology, VI

92 Why, from Plato and Aristotle downwards, philosophers should have vied with each other in scorn of the knowledge of the particular, and in adoration of that of the general, is hard to understand, seeing that the more adorable knowledge ought to be that of the more adorable things, and that the things of worth are all concretes and singulars. The only value of universal characters is that they help us, by reasoning, to know new truths about individual things. The restriction of one's meaning, moreover, to an individual thing, probably requires even more complicated brain-processes than its extension to all the instances of a kind; and the mere mystery, as such, of the knowledge, is equally great, whether generals or singulars be the things known. In sum, therefore, the traditional universal-worship can only be called a bit of perverse sentimentalism, a philosophic "idol of the cave."

William James, Psychology, XII

93 Philosophy is at once the most sublime and the most trivial of human pursuits. It works in the minutest crannies and it opens out the widest vistas. It "bakes no bread," as has been said, but it can inspire our souls with courage; and repugnant as its manners, its doubting and

challenging, its quibbling and dialectics, often are to common people, no one of us can get along without the far-flashing beams of light it sends over the world's perspectives. These illuminations at least, and the contrast effects of darkness and mystery that accompany them, give to what it says an interest that is much more than professional.

William James, Pragmatism, I

94 It is astonishing to see how many philosophical disputes collapse into insignificance the moment you subject them to this simple test of tracing a concrete consequence. There can *be* no difference anywhere that doesn't *make* a difference elsewhere—no difference in abstract truth that doesn't express itself in a difference in concrete fact and in conduct consequent upon that fact, imposed on somebody, somehow, somewhere, and sometime. The whole function of philosophy ought to be to find out what definite difference it will make to you and me, at definite instants of our life, if this world formula or that world formula be the true one.

William James, Pragmatism, II

95 It is almost incredible that men who are themselves working philosophers should pretend that any philosophy can be, or ever has been, constructed without the help of personal preference, belief, or divination. How have they succeeded in so stultifying their sense for the living facts of human nature as not to perceive that every philosopher, or man of science either, whose initiative counts for anything in the evolution of thought, has taken his stand on a sort of dumb conviction that the truth

must lie in one direction rather than another, and a sort of preliminary assurance that his notion can be made to work; and has borne his best fruit in trying to make it work? These mental instincts in different men are the spontaneous variations upon which the intellectual struggle for existence is based. The fittest conceptions survive, and with them the names of their champions shining to all futurity.

William James, Sentiment of Rationality

96 Aristotle found it necessary to complete his metaphysics by the introduction of a Prime Mover— God. This, for two reasons, is an important fact in the history of metaphysics. In the first place if we are to accord to anyone the position of the greatest metaphysician, having regard to genius of insight, to general equipment in knowledge, and to the stimulus of his metaphysical ancestry, we must choose Aristotle. Secondly, in his consideration of this metaphysical question he was entirely dispassionate; and he is the last European metaphysician of first-rate importance for whom this claim can be made.

Whitehead, Science and the Modern World, XI

97 Philosophy is a difficult subject, from the days of Plato to the present time haunted by subtle perplexities. The existence of such perplexities arising from the common obviousness of speech is the reason why the topic exists. Thus the very purpose of philosophy is to delve below the apparent clarity of common speech.

Whitehead, Adventures of Ideas, XV, 2

98 Plato in the earlier period of his thought, deceived by the beauty of mathematics intelligible in unchanging perfection, conceived of a super-world of ideas, forever perfect and forever interwoven. In his latest phase he sometimes repudiates the notion, though he never consistently banishes it from his thought. His later Dialogues circle round seven notions, namely—The Ideas, The Physical Elements, The Psyche, The Eros, The Harmony, The Mathematical Relations, The Receptacle. I mention them because I hold that all philosophy is in fact an endeavour to obtain a coherent system out of some modification of these notions.

Whitehead, Adventures of Ideas, XIX, 2

99 Metaphysics, or the attempt to conceive the world as a whole by means of thought, has been developed, from the first, by the union and conflict of two very different human impulses, the one urging men towards mysticism, the other urging them towards science. Some men have achieved greatness through one of these impulses alone, others through the other alone: in Hume, for example, the scientific impulse reigns quite unchecked, while in Blake a strong hostility to science co-exists with profound mystic insight. But the greatest men who have been philosophers have felt the need both of science and of mysticism: the attempt to harmonize the two was what made their life, and what always must, for all its arduous uncertainty, make philosophy, to some minds, a greater thing than either science or religion.

Russell, Mysticism and Logic

100 It seems to me that philosophical investigation, as far as I have experience of it, starts from that curious and unsatisfactory state of mind in which one feels complete certainty without being able to say what one is certain of. The process that results from prolonged attention is just like That of watching an object approaching through a thick fog: at first it is only a vague darkness, but as it approaches articulations appear and one discovers that it is a man or a woman, or a horse or a cow or what not. It seems to me that those who object to analysis would wish us to be content with the initial dark blur. Belief in the above process is my strongest and most unshakable prejudice as regards the methods of philosophical investigation.

Russell, My Philosophical Development, XI

101 Philosophy has been defined as "an unusually obstinate attempt to think clearly"; I should define it rather as "an unusually ingenious attempt to think fallaciously." The philosopher's temperament is rare, because it has to combine two somewhat conflicting characteristics: on the one hand a strong desire to believe some general proposition about the universe or human life; on the other hand, inability to believe contentedly except on what appear to be intellectual grounds. The more profound the philosopher, the more intricate and subtle must his fallacies be in order to produce in him the desired state of intellectual acquiescence. That is why philosophy is obscure.

Russell, Unpopular Essays, IV

102 I must confess that I am not at all partial to the fabrication of *Weltanschauungen*. Such activities may be left to philosophers, who avowedly find it impossible to make their journey through life without a Baedeker of that kind to tell them all about everything. Let us humbly accept the contempt with which they look down on us from the vantage-ground of their superior needs. But since we too cannot forego our narcissistic pride, we will draw comfort from the reflection that such "Guides to Life" soon grow out of date, and that it is precisely short-sighted, narrow, and finicky work like ours which obliges them to appear in new editions, and that even the most up-to-date of them are nothing but attempts to find a substitute for the ancient, useful, and all-embracing catechism. We know well enough how little light science has so far been able to throw on the problems that surround us. But however much ado the philosophers may make, they cannot alter the situation. Only patient, persevering research, in which everything is subordinated to the one requirement of certainty, can gradually bring about a change. The benighted traveller may sing aloud in the dark to deny his own fears; but, for all that, he will not see an inch further beyond his nose.

Freud, Inhibitions, Symptoms, and Anxiety, II

103 Philosophy is not opposed to science; it behaves itself as if it were a science, and to a certain extent it makes use of the same methods; but it parts company with science, in that it clings to the illusion that it can produce a complete and coherent picture of the universe, though in fact that picture must needs fall to pieces with every new advance in our knowledge. Its methodological error lies in the fact that it over-estimates the epistemological

value of our logical operations, and to a certain extent admits the validity of other sources of knowledge, such as intuition. . . .

But philosophy has no immediate influence on the great majority of mankind; it interests only a small number even of the thin upper stratum of intellectuals, while all the rest find it beyond them.

Freud, New Introductory Lectures on Psycho-Analysis, XXXV

104 The distinctive office, problems and subjectmatter of philosophy grow out of stresses and strains in the community life in which a given form of philosophy arises, and... accordingly, its specific problems vary with the changes in human life that are always going on and that at times constitute a crisis and a turning point in human history.

Dewey, Reconstruction in Philosophy, Introduction, I

105 We are weak today in ideal matters because intelligence is divorced from aspiration. The bare force of circumstance compels us onwards in the daily detail of our beliefs and acts, but our deeper thoughts and desires turn backwards. When philosophy shall have co-operated with the course of events and made clear and coherent the meaning of the daily detail, science and emotion will interpenetrate, practice and imagination will embrace. Poetry and religious feeling will be the unforced flowers of life. To further this articulation and revelation of the meanings of the current course of events is the task and problem of philosophy in days of transition.

Dewey, Reconstruction in Philosophy, VIII

106 Plato thought nature but a spume that plays
Upon a ghostly paradigm of things;
Solider Aristotle played the taws
Upon the bottom of a king of kings;
World-famous golden-thighed Pythagoras
Fingered upon a fiddle-stick or strings
What a star sang and careless Muses heard:
Old clothes upon old sticks to scare a bird.

Yeats, Among School Children, VI

107 Whenever the philosopher, closeted with his wisdom,
stands apart from the common rule of mankind—be it to
teach them, to serve as a model, or simply to go about his
work of perfecting his inner self—Socrates is there,
Socrates alive, working through the incomparable
prestige of his person. Let us go further. It has been said
that he brought philosophy down from heaven to earth.
But could we understand his life, and above all his death,
if the conception of the soul which Plato attributes to him
in the *Phaedo* had not been his? More generally speaking,
do the myths we find in the dialogues of Plato, touching
the soul, its origin, its entrance into the body, do
anything more than set down in Platonic terms a creative
emotion, the emotion present in the moral teaching of
Socrates? The myths, and the Socratic conception of the
soul to which they stand in the same relationship as the
explanatory programme to a symphony, have been
preserved along with the Platonic dialectics. They pursue
their subterranean way through Greek metaphysics, and
rise to the open air again with the Alexandrine
philosophers, with Ammonius perhaps, in any case with
Plotinus, who claims to be the successor of Socrates. They
have provided the Socratic soul with a body of doctrine

similar to that into which was to be breathed the spirit of the Gospels. The two metaphysics, in spite, perhaps because, of their resemblance, gave battle to each other, before the one absorbed the best that was in the other; for a while the world may well have wondered whether it was to become Christian or Neo-Platonic. It was Socrates against Jesus. To confine ourselves to Socrates, the question is: what would this very practical genius have done in another society and in other circumstances; if he had not been struck above all, by the danger of the moral empiricism of his time, and the mental anarchy of Athenian democracy; if he had not had to deal with the most crying need first, by establishing the rights of reason; if he had not therefore thrust intuition and inspiration into the background, and if the Greek he was had not mastered in him the Oriental who sought to come into being? We have made the distinction between the closed and the open: would anyone place Socrates among the closed souls? There was irony running through Socratic teaching, and outbursts of lyricism were probably rare; but in the measure in which these outbursts cleared the road for a new spirit, they have been decisive for the future of humanity.

Bergson, Two Sources of Morality and Religion, I

108 Most propositions and questions, that have been written about philosophical matters, are not false, but senseless. We cannot, therefore, answer questions of this kind at all, but only state their senselessness. Most questions and propositions of the philosophers result from the fact that we do not understand the logic of our language.

(They are of the same kind as the question whether the Good is more or less identical than the Beautiful.)

And so it is not to be wondered at that the deepest problems are really *no* problems.

Wittgenstein, Tractatus Logico-Philosophicus, 4.003

109 The object of philosophy is the logical clarification of thoughts.

Philosophy is not a theory but an activity.

A philosophical work consists essentially of elucidations.

The result of philosophy is not a number of "philosophical propositions", but to make propositions clear.

Philosophy should make clear and delimit sharply the thoughts which otherwise are, as it were, opaque and blurred....

Philosophy limits the disputable sphere of natural science.

It should limit the thinkable and thereby the unthinkable.

It should limit the unthinkable from within through the thinkable.

It will mean the unspeakable by clearly displaying the speakable.

Everything that can be thought at all can be thought clearly. Every thing that can be said can be said clearly.

Wittgenstein, Tractatus Logico-Philosophicus, 4.112-4.116

110 The right method of philosophy would be this. To say nothing except what can be said, i.e. the propositions of natural science, i.e. something that has nothing to do with philosophy: and then always, when someone else

wished to say something metaphysical, to demonstrate to him that he had given no meaning to certain signs in his propositions. This method would be unsatisfying to the other—he would not have the feeling that we were teaching him philosophy—but it would be the only strictly correct method.

My propositions are cluddatory in this way: he who understands me finally recognizes them as senseless, when he has climbed out through them, on them, over them. (He must so to speak throw away the ladder, after he has climbed up on it.)

He must surmount these propositions; then he sees the world rightly.

Whereof one cannot speak, thereof one must be silent.

Wittgenstein, Tractatus Logico-Philosophicus 6.53-7

111 The doctrines of philosophers disagree where they are literal and arbitrary,—mere guesses about the unknown; but they agree or complete one another where they are expressive or symbolic, thoughts wrung by experience from the hearts of poets. Then all philosophies alike are ways of meeting and recording the same flux of images, the same vicissitudes of good and evil, which will visit all generations, while man is man.

Santayana, Three Philosophical Poets, II

112 At beat, the true philosopher can fulfil his mission very imperfectly, which is to pilot himself, or at most a few voluntary companions who may find themselves in the same boat. It is not easy for him to shout, or address a crowd; he must be silent for long seasons; for his is watching stars that move slowly and in courses that it is

possible though difficult to foresee; and he is crushing all things in his heart as in a winepress, until his life and their secret flow out together.

Santayana, Character and Opinion in the United States,
II

113 This divination of the spiritual in the things of sense, and which expresses itself in the things of sense, is precisely what we call Poetry. Metaphysics too pursues a spiritual prey, but in a very different manner, and with a very different formal object. Whereas metaphysics stands in the line of knowledge and of the contemplation of truth, poetry stands in the line of making and of the delight procured by beauty. The difference is an all-important one, and one that it would be harmful to disregard. Metaphysics snatches at the spiritual in an idea, by the most abstract intellection; poetry reaches it in the flesh, by the very point of the sense sharpened through intelligence. Metaphysics enjoys its possession only in the retreats of the eternal regions, while poetry finds its own at ever)-crossroad in the wanderings of the contingent and the singular. The more real than reality which both seek, metaphysics must attain in the nature of things, while it suffices to poetry to touch it in any sign whatsoever. Metaphysics gives chase to essences and definitions, poetry to any flash of existence glittering by the way, and any reflection of an invisible order. Metaphysics isolates mystery in order to know it; poetry, thanks to the balances it constructs, handles and utilizes mystery as an unknown force.

Maritain, Frontiers of Poetry

114 Philosophy is not a "wisdom" of conduct or practical life that consists in acting well. It is a wisdom whose nature consists essentially in knowing.

How? Knowing in the fullest and strictest sense of the term, that is to say, with certainty, and in being able to state why a thing is what it is and cannot be otherwise, knowing by causes. The search for causes is indeed the chief business of philosophers, and the knowledge with which they are concerned is not a merely probable knowledge, such as orators impart by their speeches, but a knowledge which compels the assent of the intellect, like the knowledge which the geometrician conveys by his demonstrations. But certain knowledge of causes is termed science. Philosophy therefore is a science.

Maritain, Introduction to Philosophy, I, 5

115 Knowledge becomes coherent only as more versatile and negotiable concepts replace the generalities with which all systematizing thought begins, such as matter and motion, or body and mind, then cognition, reason and emotion, good and evil, truth and falsity, or whatever basic concepts govern the first analyses that organize a universe of discourse. Philosophy has traditionally dealt in such general terms; and the reason for its proverbial uselessness as a guide to the sciences, once they are born from its mysterious womb, is that it has made general propositions not only its immediate aim, but also its sole material. They are, in fact, the true scientist's ultimate aim, too; but his inevitable preoccupation with research that can be carried out in *ad hoc*, provisional terms is usually so complete that he cannot survey other fields and give his best hours of thought to reinterpreting

his statements in more widely variable but specifiable ways.

Langer, Mind, I, Intro.

17.2 Science and Scientific Method

Though most of the passages assembled here are drawn from books written in modern times—the age of science as we have now come to understand it—this section begins with a few quotations from the ancients that stress the role of experience, the data obtained by investigation, or the importance of checking theories or hypotheses against the observed facts. Of special interest in this connection are the passages drawn from the writings of Ptolemy, the Greek astronomer, in which he defines the scientific effort as the task of formulating a theory that will "save the appearances," i.e., one that will account for or explain all the observed phenomena. While the language in which this insight is stated varies somewhat from author to author, the reader will find the same basic point being made by many later writers, such as Kepler, Galileo, Newton, and others.

In the modern period, the quotations are drawn mainly from two sources: on the one hand, from the treatises of eminent scientists; on the other hand, from the writings of philosophers who have undertaken the task of formulating the canons of scientific method and evaluating the achievements of science. In general there seems to be agreement among them concerning the critical role played by observation in relation to hypotheses or theories. They concur in thinking that scientific theories or hypotheses can and should be tested and either verified or falsified by the

data or facts of observation, whether obtained by means of experimentation or by other techniques of research. In consequence, they agree that advances in scientific knowledge can be and have been made not only by the making of more precise and more extensive observations but also by the development of improved theories, theories better able to account for the improved observations. So predominant is this view of science in the quotations here assembled that the reader may think it has never been challenged. It has been, but only very recently, in the last fifteen years, not by leading scientists but by small groups of philosophers of science not quoted here.

The reader will find passages relevant to scientific method in Chapter 6 on Knowledge, especially Section 6.2 on Experience; and also in Section 18.1 of the chapter on Medicine and Health. Because of the special role that mathematics plays in the natural sciences, especially astronomy and physics, quotations dealing with applied mathematics or the use of mathematics in science will be found in Section 17.3 of this chapter as well as here.

■ ■ ■

- 1 Lack of experience diminishes our power of taking a comprehensive view of the admitted facts. Hence those who dwell in intimate association with nature and its phenomena grow more and more able to formulate, as the foundations of their theories, principles such as to admit of a wide and coherent development: while those whom devotion to abstract discussions has rendered

unobservant of the facts are too ready to dogmatize on the basis of a few observations.

Aristotle, On Generation and Corruption, 316a5

- 2 With a true view all the data harmonize, but with a false one the facts soon clash.

Aristotle, Ethics, 1098b12

- 3 Keep that which is committed to thy trust, avoiding profane and vain babblings, and oppositions of science falsely so called.

1 Timothy 6:20

- 4 Let no one, seeing the difficulty of our devices, find troublesome such hypotheses. For it is not proper to apply human things to divine things nor to get beliefs concerning such great things from such dissimilar examples. For what is more unlike than those which are always alike with respect to those which never are, and than those which are impeded by anything with those which are not even impeded by themselves? But it is proper to try and fit as far as possible the simpler hypotheses to the movements in the heavens; and if this does not succeed, then any hypotheses possible. Once all the appearances are saved by the consequences of the hypotheses, why should it seem strange that such complications can come about in the movements of heavenly things? For there is no impeding nature in them, but one proper to the yielding and giving way to movements according to the nature of each planet, even if they are contrary, so that they can all penetrate and shine through absolutely all the fluid media; and this free

action takes place not only about the particular circles, but also about the spheres themselves and the axes of revolution. We see the complication and sequence in their different movements difficult and hard to come by for the freedom of the movements in the likely stories constructed by us, but in the heavenly thing never anywhere impeded by this mixture. Or rather it is not proper to judge the simplicity of heavenly things by those which seem so with us, when here not even to all of us does the same thing seem likewise simple. For in this way not one of the heavenly occurrences would seem simple to those studying them, not even the unchangeableness of the first motion, since always to be the same is not difficult here with us but impossible.

Ptolemy, Almagest, XIII, 2

- 5 The astronomer and the physicist both may prove the same conclusion—that the earth, for instance, is round; the astronomer by means of mathematics (that is, by abstracting from matter), but the physicist by means of matter itself.

Aquinas, Summa Theologica, I, 1, 1

- 6 Seven years I've served this canon, but no more
I know about his science than before.
All that I had I have quite lost thereby;
And, God knows, so have many more than I.
Where I was wont to be right fresh and gay
Of clothing and of other good array.
Now may I wear my old hose on my head;
And where my colour was both fresh and red,
Now it is wan and of a leaden hue;

Whoso this science follows, he shall rue.
And from my toil yet bleary is my eye,
Behold the gain it is to multiply!
That slippery science has made me so bare
That I've no goods, wherever I may fare;
And I am still indebted so thereby
For gold that I have borrowed, truthfully,
That while I live I shall repay it never.
Let every man be warned by me for ever!

Chaucer, Canterbury Tales: Canon's Yeoman's Tale

7 I will tell you, as I was taught before.
The bodies seven and the spirits four.
In order, as my master named of yore.
The first of spirits, then, quicksilver is,
The second arsenic, the third, ywis,
Is sal ammoniac, the fourth brimstone.
The seven bodies I'll describe anon:
Sol, gold is, Luna's silver, as we see,
Mars iron, and quicksilver's Mercury,
Saturn is lead, and Jupiter is tin,
And Venus copper, by my father's kin!

Chaucer, Canterbury Tales: Canon's Yeoman's Tale

8 For out of olde felde, as men seyth,
Cometh al this newe corn from yer to yere.
And out of olde bokes, in good feyth,
Cometh al this newe science that men lere.

Chaucer, The Parliament of Fowls, 22

9 It is the job of the astronomer to use painstaking and
skilled observation in gathering together the history of

the celestial movements, and then— since he cannot by any line of reasoning reach the true causes of these movements—to think up or construct whatever causes or hypotheses he pleases such that, by the assumption of these causes, those same movements can be calculated from the principles of geometry for the past and for the future too. This artist is markedly outstanding in both of these respects: for it is not necessary that these hypotheses should be true, or even probable; but it is enough if they provide a calculus which fits the observations. ... For it is sufficiently clear that this art is absolutely and profoundly ignorant of the causes of the apparent irregular movements. And if it constructs and thinks up causes—and it has certainly thought up a good many—nevertheless it does not think them up in order to persuade anyone of their truth but only in order that they may provide a correct basis for calculation. But since for one and the same movement varying hypotheses are proposed from time to time, as eccentricity or epicycle for the movement of the sun, the astronomer much prefers to take the one which is easiest to grasp. Maybe the philosopher demands probability instead; but neither of them will grasp anything certain or hand it on, unless it has been divinely revealed to him. Therefore let us permit these new hypotheses to make a public appearance among old ones which are themselves no more probable, especially since they are wonderful and easy and bring with them a vast storehouse of learned observations. And as far as hypotheses go, let no one expect anything in the way of certainty from astronomy, since astronomy can offer us nothing certain, lest, if anyone take as true that which has been constructed for another use, he go away from this discipline a bigger fool than when he came to it.

Copernicus, De Revolutionibus, Introduction to the Reader

10 This more divine human science, which inquires into the highest things, is not lacking in difficulties. And in particular we see that as regards its principles and assumptions, which the Greeks call "hypotheses," many of those who undertook to deal with them were not in accord and hence did not employ the same methods of calculation. In addition, the courses of the planets and the revolution of the stars cannot be determined by exact calculations and reduced to perfect knowledge unless, through the passage of time and with the help of many prior observations, they can, so to speak, be handed down to posterity. For even if Claud Ptolemy of Alexandria, who stands far in front of all the others on account of his wonderful care and industry, with the help of more than forty years of observations brought this art to such a high point that there seemed to be nothing left which he had not touched upon; nevertheless we see that very many things are not in accord with the movements which should follow from his doctrine but rather with movements which were discovered later and were unknown to him.

Copernicus De Revolutionibus, I, Introduction

11 To you alone, true philosophers, ingenuous minds, who not only in books but in things themselves look for knowledge, have I dedicated these foundations of magnetic science—a new style of philosophizing. But if any see fit not to agree with the opinions here expressed and not to accept certain of my paradoxes, still let them note the great multitude of experiments and discoveries

—these it is chiefly that cause all philosophy to flourish; and we have dug them up and demonstrated them with much pains and sleepless nights and great money expense. Enjoy them you, and, if ye can employ them for better purposes. I know how hard it is to impart the air of newness to what is old, trimness to what is gone out of fashion; to lighten what is dark; to make that grateful which excites disgust; to win belief for things doubtful- but far more difficult is it to win any standing for or to establish doctrines that are novel, unheard of, and opposed to everybody's opinions. We care naught, for that, as we have held that philosophy is for the few.

William Gilbert, On the Loadstone, Pref.

- 12 All. . . our predecessors, discoursing of attraction on the basis of a few vague and indecisive experiments and of reasonings from the recondite causes of things; and reckoning among the causes of the direction of the magnet, a region of the sky, celestial poles, stars, asterisms; or mountains, cliffs, vacant space, atoms, attractional or collimational regions beyond the heavens, and other like unproved paradoxes, are world-wide astray from the truth and are blindly wandering. But we do not propose just now to overturn with arguments either these their errors and impotent reasonings, or the other many fables about the loadstone, or the fairy-tales of mountebanks and story-tellers. ... In such-like follies and fables do philosophers of the vulgar sort take delight; with such-like do they cram readers a-hungred for things abstruse, and every ignorant gaper for nonsense. But when the nature of the loadstone shall have been in the discourse following disclosed, and shall have been by our labours and experiments tested, then will the hidden and

recondite but real causes of this great effect be brought forward, proven, shown, demonstrated; then, too, will all darkness vanish; every smallest root of error, being plucked up, will be cast away and will be neglected; and the foundations of a grand magnetic science being laid will appear anew, so that high intellects may no more be deluded by vain opinions.

William Gilbert, On the Loadstone, I, 1

- 13 Men are deplorably ignorant with respect to natural things, and modern philosophers, as though dreaming in the darkness, must be aroused and taught the uses of things, the dealing with things; they must be made to quit the sort of learning that comes only from books, and that rests only on vain arguments from probability and upon conjectures.

William Gilbert, On the Loadstone, I, 10

- 14 It has been ten years since I published my *Commentaries on the Movements of the Planet Mars*. As only a few copies of the book were printed, and as it had so to speak hidden the teaching about celestial causes in thickets of calculations and the rest of the astronomical apparatus, and since the more delicate readers were frightened away by the price of the book too; it seemed to my friends that I should be doing right and fulfilling my responsibilities, if I should write an epitome, wherein a summary of both the physical and astronomical teaching concerning the heavens would be set forth in plain and simple speech and with the boredom of the demonstrations alleviated.

Kepler, Epitome of Copernican Astronomy, IV, To the Reader

15 And new Philosophy calls all in doubt,
The Element of fire is quite put out;
The Sun is lost, and th'earth, and no mans wit
Can well direct him where to looke for it.
And freely men confesse that this world's spent,
When in the Planets, and the Firmament
They seeke so many new; then see that this
Is crumbled out againe to his Atomies.
Tis all in peeces, all cohaerence gone;
All just supply, and all Relation:
Prince, Subject, Father, Sonne, are things forgot,
For every man alone thinkes he hath got
To be a Phoenix, and that then can bee
None of that kinde, of which he is, but hee.

Donne, First Anniversary

16 The sciences themselves, which have had better intelligence and confederacy with the imagination of man than with his reason, are three in number; astrology, natural magic, and alchemy: of which sciences, nevertheless, the ends or pretences are noble. For astrology pretendeth to discover that correspondence or concatenation which is between the superior globe and the inferior: natural magic pretendeth to call and reduce natural philosophy from variety of speculations to the magnitude of works: and alchemy pretendeth to make separation of all the unlike parts of bodies which in mixtures of nature are incorporate. But the derivations and prosecutions to these ends, both in the theories and in the practices, are full of error and vanity; which the great professors themselves have sought to veil over and conceal by enigmatical writings, and referring themselves to auricular traditions and such other devices, to save the

credit of impostures. And yet surely to alchemy this right is due, that it may be compared to the husbandman whereof Aesop makes the fable; that, when he died, told his sons that he had left unto them gold buried under ground in his vineyard; and they digged over all the ground, and gold they found none; but by reason of their stirring and digging the mould about the roots of their vines, they had a great vintage the year following: so assuredly the search and stir to make gold hath brought to light a great number of good and fruitful inventions and experiments, as well for the disclosing of nature as for the use of man's life.

Bacon, Advancement of Learning, Bk. I, IV, 11

- 17 It were good to divide natural philosophy into the mine and the furnace, and to make two professions or occupations of natural philosophers, some to be pioneers and some smiths: some to dig, and some to refine and hammer. And surely I do best allow of a division of that kind, though in more familiar and scholastical terms; namely, that these be the two parts of natural philosophy, the inquisition of causes, and the production of effects; speculative, and operative; natural science, and natural prudence. For as in civil matters there is a wisdom of discourse, and a wisdom of direction; so is it in natural.

Bacon, Advancement of Learning, Bk. II, VII, 1

- 18 The unassisted hand and the understanding left to itself possess but little power. Effects are produced by the means of instruments and helps, which the understanding requires no less than the hand; and as

instruments either promote or regulate the motion of the hand, so those that are applied to the mind prompt or protect the understanding.

Bacon, Novum Organum, I, 2

- 19 There are and can exist but two ways of investigating and discovering truth. The one hurries on rapidly from the senses and particulars to the most general axioms, and from them, as principles and their supposed indisputable truth, derives and discovers the intermediate axioms. This is the way now in use. The other constructs its axioms from the senses and particulars, by ascending continually and gradually, till it finally arrives at the most general axioms, which is the true but unattempted way.... Each of these two ways begins from the senses and particulars, and ends in the greatest generalities. But they are immeasurably different; for the one merely touches cursorily the limits of experiment and particulars, whilst the other runs duly and regularly through them; the one from the very outset lays down some abstract and useless generalities, the other gradually rises to those principles which are really the most common in nature.

Bacon, Novum Organum, I, 19-22

- 20 Even when men build any science and theory upon experiment, yet they almost always turn with premature and hasty zeal to practise, not merely on account of the advantage and benefit to be derived from it, but in order to seize upon some security in a new undertaking of their not employing the remainder of their labor unprofitably, and by making themselves conspicuous, to acquire a

greater name for their pursuit. Hence, like Atalanta, they leave the course to pick up the golden apple, interrupting their speed, and giving up the victory. But in the true course of experiment, and in extending it to new effects, we should imitate the Divine foresight and order; for God on the first day only created light, and assigned a whole day to that work without creating any material substance thereon. In like manner we must first, by every kind of experiment, elicit the discovery of causes and true axioms, and seek for experiments which may afford light rather than profit. Axioms, when rightly investigated and established, prepare us not for a limited but abundant practice, and bring in their train whole troops of effects.

Bacon, Novum Organum, I, 70

- 21 Let no one expect any great progress in the sciences (especially their operative part), unless natural philosophy be applied to particular sciences, and particular sciences again referred back to natural philosophy. For want of this, astronomy, optics, music, many mechanical arts, medicine itself, and (what perhaps is more wonderful) moral and political philosophy, and the logical sciences have no depth, but only glide over the surface and variety of things; because these sciences, when they have been once partitioned out and established, are no longer nourished by natural philosophy, which would have imparted fresh vigor and growth to them from the sources and genuine contemplation of motion, rays, sounds, texture, and conformation of bodies, and the affections and capacity of the understanding. But we can little wonder that the sciences grow not when separated from their roots.

Bacon, Novum Organum, I, 80

- 22 There is another powerful and great cause of the little advancement of the sciences, which is this: it is impossible to advance properly in the course when the goal is not properly fixed. But the real and legitimate goal of the sciences, is the endowment of human life with new inventions and riches.

Bacon, Novum Organum, I, 81

- 23 Those who have treated of the sciences have been either empirics or dogmatical. The former like ants only heap up and use their store, the latter like spiders spin out their own webs. The bee, a mean between both, extracts matter from the flowers of the garden and the field, but works and fashions it by its own efforts. The true labor of philosophy resembles hers, for it neither relies entirely nor principally on the powers of the mind, nor yet lays up in the memory the matter afforded by the experiments of natural history and mechanics in its raw state, but changes and works it in the understanding.

Bacon, Novum Organum, I, 95

- 24 We can then only augur well for the sciences, when the ascent shall proceed by a true scale and successive steps, without interruption or breach from particulars to the lesser axioms, thence to the intermediate (rising one above the other), and lastly, to the most general. For the lowest axioms differ but little from bare experiments; the highest and most general (as they are esteemed at present), are notional, abstract, and of no real weight. The intermediate are true, solid, full of life, and upon them depend the business and fortune of mankind;

beyond these are the really general, but not abstract, axioms, which are truly limited by the intermediate.

We must not then add wings, but rather lead and ballast to the understanding, to prevent its jumping or flying, which has not yet been done; but whenever this takes place, we may entertain greater hopes of the sciences.

Bacon, Novum Organum, I, 104

- 25 Let none be alarmed at the objection of the arts and sciences becoming depraved to malevolent or luxurious purposes and the like, for the same can be said of every worldly good; talent, courage, strength, beauty, riches, light itself, and the rest. Only let mankind regain their rights over nature, assigned to them by the gift of God, and obtain that power, whose exercise will be governed by right reason and true religion.

Bacon, Novum Organum, I, 129

- 26 Of the Sphinx's riddles there are in all two kinds: one concerning the nature of things, another concerning the nature of man; and in like manner there are two kinds of kingdom offered as the reward of solving them: one over nature, and the other over man. For the command over things natural—over bodies, medicines, mechanical powers, and infinite other of the kind—is the one proper and ultimate end of true natural philosophy; however the philosophy of the school, content with what it finds, and swelling with talk, may neglect or spurn the search after realities and works. But the riddle proposed to Oedipus, by the solution of which he became king of Thebes, related to the nature of man; for whoever has a thorough

insight into the nature of man may shape his fortune almost as he will, and is born for empire.

Bacon, Wisdom of the Ancients: Sphinx

27 First of all it seems desirable to find and explain a definition best fitting natural phenomena. For anyone may invent an arbitrary type of motion and discuss its properties; thus, for instance, some have imagined helices and conchoids as described by certain motions which are not met with in nature, and have very commendably established the properties which these curves possess in virtue of their definitions; but we have decided to consider the phenomena of bodies falling with an acceleration such as actually occurs in nature and to make this definition of accelerated motion exhibit the essential features of observed accelerated motions. And this, at last, after repeated efforts we trust we have succeeded in doing. In this belief we are confirmed mainly by the consideration that experimental results are seen to agree with and exactly correspond with those properties which have been, one after another, demonstrated by us.

Galileo, Two New Sciences, III

28 *Simplicio*. I understand in a general way how the two kinds of natural motions give rise to the circles and spheres; and yet as to the production of circles by accelerated motion and its proof, I am not entirely clear; but the fact that one can take the origin of motion either at the inmost centre or at the very top of the sphere leads one to think that there may be some great mystery hidden in these true and wonderful results, a mystery

related to the creation of the universe (which is said to be spherical in shape), and related also to the seat of the first cause.

Salviati. I have no hesitation in agreeing with you. But profound considerations of this kind belong to a higher science than ours. We must be satisfied to belong to that class of less worthy workmen who procure from the quarry the marble out of which, later, the gifted sculptor produces those masterpieces which lay hidden in this rough and shapeless exterior.

Galileo, Two New Sciences, III

29 Thus far I have spoken of the passage of the blood from the veins into the arteries, and of the manner in which it is transmitted and distributed by the action of the heart; points to which some, moved either by the authority of Galen or Columbus, or the reasonings of others, will give in their adhesion. But what remains to be said upon the quantity and source of the blood which thus passes is of so novel and unheard of character, that I not only fear injury to myself from the envy of a few, but I tremble lest I have mankind at large for my enemies, so much doth wont and custom, that become as another nature, and doctrine once sown and that hath struck deep root, and respect for antiquity influence all men: still the die is cast, and my trust is in my love of truth, and the candour that inheres in cultivated minds. And sooth to say, when I surveyed my mass of evidence, whether derived from vivisections, and my various reflections on them, or from the ventricles of the heart and the vessels that enter into and issue from them, the symmetry and size of these conduits—for nature doing nothing in vain, would never have given them so large a relative size without a

purpose—or from the arrangement and intimate structure of the valves in particular, and of the other parts of the heart in general, with many things besides, I frequently and seriously bethought me, and long revolved in my mind, what might be the quantity of blood which was transmitted, in how short a time its passage might be effected, and the like; and not finding it possible that this could be supplied by the juices of the ingested aliment without the veins on the one hand becoming drained, and the arteries on the other getting ruptured through the excessive charge of blood, unless the blood should somehow find its way from the arteries into the veins, and so return to the right side of the heart; I began to think whether there might not be a MOTION, AS IT WERE, IN A CIRCLE. Now this I afterwards found to be true.

William Harvey, Motion of the Heart, VIII

- 30 The heart, consequently, is the beginning of life; the sun of the microcosm, even as the sun in his turn might well be designated the heart of the world; for it is the heart by whose virtue and pulse the blood is moved, perfected, made apt to nourish, and is preserved from corruption and coagulation; it is the household divinity which, discharging its function, nourishes, cherishes, quickens the whole body, and is indeed the foundation of life, the source of all action. But of these things we shall speak more opportunely when we come to speculate upon the final cause of this motion of the heart.

William Harvey, Motion of the Heart, VIII

- 31 To those who repudiate the circulation because they neither see the efficient nor final cause of it, and who

exclaim, *cui bono*? I have yet to reply, having hitherto taken no note of the ground of objection which they take up. And first I own I am of opinion that our first duty is to inquire whether the thing be or not, before asking wherefore it is? for from the facts and circumstances which meet us in the circulation admitted, established, the ends and objects of its institution are especially to be sought. Meantime I would only ask, how many things we admit in physiology, pathology, and therapeutics, the causes of which are unknown to us? That there are many, no one doubts—the causes of putrid fevers, of revulsions, of the purgation of excrementitious matters, among the number.

Whoever, therefore, sets himself in opposition to the circulation, because, if it be acknowledged, he cannot account for a variety of medical problems, nor in the treatment of diseases and the administration of medicines, give satisfactory reasons for the phenomena that appear; or who will not see that the precepts he has received from his teachers are false; or who thinks it unseemly to give up accredited opinions; or who regards it as in some sort criminal to call in question doctrines that have descended through a long succession of ages, and carry the authority of the ancients—to all of these I reply: that the facts cognizable by the senses wait upon no opinions, and that the works of nature bow to no antiquity; for indeed there is nothing either more ancient or of higher authority than nature.

William Harvey, Circulation of the Blood, II

- 32 On the same terms... as art is attained to, is all knowledge and science acquired; for as art is a habit with reference to things to be done, so is science a habit in

respect of things to be known: as that proceeds from the imitation of types or forms, so this proceeds from the knowledge of natural things.

William Harvey, Animal Generation, Intro.

33 Thus, our learned anatomist, blinded by a popular error, seeking in the egg for some particular matter fitted to engender the chick distinct from the rest of the contents of the egg, has gone astray. And so it happens to all, who, forsaking the light, which the frequent dissection of bodies, and familiar converse with nature supplies, expect that they are to understand from conjecture, and arguments founded on probabilities, or the authority of writers, the things or the facts which they ought themselves to behold with their own eyes, to perceive with their proper senses- It is not wonderful, therefore, when we see that we have so many errors accredited by general consent, handed down to us from remote antiquity', that men otherwise of great ingenuity, should be egregiously deceived, which they may very well be, when they are satisfied with taking their knowledge from books, and keeping their memory stored with the notions of learned men. They who philosophize in this way, by tradition, if I may so say, know no better than the books they keep by them.

William Harvey, Animal Generation, 43

34 Whenever men notice some similarity between two things, they are wont to ascribe to each, even in those respects in which the two differ, what they have found to be true of the other. Thus they erroneously compare the sciences, which entirely consist in the cognitive exercise

of the mind, with the arts, which depend upon an exercise and disposition of the body. They see that not all the arts can be acquired by the same man, but that he who restricts himself to one, most readily becomes the best executant, since it is not so easy for the same hand to adapt itself both to agricultural operations and to harp-playing, or to the performance of several such tasks as to one alone. Hence they have held the same to be true of the sciences also, and distinguishing them from one another according to their subject matter, they have imagined that they ought to be studied separately, each in isolation from all the rest. But this is certainly wrong. For since the sciences taken all together are identical with human wisdom, which always remains one and the same, however applied to different subjects, and suffers no more differentiation proceeding from them than the light of the sun experiences from the variety of the things which it illumines, there is no need for minds to be confined at all within limits; for neither does the knowing of one truth have an effect like that of the acquisition of one art and prevent us from finding out another, it rather aids us to do so.... Hence we must believe that all the sciences are so inter-connected, that it is much easier to study them all together than to isolate one from all the others. If, therefore, anyone wishes to search out the truth of things in serious earnest, he ought not to select one special science; for all the sciences are conjoined with each other and interdependent: he ought rather to think how to increase the natural light of reason, not for the purpose of resolving this or that difficulty of scholastic type, but in order that his understanding may light his will to its proper choice in all the contingencies of life. In a short time he will see with amazement that he

has made much more progress than those who are eager about particular ends, and that he has not only obtained all that they desire, but even higher results than fall within his expectation.

Descartes, Rules for Direction of the Mind, I

35 Fearing that I could not put in my Treatise all that I had in my mind, I undertook only to show very fully my conceptions of light. Later on, when occasion occurred, I resolved to add something about the sun and fixed stars, because light proceeds almost entirely from them; the heavens would be dealt with because they transmit light, the planets, the comets and the earth because they reflect it, and more particularly would all bodies which are on the earth, because they are either coloured or transparent, or else luminous; and finally I should deal with man because he is the spectator of all. For the very purpose of putting all these topics somewhat in shadow, and being able to express myself freely about them, without being obliged to adopt or to refute the opinions which are accepted by the learned, I resolved to leave all this world to their disputes, and to speak only of what would happen in a new world if God now created, somewhere in an imaginary space, matter sufficient wherewith to form it, and if He agitated in diverse ways, and without any order, the diverse portions of this matter, so that there resulted a chaos as confused as the poets ever feigned, and concluded His work by merely lending His concurrence to Nature in the usual way, leaving her to act in accordance with the laws which He had established.

Descartes, Discourse on Method, V

36 So soon as I had acquired some general notions concerning Physics, and as, beginning to make use of them in various special difficulties, I observed to what point they might lead us, and how much they differ from the principles of which we have made use up to the present time, I believed that I could not keep them concealed without greatly sinning against the law which obliges us to procure, as much as in us lies, the general good of all mankind. For they caused me to see that it is possible to attain knowledge which is very useful in life, and that, instead of that speculative philosophy which is taught in the Schools, we may find a practical philosophy by means of which, knowing the force and the action of fire, water, air, the stars, heavens and all other bodies that environ us, as distinctly as we know the different crafts of our artisans, we can in the same way employ them in all those uses to which they are adapted, and thus render ourselves the masters and possessors of nature.

Descartes, Discourse on Method, VI

37 The light of humane minds is perspicuous words, but by exact definitions first snuffed, and purged from ambiguity; reason is the pace; increase of science, the way; and the benefit of mankind, the end.

Hobbes, Leviathan, I, 5

38 All the sciences are infinite in the extent of their researches. For who doubts that geometry, for instance, has an infinite infinity of problems to solve? They are also infinite in the multitude and fineness of their premises; for it is clear that those which are put forward as ultimate

are not self-supporting, but are based on others which, again having others for their support, do not permit of finality. But we represent some as ultimate for reason, in the same way as in regard to material objects we call that an indivisible point beyond which our senses can no longer perceive anything, although by its nature it is infinitely divisible.

Of these two Infinities of science, that of greatness is the most palpable, and hence a few persons have pretended to know all things. "I will speak of the whole," said Democritus.

But the infinitely little is the least obvious. Philosophers have much oftener claimed to have reached it, and it is here they have all stumbled.

Pascal, Pensées, II, 72

39 Geometry, arithmetic, music, physics, medicine, architecture, and all the sciences subject to experiment and reason must be added to if they are to become perfect. The ancients found them merely sketched by their predecessors, and we shall leave them to our successors in a more perfected state than we received them. Since their perfection depends upon time and effort, it is evident that even if our effort and time had gained us less than the labors of the ancients, separated from ours, the two together nevertheless must have more effect than either alone.

The clearing up of this difference should make us pity the blindness of those who advance authority alone as proof in physics instead of reason or experiment, and should fill us with horror at the wickedness of others who use reason alone in theology instead of the authority of Scripture and the Fathers. We must strengthen the

courage of those timid souls who dare discover nothing in physics, and confound the insolence of that temerity which introduces novelty into theology. Meanwhile the misfortune of the age is such that we see many new opinions in theology altogether unknown to antiquity maintained with obstinacy and received with applause; whereas those put forward in physics, though few in number, must be convicted of error, it seems, as soon as they shock, however little, received opinions. As if respect for the philosophers of antiquity were a duty but for the most ancient of the Fathers only decorum! I leave it to the judicious to observe the importance of this abuse which perverts the order of the sciences so unjustly, and I think there will be few who do not wish this ... to be applied to other subjects, since new discoveries are inevitably errors in those matters we profane with impunity, whereas they are absolutely necessary for the perfection of so many other subjects incomparably lower, which however we would be afraid to touch.

Pascal, Preface to the Treatise on the Vacuum

40 Concerning the vacuum the ancients were right to say that nature did not permit it, because all their experiments had always led to the observation that she abhorred it and could not endure it. But if the new experiments had been known to them, perhaps they would have found reason to affirm what they had reason to deny because the vacuum had not yet appeared. Therefore in making the judgment that nature did not permit a vacuum, they meant to speak of nature only as they knew her; since to make the judgment in general it would not be enough to have seen it true in a hundred instances or in a thousand or in any other number

however great, for if there remained a single case to examine, it alone would suffice to prevent the general definition, and if a single case were opposed, it alone. . . . For in all matters whose proof is by experiment and not by demonstration no universal assertion can be made except by the general enumeration of all the parts and all the different cases. Thus when we say the diamond is the hardest of all bodies, we mean of all bodies we know, and we neither can nor should include those we do not know. And when we say that gold is the heaviest of all bodies, it would be rash of us to include in this general proposition bodies not yet in our knowledge, although it is not impossible they are in nature. Similarly when the ancients asserted that nature did not permit a vacuum, they meant she did not permit a vacuum in all the experiments they had seen, and they could not without rashness include experiments they did not know. But if they had known them, undoubtedly they would have drawn the same consequences as we do and would by their avowal have given them the authority of that antiquity which men today want to make the sole principle of the sciences.

Pascal, Preface to the Treatise on the Vacuum

- 41 Let all the disciples of Aristotle bring together all the strongest arguments there are in the writings of their master and of his commentators to account for these things by the horror of the vacuum, if they can; if not, let them recognize that experiments are the true masters to follow in physics, that the experiment made on the mountains overturned the universal belief everywhere held that nature abhors a vacuum and opened up this knowledge which can nevermore be forgotten, that

nature has no horror of the vacuum, that she does nothing to avoid it, and that the weight of the mass of the air is the true cause of all the effects hitherto attributed to that imaginary cause.

Pascal, Treatise on the Weight of the Mass of the Air

42 And Raphael now to Adam's doubt propos'd
Benevolent and facil thus repli'd.

To ask or search I blame thee not, for Heav'n
Is as the Book of God before thee set,
Wherein to read his wondrous Works, and learne
His Seasons, Hours, or Days, or Months, or Yeares;
This to attain, whether Heav'n move or Earth,
Imports not, if thou reck'n right, the rest
From Man or Angel the great Architect
Did wisely to conceal, and not divulge
His secrets to be scann'd by them who ought
Rather admire; or if they list to try
Conjecture, he his Fabric of the Heav'ns
Hath left to thir disputes, perhaps to move
His laughter at thir quaint Opinions wide
Hereafter, when they come to model Heav'n
And calculate the Starrs, how they will weild
The mightie frame, how build, unbuild, contrive
To save appeerances, how gird the Sphear
With Centric and Eccentric scribl'd o're,
Cycle and Epicycle, Orb in Orb.

Milton, Paradise Lost, VIII, 64

43 I have finally judged that it was better worth while to publish this writing, such as it is, than to let it run the risk, by waiting longer, of remaining lost. There will be

seen in its demonstrations of those kinds which do not produce as great a certitude as those of geometry, and which even differ much therefrom, since, whereas the geometers prove their propositions by fixed and incontestable principles, here the principles are verified by the conclusions to be drawn from them; the nature of these things not allowing of this being done otherwise. It is always possible to attain thereby to a degree of probability which very often is scarcely less than complete proof. To wit, when things which have been demonstrated by the principles that have been assumed correspond perfectly to the phenomena which experiment has brought under observation; especially when there are a great number of them, and further, principally, when one can imagine and foresee new phenomena which ought to follow from the hypotheses which one employs, and when one finds that therein the fact corresponds to our prevision. But if all these proofs of probability are met with in that which I propose to discuss, as it seems to me they are, this ought to be a very strong confirmation of the success of my inquiry.

Huygens, Treatise on Light, Pref.

44 I derive from the celestial phenomena the forces of gravity with which bodies tend to the sun and the several planets. Then from these forces, by other propositions which are also mathematical, I deduce the motions of the planets, the comets, the moon, and the sea. I wish we could derive the rest of the phenomena of Nature by the same kind of reasoning from mechanical principles, for I am induced by many reasons to suspect that they may all depend upon certain forces by which the particles of bodies, by some causes hitherto unknown, are either

mutually impelled towards one another, and where in regular figures, or are repelled and recede from one another. These forces being unknown, philosophers have hitherto attempted the search of Nature in vain; but I hope the principles here laid down will afford some light either to this or some truer method of philosophy.

Newton, Principia, Pref. to 1st Ed.

- 45 The qualities of bodies, which admit neither intensification nor remission of degrees, and which are found to belong to all bodies within the reach of our experiments, are to be esteemed the universal qualities of all bodies whatsoever. For since the qualities of bodies are only known to us by experiments, we are to hold for universal all such as universally agree with experiments; and such as are not liable to diminution can never be quite taken away. We are certainly not to relinquish the evidence of experiments for the sake of dreams and vain fictions of our own devising; nor are we to recede from the analogy of Nature, which is wont to be simple, and always consonant to itself.

Newton, Principia, III, Rule III

- 46 In experimental philosophy we are to look upon propositions inferred by general induction from phenomena as accurately or very nearly true, notwithstanding any contrary hypotheses that may be imagined, till such time as other phenomena occur, by which they may either be made more accurate, or liable to exceptions.

This rule we must follow, that the argument of induction may not be evaded by hypotheses.

Newton, Principia, III, Rule IV

47 These principles [e.g., gravity] I consider, not as occult qualities, supposed to result from the specific forms of things, but as general laws of nature, by which the things themselves are formed; their truth appearing to us by phenomena, though their causes be not yet discovered. For these are manifest qualities, and their causes only are occult. And the Aristotelians gave the name of occult qualities, not to manifest qualities, but to such qualities only as they supposed to lie hid in bodies, and to be the unknown causes of manifest effects. Such as would be the causes of gravity, and of magnetic and electric attractions, and of fermentations, if we should suppose that these forces or actions arose from qualities unknown to us, and incapable of being discovered and made manifest. Such occult qualities put a stop to the improvement of natural philosophy, and therefore of late years have been rejected. To tell us that every species of things is endowed with an occult specific quality by which it acts and produces manifest effects, is to tell us nothing; but to derive two or three general principles of motion from phenomena, and afterwards to tell us how the properties and actions of all corporeal things follow from those manifest principles, would be a very great step in philosophy, though the causes of those principles were not yet discovered. And, therefore, I scruple not to propose the principles of motion above mentioned, they being of very general extent, and leave their causes to be found out.

Newton, Optics, III, 1

48 I do not know what I may appear to the world, but to myself I seem to have been only like a boy playing on the seashore, and diverting myself in now and then finding a smoother pebble or a prettier shell than ordinary, whilst the great ocean of truth lay all undiscovered before me.

Newton, Remark (1727)

49 Mr. Newton, in his never enough to be admired book, has demonstrated several propositions, so many new truths, before unknown to and are further advances in mathematical knowledge: but, for the discovery of these, it was not the general maxims, “what is, is;” or, “the whole is bigger than a part,” or the like, that helped him. These were not the clues that led him into the discovery of the truth and certainty of those propositions. Nor was it by them that he got the knowledge of those demonstrations, but by finding out intermediate ideas that showed the agreement or disagreement of the ideas, as expressed in the propositions he demonstrated. This is the greatest exercise and improvement of human understanding in the enlarging of knowledge, and advancing the sciences; wherein they are far enough from receiving any help from the contemplation of these or the like magnified maxims.

Locke, Concerning Human Understanding, Bk. IV, VII, 11

50 I deny not but a man, accustomed to rational and regular experiments, shall be able to see further into the nature of bodies and guess righter at their yet unknown properties than one that is a stranger to them: but yet, as I have said, this is but judgment and opinion, not knowledge and certainty. This way of *getting and*

improving our knowledge in substances only by experience and history, which is all that the weakness of our faculties in this state of mediocrity which we are in in this world can attain to, makes me suspect that *natural philosophy is not capable of being made a science*. We are able, I imagine, to reach very little general knowledge concerning the species of bodies and their several properties. Experiments and historical observations we may have, from which we may draw advantages of ease and health, and thereby increase our stock of conveniences for this life; but beyond this I fear our talents reach not, nor are our faculties, as I guess, able to advance.

Locke, Concerning Human Understanding, Bk. IV, XII, 10

- 51 Natural philosophy, as a speculative science, I imagine we have none, and perhaps I may think I have reason to say we never shall be able to make a science of it. The works of nature are contrived by a wisdom, and operate by ways too far surpassing our faculties to discover or capacities to conceive, for us ever to be able to reduce them into a science.

Locke, Some Thoughts Concerning Education, 190

- 52 If ... we consider the difference there is betwixt natural philosophers and other men, with regard to their knowledge of the phenomena, we shall find it consists not in an exacter knowledge of the efficient cause that produces them—for that can be no other than the *will of a spirit*—but only in a greater largeness of comprehension, whereby analogies, harmonies, and agreements are discovered in the works of nature, and

the particular effects explained, that is, reduced to general rules, which rules, grounded on the analogy and uniformness observed in the production of natural effects, are most agreeable and sought after by the mind; for that they extend our prospect beyond what is present and near to us, and enable us to make very probable conjectures touching things that may have happened at very great distances of time and place, as well as to predict things to come; which sort of endeavour towards omniscience is much affected by the mind.

Berkeley, Principles of Human Knowledge, 105

53 I think we may lay down the following conclusions. First, it is plain philosophers amuse themselves in vain, when they inquire for any natural efficient cause, distinct from a *mind* or *spirit*. Secondly, considering the whole creation is the workmanship of a *wise and good Agent*, it should seem to become philosophers to employ their thoughts (contrary to what some hold) about the final causes of things; and I confess I see no reason why pointing out the various ends to which natural things are adapted, and for which they were originally with unspeakable wisdom contrived, should not be thought one good way of accounting for them, and altogether worthy a philosopher. Thirdly, from what has been premised no reason can be drawn why the history of nature should not still be studied, and observations and experiments made, which, that they are of use to mankind, and enable us to draw any general conclusions, is not the result of any immutable habitudes or relations between things themselves, but only of God's goodness and kindness to men in the administration of the world. Fourthly, by a diligent observation of the phenomena within our view,

we may discover the general laws of nature, and from them deduce the other phenomena; I do not say *demonstrate*, for all deductions of that kind depend on a supposition that the Author of nature always operates uniformly, and in a constant observance of those rules we take for principles: which we cannot evidently know.

Berkeley, Principles of Human Knowledge, 107

54 Nature and Nature's laws lay hid in Night;
God said. Let NEWTON be! and all was Light.

Pope, Intended for Sir Isaac Newton

55 The most perfect philosophy of the natural kind only staves off our ignorance a little longer: as perhaps the most perfect philosophy of the moral or metaphysical kind serves only to discover larger portions of it. Thus the observation of human blindness and weakness is the result of all philosophy, and meets us at every turn, in spite of our endeavours to elude or avoid it.

Nor is geometry, when taken into the assistance of natural philosophy, ever able to remedy this defect, or lead us into the knowledge of ultimate causes, by all that accuracy of reasoning for which it is so justly celebrated.... Thus, it is a law of motion, discovered by experience, that the moment or force of any body in motion is in the compound ratio or proportion of its solid contents and its velocity; and consequently, that a small force may remove the greatest obstacle or raise the greatest weight, if, by any contrivance or machinery, we can increase the velocity of that force, so as to make it an overmatch for its antagonist. Geometry assists us in the application of this law, by giving us the just dimensions

of all the parts and figures which can enter into any species of machine; but still the discovery of the law itself is owing merely to experience, and all the abstract reasonings in the world could never lead us one step towards the knowledge of it. When we reason *a priori*, and consider merely any object or cause as it appears to the mind, independent of all observation, it never could suggest to us the notion of any distinct object, such as its effect; much less show us the inseparable and inviolable connexion between them. A man must be very sagacious who could discover by reasoning that crystal is the effect of heat, and ice of cold, without being previously acquainted with the operation of these qualities.

Hume, Concerning Human Understanding, IV, 26-27

56 When we run over libraries, persuaded of these principles, what havoc must we make? If we take in our hand any volume; of divinity or school metaphysics, for instance; let us ask, *Does it contain any abstract reasoning concerning quantity or number? No, Does it contain any experimental reasoning concerning matter of fact and existence? No.* Commit it then to the flames: for it can contain nothing but sophistry and illusion.

Hume, Concerning Human Understanding, XII, 132

57 The philosophers of the last age found out a new universe; and a circumstance which made its discovery more difficult was that no one had so much as suspected its existence. The most sage and judicious were of opinion that it was a frantic rashness to dare so much as to imagine that it was possible to guess the laws by which the celestial bodies move and the manner how

light acts. Galileo, by his astronomical discoveries, Kepler, by his calculation, Descartes (at least, in his dioptrics), and Sir Isaac Newton, in all his works, severally saw the mechanism of the springs of the world. The geometricians have subjected infinity to the laws of calculation. The circulation of the blood in animals, and of the sap in vegetables, have changed the face of Nature with regard to us. A new kind of existence has been given to bodies in the air-pump. By the assistance of telescopes bodies have been brought nearer to one another. Finally, the several discoveries which Sir Isaac Newton has made on light are equal to the boldest things which the curiosity of man could expect after so many philosophical novelties.

Voltaire, Letters on the English, XVI

- 58 It must indeed be confessed that the Royal Society boast their Newton, but then he did not owe his knowledge and discoveries to that body; so far from it that the latter were intelligible to very few of his fellow members. A genius like that of Sir Isaac belonged to all the academies in the world, because all had a thousand things to learn of him.

Voltaire, Letters on the English, XVI

- 59 There prevails among men of letters an opinion that all appearance of science is particularly hateful to women.

Johnson, Rambler No. 173

- 60 *Johnson*. Human experience, which is constantly contradicting theory, is the great test of truth. A system, built upon the discoveries of a great many minds, is always of more strength, than what is produced by the mere workings of any one mind, which, of itself, can do

little. There is not so poor a book in the world that would not be a prodigious effort were it wrought out entirely by a single mind, without the aid of prior investigators.

Boswell, Life of Johnson (July 28, 1763)

61 We very often hear complaints of the shallowness of the present age, and of the decay of profound science. But I do not think that those which rest upon a secure foundation, such as mathematics, physical science, etc., in the least deserve this reproach, but that they rather maintain their ancient fame, and in the latter case, indeed, far surpass it. The same would be the case with the other kinds of cognition, if their principles were but firmly established. In the absence of this security, indifference, doubt, and finally, severe criticism are rather signs of a profound habit of thought. Our age is the age of criticism, to which everything must be subjected. The sacredness of religion, and the authority of legislation, are by many regarded as grounds of exemption from the examination of this tribunal. But, if they are exempted, they become the subjects of just suspicion, and cannot lay claim to sincere respect, which reason accords only to that which has stood the test of a free and public examination.

Kant, Critique of Pure Reason, Pref. to 1st Ed., fn. 2

62 It is only about a century and a half since the wise Bacon gave a new direction to physical studies, or rather—as others were already on the right track—imparted fresh vigour to the pursuit of this new direction. Here, too, as in the case of mathematics, we find evidence of a rapid

intellectual revolution. In the remarks which follow I shall confine myself to the *empirical* side of natural science.

When Galilei experimented with balls of a definite weight on the inclined plane, when Torricelli caused the air to sustain a weight which he had calculated beforehand to be equal to that of a definite column of water, or when Stahl, at a later period, converted metals into lime, and reconverted lime into metal, by the addition and subtraction of certain elements; a light broke upon all natural philosophers. They learned that reason only perceives that which it produces after its own design; that it must not be content to follow, as it were, in the leading-strings of nature, but must proceed in advance with principles of judgement according to unvarying laws, and compel nature to reply to its questions. For accidental observations, made according to no preconceived plan, cannot be united under a necessary law. But it is this that reason seeks for and requires. It is only the principles of reason which can give to concordant phenomena the validity of laws, and it is only when experiment is directed by these rational principles that it can have any real utility. Reason must approach nature with the view, indeed, of receiving information from it, not, however, in the character of a pupil, who listens to all that his master chooses to tell him, but in that of a judge, who compels the witnesses to reply to those questions which he himself thinks fit to propose. To this single idea must the revolution be ascribed, by which, after groping in the dark for so many centuries, natural science was at length conducted into the path of certain progress.

Kant, Critique of Pure Reason, Pref. to 2nd Ed.

63 In matters of science . . . the greatest inventor differs only in degree from the most laborious imitator and apprentice, whereas he differs specifically from one endowed by nature for fine art. No disparagement, however, of those great men, to whom the human race is so deeply indebted, is involved in this comparison of them with those who on the score of their talent for fine art are the elect of nature. The talent for science is formed for the continued advances of greater perfection in knowledge, with all its dependent practical advantages, as also for imparting the same to others. Hence scientists can boast a ground of considerable superiority over those who merit the honour of being called geniuses, since genius reaches a point at which art must make a halt, as there is a limit imposed upon it which it cannot transcend.

Kant, Critique of Aesthetic Judgement, 47

64 Fine art and the sciences, if they do not make man morally better, yet, by conveying a pleasure that admits of universal communication and by introducing polish and refinement into society, make him civilized. Thus they do much to overcome the tyrannical propensities of sense, and so prepare man for a sovereignty in which reason alone shall have sway.

Kant, Critique of Teleological Judgement, 83

65 The impossibility of separating the nomenclature of a science from the science itself is owing to this, that every branch of physical science must consist of three things; the series of facts which are the objects of the science, the ideas which represent these facts, and the words by

which these ideas are expressed. Like three impressions of the same seal, the word ought to produce the idea, and the idea to be a picture of the fact. And, as ideas are preserved and communicated by means of words, it necessarily follows that we cannot improve the language of any science without at the same time improving the science itself; neither can we, on the other hand, improve a science without improving the language or nomenclature which belongs to it. However certain the facts of any science may be and however just the ideas we may have formed of these facts, we can only communicate false impressions to others while we want words by which these may be properly expressed.

Lavoisier, Elements of Chemistry, Pref.

- 66 When we begin the study of any science, we are in a situation, respecting that science, similar to that of children; and the course by which we have to advance is precisely the same which nature follows in the formation of their ideas. In a child, the idea is merely an effect produced by a sensation; and, in the same manner, in commencing the study of a physical science, we ought to form no idea but what is a necessary consequence, and immediate effect, of an experiment or observation. Besides, he that enters upon the career of science is in a less advantageous situation than a child who is acquiring his first ideas. To the child, nature gives various means of rectifying any mistakes he may commit respecting the salutary or hurtful qualities of the objects which surround him. On every occasion his judgments are corrected by experience; want and pain are the necessary consequences arising from false judgment; gratification and pleasure are produced by judging aright. Under such

masters, we cannot fail to become well informed; and we soon learn to reason justly, when want and pain are the necessary consequences of a contrary conduct.

In the study and practice of the sciences it is quite different; the false judgments we form neither affect our existence nor our welfare; and we are not forced by any physical necessity to correct them. Imagination, on the contrary, which is ever wandering beyond the bounds of truth, joined to self-love and that self-confidence we are so apt to indulge, prompts us to draw conclusions which are not immediately derived from facts; so that we become in some measure interested in deceiving ourselves. Hence, it is by no means to be wondered that, in the science of physics in general, men have often made suppositions instead of forming conclusions. These suppositions, handed down from one age to another, acquire additional weight from the authorities by which they are supported, till at last they are received, even by men of genius, as fundamental truths.

The only method of preventing such errors from taking place, and of correcting them when formed, is to restrain and simplify our reasoning as much as possible. This depends entirely upon ourselves, and the neglect of it is the only source of our mistakes. We must trust to nothing but facts: these are presented to us by nature and cannot deceive. We ought, in every instance, to submit our reasoning to the test of experiment and never to search for truth but by the natural road of experiment and observation.

Lavoisier, Elements of Chemistry, Pref.

67 I am far from pretending ... to set aside the necessity of attendance upon lectures and laboratories for such as

wish to acquire accurate knowledge of the science of chemistry. These should familiarise themselves to the employment of apparatus, and to the performance of experiments by actual experience. *Nihil est in intellectu quod non prius fuerit in sensu* [Nothing is in the intellect that was not first in the senses], the motto which the celebrated Rouelle caused to be painted in large characters in a conspicuous part of his laboratory, is an important truth never to be lost sight of either by teachers or students of chemistry.

Lavoisier, Elements of Chemistry, III, Introduction

68 The best method known for determining the quantities of substances submitted to chemical experiment or resulting from them, is by means of an accurately constructed beam and scales, with properly regulated weights, which well known operation is called *weighing*. The denomination and quantity of the weights used as an unit or standard for this purpose are extremely arbitrary, and vary not only in different kingdoms, but even in different provinces of the same kingdom, and in different cities of the same province. This variation is of infinite consequence to be well understood in commerce and in the arts; but, in chemistry, it is of no moment what particular denomination of weight be employed, provided the results of experiments be expressed in convenient fractions of the same denomination. For this purpose, until all the weights used in society be reduced to the same standard, it will be sufficient for chemists in different parts to use the common pound of their own country as the unit or standard, and to express all its fractional parts in decimals instead of the arbitrary divisions now in use. By this means the chemists of all

countries will be thoroughly understood by each other, as, although the absolute weights of the ingredients and products cannot be known, they will readily, and without calculation, be able to determine the relative proportions of these to each other with the utmost accuracy; so that in this way we shall be possessed of an universal language for this part of chemistry.

Lavoisier, Elements of Chemistry, III, 1

69 The present rage for wide and unrestrained speculation seems to be a kind of mental intoxication, arising, perhaps, from the great and unexpected discoveries which have been made of late years in various branches of science. To men elate and giddy with such successes, everything appeared to be within the grasp of human powers; and, under this illusion, they confounded subjects where no real progress could be proved with those where the progress had been marked, certain, and acknowledged. Could they be persuaded to sober themselves with a little severe and chastised thinking, they would see that the cause of truth and of sound philosophy cannot but suffer by substituting wild flights and unsupported assertions for patient investigation and well authenticated proofs.

Malthus, Population, IX

70 Without my attempts in natural science, I should never have learned to know mankind such as it is. In nothing else can we so closely approach pure contemplation and thought, so closely observe the errors of the senses and of the understanding.

Goethe, Conversations with Eckermann (Feb. 13, 1829)

71 Science appears but what in truth she is,
Not as our glory and our absolute boast,
But as a succedaneum, and a prop
To our infirmity. No officious slave
Art thou of that false secondary power
By which we multiply distinctions, then
Deem that our puny boundaries are things
That we perceive, and not that we have made.

Wordsworth, The Prelude, II, 212

72 The Evangelist St. John my patron was:
Three Gothic courts are his, and in the first
Was my abiding-place, a nook obscure;
Right underneath, the College kitchens made
A humming sound, less tuneable than bees,
But hardly less industrious; with shrill notes
Of sharp command and scolding intermixed.
Near me hung Trinity's loquacious clock,
Who never let the quarters, night or day,
Slip by him unproclaimed, and told the hours
Twice over with a male and female voice.
Her pealing organ was my neighbour too;
And from my pillow, looking forth by light
Of moon or favouring stars, I could behold
The antechapel where the statue stood
Of Newton with his prism and silent face,
The marble index of a mind forever
Voyaging through strange seas of Thought, alone.

Wordsworth, The Prelude, III, 46

73 The state is universal in form, a form whose essential
principle is thought. This explains why it was in the state

that freedom of thought and science had their origin. It was a church, on the other hand, which burnt Giordano Bruno, forced Galileo to recant on his knees his exposition of the Copernican view of the solar system, and so forth. Science too, therefore, has its place on the side of the state since it has one element, its form, in common with the state, and its aim is knowledge, knowledge of objective truth and rationality in terms of thought. Such knowledge may, of course, fall from the heights of science into opinion and deductive argumentation, and, turning its attention to ethical matters and the organization of the state, set itself against their basic principles. And it may perhaps do this while making for this opening—as if it were reason and the right of subjective self-consciousness—the same pretentious claim as the church makes for its own sphere, the claim, namely, to be free from restraint in its opinions and convictions.

Hegel, Philosophy of Right, 270

74 The knowledge of rational mechanics, which the most ancient nations had been able to acquire, has not come down to us, and the history of this science, if we except the first theorems in harmony, is not traced up beyond the discoveries of Archimedes. This great geometer explained the mathematical principles of the equilibrium of solids and fluids. About eighteen centuries elapsed before Galileo, the originator of dynamical theories, discovered the laws of motion of heavy bodies. Within this new science Newton comprised the whole system of the universe. The successors of these philosophers have extended these theories, and given them an admirable perfection: they have taught us that the most diverse

phenomena are subject to a small number of fundamental laws which are reproduced in all the acts of nature. It is recognised that the same principles regulate all the movements of the stars, their form, the inequalities of their courses, the equilibrium and the oscillations of the seas, the harmonic vibrations of air and sonorous bodies, the transmission of light, capillary actions, the undulations of fluids, in fine the most complex effects of all the natural forces.

Fourier, Analytical Theory of Heat, Preliminary Discourse

75 The new theories explained in our work are united for ever to the mathematical sciences, and rest like them on invariable foundations; all the elements which they at present possess they will preserve, and will continually acquire greater extent. Instruments will be perfected and experiments multiplied. The analysis which we have formed will be deduced from more general, that is to say, more simple and more fertile methods common to many classes of phenomena. . . . The theory itself will direct all these measures, and assign their precision. No considerable progress can hereafter be made which is not founded on experiments such as these; for mathematical analysis can deduce from general and simple phenomena the expression of the laws of nature; but the special application of these laws to very complex effects demands a long series of exact observations.

Fourier, Analytical Theory of Heat, Preliminary Discourse

76 There is no science which, having attained the positive stage, does not bear marks of having passed through the others. Some time since it was (whatever it might be)

composed, as we can now perceive, of metaphysical abstractions; and, further back in the course of time, it took its form from theological conceptions. We shall have only too much occasion to see, as we proceed, that our most advanced sciences still bear very evident marks of the two earlier periods through which they have passed.

Comte, Positive Philosophy, Introduction, I

77 All good intellects have repeated, since Bacon's time, that there can be no real knowledge but that which is based on observed facts. This is incontestable, in our present advanced stage; but, if we look back to the primitive stage of human knowledge, we shall see that it must have been otherwise then. If it is true that every theory must be based upon observed facts, it is equally true that facts can not be observed without the guidance of some theory. Without such guidance, our facts would be desultory and fruitless; we could not retain them: for the most part we could not even perceive them.

Comte, Positive Philosophy, Introduction, 1

78 Because it is proposed to consolidate the whole of our acquired knowledge into one body of homogeneous doctrine, it must not be supposed that we are going to study this vast variety as proceeding from a single principle, and as subjected to a single law.... Our intellectual resources are too narrow, and the universe is too complex, to leave any hope that it will ever be within our power to carry scientific perfection to its last degree of simplicity.... While pursuing the philosophical aim of all science, the lessening of the number of general laws requisite for the explanation of natural phenomena, we

shall regard as presumptuous every attempt, in all future time, to reduce them rigorously to one.

Comte, Positive Philosophy, Introduction, 1

79 *The Lycee*, No. 36 for January 1st, has a long and rather premature article, in which it endeavours to show anticipations by French philosophers of my researches. It however mistakes the erroneous results of MM. Fresnel and Ampere for true ones, and then imagines my true results are like those erroneous ones. I notice it here, however, for the purpose of doing honour to Fresnel in a much higher degree than would have been merited by a feeble anticipation of the present investigations. That great philosopher, at the same time with myself and fifty other persons, made experiments which the present paper proves could give no expected result. He was deceived for the moment and published his imaginary success; but on more carefully repeating his trials, he could find no proof of their accuracy; and, in the high and pure philosophic desire to remove error as well as discover truth, he recanted his first statement. The example of Berzelius regarding the first Thorina is another instance of this fine feeling; and as occasions are not rare, it would be to the dignity of science if such examples were more frequently followed.

Faraday, Experimental Researches in Electricity, I, 79, fn.

80 It is the great beauty of our science. Chemistry that advancement in it, whether in a degree great or small, instead of exhausting the subjects of research, opens the doors to further and more abundant knowledge,

overflowing with beauty and utility, to those who will be at the easy personal pains of undertaking its experimental investigation.

Faraday, Experimental Researches in Electricity, VII, 871

81 The views I have taken of the definite action of electricity in decomposing bodies, and the identity of the power so used with the power to be overcome, founded not on a mere opinion or general notion, but on facts which, being altogether new, were to my mind precise and conclusive, gave me, as I conceived, the power of examining the question with advantages not before {assessed by any, and which might compensate, on my part, for the superior clearness and extent of intellect on theirs. Such are the considerations which have induced me to suppose I might help in deciding the question, and be able to render assistance in that great service of removing *doubtful knowledge*. Such knowledge is the early morning light of every advancing science, and is essential to its development; but the man who is engaged in dispelling that which is deceptive in it, and revealing more clearly that which is true, is as useful in his place, and as necessary to the general progress of the science, as he who first broke through the intellectual darkness, and opened a path into knowledge before unknown to man.

Faraday, Experimental Researches in Electricity, VIII, 876

82 The science of electricity is in that state in which every part of it requires experimental investigation; not merely for the discovery of new effects, but what is just now of

far more importance, the development of the means by which the old effects are produced, and the consequent more accurate determination of the first principles of action of the most extraordinary and universal power in nature: and to those philosophers who pursue the inquiry zealously yet cautiously, combining experiment with analogy, suspicious of their preconceived notions, paying more respect to a fact than a theory, not too hasty to generalize, and above all things, willing at every step to cross-examine their own opinions, both by reasoning and experiment, no branch of knowledge can afford so fine and ready a field for discovery as this. Such is most abundantly shown to be the case by the progress which electricity has made in the last thirty years: chemistry and magnetism have successively acknowledged its overruling influence: and it is probable that every effect depending upon the powers of inorganic matter, and perhaps most of those related to vegetable and animal life, will ultimately be found subordinate to it.

Faraday, Experimental Researches in Electricity, XI, 1161

- 83 I have no clear idea of the physical condition constituting the charged magnetic state; i.e. the state of the source of magnetic power: or of the coercitvity by which that state is either resisted in its attainment, or sustained in its permanent condition; for the hypotheses as yet put forth give no satisfaction to my mind. I profess rather to point out the difficulties in the way of the views, which are at present somewhat too easily accepted, and to shake men's minds from their habitual trust in them; for, next to developing and expounding, that appears to me the most useful and effectual way of really advancing the subject:—it is better to be aware, or even to suspect, we are

wrong, than to be unconsciously or easily led to accept an error as right.

Faraday, Experimental Researches in Electricity, The Moving Conductor, 3362

84 The laws of nature, as we understand them, are the foundation of our knowledge in natural things. So much as we know of them has been developed by the successive energies of the highest intellects, exerted through many ages. After a most rigid and scrutinizing examination upon principle and trial, a definite expression has been given to them; they have become, as it were, our belief or trust. From day to day we still examine and test our expressions of them. We have no interest in their retention if erroneous; on the contrary, the greatest discovery a man could make would be to prove that one of these accepted laws was erroneous, and his greatest honour would be the discovery.

Faraday, Observations on Mental Education

85 Science moves, but slowly, slowly, creeping on from point to point,

Tennyson, Locksley Hall, 134

86 Wisdom does not inspect, but behold. We must look a long time before we can see. Slow are the beginnings of philosophy. He has something demoniacal in him, who can discern a law or couple two facts. we can imagine a time when 'Water runs down hill' may have been taught in the schools. The true man of science will know nature better by his finer organization; he will smell, taste, see, hear, feel, better than other men. His will be a deeper and

finer experience. we do not learn by inference and deduction and the application of mathematics to philosophy, but by direct intercourse and sympathy. It is with science as with ethics—we cannot know truth by contrivance and method; the Baconian is as false as any other, and with all the helps of machinery and the arts, the most scientific will still be the healthiest and friendliest man, and possess a more perfect Indian wisdom.

Thoreau, Natural History of Massachusetts

- 87 When it was first said that the sun stood still and the world turned round, the common sense of mankind declared the doctrine false; but the old saying of *Vox populi, vox Dei*, as every philosopher knows, cannot be trusted in science.

Darwin, Origin of Species, VI

- 88 It can hardly be supposed that a false theory would explain, in so satisfactory a manner as does the theory of natural selection, the several large classes of facts above specified. It has recently been objected that this is an unsafe method of arguing; but it is a method used in judging of the common events of life, and has often been used by the greatest natural philosophers. The undulatory theory of light has thus been arrived at; and the belief in the revolution of the earth on its own axis was until lately supported by hardly any direct evidence. It is no valid objection that science as yet throws no light on the far higher problem of the essence or origin of life. Who can explain what is the essence of the attraction of gravity? No one now objects to following out the results

consequent on this unknown clement of attraction; not withstanding that Leibnitz formerly accused Newton of introducing "occult qualities and miracles into philosophy."

Darwin, Origin of Species, XV

89 False facts are highly injurious to the progress of science, for they often endure long; but false views, if supported by some evidence, do little harm, for every one takes a salutary pleasure in proving their falseness: and when this is done, one path towards error is closed and the road to truth is often at the same time opened.

Darwin, Descent of Man, III, 21

90 Science is, I believe, nothing but *trained and organised common sense* differing from the latter only as a veteran may differ from a raw recruit: and its methods differ from those of common sense only so far as the guardsman's cut and thrust differ from the manner in which a savage wields his club. The primary power is the same in each case, and perhaps the untutored savage has the more brawny arm of the two. The *real* advantage lies in the point and polish of the swordsman's weapon; in the trained eye quick to spy out the weakness of the adversary; in the ready hand prompt to follow it on the instant. But, after all, the sword exercise is only the hewing and poking of the clubman developed and perfected.

So, the vast results obtained by Science are won by no mystical faculties, by no mental processes, other than those which are practised by every one of us, in the humblest and meanest affairs of life.

*T. H. Huxley, Educational Value of the Natural History
Sciences*

91 Faith is a fine invention
When gentlemen can see.
But microscopes are prudent
In an emergency.

Emily Dickinson, Faith Is

92 We know how easily the uselessness of almost every branch of knowledge may be proved, to the complete satisfaction of those who do not possess it. How many, not altogether stupid men, think the scientific study of languages useless, think ancient literature useless, all erudition useless, logic and metaphysics useless, poetry and the fine arts idle and frivolous, political economy purely mischievous? Even history has been pronounced useless and mischievous by able men. Nothing but that acquaintance with external nature, empirically acquired, which serves directly for the production of objects necessary to existence or agreeable to the senses, would get its utility recognised if people had the least encouragement to disbelieve it.

Mill, Representative Government, VI

93 Whatever be the most proper mode of expressing it, the proposition that the course of nature is uniform is the fundamental principle, or general axiom, of Induction. It would yet be a great error to offer this large generalisation as any explanation of the inductive process. On the contrary, I hold it to be itself an instance of induction, and induction by no means of the most obvious kind. Far from being the first induction we make,

it is one of the last, or at all events one of those which are latest in attaining strict philosophical accuracy. As a general maxim, indeed, it has scarcely entered into the minds of any but philosophers; nor even by them, as we shall have many opportunities of remarking, have its extent and limits been always very justly conceived. The truth is, that this great generalisation is itself founded on prior generalisations. The obscurer laws of nature were discovered by means of it, but the more obvious ones must have been understood and assented to as general truths before it was ever heard of. We should never have thought of affirming that all phenomena take place according to general laws, if we had not first arrived, in the case of a great multitude of phenomena, at some knowledge of the laws themselves; which could be done no otherwise than by induction.

Mill, System of Logic, Bk. III, III, 1

94 It must be kept constantly in view... that in science, those who speak of explaining any phenomenon mean (or should mean) pointing out not some more familiar, but merely some more general phenomenon, of which it is a partial exemplification; or some laws of causation which produce it by their joint or successive action, and from which, therefore, its conditions may be determined deductively. Every such operation brings us a step nearer towards answering the question which was stated ... as comprehending the whole problem of the investigation of nature, viz. What are the fewest assumptions, which being granted, the order of nature as it exists would be the result? What are the fewest general propositions from which all the uniformities existing in nature could be deduced?

The laws, thus explained or resolved, are sometimes said to be *accounted for*, but the expression is incorrect, if taken to mean any-thing more than what has been already stated. In minds not habituated to accurate thinking, there is often a confused notion that the general laws are the *causes* of the partial ones; that the law of general gravitation, for example, causes the phenomenon of the fall of bodies to the earth. But to assert this would be a misuse of the word cause: terrestrial gravity is not an effect of general gravitation, but a case of it; that is, one kind of the particular instances in which that general law obtains. To account for a law of nature means, and can mean, nothing more than to assign other laws more general, together with collocations, which laws and collocations being supposed, the partial law follows without any additional supposition.

Mill, System of Logic, Bk. III, XII, 6

- 95 Fundamentally, all sciences reason in the same way and aim at the same object. They all try to reach knowledge of the law of phenomena, so as to foresee, vary or master phenomena.

Claude Bernard, Experimental Medicine, I,1

- 96 Men of science who mean to embrace the principles of the experimental method as a whole, must fulfill two classes of conditions and must possess two qualities of mind which are indispensable if they are to reach their goal and succeed in The discovery of truth. First, they must have ideas which they submit to the control of facts; but at the same time they must make sure that the facts which serve as starting point or as control for the

idea are correct and well established; they must be at once observers and experimenters.

Claude Bernard, Experimental Medicine, I, 1

97 The first condition to be fulfilled by men of science, applying themselves to the investigation of natural phenomena, is to maintain absolute freedom of mind, based on philosophic doubt. Yet we must not be in the least sceptical; we must believe in science, i.e., in determinism; we must believe in a complete and necessary relation between things, among the phenomena proper to living beings as well as in all others; but at the same time we must be thoroughly convinced that we know this relation only in a more or less approximate way, and that the theories we hold are far from embodying changeless truths. When we propound a general theory in our sciences, we are sure only that, literally speaking, all such theories are false. They are only partial and provisional truths which are necessary' to us, as steps on which we rest, so as to go on with investigation; they embody only the present state of our knowledge, and consequently they must change with the growth of science, and all the more often when sciences are less advanced in their evolution.

Claude Bernard, Experimental Medicine, I, 2

98 The object of science is everywhere the same: to learn the material conditions of phenomena. But though this goal is the same in the physico-chemical and in biological sciences, it is much harder to reach in the latter because of the mobility and complexity of the phenomena which we meet.

Claude Bernard, Experimental Medicine, II, 1

99 An experimenter who has made an experiment, in conditions which he believes were determined, may happen not to get the same results in a new series of investigations as in his first observation; in repeating the experiment, with fresh precautions, it may happen again that, instead of his first result, he may encounter a wholly different one. In such a situation, what is to be done? Should we acknowledge that the facts are indeterminable? Certainly not, since that cannot be. We must simply acknowledge that experimental conditions, which we believed to be known, are not known. We must more closely study, search out and define the experimental conditions, for the facts cannot be contradictory one to another; they can only be indeterminate. Facts never exclude one another, they are simply explained by differences in the conditions in which they are born. So an experimenter can never deny a fact that he has seen and observed, merely because he cannot rediscover it.

Claude Bernard, Experimental Medicine, II, 1

100 Science and men of science are cosmopolitans, and it seems hardly important whether a scientific truth develops at any particular spot on the globe, as long as the general diffusion of science allows all men to share in it.

Claude Bernard, Experimental Medicine, II, 2

101 All human sciences have traveled along [the same] path. Arriving at infinitesimals, mathematics, the most exact of sciences, abandons the process of analysis and

enters on the new process of the integration of unknown, infinitely small, quantities. Abandoning the conception of cause, mathematics seeks law, that is, the property common to all unknown, infinitely small, elements. In another form but along the same path of reflection the other sciences have proceeded. When Newton enunciated the law of gravity he did not say that the sun or the earth had a property of attraction; he said that all bodies from the largest to the smallest have the property of attracting one another, that is, leaving aside the question of the cause of the movement of the bodies, he expressed the property common to all bodies from the infinitely large to the infinitely small. The same is done by the natural sciences: leaving aside the question of cause, they seek for laws.

Tolstoy, War and Peace, II Epilogue, XI

102 What we call science today is merely a haphazard collection of disconnected scraps of knowledge, most of them useless, and many of which, instead of giving us absolute truth provide the most bizarre delusions, presented as truth one day and refuted the next.

Tolstoy, What Is Religion?, I

103 It must be said that in some of these fields [of psychology] the results have as yet borne little theoretic fruit commensurate with the great labor expended in their acquisition. But facts are facts, and if we only get enough of them they are sure to combine. New ground will from year to year be broken, and theoretic results will grow. Meanwhile the experimental method has quite

changed the face of the science so far as the latter is a record of mere work done.

William James, Psychology, VII

104 In a scientific research... the inquirer starts with a fact of which he seeks the reason, or with an hypothesis of which he seeks the proof. In either case he keeps turning the matter incessantly in his mind until, by the arousal of associate upon associate, some habitual, some similar, one arises which he recognizes to suit his need. This, however, may take years. No rules can be given by which the investigator may proceed straight to his result; but both here and in the case of reminiscence the accumulation of helps in the way of associations may advance more rapidly by the use of certain routine methods. In striving to recall a thought, for example, we may of set purpose run through the successive classes of circumstance with which it may possibly have been connected, trusting that when the right member of the class has turned up it will help the thought's revival. Thus we may run through all the *places* in which we may have had it. We may run through the *persons* whom we remember to have conversed with, or we may call up successively all the *books* we have lately been reading. If we are trying to remember a person we may run through a list of streets or of professions. Some item out of the lists thus methodically gone over will very likely be associated with the fact we are in need of, and may suggest it or help to do so. And yet the item might never have arisen without such systematic procedure. In scientific research this accumulation of associates has been methodized by Mill under the title of "The Four Methods of Experimental Inquiry." By the "method of

agreement," by that of "difference," by those of "residues" and "concomitant variations" (which cannot here be more nearly defined), we make certain lists of cases; and by ruminating these lists in our minds the cause we seek will be more likely to emerge. But the final stroke of discovery is only prepared, not effected, by them. The brain-tracts must, of their own accord, shoot the right way at last, or we shall still grope in darkness. That in some brains the tracts do shoot the right way much oftener than in others, and that we cannot tell why,—these are ultimate facts to which we must never close our eyes. Even in forming our lists of instances according to Mill's methods, we are at the mercy of the spontaneous workings of Similarity in our brain.

William James, Psychology, XIV

105 The history of science is strewn with wrecks and ruins of theory—essences and principles, fluids and forces—once fondly clung to, but found to hang together with no facts of sense. And exceptional phenomena solicit our belief in vain until such time as we chance to conceive them as of kinds already admitted to exist. What science means by "verification" is no more than this, that no object of conception shall be believed which sooner or later has not some permanent and vivid object of sensation for its term.

William James, Psychology, XXI

106 Every scientific conception is in the first instance a "spontaneous variation" in someone's brain. For one that proves useful and applicable there are a thousand that perish through their worthlessness. Their genesis is

strictly akin to that of the flashes of poetry and sallies of wit to which the instable brain-paths equally give rise. But whereas the poetry and wit (like the science of the ancients) are their "own excuse for being," and have to run the gauntlet of no farther test, the "scientific" conceptions must prove their worth by being "verified." This test, however, is the cause of their preservation not that of their production.

William James, Psychology, XXVIII

107 The aspiration to be "scientific" is such an idol of the tribe to the present generation, is so sucked in with his mother's milk by every one of us, that we find it hard to conceive of a creature who should not feel it, and harder still to treat it freely as the altogether peculiar and one-sided objective interest which it is. But as a matter of fact, few even of the cultivated members of the race have shared it; it was invented but a generation or two ago.

William James, Psychology, XXVIII, fn.

108 Thousands of years ago men started to cast the chaos of nature's sequences and juxtapositions into a form that might seem intelligible. Many were their ideal prototypes of rational order: teleological and aesthetic ties between things, causal and substantial bonds, as well as logical and mathematical relations. The most promising of these ideal systems at first were of course the richer ones, the sentimental ones. The baldest and least promising were the mathematical ones; but the history of the latter's application is a history of steadily advancing successes, whilst that of the sentimentally richer systems is one of relative sterility and failure....

When you give things mathematical and mechanical names and call them just so many solids in just such positions, describing just such paths with just such velocities, all is changed. Your sagacity finds its reward in the verification by nature of all the deductions which you may next proceed to make. Your "things" realize all the *consequences* of the names by which you classed them. . . . The ideal which this philosophy strives after is a mathematical world-formula, by which, if all the collocations and motions at a given moment were known, it would be possible to reckon those of any wished-for future moment, by simply considering the necessary geometrical, arithmetical, and logical implications. Once we have the world in this bare shape, we can fling our net of *a priori* relations over all its terms, and pass from one of its phases to another by inward thought-necessity. Of course it is a world with a very minimum of rational *stuff*. The sentimental facts and relations are butchered at a blow. But the rationality yielded is so superbly complete in *form* that to many minds this atones for the loss, and reconciles the thinker to the notion of a purposeless universe, in which all the things and qualities men love, *dulcissima mundi nomina*, are but illusions of our fancy attached to accidental clouds of dust which will be dissipated by the eternal cosmic weather as carelessly as they were formed.

William James, Psychology, XXVIII

109 The most useful investigator, because the most sensitive observer, is always he whose eager interest in one side of the question is balanced by an equally keen nervousness lest he become deceived. Science has organized this nervousness into a regular *technique*, her

so-called method of verification; and she has fallen so deeply in love with the method that one may even say she has ceased to care for truth by itself at all. It is only truth as technically verified that interests her. The truth of truths might come in merely affirmative form, and she would decline to touch it.

William James, Will to Believe

110 The laity are struck to see how ephemeral scientific theories are. After some years of prosperity, they see them successively abandoned; they see ruins accumulate upon ruins; they foresee that the theories fashionable to-day will shortly succumb in their turn and hence they conclude that these are absolutely idle. This is what they call the *bankruptcy of science*.

Their scepticism is superficial; they give no account to themselves of the aim and the role of scientific theories; otherwise they would comprehend that the ruins may still be good for something.

Poincare, Science and Hypothesis, IV, 10

111 If we ought not to fear moral truth, still less should we dread scientific truth. In the first place it can not conflict with ethics. Ethics and science have their own domains, which touch but do not interpenetrate. The one shows us to what goal we should aspire, the other, given the goal, teaches us how to attain it. So they can never conflict since they can never meet. There can no more be immoral science than there can be scientific morals.

But if science is feared, it is above all because it can not give us happiness. Of course it can not. We may even ask whether the beast does not suffer less than man. But

can we regret that earthly paradise where man brute-like was really immortal in knowing not that he must die? When we have tasted the apple, no suffering can make us forget its savor. We always come back to it. Could it be otherwise? As well ask if one who has seen and is blind will not long for the light. Man, then, can not be happy through science, but to-day he can much less be happy without it.

Poincare, Value of Science, Intro.

112 How do we discover the individual laws of Physics, and what is their nature? It should be remarked, to begin with, that we have no right to assume that any physical laws exist, or if they have existed up to now, that they will continue to exist in a similar manner in future. It is perfectly conceivable that one fine day Nature should cause an unexpected event to occur which would baffle us all; and if this were to happen we would be powerless to make any objection, even if the result would be that, in spite of our endeavours, we should fail to introduce order into the resulting confusion. In such an event, the only course open to science would be to declare itself bankrupt. For this reason, science is compelled to begin by the general assumption that a general rule of law dominates throughout Nature.

Planck, Universe in the Light of Modern Physics, 5

113 There have been times when science and philosophy were alien, if not actually antagonistic to each other. These times have passed. Philosophers have realized that they have no right to dictate to scientists their aims and the methods for attaining them; and scientists have

learned that the starting-point of their investigations does not lie solely in the perceptions of the senses, and that science cannot exist without some small portion of metaphysics. Modern Physics impresses us particularly with the truth of the old doctrine which teaches that there are realities existing apart from our sense-perceptions, and that there are problems and conflicts where these realities are of greater value for us than the richest treasures of the world of experience.

Planck, Universe in the Light of Modern Physics, 8

114 Our credulity, though enormous, is not boundless; and our stock of it is quite used up by our mediums, clairvoyants, hand readers, slate writers, Christian Scientists, psychoanalysts, electronic vibration diviners, therapists of all schools registered and unregistered, astrologers, astronomers who tell us that the sun is nearly a hundred million miles away and that Betelgeuse is ten times as big as the whole universe, physicists who balance Betelgeuse by describing the incredible smallness of the atom, and a host of other marvel mongers whose credulity would have dissolved the Middle Ages in a roar of sceptical merriment. In the Middle Ages people believed that the earth was flat, for which they had at least the evidence of their senses: we believe it to be round, not because as many as one per cent of us could give the physical reasons for so quaint a belief, but because modern science has convinced us that nothing that is obvious is true, and that everything that is magical, improbable, extraordinary, gigantic, microscopic, heartless, or outrageous is scientific.

Shaw, Saint Joan, Pref.

115 Induction presupposes metaphysics. In other words, it rests upon an antecedent rationalism. You cannot have a rational justification for your appeal to history till your metaphysics has assured you that there is a history to appeal to; and like-wise your conjectures as to the future presuppose some basis of knowledge that there is a future already subjected to some determinations. The difficulty is to make sense of either of these ideas. But unless you have done so, you have made nonsense of induction.

You will observe that I do not hold induction to be in its essence the derivation of general laws. It is the divination of some characteristics of a particular future from the known characteristics of a particular past. The wider assumption of general laws holding for all cognisable occasions appears a very unsafe addendum to attach to this limited knowledge.

Whitehead, Science and the Modern Worlds III

116 The progress of science consists in observing these interconnections and in showing with a patient ingenuity that the events of this evershifting world are but examples of a few general connections or relations called laws. To see what is general in what is particular and what is permanent in what is transitory is the aim of scientific thought. In the eye of science, the fall of an apple, the motion of a planet round a sun, and the clinging of the atmosphere to the earth are all seen as examples of the law of gravity. This possibility of disentangling the most complex evanescent circumstances into various examples of permanent laws is the controlling idea of modern thought.

Whitehead, Introduction to Mathematics, I

117 All mathematical calculations about the course of nature must start from some assumed law' of nature.... Accordingly, however accurately we have calculated that some event must occur, the doubt always remains—Is the law true? If the law states a precise result, almost certainly it is not precisely accurate; and thus even at the best the result, precisely as calculated, is not likely to occur. But then we have no faculty capable of observation with ideal precision, so, after all, our inaccurate laws may be good enough.

Whitehead, Introduction to Mathematics, III

118 In science the man of real genius is the man who invents a new method. The notable discoveries are often made by his successors, who can apply the method with fresh vigour, unimpaired by the previous labour of perfecting it; but the mental calibre of the thought required for their work, however brilliant, is not so great as that required by the first inventor of the method.

Russell, Place of Science in a Liberal Education

119 The kernel of the scientific outlook is a thing so simple, so obvious, so seemingly trivial, that the mention of it may almost excite derision. The kernel of the scientific outlook is the refusal to regard our own desires, tastes, and interests as affording a key to the understanding of the world. Stated thus baldly, this may seem no more than a trite truism. But to remember it consistently in matters arousing our passionate partisanship is by no means easy, especially where the available evidence is uncertain and inconclusive.

Russell, Place of Science in a Liberal Education

120 Man has existed for about a million years. He has possessed writing for about 6,000 years, agriculture somewhat longer, but perhaps not much longer. Science, as a dominant factor in determining the beliefs of educated men, has existed for about 300 years; as a source of economic technique, for about 150 years. In this brief period it has proved itself an incredibly powerful revolutionary force. When we consider how recently it has risen to power, we find ourselves forced to believe that we are at the very beginning of its work in transforming human life.

Russell, Science and Tradition

121 The effect of science upon our view of man's place in the universe has been of two opposite kinds; it has at once degraded and exalted him. It has degraded him from the standpoint of contemplation, and exalted him from that of action. The latter effect has gradually come to outweigh the former, but both have been important.

Russell, Science and Tradition

122 The way in which science arrives at its beliefs is quite different from that of mediaeval theology. Experience has shown that it is dangerous to start from general principles and proceed deductively, both because the principles may be untrue and because the reasoning based upon them may be fallacious. Science starts, not from large assumptions, but from particular facts discovered by observation or experiment. From a number of such facts a general rule is arrived at, of which, if it is true, the facts in question are instances. This rule is not positively

asserted, but is accepted, to begin with, as a working hypothesis. If it is correct, certain hitherto unobserved phenomena will take place in certain circumstances. If it is found that they do take place, that so far confirms the hypothesis; if they do not, the hypothesis must be discarded and a new one must be invented. However many facts are found to fit the hypothesis, that does not make it certain, although in the end it may come to be thought in a high degree probable; in that case, it is called a theory rather than a hypothesis. A number of different theories, each built directly upon facts, may become the basis for a new and more general hypothesis from which, if true, they all follow; and to this process of generalization no limit can be set. But whereas, in mediaeval thinking, the most general principles were the starting point, in science they are the final conclusion—final, that is to say, at a given moment, though liable to become instances of some still wider law at a later stage.

Russell, Religion and Science, I

123 The view is often defended that sciences should be built up on clear and sharply defined basal concepts. In actual fact no science, not even the most exact, begins with such definitions. The true beginning of scientific activity consists rather in describing phenomena and then in proceeding to group, classify, and correlate them. Even at the stage of description, it is not possible to avoid applying certain abstract ideas to the material in hand, ideas derived from various sources and certainly not the fruit of the new experience only. Still more indispensable are such ideas—which will later become the basal concepts of the science—as the material is further elaborated. They must at first necessarily possess some

measure of uncertainty; there can be no question of any clear delimitation of their content. So long as they remain in this condition, we come to an understanding about their meaning by repeated references to the material of observation, from which we seem to have deduced our abstract ideas, but which is, in point of fact, subject to them. Thus, strictly speaking, they are in the nature of conventions; although everything depends on their being chosen in no arbitrary manner, but determined by the important relations they have to the empirical material—relations that we seem to divine before we can clearly recognize and demonstrate them. It is only after more searching investigation of the field in question that we are able to formulate with increased clarity the scientific concepts underlying it, and progressively so to modify these concepts that they become widely applicable and at the same time consistent logically. Then, indeed, it may be time to immure them in definitions. The progress of science, however, demands a certain elasticity even in these definitions.

Freud, Instincts and Their Vicissitudes

124 It is a mistake to believe that a science consists in nothing but conclusively proved propositions, and it is unjust to demand that it should. It is a demand only made by those who feel a craving for authority in some form and a need to replace the religious catechism by something else, even if it be a scientific one. Science in its catechism has but few apodictic precepts; it consists mainly of statements which it has developed to varying degrees of probability. The capacity to be content with these approximations to certainty and the ability to carry on constructive work despite the lack of final

confirmation are actually a mark of the scientific habit of mind.

Freud, General Introduction to Psycho-Analysis, III

125 Humanity has in the course of time had to endure from the hands of science two great outrages upon its naive self-love. The first was when it realized that our earth was not the centre of the universe, but only a tiny speck in a world-system of a magnitude hardly conceivable; this is associated in our minds with the name of Copernicus, although Alexandrian doctrines taught something very similar. The second was when biological research robbed man of his peculiar privilege of having been specially created, and relegated him to a descent from the animal world, implying an ineradicable animal nature in him: this transvaluation has been accomplished in our own time upon the instigation of Charles Darwin, Wallace, and their predecessors, and not without the most violent opposition from their contemporaries. But man's craving for grandiosity is now suffering the third and most bitter blow from present-day psychological research which is endeavouring to prove to the ego of each one of us that he is not even master in his own house, but that he must remain content with the veriest scraps of information about what is going on unconsciously in his own mind. We psycho-analysts were neither the first nor the only ones to propose to mankind that they should look inward; but it appears to be our lot to advocate it most insistently and to support it by empirical evidence which touches every man closely. This is the kernel of the universal revolt against our science, of the total disregard of academic courtesy in dispute, and the liberation of opposition from all the constraints of impartial logic.

Freud, General Introduction to Psycho-Analysis, XVIII

126 It is inadmissible to declare that science is one field of human intellectual activity, and that religion and philosophy are others, at least as valuable, and that science has no business to interfere with the other two, that they all have an equal claim to truth, and that every one is free to choose whence he shall draw his convictions and in what he shall place his belief. Such an attitude is considered particularly respectable, tolerant, broadminded, and free from narrow prejudices. Unfortunately it is not tenable; it shares all the pernicious qualities of an entirely unscientific *Weltanschauung* [world view] and in practice comes to much the same thing. The bare fact is that truth cannot be tolerant and cannot admit compromise or limitations, that scientific research looks on the whole field of human activity as its own, and must adopt an uncompromisingly critical attitude towards any other power that seeks to usurp any part of its province.

Freud, General Introduction to Psycho-Analysis, XXXV

127 Scientific thought is, in its essence, no different from the normal process of thinking, which we all, believers and unbelievers, alike, make use of when we are going about our business in everyday life. ... Its aim is to arrive at correspondence with reality, that is to say with what exists outside us and independently of us, and, as experience has taught us, is decisive for the fulfilment or frustration of our desires. This correspondence with the real external world we call *truth*. It is the aim of scientific work, even when the practical value of that work does not interest us. When, therefore, religion claims that it can

take the place of science and that, because it is beneficent and ennobling, it must therefore be true, that claim is, in fact, an encroachment which, in the interests of every one, should be resisted. It is asking a great deal of a man, who has learned to regulate his everyday affairs in accordance with the rules of experience and with due regard to reality, that he should entrust precisely what affects him most nearly to the care of an authority which claims as its prerogative freedom from all the rules of rational thought. And, as for the protection that religion promises its believers, I hardly think that any of us would be willing even to enter a motor-car, if the driver informed us that he drove without allowing himself to be distracted by traffic regulations, but in accordance with the impulses of an exalted imagination.

Freud, New Introductory Lectures on Psycho-Analysis, XXXV

128 Ladies and Gentlemen—Let me in conclusion sum up what I had to say about the relation of psycho-analysis to the question of a *Weltanschauung* [world view]. Psycho-analysis is not, in my opinion, in a position to create a *Weltanschauung* of its own. It has no need to do so, for it is a branch of science and can subscribe to the scientific *Weltanschauung*. The latter, however, hardly merits such a high-sounding name, for it does not take everything into its scope, it is incomplete, and it makes no claim to being comprehensive or to constituting a system. Scientific thought is still in its infancy; there are very many of the great problems with which it has as yet been unable to cope. A *Weltanschauung* based upon science has, apart from the emphasis it lays upon the real world, essentially negative characteristics, such as that it limits

itself to truth and rejects illusions. Those of our fellow-men who are dissatisfied with this state of things and who desire something more for their momentary peace of mind may look for it where they can find it. We shall not blame them for doing so; but we cannot help them and cannot change our own way of thinking on their account.

*Freud, New Introductory Lectures on Psycho-Analysis,
XXXV*

129 From a systematic theoretical point of view, we may imagine the process of evolution of an empirical science to be a continuous process of induction. Theories are evolved, and are expressed in short compass as statements of a large number of individual observations in the form of empirical laws, from which the general laws can be ascertained by comparison. Regarded in this way, the development of a science bears some resemblance to the compilation of a classified catalogue. It is as it were, a purely empirical enterprise.

But this point of view by no means embraces the whole of the actual process; for it slurs over the important part played by intuition and deductive thought in the development of an exact science. As soon as a science has emerged from its initial stages, theoretical advances are no longer achieved merely by a process of arrangement. Guided by empirical data, the investigator rather develops a system of thought which, in general, is built up logically from a small number of fundamental assumptions, the so-called axioms. We call such a system of thought a *theory*. The theory finds the justification for its existence in the fact that it correlates a large number of single observations and it is just here that the "truth" of the theory lies.

Einstein, Relativity, Appendix III

130 A theory is the more impressive the greater the simplicity of its premises is, the more different kinds of things it relates, and the more extended is its area of applicability. Therefore the deep impression which classical thermodynamics made upon me. It is the only physical theory of universal content concerning which I am convinced that, within the framework of the applicability of its basic concepts, it will never be overthrown (for the special attention of those who are skeptics on principle),

Einstein, Autobiographical Notes

131 The significant outward forms of the civilization of the western world are the product of the machine and its technology. Indirectly, they are the product of the scientific revolution which took place in the seventeenth century. In its effect upon men's external habits, dominant interests, the conditions under which they work and associate, whether in the family, the factory, the state, or internationally, science is by far the most potent social factor in the modern world. It operates, however, through its undesigned effects rather than as a transforming influence of men's thoughts and purposes. This contrast between outer and inner operation is the great contradiction in our lives. Habits of thought and desire remain in substance what they were before the rise of science, while the conditions under which they take effect have been radically altered by science.

Dewey, Science and Society

132 Great as have been the social changes of the last century, they are not to be compared with those which will emerge when our faith in scientific method is made manifest in social works. We are living in a period of depression. The intellectual function of trouble is to lead men to think. The depression is a small price to pay if it induces us to think about the cause of the disorder, confusion, and insecurity which are the outstanding traits of our social life. If we do not go back to their cause, namely our half-way and accidental use of science, mankind will pass through depressions, for they are the graphic record of our unplanned social life. The story of the achievement of science in physical control is evidence of the possibility of control in social affairs. It is our human intelligence and human courage which are on trial; it is incredible that men who have brought the technique of physical discovery, invention, and use to such a pitch of perfection will abdicate in the face of the infinitely more important human problem.

Dewey, Science and Society

133 Science is nothing but developed perception, interpreted intent, commonsense rounded out and minutely articulated.

Santayana, Life of Reason, V, 11

134 When I was younger what was pompously called Science wore an imposing aspect. There was a well-dressed Royal Family in the intellectual world, expected to rule indefinitely: sovereign axioms, immutable laws, and regent hypotheses. We had Newtonian space and time, the conservation of energy', and Darwinian

evolution. Now there is a democracy of theories elected for short terms of office, speaking shop-dialects, and hardly presented or presentable to the public eye. The investigators technique takes the lead, not the exigences of popularizing eloquence. The frontiers of this science seem less secure, with vast claims to undiscovered or undiscoverable regions; and first principles at home are wobbly and vague. Yet this looseness in thought goes with ingenuity in methods and multiplicity of contacts; and it serves to dispel an illusion that better-digested science might create: the illusion that scientific ideas reveal the literal and intimate essence of reality, as the images of sense certainly do not. But the fact is that both sense and science are relatively and virtually true, being appropriate to the organ employed and to the depth to which this organ may penetrate into the structure of things or may trace their movement. The senses do this well enough, in their own terms, for the uses of animal and social life; but modern science approaches the dynamism of nature by means of artificial instruments and experiments: hence its astonishing mechanical applications, and its moral and pictorial blindness. It studies methods rather than objects; it works indirectly if not directly in the service of industrialism, which needs to manipulate and not to understand; and if it succeeds in its manipulations it has done its duty. But this is a very special development, perhaps temporary, and certainly not fundamental in human knowledge. The images of sense will be with us while the human race endures. They will always yield our classical and personal view of nature. The stars will remain the visible stars, no matter what science may tell us about them; earth, water, air, and fire will still confront the spirit, and survive the

disintegration that chemistry may subject them to. Ultimately the authority of science will always depend on the evidence of sense and on the analogy of familiar objects and events.

Santayana, Realms of Being, General Review

135 Let us suppose that a scientist, who is sealed in a room of ground glass and receives by radio the experimental information on which he works, learns one day about a certain machine capable of hurling its own weight to a height three hundred times its own. He will not have much difficulty in roughly imagining this machine, unknown in itself, as a sort of catapult constructed according to the furnished data. He will correct and make the image more precise as new information reaches him. Suppose he learns that this machine manifests the properties of what men call memory. That is to say it modifies, in proportion as it functions, its very manner of functioning and of reacting to stimuli, a thing which his reconstructed apparatus does not do. Perhaps he will solve the difficulty by endowing the space occupied by this apparatus with some new dimension according to which the past of the machine would be preserved and would modify in an invisible manner its very structure. We who walk the streets and put up at inns can know that the machine in question is called a flea. The scientist will not know this but the construction that he ceaselessly alters (turns upside down, if necessary, to meet a "crisis") will present at each instant the sum of all the measurable properties found in the flea and actually known by him. Obviously, in creating such a construction which is fictitious but founded on the real and always exactly and rigorously determined, in that way he will acquire ever

more and more profound knowledge about the nature of the flea, but always by way of myth and of symbol. It would be inaccurate to say that he does not know this nature. He does not know it ontologically or *in itself*.

Maritain, Degrees of Knowledge, Pt. I, IV, 1

136 We see the same history of progress—even, may be, more strikingly—since the time of Galileo in the physico-mathematical sciences—that is to say in the art of translating sensible phenomena into quantitative symbols: and this is precisely because those studies are in truth the poorest of all in intelligibility, the least exacting in intellectuality, hence the easiest.

Maritain, Theonas X

17.3 The Discipline of Mathematics

Of all the disciplines, mathematics has perhaps the distinction of being the only one in the history of which there is no rift between its modern and its ancient devotees. It was honored in antiquity as it is honored in modern times as the exemplar of intellectual clarity, rigor, precision, and order. The achievements of the great mathematicians of antiquity—of Euclid, Apollonius, Archimedes, Nichomachus, Hiero—are never denigrated or minimized, even though later developments in mathematics have thrown new light on their accomplishments.

Though the philosophers of mathematics may disagree about the status of the objects of mathematical study, or about the relation of mathematical truth to the world of real existences, there is, generally speaking, less disagreement

among mathematicians than among the practitioners of any other discipline concerning the aims, methods, and results of their work. It is seldom if ever the case that competent mathematicians do not see eye to eye about the definition of a problem to be solved, or about the validity of a proposed solution of it. The solution either can or cannot be demonstrated to the satisfaction of all concerned.

These distinctive characteristics of mathematics as a discipline the reader will find reflected in the general tone and tendency of the passages quoted in this section. The reader will, in addition, find quotations from ancient writers that attribute the origin of mathematics, especially of geometry, to the exigencies of land-surveying; that discuss the division of mathematics into arithmetic and geometry; and that consider the application of mathematics to the study of physical phenomena. The passages drawn from modern sources the reader will find more illuminating on the characteristics of mathematical thought, on the power as well as the limitations of mathematics, on the logic of mathematics, and on the relation of mathematics to logic.

■ ■ ■

- 1 Sesostris [the king of Egypt and Ethiopia]... made a division of the soil of Egypt among the inhabitants, assigning square plots of ground of equal size to all, and obtaining his chief revenue from the rent which the holders were required to pay him year by year. If the river carried away any portion of a man's lot, he appeared before the king, and related what had happened; upon which the king sent persons to examine, and determine

by measurement the exact extent of the loss; and thenceforth only such a rent was demanded of him as was proportionate to the reduced size of his land. From this practice, I think, geometry first came to be known in Egypt, whence it passed into Greece.

Herodotus, History, II, 109

2 *Socrates*. And all arithmetic and calculation have to do with number?

Glaucon. Yes.

And they appear to lead the mind towards truth?

Yes, in a very remarkable manner.

Then this is knowledge of the kind for which we are seeking, having a double use, military and philosophical; for the man of war must learn the art of number or he will not know how to array his troops, and the philosopher also, because he has to rise out of the sea of change and lay hold of true being, and therefore he must be an arithmetician....

Then this is a kind of knowledge which legislation may fitly prescribe; and we must endeavour to persuade those who are to be the principal men of our State to go and learn arithmetic, not as amateurs, but they must carry on the study until they see the nature of numbers with the mind only; nor again, like merchants or retail-traders, with a view to buying or selling, but for the sake of their military use, and of the soul herself; and because this will be the easiest way for her to pass from becoming to truth and being.

That is excellent, he said.

Yes, I said, and now having spoken of it, I must add how charming the science is! and in how-many ways it

conduces to our desired end, if pursued in the spirit of a philosopher, and not of a shopkeeper!

How do you mean?

I mean, as I was saying, that arithmetic has a very great and elevating effect, compelling the soul to reason about abstract number, and rebelling against the introduction of visible or tangible objects into the argument.

Plato, Republic, VII, 525A

3 Let no one enter here who is ignorant of geometry.

Inscription over the door of Plato's Academy

4 For instance, he [Socrates] said that the study of geometry- should be pursued until the student was competent to measure a parcel of land accurately in case he wanted to take over, convey or divide it, or to compute the yield; and this knowledge was so easy to acquire, that anyone who gave his mind to mensuration knew the size of the piece and carried away a knowledge of the principles of land measurement. He was against carrying the study of geometry so far as to include the more complicated figures, on the ground that he could not see the use of them. Not that he was himself unfamiliar with them, but he said that they were enough to occupy a lifetime, to the complete exclusion of many other useful studies.

Xenophon, Memorabilia, IV, 7

5 It is the physician's business to know that circular wounds heal more slowly, the geometer's to know the reason why.

Aristotle, Posterior Analytics, 79a14

- 6 The science which is knowledge at once of the fact and of the reasoned fact, not of the fact by itself without the reasoned fact, is the more exact and the prior science.

A science such as arithmetic, which is not a science of properties *qua* inhering in a substratum, is more exact than and prior to a science like harmonics, which is a science of properties inhering in a substratum; and similarly a science like arithmetic, which is constituted of fewer basic elements, is more exact than and prior to geometry, which requires additional elements.

Aristotle, Posterior Analytics, 87a30

- 7 Mathematics has come to be identical with philosophy for modern thinkers, though they say that it should be studied for the sake of other things.

Aristotle, Metaphysics, 992a33

- 8 Since even the mathematician uses the common axioms only in a special application, it must be the business of first philosophy to examine the principles of mathematics also.

Aristotle, Metaphysics, 1061b18

- 9 The Pythagoreans, because they saw many attributes of numbers belonging to sensible bodies, supposed real things to be numbers—not separable numbers, however, but numbers of which real things consist. But why? Because the attributes of numbers are present in a musical scale and in the heavens and in many other things. Those, however, who say that mathematical number alone exists cannot according to their hypotheses say anything of this sort, but it used to be

urged that these sensible things could not be the subject of the sciences. But we maintain that they are.... And it is evident that the objects of mathematics do not exist apart; for if they existed apart their attributes would not have been present in bodies.

Aristotle, Metaphysics, 1090a20

10 A *point* is that which has no part.

Euclid, Elements, I, Def. I

11 Let the following be postulated:

1. To draw a straight line from any point to any point.
2. To produce a finite straight line continuously in a straight line.
3. To describe a circle with any centre and distance.
4. That all right angles are equal to one another.
5. That, if a straight line falling on two straight lines make the interior angles on the same side less than two right angles, the two straight lines, if produced indefinitely, meet on that side on which are the angles less than the two right angles.

Euclid, Elements, I, Postulates

12 1. Things which are equal to the same thing are also equal to one another.

2. If equals be added to equals, the wholes are equal.
3. If equals be subtracted from equals, the remainders are equal.
4. Things which coincide with one another are equal to one another.
5. The whole is greater than the part.

Euclid, Elements, I, Common Notions

- 13 They relate that Euclid was asked by Ptolemy, whether there was any shorter way to the attainment of geometry than by his elementary institutions, and he answered, there was no other royal path which led to geometry.

Prod us, Commentaries on Euclid, II, 4

- 14 The proofs then of these theorems I have written in this book and now send to you. Seeing moreover in you, as I say, an earnest student, a man of considerable eminence in philosophy, and an admirer [of mathematical inquiry], I thought fit to write out for you and explain in detail in the same book the peculiarity of a certain method, by which it will be possible for you to get a start to enable you to investigate some of the problems in mathematics by means of mechanics. This procedure is, I am persuaded, no less useful even for the proof of the theorems themselves; for certain things first became clear to me by a mechanical method, although they had to be demonstrated by geometry afterwards because their investigation by the said method did not furnish an actual demonstration. But it is of course easier, when we have previously acquired, by the method, some knowledge of the questions, to supply the proof than it is to find it without any previous knowledge. This is a reason why, in the case of the theorems the proof of which Eudoxus was the first to discover, namely that the cone is a third part of the cylinder, and the pyramid of the prism, having the same base and equal height, we should give no small share of the credit to Democritus who was the first to make the assertion with regard to the said figure though he did not prove it.

*Archimedes, Method Treating of Mechanical Problems,
Greeting*

15 Eudoxus and Archytas had been the first originators of this far-famed and highly-prized art of mechanics, which they employed as an elegant illustration of geometrical truths, and as means of sustaining experimentally, to the satisfaction of the senses, conclusions too intricate for proof by words and diagrams. As, for example, to solve the problem, so often required in constructing geometrical figures, given the two extremes, to find the two mean lines of a proportion, both these mathematicians had recourse to the aid of instruments, adapting to their purpose certain curves and sections of lines.

But because of Plato's indignation at it, and his invectives against it as the mere corruption and annihilation of the one good of geometry, which was thus shamefully turning its back upon the unembodied objects of pure intelligence to recur to sensation, and to ask help (not to be obtained without base supervisions and depravation) from matter; so it was that mechanics came to be separated from geometry, and, repudiated and neglected by philosophers, took its place as a military art.

Plutarch, Marcelltus

16 If geometry exists, arithmetic must also needs be implied, for it is with the help of this latter that we can speak of triangle, quadrilateral, octahedron, icosahedron, double, eightfold, or one and one-half times, or anything else of the sort which is used as a term by geometry, and such things cannot be conceived of without the numbers that are implied with each one,... Hence arithmetic

abolishes geometry along with itself, but is not abolished by it, and while it is implied by geometry, it does not itself imply geometry.

Nicomachus, Arithmetic, I, 4

- 17 Aristotle quite properly divides... the theoretical into three immediate genera: the physical, the mathematical, and the theological- For given that all beings have their existence from matter and form and motion, and that none of these can be seen, but only thought, in its subject separately from the others, if one should seek out in its simplicity the first cause of the first movement of the universe, he would find God invisible and unchanging. And the kind of science which seeks after Him is the theological; for such an act can only be thought as high above somewhere near the loftiest things of the universe and is absolutely apart from sensible things. But the kind of science which traces through the material and ever moving quality, and has to do with the white, the hot, the sweet, the soft, and such tilings, would be called physical; and such an essence, since it is only generally what it is, is to be found in corruptible things and below the lunar sphere. And the kind of science which shows up quality with respect to forms and local motions, seeking figure, number, and magnitude and also place, time, and similar things, would be defined as mathematical. For such an essence falls, as it were, between the other two, not only because it can be conceived both through The senses and without the senses, but also because it is an accident in absolutely all beings both mortal and immortal, changing with those things that ever change, according to their inseparable

form, and preserving unchangeable the changelessness of form in things eternal and of an ethereal nature.

And therefore meditating that the other two genera of the theoretical would be expounded in terms of conjecture rather than in terms of scientific understanding; the theological because it is in no way phenomenal and attainable, but the physical because its matter is unstable and obscure, so that for this reason philosophers could never hope to agree on them; and meditating that only the mathematical, if approached enquiringly, would give its practitioners certain and trustworthy knowledge with demonstration both arithmetic and geometric resulting from indisputable procedures, we were led to cultivate most particularly as far as lay in our power this theoretical discipline. And especially were we led to cultivate That discipline developed in respect to divine and heavenly things as being the only one concerned with the study of things which are always what they are, and therefore able itself to be always what it is—which is indeed the proper mark of a science—because of its own clear and ordered understanding, and yet to cooperate with the other disciplines no less than they themselves. For that special mathematical theory would most readily prepare the way to the theological, since it alone could take good aim at that unchangeable and separate act, so close to that act are the properties having to do with translations and arrangements of movements, belonging to those heavenly beings which are sensible and both moving and moved, but eternal and impassible. Again as concerns the physical there would not be just chance correspondances. For the general property of the material essence is pretty well evident from the peculiar fashion of its local motion

—for example, the corruptible and incorruptible from straight and circular movements, and the heavy and light or passive and active from movement to the center and movement from the center. And indeed this same discipline would more than any other prepare understanding persons with respect to nobleness of actions and character by means of the sameness, good order, due proportion, and simple directness contemplated in divine things, making its followers lovers of that divine beauty, and making habitual in them, and as it were natural, a like condition of the soul.

Ptolemy, Almagest, I, 1

- 18 Coming now to the science of numbers it is clear to the dullest apprehension that this was not created by man, but was discovered by investigation. For, though Virgil could at his own pleasure make the first syllable of *Italia* long, while the ancients pronounced it short, it is not in any man's power to determine at his pleasure that three times three are not nine, or do not make a square, or are not the triple of three, nor one and a half times the number six, or that it is not true that they are not the double of any number because odd numbers have no half. Whether, then, numbers are considered in themselves, or as applied to the laws of figures, or of sounds, or of other motions, they have fixed law's which were not made by man, but which the acuteness of ingenious men brought to light.

Augustine, Christian Doctrine, II, 38

- 19 Mathematical species... can be abstracted by the intellect from sensible matter, not only from individual, but also

from common matter, though not from common intelligible matter, but only from individual matter. For sensible matter is corporeal matter as subject to sensible qualities, such as being cold or hot, hard or soft, and the like, while intelligible matter is substance as subject to quantity. Now it is manifest that quantity is in substance before sensible qualities are. Hence quantities, such as number, dimension, and figures, which are the terminations of quantity, can be considered apart from sensible qualities, and this is to abstract them from sensible matter; but they cannot be considered without understanding the substance which is subject to the quantity, for that would be to abstract them from common intelligible matter. Yet they can be considered apart from this or that substance, for that is to abstract them from individual intelligible matter.

Aquinas, Summa Theologica, I, 85, 1

- 20 Many philosophers have called the world a visible god on account of its extraordinary excellence. So if the worth of the arts were measured by the matter with which they deal, this art—which some call astronomy, others astrology, and many of the ancients the consummation of mathematics— would be by far the most outstanding. This art which is as it were the head of all the liberal arts and the one most worthy of a free man leans upon nearly all the other branches of mathematics. Arithmetic, geometry, optics, geodesy, mechanics, and Whatever others, all offer themselves in its service. And since a property of all good arts is to draw the mind of man away from the vices and direct it to better things, these arts can do that more plentifully, over and above the unbelievable pleasure of mind [which they furnish].

Copernicus, De Revolutionibus, I, Introduction

21 *I implore you, you do not hope to be able to give the reasons for the number of the planets, do you?*

This worry has been resolved, with the help of God, not badly. Geometrical reasons are co-eternal with God.

Kepler, Epitome of Copernican Astronomy, Bk. IV, I, 3

22 There remaineth yet another part of natural philosophy, which is commonly made a principal part, and holdeth rank with physic special and metaphysic, which is mathematic; but I think it more agreeable to the nature of things, and to the light of order, to place it as a branch of metaphysic. For the subject of it being quantity, not quantity indefinite, which is but a relative, and belongeth to *philosophia prima* (as hath been said), but quantity determined or proportionable, it appeareth to be one of the essential forms of things as that that is causative in nature of a number of effects; insomuch as we see in the schools both of Democritus and of Pythagoras, that the one did ascribe figure to the first seeds of things, and the other did suppose numbers to be the principles and originals of things....

The mathematics are either pure or mixed. To the pure mathematics are those sciences belonging which handle quantity determinate, merely severed from any axioms of natural philosophy; and these are two, geometry and arithmetic; the one handling quantity continued, and the other dissevered. Mixed hath for subject some axioms or parts of natural philosophy, and considereth quantity determined, as it is auxiliary and incident unto them. For many parts of nature can neither be invented with sufficient subtilty, nor demonstrated with sufficient

perspicuity, nor accommodated unto use with sufficient dexterity, without the aid and intervening of the mathematics; of which sort are perspective, music, astronomy, cosmography, architecture, enginery, and divers others. In the mathematics I can report no deficiency, except it be that men do not sufficiently understand the excellent use of the pure mathematics, in that they do remedy and cure many defects in the wit and faculties intellectual. For if the wit be too dull, they sharpen it; if too wandering, they fix it; if too inherent in the sense, they abstract it. So that *£is tennis* is a game of no use in itself, but of great use in respect it maketh a quick eye and a body ready to put itself into all postures; so in the mathematics, that use which is collateral and intervenient is no less worthy than that which is principal and intended. And as for the mixed mathematics, I may only make this prediction, that there cannot fail to be more kinds of them, 2 is nature grows further disclosed.

Bacon, Advancement of Learning, Bk, II, VIII, 1-2

- 23 Must we not confess that geometry is the most powerful of all instruments for sharpening the wit and training the mind to think correctly? Was not Plato perfectly right when he wished that his pupils should be first of all well grounded in mathematics?

Galileo, Two New Sciences, II

- 24 *Sagredo*. The force of rigid demonstrations such as occur only in mathematics fills me with wonder and delight. From accounts given by gunners, I was already aware of the fact that in the use of cannon and mortars, the maximum range, that is the one in which the shot goes

farthest, is obtained when the elevation is 45° or, as they say, at the sixth point of the quadrant; but to understand why this happens far outweighs the mere information obtained by the testimony of others or even by repeated experiment.

Salviati. What you say is very true. The knowledge of a single fact acquired through a discovery of its causes prepares the mind to understand and ascertain other facts without need of recourse to experiment, precisely as in the present case, where by argumentation alone the Author proves with certainty that the maximum range occurs when the elevation is 45° . He thus demonstrates what has perhaps never been observed in experience namely, that of other shots those which exceed or fall short of 45° by equal amounts have equal ranges.

Galileo, Two New Sciences, IV

25 But now let us proceed to explain more carefully our reasons for saying... that of all the sciences known as yet, Arithmetic and Geometry alone are free from any taint of falsity or uncertainty. we must note then that there are two ways by which we arrive at the knowledge of facts, viz. by experience and by deduction. We must further observe that while our inferences from experience are frequently fallacious, deduction, or the pure illation of one thing from another, though it may be passed over, if it is not seen through, cannot be erroneous when performed by an understanding that is in the least degree rational. And it seems to me that the operation is profited but little by those constraining bonds by means of which the Dialecticians claim to control human reason, though I do not deny that that discipline may be serviceable for other purposes. My reason for saying so is

that none of the mistakes which men can make (men, I say, not beasts) are due to faulty inference; they are caused merely by the fact that we found upon a basis of poorly comprehended experiences, or that propositions are posited which are hasty and groundless.

This furnishes us with an evident explanation of the great superiority in certitude of Arithmetic and Geometry to other sciences. The former alone deal with an object so pure and uncomplicated, that they need make no assumptions at all which experience renders uncertain, but wholly consist in the rational deduction of consequences. They are on that account much the easiest and clearest of all, and possess an object such as we require, for in them it is scarce humanly possible for anyone to err except by inadvertence. And yet we should not be surprised to find that plenty of people of their own accord prefer to apply their intelligence to other studies, or to Philosophy. The reason for this is that every person permits himself the liberty of making guesses in the matter of an obscure subject with more confidence than in one which is clear, and that it is much easier to have some vague notion about any subject, no matter what, than to arrive at the real truth about a single question however simple that may be.

But one conclusion now emerges out of these considerations, viz. not, indeed, that Arithmetic and Geometry are the sole sciences to be studied, but only that in our search for the direct road towards truth we should busy ourselves with no object about which we cannot attain a certitude equal to that of the demonstrations of Arithmetic and Geometry.

Descartes, Rules for Direction of the Mind, II

26 When first I applied my mind to Mathematics I read straight away most of what is usually given by the mathematical writers, and I paid special attention to Arithmetic and Geometry, because they were said to be the simplest and so to speak the way to all the rest. But in neither case did I then meet with authors who fully satisfied me. I did indeed learn in their works many propositions about numbers which I found on calculation to be true. As to figures, they in a sense exhibited to my eyes a great number of truths and drew conclusions from certain consequences. But they did not seem to make it sufficiently plain to the mind itself why those things are so, and how they discovered them.. . .

It was these reflections that recalled me from the particular studies of Arithmetic and Geometry to a general investigation of Mathematics, and thereupon I sought to determine what precisely was universally meant by that term, and why not only the above mentioned sciences, but also Astronomy, Music, Optics, Mechanics and several others are styled parts of Mathematics. Here indeed it is not enough to look at the origin of the word; for since the name "Mathematics" means exactly the same thing as "scientific study," these other branches could, %vitb as much right as Geometry itself, be called Mathematics. Yet we see that almost anyone who has had the slightest schooling, can easily distinguish what relates to Mathematics in any question from that which belongs to the other sciences. But as I considered the matter carefully it gradually came to light that all those matters only were referred to Mathematics in which order and measurement are investigated, and that it makes no difference whether it be in numbers, figures, stars, sounds or any other object that the

question of measurement arises. I saw consequently that there must be some general science to explain that clement as a whole which gives rise to problems about order and measurement, restricted as these are to no special subject matter. This, I perceived, was called "Universal Mathematics," not a far fetched designation, but one of long standing which has passed into current use, because in this science is contained everything on account of which the others are called pars of Mathematics. We can see how much it excels in utility and simplicity the sciences subordinate to it, by the fact that it can deal with all the objects of which they have cognizance and many more besides, and that any difficulties it contains are found in them as well, added to the fact that in them fresh difficulties arise due to their special subject matter which in it do not exist. But now how comes it that though everyone knows the name of this science and understands what is its province even without studying it attentively, so many people laboriously pursue the other dependent sciences, and no one cares to master this one? I should marvel indeed were I not aware that everyone thinks it to be so very easy, and had I not long since observed that the human mind passes over what it thinks it can easily accomplish, and hastens straight away to new and more imposing occupations.

Descartes, Rules for Direction of the Mind, IV

27 There can be nothing so absurd but may be found in the books of philosophers. And the reason is manifest. For there is not one of them that begins his ratiocination from the definitions or explications of the names they are to use; which is a method that hath been used only in

geometry, whose conclusions have thereby been made indisputable.

Hobbes, Leviathan, I, 5

28 *The difference between the mathematical and the intuitive mind.*—In the one, the principles are palpable, but removed from ordinary use; so that for want of habit it is difficult to turn one's mind in that direction: but if one turns it thither ever so little, one sees the principles fully, and one must have a quite inaccurate mind who reasons wrongly from principles so plain that it is almost impossible they should escape notice.

But in the intuitive mind the principles are found in common use and are before the eyes of everybody. One has only to look, and no effort is necessary; it is only a question of good eyesight, but it must be good, for the principles are so subtle and so numerous that it is almost impossible but that some escape notice. Now the omission of one principle leads to error; thus one must have very clear sight to see all the principles and, in the next place, an accurate mind not to draw false deductions from known principles.

All mathematicians would then be intuitive if they had clear sight, for they do not reason incorrectly from principles known to them; and intuitive minds would be mathematical if they could turn their eyes to the principles of mathematics to which they are unused.

The reason, therefore, that some intuitive minds are not mathematical is that they cannot at all turn their attention to the principles of mathematics. But the reason that mathematicians are not intuitive is that they do not see what is before them, and that, accustomed to the exact and plain principles of mathematics, and not

reasoning till they have well inspected and arranged their principles, they are lost in matters of intuition where the principles do not allow of such arrangement. They are scarcely seen; they are felt rather than seen; there is the greatest difficulty in making them felt by those who do not of themselves perceive them. These principles are so fine and so numerous that a very delicate and very clear sense is needed to perceive them, and to judge rightly and justly when they are perceived, without for the most part being able to demonstrate them in order as in mathematics, because the principles are not known to us in the same way, and because it would be an endless matter to undertake it. We must see the matter at once, at one glance, and not by a process of reasoning, at least to a certain degree. And thus it is rare that mathematicians are intuitive and that men of intuition are mathematicians, because mathematicians wish to treat matters of intuition mathematically and make themselves ridiculous, wishing to begin with definitions and then with axioms, which is not the way to proceed in this kind of reasoning. Not that the mind does not do so, but it does it tacitly, naturally, and without technical rules; for the expression of it is beyond all men, and only a few can feel it.

Intuitive minds, on the contrary, being thus accustomed to judge at a single glance, are so astonished when they are presented with propositions of which they understand nothing, and the way to which is through definitions and axioms so sterile, and which they are not accustomed to see thus in detail, that they are repelled and disheartened.

But dull minds are never either intuitive or mathematical.

Mathematicians who are only mathematicians have exact minds, provided all things are explained to them by means of definitions and axioms; otherwise they are inaccurate and insufferable, for they are only right when the principles are quite clear.

And men of intuition who are only intuitive cannot have the patience to reach to first principles of things speculative and conceptual, which they have never seen in the world and which are altogether out of the common.

Pascal, Pansees, I, 1

29 We shall never get into such trouble if we follow the order of geometry. That wise science is very far from defining such primitive words as space, time, motion, equality, majority, decrease, all, and those others which the generality of men understand without explanation. But with the exception of these the remaining terms used by geometry are so clarified and defined that we have no need of a dictionary to understand any one of them, so that in a word all these terms are perfectly intelligible either by the natural light or by the definitions given.

This is the way geometry avoids all those vices which may be encountered in connection with the first point, which is to define only those things that need to be defined. It observes the same conduct with respect to the second point, which is to prove those propositions that are not evident. For when geometry has reached the first truths that can be known, it stops there and requires that they be granted since it has nothing clearer to prove them with; so that all the propositions of geometry are perfectly demonstrated either by the natural light or by proofs.

Whence it is that if this science does not define and demonstrate everything, it is only because it is impossible for us to do so. But since nature supplies everything not given by the science, the order of that science, though it does not give a superhuman perfection, has all the perfection men are capable of....

Perhaps it will be thought strange that geometry cannot define any of the things that are its principal objects; for it can define neither motion nor numbers nor space, and yet these are the three things it particularly considers and in accordance with whose investigation it takes the three different names of mechanics, arithmetic, geometry, this last word belonging both to the genus and to the species.

But we shall feel no surprise if we observe that, this admirable science concerning itself only with the simplest things, the very quality which makes them worthy of being its objects makes them incapable of definition; so that the lack of definition is rather a perfection than a defect because it does not come from their obscurity but on the contrary from their extreme evidence, which is such that although it is not so convincing as a demonstration, it is fully as certain. Geometry supposes then that we know what thing is meant by the words: *motion, number, space*; and without stopping uselessly to define them it penetrates their nature and lays bare their marvelous properties.

Pascal, Geometrical Demonstration

- 30 It was much easier for a man to place these things aside with others of the use of which he was ignorant, and thus retain his present and inborn state of ignorance, than to destroy the whole superstructure and think out a new

one. Hence it was looked upon as indisputable that the judgments of the gods far surpass our comprehension; and this opinion alone would have been sufficient to keep the human race in darkness to all eternity, if mathematics, which does not deal with ends, but with the essences and properties of forms, had not placed before us another rule of truth.

Spinoza, Ethics, I, Appendix

31 Since the ancients (as we are told by Pappus) esteemed the science of mechanics of greatest importance in the investigation of natural things, and the moderns, rejecting substantial forms and occult qualities, have endeavored to subject the phenomena of nature to the laws of mathematics, I have in this treatise cultivated mathematics as far as it relates to philosophy. The ancients considered mechanics in a twofold respect; as rational, which proceeds accurately by demonstration, and practical. To practical mechanics all the manual arts belong, from which mechanics took its name. But as artificers do not work with perfect accuracy, it comes to pass that mechanics is so distinguished from geometry that what is perfectly accurate is called geometrical; what is less so, is called mechanical. However, the errors are not in the art, but in the artificers. He that works with less accuracy is an imperfect mechanic; and if any could work with perfect accuracy, he would be the most perfect mechanic of all, for the description of right lines and circles, upon which geometry is founded, belongs to mechanics. Geometry does not teach us to draw these lines, but requires them to be drawn, for it requires that the learner should first be taught to describe these accurately before he enters upon geometry, then it shows

how by these operations problems may be solved. To describe right lines and circles are problems, but not geometrical problems. The solution of these problems is required from mechanics, and by geometry the use of them, when so solved, is shown; and it is the glory of geometry that from those few principles, brought from without, it is able to produce so many things. Therefore geometry is founded in mechanical practice, and is nothing but that part of universal mechanics which accurately proposes and demonstrates the art of measuring. But since the manual arts are chiefly employed in the moving of bodies, it happens that geometry is commonly referred to their magnitude, and mechanics to their motion. In this sense rational mechanics will be the science of motions resulting from any forces whatsoever, and of the forces required to produce any motions, accurately proposed and demonstrated. This part of mechanics, as far as it extended to the five powers which relate to manual arts, was cultivated by the ancients, who considered gravity (it not being a manual power) no otherwise than in moving weights by those powers. But I consider philosophy rather than arts and write not concerning manual but natural powers, and consider chiefly those things which relate to gravity, levity, elastic force, the resistance of fluids, and the like forces, whether attractive or impulsive; and therefore I offer this work as the mathematical principles of philosophy, for the whole burden of philosophy seems to consist in this—from the phenomena of motions to investigate the forces of nature, and then from these forces to demonstrate the other phenomena.

Newton, Principia, Pref. to 1st Ed.

32 In mathematics we are to investigate the quantities of forces with their proportions consequent upon any conditions supposed; then, when we enter upon physics, we compare those proportions with the phenomena of Nature, that we may know what conditions of those forces answer to the several kinds of attractive bodies. And this preparation being made, we argue more safely concerning the physical species, causes, and proportions of the forces.

Newton, Principia, I, 11, Schol.

33 In this proposition, that "the three angles of a triangle are equal to two right ones," one who has seen and clearly perceived the demonstration of this truth knows it to be true, when that demonstration is gone out of his mind; so that at present it is not actually in view, and possibly cannot be recollected: but he knows it in a different way from what he did before. The agreement of the two ideas joined in that proposition is perceived; but it is by the intervention of other ideas than those which at first produced that perception. He remembers, i.e. he knows (for remembrance is but the reviving of some past knowledge) that he was once certain of the truth of this proposition, that the three angles of a triangle are equal to two right ones. The immutability of the same relations between the same immutable things is now the idea that shows him, that if the three angles of a triangle were once equal to two right ones, they will always be equal to two right ones. And hence he comes to be certain, that what was once true in the case, is always true; what ideas once agreed will always agree; and consequently what he once knew to be true, he will always know to be true; as long as he can remember that he once knew it. Upon this

ground it is, that particular demonstrations in mathematics afford general knowledge. If then the perception, that the same ideas will *eternally* have the same habitudes and relations, be not a sufficient ground of knowledge, there could be no knowledge of general propositions in mathematics; for no mathematical demonstration would be any other than particular: and when a man had demonstrated any proposition concerning one triangle or circle, his knowledge would not reach beyond that particular diagram. If he would extend it further, he must renew his demonstration in another instance, before he could know it to be true in another like triangle, and so on: by which means one could never come to the knowledge of any general propositions.

Locke, Concerning Human Understanding, Bk, IV, I, 9

- 34 Mathematicians abstracting their thoughts from names, and accustoming themselves to set before their minds the ideas themselves that they would consider, and not sounds instead of them, have avoided thereby a great part of that perplexity, puddering, and confusion, which has so much hindered men's progress in other parts of knowledge. For whilst they stick in words of undetermined and uncertain signification, they are unable to distinguish true from false, certain from probable, consistent from inconsistent, in their own opinions.

Locke, Concerning Human Understanding, Bk. IV, III, 30

- 35 All the objects of human reason or enquiry may naturally be divided into two kinds, to wit, *Relations of Ideas*, and

Matters of Fact. Of the first kind are the sciences of Geometry', Algebra, and Arithmetic; and in short, every affirmation which is either intuitively or demonstratively certain. *That the square of the hypotenuse is equal to the square of the two sides*, is a proposition which expresses a relation between these figures. *That three times five is equal to the half of thirty*, expresses a relation between these numbers. Propositions of this kind are discoverable by the mere operation of thought, without dependence on what is anywhere existent in the universe. Though there never were a circle or triangle in nature, the truths demonstrated by Euclid would for ever retain their certainty and evidence.

Hume, Concerning Human Understanding, IV, 20

- 36 The great advantage of the mathematical sciences above the moral consists in this, that the ideas of the former, being sensible, are always clear and determinate, the smallest distinction between them is immediately perceptible, and the same terms are still expressive of the same ideas, without ambiguity or variation. An oval is never mistaken for a circle, nor an hyperbola for an ellipsis. The isosceles and scalenum are distinguished by boundaries more exact than vice and virtue, right and wrong. If any term be defined in geometry, the mind readily, of itself, substitutes, on all occasions, the definition for the term defined: Or even when no definition is employed, the object itself may be presented to the senses, and by that means be steadily and clearly apprehended.

Hume, Concerning Human Understanding, VII, 48

37 The mathematics are distinguished by a peculiar privilege, that, in the course of ages, they may always advance and can never recede.

Gibbon, Decline and Fall of the Roman Empire, LI I

38 The science of mathematics presents the most brilliant example of the extension of the sphere of pure reason without the aid of experience. Examples are always contagious; and they exert an especial influence on the same faculty, which naturally flatters itself that it will have the same good fortune in other case as fell to its lot in one fortunate instance. Hence pure reason hopes to be able to extend its empire in the transcendental sphere with equal success and security, especially when it applies the same method which was attended with such brilliant results in the science of mathematics. It is, therefore, of the highest importance for us to know whether the method of arriving at demonstrative certainty, which is termed *mathematical*, be identical with that by which we endeavour to attain the same degree of certainty in philosophy, and which is termed in that science *dogmatical*.

Kant, Critique of Pure Reason, Transcendental Method

39 The success which attends the efforts of reason in the sphere of mathematics naturally fosters the expectation that the same good fortune will be its lot, if it applies the mathematical method in other regions of mental endeavour besides that of quantities. Its success is thus great, because it can support all its conceptions by *a priori* intuitions and, in this way, make itself a master, as it were, over nature; while pure philosophy, with its *a*

priori discursive conceptions, bungles about in the world of nature, and cannot accredit or show any *a priori* evidence of the reality of these conceptions. Masters in the science of mathematics are confident of the success of this method; indeed, it is a common persuasion that it is capable of being applied to any subject of human thought. They have hardly ever reflected or philosophized on their favourite science—a task of great difficulty; and the specific difference between the two modes of employing the faculty of reason has never entered their thoughts.

Kant, Critique of Pure Reason, Transcendental Method

- 40 Pure mathematics can never deal with the real existence of things, but only with their possibility, that is to say, with the possibility of an intuition answering to the conceptions of the things. Hence it cannot touch the question of cause and effect, and consequently, all the finality there observed must always be regarded simply as formal, and never as a physical end.

Kant, Critique of Teleological Judgement, 63, fn.

- 41 In disquisitions of every kind, there are certain primary truths, or first principles, upon which all subsequent reasonings must depend. These contain an internal evidence which, antecedent to all reflection or combination, commands the assent of the mind. Where it produces not this effect, it must proceed either from some defect or disorder in the organs of perception, or from the influence of some strong interest, or passion, or prejudice. Of this nature are the maxims in geometry, that "the whole is greater than its part; things equal to the same

are equal to one another; two straight lines cannot enclose a space; and all right angles are equal to each other."...

The objects of geometrical inquiry are so entirely abstracted from those pursuits which stir up and put in motion the unruly passions of the human heart, that mankind, without difficulty, adopt not only the more simple theorems of the science, but even those abstruse paradoxes which, however they may appear susceptible of demonstration, are at variance with the natural conceptions which the mind, without the aid of philosophy, would be led to entertain upon the subject. The INFINITE DIVISIBILITY of matter, or, in other words, the INFINITE divisibility of a FINITE thing, extending even to the minutest atom, is a point agreed among geometers, though not less incomprehensible to common sense than any of those mysteries in religion against which the batteries of infidelity have been so industriously levelled.

Hamilton, Federalist 31

42 Profound study of nature is the most fertile source of mathematical discoveries. Not only has this study, in offering a determinate object to investigation, the advantage of excluding vague questions and calculations without issue; it is besides a sure method of forming analysis itself, and of discovering the elements which it concerns us to know, and which natural science ought always to preserve; these are the fundamental elements which are reproduced in all natural effects.

We see, for example, that the same expression whose abstract properties geometers had considered, and which in this respect belongs to general analysis. represents as

well the motion of light in the atmosphere, as it determines the laws of diffusion of heat in solid matter, and enters into all the chief problems of the theory of probability.

The analytical equations, unknown to the ancient geometers, which Descartes was the first to introduce into the study of curves and surfaces, are not restricted to the properties of figures, and to those properties which are the object of rational mechanics; they extend to all general phenomena. There cannot be a language more universal and more simple, more free from errors and from obscurities, that is to say more worthy to express the invariable relations of natural things.

Considered from this point of view, mathematical analysis is as extensive as nature itself; it defines all perceptible relations, measures times, spaces, forces, temperatures; this difficult science is formed slowly, but it preserves every principle which it has once acquired; it grows and strengthens itself incessantly in the midst of the many variations and errors of the human mind.

Its chief attribute is clearness; it has no marks to express confused notions. It brings together phenomena the most diverse, and discovers the hidden analogies which unite them. If matter escapes us, as that of air and light, by its extreme tenuity, if bodies are placed far from us in the immensity of space, if man wishes to know the aspect of the heavens at successive epochs separated by a great number of centuries, if the actions of gravity and of heat are exerted in the interior of the earth at depths which will be always inaccessible, mathematical analysis can yet lay hold of the law's of these phenomena. It makes them present and measurable, and seems to be a faculty of the human mind destined to supplement the

shortness of life and the imperfection of the senses; and what is still more remarkable, it follows the same course in the study of all phenomena; it interprets them by the same language, as if to attest the unity and simplicity of the plan of the universe, and to make still more evident that unchangeable order which presides over all natural causes.

Fourier, Analytical Theory of Heat, Preliminary Discourse

- 43 The peculiarity of the evidence of mathematical truths is that all the argument is on one side. There are no objections, and no answers to objections.

Mill, On Liberty, II

- 44 It is true that similar confusion and uncertainty, and in some cases similar discordance, exist respecting the first principles of all the sciences, not excepting that which is deemed the most certain of them, mathematics; without much impairing, generally indeed without impairing at all, the trustworthiness of the conclusions of those sciences. An apparent anomaly, the explanation of which is, that the detailed doctrines of a science are not usually deduced from, nor depend for their evidence upon, what are called its first principles. Were it not so, there would be no science more precarious, or whose conclusions were more insufficiently made out, than algebra; which derives none of its certainty from what are commonly taught to learners as its elements, since these, as laid down by some of its most eminent teachers, are as full of fictions as English law, and of mysteries as theology. The truths which are ultimately accepted as the first principles of a science, are really the last results of

metaphysical analysis, practised on the elementary notions with which the science is conversant; and their relation to the science is not that of foundations to an edifice, but of roots to a tree, which may perform their office equally well though they be never dug down to and exposed to light.

Mill, Utilitarianism, I

- 45 A modern branch of mathematics having achieved the art of dealing with the infinitely small can now yield solutions in other more complex problems of motion which used to appear insoluble.

This modern branch of mathematics, unknown to the ancients, when dealing with problems of motion admits the conception of the infinitely small, and so conforms to the chief condition of motion (absolute continuity) and thereby corrects the inevitable error which the human mind cannot avoid when it deals with separate elements of motion instead of examining continuous motion.

Tolstoy, War and Peace, XI, 1

- 46 The whole science of geometry may be said to owe its being to the exorbitant interest which the human mind takes in *lines*. We cut space up in every direction in order to manufacture them.

William James, Psychology, XX, fn, 1

- 47 As regards... mathematical judgments,... they express results of comparison and nothing more. The mathematical sciences deal with similarities and equalities exclusively, and not with coexistences and sequences. Hence they have, in the first instance, no

connection with the order of experience. The comparisons of mathematics are between numbers and extensive magnitudes, giving rise to arithmetic and geometry respectively.

William James, Psychology, XXVIII

48 The very possibility of the science of mathematics seems an insoluble contradiction. If this science is deductive only in appearance, whence does it derive that perfect rigor no one dreams of doubting? If, on the contrary, all the propositions it enunciates can be deduced one from another by the rules of formal logic, why is not mathematics reduced to an immense tautology? The syllogism can teach us nothing essentially new, and, if everything is to spring from the principle of identity, everything should be capable of being reduced to it. Shall we then admit that the enunciations of all those theorems which fill so many volumes are nothing but devious ways of saying A is A?

Without doubt, we can go back to the axioms, which are at the source of all these reasonings. If we decide that these can not be reduced to the principle of contradiction, if still less we see in them experimental facts which could not partake of mathematical necessity, we have yet the resource of classing them among synthetic *a priori* judgments. This is not to solve the difficulty, but only to baptize it; and even if the nature of synthetic judgments were for us no mystery, the contradiction would not have disappeared, it would only have moved back; syllogistic reasoning remains incapable of adding anything to the data given it; these data reduce themselves to a few axioms, and we should find nothing else in the conclusions.

No theorem could be new if no new axiom intervened in its demonstration; reasoning could give us only the immediately evident verities borrowed from direct intuition; it would be only an intermediary parasite, and therefore should we not have good reason to ask whether the whole syllogistic apparatus did not serve solely to disguise our borrowing?

The contradiction will strike us the more if we open any book on mathematics; on every page the author will announce his intention of generalizing some proposition already known. Does the mathematical method proceed from the particular to the general, and, if so, how then can it be called deductive?

If finally the science of number were purely analytic, or could be analytically derived from a small number of synthetic judgments, it seems that a mind sufficiently powerful could at a glance perceive all its truths; nay more, we might even hope that some day one would invent to express them a language sufficiently simple to have them appear self-evident to an ordinary intelligence.

If we refuse to admit these consequences, it must be conceded that mathematical reasoning has of itself a sort of creative virtue and consequently differs from the syllogism.

The difference must even be profound. We shall not, for example, find the key to the mystery in the frequent use of that rule according to which one and the same uniform operation applied to two equal numbers will give identical results.

All these modes of reasoning, whether or not they be reducible to the syllogism properly so called, retain the

analytic character, and just because of that are powerless.

Poincare, Science and Hypothesis, I, 1

49 *The axioms of geometry therefore are neither synthetic a priori judgments nor experimental facts.*

They are *conventions*; our choice among all possible conventions is *guided* by experimental facts; but it remains *free* and is limited only by the necessity of avoiding all contradiction. Thus it is that the postulates can remain *rigorously* true even though the experimental laws which have determined their adoption are only approximative.

In other words, *the axioms of geometry* (I do not speak of those of arithmetic) *are merely disguised definitions.*

Then what are we to think of that question: Is the Euclidean geometry true?

It has no meaning.

As well ask whether the metric system is true and the old measures false; whether Cartesian coordinates are true and polar coordinates false. One geometry can not be more true than another; it can only be *more convenient.*

Poincare, Science and Hypothesis, II, 3

50 It has often been said that if individual experience could not create geometry the same is not true of ancestral experience. But what does that mean? Is it meant that we could not experimentally demonstrate Euclid's postulate, but that our ancestors have been able to do it? Not in the least. It is meant that by natural selection our mind has *adapted* itself to the conditions of the external world, that

it has adopted the geometry *most advantageous* to the species: or in other words *the most convenient*. This is entirely in conformity with our conclusions; geometry is not true, it is advantageous.

Poincare, Science and Hypothesis, II, 5

- 51 The genesis of mathematical creation is a problem which should intensely interest the psychologist. It is the activity in which the human mind seems to take least from the outside world, in which it acts or seems to act only of itself and on itself, so that in studying the procedure of geometric thought we may hope to reach what is most essential in man's mind.

Poincare, Science and Method, I, 3

- 52 In fact, what is mathematical creation? It does not consist in making new combinations with mathematical entities already known. Any one could do that, but the combinations so made would be infinite in number and most of them absolutely without interest. To create consists precisely in not making useless combinations and in making those which are useful and which are only a small minority. Invention is discernment, choice.

Poincare, Science and Method, I, 3

- 53 You have doubtless often been asked of what good is mathematics and whether these delicate constructions entirely mind-made are not artificial and born of our caprice.

Among those who put this question I should make a distinction; practical people ask of us only the means of money-making. These merit no reply; rather would it be

proper to ask of them what is the good of accumulating so much wealth and whether, to get time to acquire it, we are to neglect art and science, which alone give us souls capable of enjoying it, 'and for life's sake to sacrifice all reasons for living.'

Besides, a science made solely in view of applications is impossible; truths are fecund only if bound together. If we devote ourselves solely to those truths whence we expect an immediate result, the intermediary links are wanting and there will no longer be a chain.

The men most disdainful of theory get from it, without suspecting it, their daily bread; deprived of this food, progress would quickly cease, and we should soon congeal into the immobility of old China.

But enough of uncompromising practitioners! Besides these, there are those who are only interested in nature and who ask us if we can enable them to know it better.

To answer these, we have only to show them the two monuments already rough-hewn, Celestial Mechanics and Mathematical Physics.

They would doubtless concede that these structures are well worth the trouble they have cost us. But this is not enough. Mathematics has a triple aim. It must furnish an instrument for the study of nature. But that is not all: it has a philosophic aim and, I dare maintain, an esthetic aim. It must aid the philosopher to fathom the notions of number, of space, of time. And above all, its adepts find therein delights analogous to those given by painting and music. They admire the delicate harmony of numbers and forms; they marvel when a new discovery opens to them an unexpected perspective; and has not the Joy they thus feel the esthetic character, even though the senses take no part therein? Only a privileged few are

called to enjoy it fully, it is true, but is not this the case for all the noblest arts?

This is why I do not hesitate to say that mathematics deserves to be cultivated for its own sake, and the theories inapplicable to physics as well as the others. Even if the physical aim and the esthetic aim were not united, we ought not to sacrifice either.

But more: these two aims are inseparable and the best means of attaining one is to aim at the other, or at least never to lose sight of it.

Poincare, Value of Science, II, 5

- 54 The first man who noticed the analogy between a group of seven fishes and a group of seven days made a notable advance in the history of thought.

Whitehead, Science and the Modern World, 11

- 55 I will not go so far as to say that to construct a history of thought without profound study of the mathematical ideas of successive epochs is like omitting Hamlet from the play which is named after him. That would be claiming too much. But it is certainly analogous to cutting out the part of Ophelia. This simile is singularly exact. For Ophelia is quite essential to the play, she is very charming—and a little mad. Let us grant that the pursuit of mathematics is a divine madness of the human spirit, a refuge from the goading urgency of contingent happenings.

Whitehead, Science and the Modern World, II

- 56 Mathematics is thought moving in the sphere of complete abstraction from any particular instance of what it is

talking about. So far is this view of mathematics from being obvious, that we can easily assure ourselves that it is not, even now, generally understood.

Whitehead, Science and the Modern World, II

57 Our last reflection must be, that we have in the end come back to a version of the doctrine of old Pythagoras, from whom mathematics, and mathematical physics, took their rise. He discovered the importance of dealing with abstractions; and in particular directed attention to number as characterising the periodicities of notes of music. The importance of the abstract idea of periodicity was thus present at the very beginning both of mathematics and of European philosophy.

In the seventeenth century, the birth of modern science required a new mathematics, more fully equipped for the purpose of analysing the characteristics of vibratory existence. And now in the twentieth century we find physicists largely engaged in analysing the periodicities of atoms. Truly, Pythagoras in founding European philosophy and European mathematics, endowed them with the luckiest of lucky guesses—or, was it a flash of divine genius, penetrating to the inmost nature of things?

Whitehead, Science and the Modern World, II

58 The study of mathematics is apt to commence in disappointment. The important applications of the science, the theoretical interest of its ideas, and the logical rigour of its methods, all generate the expectation of a speedy introduction to processes of interest. We are told that by its aid the stars are weighed and the billions

of molecules in a drop of water are counted. Yet, like the ghost of Hamlet's father, this great science eludes the efforts of our mental weapons to grasp it—" 'Tis here, 'tis there, 'tis gone"—and what we do see does not suggest the same excuse for illusiveness as sufficed for the ghost, that it is too noble for our gross methods. "A show of violence," if ever excusable, may surely be "offered" to the trivial results which occupy the pages of some elementary mathematical treatises.

Whitehead, Introduction to Mathematics, I

59 Mathematics, rightly viewed, possesses not only truth, but supreme beauty—a beauty cold and austere, like that of sculpture, without appeal to any part of our weaker nature, without the gorgeous trappings of painting or music, yet sublimely pure, and capable of a stern perfection such as only the greatest art can show. The true spirit of delight, the exaltation, the sense of being more than Man, which is the touchstone of the highest excellence, is to be found in mathematics as surely as in poetry.

Russell, Study of Mathematics

60 Pure mathematics consists entirely of assertions to the effect that, if such and such a proposition is true of *anything*, then such and such another proposition is true of that thing. It is essential not to discuss whether the first proposition is really true, and not to mention what the anything is, of which it is supposed to be true. Both these points would belong to applied mathematics. We start, in pure mathematics, from certain rules of inference, by which we can infer that if one proposition is

true then so is some other proposition. These rules of inference constitute the major part of the principles of formal logic. We then take any hypothesis that seems amusing, and deduce its consequences. If our hypothesis is about *anything*, and not about some one or more particular things, then our deductions constitute mathematics. Thus mathematics may be defined as the subject in which we never know what we are talking about, nor whether what we are saying is true. People who have been puzzled by the beginnings of mathematics will, I hope, find comfort in this definition, and will probably agree that it is accurate.

Russell, Mathematics and the Metaphysicians

61 Mathematics is said to have . . . , disciplinary value in habituating the pupil to accuracy of statement and closeness of reasoning; it has utilitarian value in giving command of the arts of calculation involved in trade and the arts; culture value in its enlargement of the imagination in dealing with the most general relations of things; even religious value in its concept of the infinite and allied ideas. But clearly mathematics does not accomplish such results, because it is endowed with miraculous potencies called values; it has these values if and when it accomplishes these results, and not otherwise. The statements may help a teacher to a larger vision of the possible results to be effected by instruction in mathematical topics. But unfortunately, the tendency is to treat the statement as indicating powers inherently residing in the subject, whether they operate or not, and thus to give it a rigid justification. If they do not operate, the blame is put not on the subject as taught, but on the indifference and recalcitrancy of pupils,

62 Mathematics is like music, freely exploring the possibilities of form. And yet, notoriously, mathematics holds true of things; hugs and permeates them far more closely than does confused and inconstant human perception; so that the dream of many exasperated critics of human error has been to assimilate all science to mathematics, so as to make knowledge safe by making it, as Locke wished, direct perception of the relations between ideas. Unfortunately, knowledge would then never touch those matters of fact on which Locke was intent. The only serious value of those logical explorations would lie in their possible relevance to the accidents of existence. It is only in that relation and in that measure that mathematical science would cease to be mere play with ideas and would become *true*: that is, in a serious sense, would become *knowledge*. Now the seriousness of mathematics comes precisely of its remarkable and exact relevance to material facts, both familiar and remote: so that mathematical equations, besides being essentially necessary in themselves, are often also true of the world we live in. And this in a surprising measure....

In this way mathematical calculations far outrunning experiment often turns out to be true of the physical world, as if, *per impossibile*, they could be true *a priori*. But in fact nature, that had to have some form or other, is organized and deployed on principles which, in human language, are called number, shape, and measurable time; categories which for that reason have taken root in human language science.

Chapter 18

MEDICINE and HEALTH

Chapter 18 is divided into three sections: 18.1 The Art and Science of Medicine, 18.2 The Practice of Medicine: Physicians and Patients, and 18.3 Health and Disease.

Medicine is one of the traditionally recognized learned professions. In the constitution of the first universities, it was one of the three faculties granting a doctorate, the other two being law and theology. Both as a profession and as a field of learning, it is, perhaps, older than the other two, originating in the West with the formation of the Hippocratic school of medicine on the island of Cos in the fifth century B.C. The professional aspect of medicine is covered in the second section of this chapter; the first section focuses on medicine as a field of learning, a body of knowledge acquired by experience and investigation, and applied in practice by a set of techniques or skills; and the third section is concerned with the two states of the living body that define the interests of medicine—as an art, a science, and a profession.

The consideration of medicine as an art may be illuminated by the discussion of the nature and kinds of art in Section 16.1. The consideration of medicine as a science may similarly be illuminated by the discussion of science and scientific method in Section 17.2. The discussion of the nature of life in Section 19.2 and of life and death in Section 1.8 may provide background for the consideration of health and disease.

...

18.1 The Art and Science of Medicine

The quotations collected here are more or less general statements about medicine conceived either as an art or as a science. In antiquity, the emphasis was on medicine as an art, but the ancient conception of art did not preclude science; on the contrary, it presupposed science, or at least an organized body of knowledge, gained by careful observation and investigation, which provided a basis for the rules to be followed in the practice of the art. The man who tried to heal the sick by guesswork or by trial and error was called an "empiric," and this term was used not only in a derogatory sense but also in sharp contrast to the skilled physician whose procedures were governed by his knowledge of the causes or conditions of health and disease.

The introduction of medical experimentation in modern times, foreshadowed by Bacon and Harvey and definitely instituted by Claude Bernard, provides the basis for the claim that ancient medicine was more of an art than a science and that scientific medicine is of recent origin. The reader should be aware of changes in the meanings of the terms "art" and "science" while examining the criticisms that later generations level against earlier stages of medicine.

A few quotations present the notion of medicine as a cooperative art, an art that merely helps nature do what nature tends to do by itself, unaided by human skill. Thus conceived, the art of healing, productive or conservative of health, is like the arts of farming and of teaching. In each

case, the ultimate product—the fruits of the earth, the health of the body, and knowledge in the mind—results from natural processes that the human artist must be cognizant of in order to aid nature.

There are some passages here that attack or satirize the presumptions and pretensions of medicine, but most of the quotations that express such attitudes have been placed in Section 15.2, since they are mainly directed against the practitioner of the art rather than against the art itself.

■ ■ ■

- 1 Honor a physician with the honor due unto him for the uses which ye may have of him: for the Lord hath created him. For of the most High cometh healing, and he shall receive honor of the king. The skill of the physician shall lift up his head: and in the sight of great men he shall be in admiration. The Lord hath created medicines out of the earth; and he that is wise will not abhor them. Was not the water made sweet with wood, that the virtue thereof might be known? And he hath given men skill, that he might be honored in his marvelous works. With such doth he heal [men,] and taketh away their pains. Of such doth the apothecary make a confection; and of his works there is no end; and from him is peace over all the earth. My son, in thy sickness be not negligent: but pray unto the Lord, and he will make thee whole. Leave off from sin, and order thine hands aright, and cleanse thy heart from all wickedness. Give a sweet savor, and a memorial of fine flour; and make a fat offering, as not being. Then give place to the physician, for the Lord hath created him: let

him not go from thee, for thou hast need of him. There is a time when in their hands there is good success. For they shall also pray unto the Lord, that he would prosper that, which they give for ease and remedy to prolong life. He that sinneth before his Maker, let him fall into the hand of the physician.

Ecclesiasticus 38:1—15

- 2 The art of Medicine would not have been invented at first, nor would it have been made a subject of investigation (for there would have been no need of it), if when men are indisposed, the same food and other articles of regimen which they eat and drink when in good health were proper for them, and if no others were preferable to these.

But now necessity itself made medicine to be sought out and discovered by men, since the same things when administered to the sick, which agreed with them when in good health, neither did nor do agree with them.

Hippocrates, On Ancient Medicine, 3

- 3 Certain sophists and physicians say that it is not possible for any one to know medicine who does not know what man is ... , and that whoever would cure men properly, must learn this in the first place. But this saying rather appertains to philosophy, as Empedocles and certain others have described what man in his origin is, and how he first was made and constructed. But I think whatever such has been said or written by sophist or physician concerning nature has less connection with the art of medicine than with the art of painting. And I think that one cannot know anything certain respecting nature from

any other quarter than from medicine; and that this knowledge is to be attained when one comprehends the whole subject of medicine properly, but not until then; and I say that this history shows what man is, by what causes he was made, and other things accurately. Wherefore it appears to me necessary to every physician to be skilled in nature, and strive to know, if he would wish to perform his duties, what man is in relation to the articles of food and drink, and to his other occupations, and what are the effects of each of them to every one.

Hippocrates, On Ancient Medicine, 20

- 4 Whoever wishes to investigate medicine properly, should proceed thus: in the first place to consider the seasons of the year, and what effects each of them produces for they are not at all alike, but differ much from themselves in regard to their changes. Then the winds, the hot and the cold, especially such as are common to all countries, and then such as are peculiar to each locality. We must also consider the qualities of the waters, for as they differ from one another in taste and weight, so also do they differ much in their qualities. In the same manner, when one comes into a city to which he is a stranger, he ought to consider its situation, how it lies as to the winds and the rising of the sun; for its influence is not the same whether it lies to the north or the south, to the rising or to the setting sun. These things one ought to consider most attentively, and concerning the waters which the inhabitants use, whether they be marshy and soft, or hard, and running from elevated and rocky situations, and then if saltish and unfit for cooking; and the ground, whether it be naked and deficient in water, or wooded and well watered, and whether it lies in a hollow,

confined situation, or is elevated and cold; and the mode in which the inhabitants live, and what are their pursuits, whether they are fond of drinking and eating to excess, and given to indolence, or are fond of exercise and labor, and not given to excess in eating and drinking.

From these things he must proceed to invest!, gate everything else. For if one knows all these things well, or at least the greater part of them, he cannot miss knowing, when he comes into a strange city, either the diseases peculiar to the place, or the particular nature of common diseases, so that he will not be in doubt as to the treatment of the diseases, or commit mistakes, as is likely to be the case provided one had not previously considered these matters. And in particular as the season and the year advances, he can tell what epidemic diseases will attack the city, either in summer or in winter, and what each individual will be in danger of experiencing from the change of regimen. For knowing the changes of the seasons, the risings and settings of the stars, how each of them takes place, he will be able to know beforehand what sort of a year is going to ensue. Having made these investigations, and knowing beforehand the seasons, such a one must be acquainted with each particular, and must succeed in the preservation of health, and be by no means unsuccessful in the practice of his art. And if it shall be thought that these things belong rather to meteorology, it will be admitted, on second thoughts, that astronomy contributes not a little, but a very great deal, indeed, to medicine. For with the seasons the digestive organs of men undergo a change.

Hippocrates, Airs, Waters, and Places, 1-2

- 5 It is disgraceful in every art, and more especially in medicine, after much trouble, much display, and much talk, to do no good after all.

Hippocrates, Articulations, 44

- 6 To such as are curable, means are to be used to prevent them from becoming incurable, studying how they may best be prevented from getting into an incurable state. And incurable cases should be known, that they may not be aggravated by useless applications, and splendid and creditable prognostics are made by knowing where, how, and when every case will terminate, and whether it will be converted into a curable or an incurable disease.

Hippocrates, Articulations, 58

- 7 Life is short, and Art long; the crisis fleeting; experience perilous, and decision difficult.

Hippocrates, Aphorisms, I, 1

- 8 Eryximachus. Medicine may be regarded generally as the knowledge of the loves and desires of the body, and how to satisfy them or not; and the best physician is he who is able to separate fair love from foul, or to convert one into the other; and he who knows how to eradicate and how to implant love, whichever is required, and can reconcile the most hostile elements in the constitution and make them loving friends, is a skilful practitioner. Now the most hostile are the most opposite, such as hot and cold, bitter and sweet, moist and dry, and the like. And my ancestor, Asclepius, knowing how to implant friendship and accord in these elements, was the creator of our art.

Plato, Symposium, 186B

9 Art arises when from many notions gained by experience one universal judgement about a class of objects is produced. For to have a judgement that when Callias was ill of this disease this did him good, and similarly in the case of Socrates and in many individual cases, is a matter of experience; but to judge that it has done good to all persons of a certain constitution, marked off in one class, when they were ill of this disease, e.g. to phlegmatic or bilious people when burning with fever,—this is a matter of art.

Aristotle, Metaphysics, 981a6

10 The art of medicine is valuable to us because it is conducive to health, not because of its scientific interest.

Cicero, De Finibus, I, 13

11 Nothing hinders a cure so much as frequent changes of treatment.

Seneca, Letters to Lucilius, 2

12 The learned Erasistratus, however, overlooks—nay, despises—what neither Hippocrates, Diodes, Praxagoras, nor Philistion despised, nor indeed any of the best philosophers, whether Plato, Aristotle, or Theophrastus; he passes by whole functions as though it were but a trifling and casual department of medicine which he was neglecting, without deigning to argue whether or not these authorities are right in saying that the bodily parts of all animals are governed by the Warm, the Cold, the Dry and the Moist, the one pair being active and the other passive, and that among these the Warm has most power in connection with all functions, but especially

with the genesis of the humours. Now, one cannot be blamed for not agreeing with all these great men, nor for imagining that one knows more than they; but not to consider such distinguished teaching worthy either of contradiction or even mention shows an extraordinary arrogance.

Galen, Natural Faculties, II, 8

As for the scientific proofs of all this, they are to be drawn from these principles of which I have already spoken—namely, that bodies act upon and are acted upon by each other in virtue of the Warm, Cold, Moist and Dry. And if one is speaking of any activity, whether it be exercised by vein, liver, arteries, heart, alimentary canal, or any part, one will be inevitably compelled to acknowledge that this activity depends upon the way in which the four qualities are blended.

Galen, Natural Faculties, II, 9

14 Although, with a cruel zeal for science, some medical men, who are called anatomists, have dissected the bodies of the dead, and sometimes even of sick persons who died under their knives, and have inhumanly pried into the secrets of the human body to learn the nature of the disease and its exact seat, and how it might be cured, yet those relations of which I speak, and which form the concord, or, as the Greeks call it, *harmony*, of the whole body outside and in, as of some instrument, no one has been able to discover, because no one has been audacious enough to seek for them.

Augustine, City of God, XXII, 24

15 He [Pantagrue] went then to Montpellier, where he met with the good wives of Mirevaux, and good jovial company withal, and thought to have set himself to the study of physic; but he considered that that calling was too troublesome and melancholic, and that physicians did smell of glisters like old devils.

Rabelais, Gargantua and Pantagrue, II, 5

16... the moral comedy of him who had espoused and married a dumb wife. I was there, quoth Epistemon. The good honest man, her husband, was very earnestly urgent to have the fillet of her tongue untied, and would needs have her speak by any means. At his desire, some pains were taken on her, and partly by the industry of the physician, other part by the expertness of the surgeon, the encyliglotte which she had under her tongue being cut, she spoke, and spoke again; yea, within a few hours she spoke so loud, so much, so fiercely, and so long, that her poor husband returned to the same physician for a receipt to make her hold her peace. There are, quoth the physician, many proper remedies in our art to make dumb women speak, but there are none that ever I could learn therein to make them silent. The only cure which I have found out is their husband's deafness. The wretch became within few weeks thereafter, by virtue of some drugs, charms, or enchantments, which the physician had prescribed unto him, so deaf, that he could not have heard the thundering of nineteen hundred cannons at a salvo. His wife perceiving that indeed he was as deaf as a doornail, and that her scolding was but in vain, sith that he heard her not, she grew stark mad.

Some time after, the doctor asked for his fee of the husband; who answered, That truly he was deaf, and so

was not able to understand what the tenour of his demand might be.

Rabelais, Gargantua and Pantagruel, III, 34

- 17 'Tis wonderful how God has put such excellent physic in mere muck; we know by experience that swine's dung stints the blood; horse's serves for the pleurisy; man's heals wounds and black blotches; asses' is used for the bloody flux, and cow's with preserved roses serves for epilepsy, or for convulsions of children.

Luther, Table Talk, H92

- 18 Experience is really on its own dunghill in the subject of medicine, where reason yields it the whole field. Tiberius used to say that whoever had lived twenty years should be responsible to himself for the things that were harmful or beneficial to him» and know how to take care of himself without medical aid. And he might have learned this from Socrates, who, advising his disciples, carefully and as a principal study, the study of their health, used to add that it was difficult for an intelligent man who was careful about his exercise, his drinking, and his eating not to know better than any doctor what was good or bad for him.

Montaigne, Essays, III, 13, Of Experience

- 19 *Friar Laurence.* Mickle is the powerful grace that lies
In herbs, plants, stones, and their true qualities:
For nought so vile that on the earth doth live
But to the earth some special good doth give,
Nor aught so good but strain'd from that fair use
Revolts from true birth, stumbling on abuse:

Virtue itself turns vice, being misapplied;
And vice sometimes by action dignified.
Within the infant rind of this small flower
Poison hath residence and medicine power:
For this, being smelt, with that part cheers each part;
Being tasted, slays all senses with the heart.
Two such opposed kings encamp them still
In man as well as herbs, grace and rude will;
And where the worser is predominant,
Full soon the canker death eats up that plant.

Shakespeare, Romeo and Juliet, II, iii, 15

20 *Falstaff*. A good sherris-sack hath a two-fold operation in it. It ascends me into the brain; dries me there all the foolish and dull and crudy vapours which environ it; makes it apprehensive, quick, forgetive, full of nimble, fiery, and delectable shapes; which, delivered o'er to the voice, the tongue, which is the birth, becomes excellent wit. The second property of your excellent sherris is the warming of the blood; which, before cold and settled, left the liver white and pale, which is the badge of pusillanimity and cowardice; but the sherris warms it and makes it course from the inwards to the parts extreme: it illumineth the face, which as a beacon gives warning to all the rest of this little kingdom, man, to arm; and then the vital commoners and inland petty spirits muster me all to their captain, the heart, who, great and puffed up with this retinue, doth any deed of courage; and this valour comes of sherris. So that skill in the weapon is nothing without sack for that sets it a-work; and learning a mere hoard of gold kept by a devil, till sack commences it and sets it in act and use. Hereof comes it that Prince Harry is valiant; for the cold blood he did naturally inherit

of his father he hath, like lean, sterile and bare land,
manured, husbanded, and tilled with excellent endeavour
of drinking good and good store of fertile sherris, that he
is become very hot and valiant. If I had a thousand sons,
the first humane principle I would teach them should be
to forswear thin potations and to addict themselves to
sack.

Shakespeare, II Henry IV, IV, Hi, 103

21 *Macbeth*. Throw physic to the dogs; I'll none of it.

Shakespeare, Macbeth, V, iii, 46

22 *Sancho* was conducted from the Court of Justice to a
sumptuous Palace; where, in a spacious Room he found
the Cloth laid, and a most neat and magnificent
Entertainment prepar'd. As soon as he enter'd, the Wind-
Musick play'd, and four Pages waited on him, in order to
the washing his Hands; which he did with a great deal of
Gravity. And now the Instruments ceasing, *Sancho* down
at the upper End of the Table; for there was no Seat but
there, and the Cloth was only laid for one, A certain
Personage, who afterwards appear'd to be a Physician,
came and stood at his Elbow, with a Whalebone Wand in
his Hand. Then they took off a curious white Cloth that
lay over the Dishes on the Table, and discover'd great
Variety of Fruit, and other Eatables. One that look'd like a
Student, said Grace; a Page put a lac'd Bib under
Sancho's Chin; and another, who did the Office of Sewer,
set a Dish of Fruit before him. But he had hardly put one
Bit into his Mouth, before the Physician touch'd the Dish
with his Wand, and then it was taken away by a Page in
an Instant. Immediately another with Meat was clapp'd in

the Place; but Sancho no sooner offer'd to taste it, but the Doctor with the Wand conjur'd it away as fast as the Fruit. Sancho was amaz'd at this sudden Removal, and looking about him on the Company, ask'd them whether they us'd to tantalize People at that rate, feeding their Eyes, and starving their Bellies? My Lord Governor, answer'd the Physician, you are to eat here no otherwise than according to the Use and Custom of other Islands where there are Governors. I am a Doctor of Physick, my Lord, and have a Salary allow'd me in this Island, for taking Charge of the Governor's Health, and I am more careful of it than of my own; studying Night and Day his Constitution, that I may the better know what to prescribe when he falls sick. Now the chief Thing I do, is to attend him always at his Meals, to let him cat what I think convenient for him, and to prevent his eating what I imagine to be prejudicial to his Health, and offensive to his Stomach. Therefore I now order'd the Fruit to be taken away» because 'tis too cold and moist; and the other Dish, because 'tis as much too hot, and overseason'd with Spices, which are apt to increase Thirst; and he that drinks much, destroys and consumes the radical Moisture, which is the Fuel of Life. So then, quoth *Sancho*, this Dish of roasted Partridges here can do me no manner of Harm. Hold, said the Physician, the Lord Governor shall not cat of 'em, while I live to prevent it. Why so? cry'd *Sancho*: Because, answer'd the Doctor, our great Master *Hippocrates*, the North-Star, and Luminary of Physick, says in one of his Aphorisms, *Omnis Saturatio mala, perdicis autem pessima*: That is, all Repletion is bad, but that of Partridges is worst of all. If it be so, said *Sancho*, let Mr Doctor see which of all these Dishes on the Table will do me most Good and least Harm, and let me eat my

Belly-full of that, without having it whisk'd away with his Wand. For, by my Hopes, and the Pleasures of Government, as I live, I am ready to die with Hunger; and not to allow me to cat any Victuals (let Mr Doctor say what he will) is the Way to shorten my Life, and not to lengthen it. Very true, my Lord, reply'd the Physician, however, I am of Opinion, you ought not to eat of these Rabbets, as being a hairy, furry Sort of Food; nor would I have you taste of that Veal: Indeed if it were neither roasted nor pickled, something might be said; but as it is, it must not be. Well then, said *Sancho*, what think you of that huge Dish yonder that smokes so? I take it to be an *Olla Podrida*; and that being a Hodgepodge of so many Sorts of Victuals, sure I can't but light upon something there that will nick me, and be both wholesom and toothsom. *Absit*, cry'd the Doctor, far be such an ill Thought from us; no Diet in the World yields worse Nutriment than those Mishmashes do. No, leave that luxurious Compound to your rich Monks and Prebendaries, your Masters of Colleges, and lusty Feeders at Country-Weddings: But let them not incumber the Tables of Governors, where nothing but delicate unmix'd Viands in their Prime ought to make their Appearance. The Reason is, that simple Medicines are generally allow'd to be better than Compounds; for in a Composition there may happen a Mistake by the unequal Proportion of the Ingredients; but Simples are not subject to that Accident. Therefore what I would advise at present, as a fit Diet for the Governor, for the Preservation and Support of his Health, is a hundred of small Wafers, and a few thin Slices of Marmalade, to strengthen his Stomach and help Digestion. *Sancho* hearing this, lean'd back upon his Chair, and looking earnestly in the Doctor's

Face, very seriously ask'd him what his Name was, and where he had studied? My Lord, answer'd he, I am call'd Doctor *Pedro Rezio de Aguero*, The Name of the Place where I was born, is *Tirteafuera*, and lies between *Caraquel* and *Almodabar del Campo*, on the Right-hand; and I took my Degree of Doctor in the University of *Osuna*. Hark you, said *Sancho*, in a mighty Chafe, Mr Dr *Pedro Rezio de Aguero*, born at *Tirteafuera*, that lies between *Caraquel* and *Almodabar del Campo*, on the Right-hand, and who took your Degrees of Doctor at the University of *Osuna*, and so forth. Take your self away! avoid the Room this Moment, or by the Sun's Light, I'll get me a good Cudgel, and beginning with your Carcase, will so be-labour and rib-roast all the Physick-mongers in the Island, that I will not leave therein one of the Tribe of those, I mean that are ignorant Quacks; for as for learned and wise Physicians, I'll make much of 'em, and honour 'em like so many Angels. Once more *Pedro Rezio*, I say, get out of my Presence. Avaunt! or I'll take the Chair I sit upon, and comb your Head with it to some Purpose; and let me be call'd to an Account about it when I give up my Office; I don't care. I'll clear my self by saying, I did the World good Service, in ridding it of a bad Physician, the Plague of a Commonwealth. Body of me! let me eat, or let 'em take their Government again; for an Office that won't afford a Man his Victuals, is not worth two Horse-Beans.

Cervantes, Don Quixote, II, 47

- 23 The poets did well to conjoin music and medicine in Apollo, because the office of medicine is but to tune this curious harp of man's body and to reduce it to harmony.

Bacon, Advancement of Learning, Bk, II, X, 2

24 As for the footsteps of diseases, and their devastations of the inward parts, impostumations, exulcerations, discontinuations, putrefactions, consumptions, contractions, extensions, convulsions, dislocations, obstructions, repletions, together with all preternatural substances, as stones, carnosities, excrescences, worms and the like; they ought to have been exactly observed by multitude of anatomies, and the contribution of men's several experiences, and carefully set down both historically according to the appearances, and artificially with a reference to the diseases and symptoms which resulted from them, in case where the anatomy is of a defunct patient; whereas now upon opening of bodies they are passed over slightly and in silence.

Bacon, Advancement of Learning, Bk. II, X, 5

25 I profess both to learn and to teach anatomy, not from books but from dissections; not from the positions of philosophers but from the fabric of nature.

William Harvey, Motion of the Heart, Dedication

26 Even as the dissection of healthy and well-constituted bodies contributes essentially to the advancement of philosophy and sound physiology, so does the inspection of diseased and cachectic subjects powerfully assist philosophical pathology. And, indeed, the physiological consideration of the things which are according to nature is to be first undertaken by medical men; since that which is in conformity with nature is right, and serves as a rule both to itself and to that which is amiss; by the light it sheds, too, aberrations and affections against nature are defined; pathology then stands out more

clearly; and from pathology' the use and art of healing, as well as occasions for the discovery of many new remedies, are perceived. Nor could anyone readily imagine how extensively internal organs are altered in diseases, especially chronic diseases, and what monstrosities among internal parts these diseases engender. So that I venture to say, that the examination of a single body of one who has died of tabes or some other disease of long standing, or poisonous nature, is of more service to medicine than the dissection of the bodies of ten men who have been hanged.

William Harvey, Circulation of the Blood, I

- 27 The mind depends so much on the temperament and disposition of the bodily organs that, if it is possible to find a means of rendering men wiser and cleverer than they have hitherto been, I believe that it is in medicine that it must be sought.

Descartes, Discourse on Method, VI

- 28 The medicine which is now in vogue contains little of which the utility is remarkable; but, without having any intention of decrying it, I am sure that there is no one, even among those who make its study a profession, who does not confess that all that men know is almost nothing in comparison with what remains to be known; and that we could be free of an infinitude of maladies both of body and mind, and even also possibly of the infirmities of age, if we had sufficient knowledge of their causes, and of all the remedies with which nature has provided us.

Descartes, Discourse on Method, \T

29 *Geronte*. There is just one thing that bothers me: the position of the liver and the heart. It seems to me that you place them wrongly; and the heart is on the left side and the liver on the right.

Sganarelle. Yes, that is the way it used to be. But we have changed all that; now we use an entirely new method in medicine.

Moliere, The Doctor in Spite of Himself, II, vi

30 I was going on to tell him of another sort of people, who get their livelihood by attending the sick, having upon some occasions informed his honour that many of my crew had died of diseases: but here it was with the utmost difficulty that I brought him to apprehend what I meant. He could easily conceive, that a Houyhnhnm grew weak and heavy a few days before his death; or by some accident might hurt a limb. But that nature who worketh all things to perfection, should suffer any pains to breed in our bodies, he thought impossible; and desired to know the reason of so unaccountable an evil. I told him, we fed on a thousand things which operated contrary to each other: that, we eat when we were not hungry; and drank without the provocation of thirst: that, we sat whole nights drinking strong liquors without eating a bit, which disposed us to sloth, enflamed our bodies, and precipitated or prevented digestion. That, prostitute female Yahoos acquired a certain malady, which bred rottenness in the bones of those, who fell into their embraces: that this and many other diseases, were propagated from father to son; so that great numbers come into the world with complicated maladies upon them: that, it would be endless to give him a catalogue of all diseases incident to human bodies; for they could not

be fewer than five or six hundred, spread over every limb, and joint: in short, every part, external and intestine, having diseases appropriated to each. To remedy which, there was a sort of people bred up among us, in the profession or pretence of curing the sick. And, because I had some skill in the faculty, I would in gratitude to his honour, let him know the whole mystery and method by which they proceed.

Their fundamental is, that all diseases arise from *repletion*; from whence they conclude, that a great *evacuation* of the body is necessary, either through the natural passage, or upwards at the mouth. Their next business is, from herbs, minerals, gums, oyls, shells, salts, juices, sea-weed, excrements, barks of trees, serpents, toads, frogs, spiders, dead mens flesh and bones, beasts and fishes, to form a composition for smell and taste the most abominable, nauseous and detestable, that they can possibly contrive, which the stomach immediately rejects with loathing: and this they call a vomit. Or else from the same store-house, with some other poysonous additions, they command us to take in at the orifice *above* or *below* (just as the physician then happens to be disposed) a medicine equally annoying and disgusting to the bowels; which relaxing the belly, drives down all before it: and this they call a *purge*), or a *glyster*. For nature (as the physicians alledge) having intended the superior anterior orifice only for the *intromission* of solids and liquids, and the inferior posterior for ejection, these artists ingeniously considering that in all diseases nature is forced out of her seat; therefore to replace her in it, the body must be treated in a manner directly contrary, by interchanging the use of each orifice; forcing solids and

liquids in at the *anus*, and making evacuations at the mouth.

But, besides real diseases, we are subject to many that are only imaginary, for which the physicians have invented imaginary cures; these have their several names, and so have the drugs that are proper for them; and with these our female Yahoos are always infested.

One great excellency in this tribe is their skill at *prognosticks*, wherein they seldom fail; their predictions in real diseases, when they rise to any degree of malignity, generally portending *death*, which is always in their power, when recovery is not: and therefore, upon any unexpected signs of amendment, after they have pronounced their sentence, rather than be accused as false prophets, they know how to approve their sagacity to the world by a seasonable dose.

Swift, Gulliver's Travels, IV, 6

- 31 However useful medicine, properly administered, may be among us, it is certain that, if the savage, when he is sick and left to himself, has nothing to hope but from nature, he has, on the other hand, nothing to fear but from his disease; which renders his situation often preferable to our own.

Rousseau, Origin of Inequality, I

- 32 With savages, the weak in body or mind are soon eliminated; and those that survive commonly exhibit a vigorous state of health. We civilised men, on the other hand, do our utmost to check the process of elimination; we build asylums for the imbecile, the maimed, and the sick; we institute poor-laws; and our medical men exert

their utmost skill to save the life of every one to the last moment. There is reason to believe that vaccination has preserved thousands, who from a weak constitution would formerly have succumbed to small-pox. Thus the weak members of civilised societies propagate their kind. No one who has attended to the breeding of domestic animals will doubt that this must be highly injurious to the race of man. It is surprising how soon a want of care, or care wrongly directed, leads to the degeneration of a domestic race; but excepting in the case of man himself, hardly any one is so ignorant as to allow his worst animals to breed.

Darwin, Descent of Man, I, 5

33 Every science has its own kind of investigation and its equipment of special instruments and methods. This, after all, is plain enough, since every science is characterized by the nature of its problems and by the variety of the phenomena that it studies. Medical investigation is the most complicated of all: it includes all the methods proper to anatomical, physiological and therapeutic research, and, as it develops, it also borrows from chemistry and physics many means of research which become powerful allies. In the experimental sciences all progress is measured by improvement in the means of investigation. The whole future of experimental medicine depends on creating a method of research which may be applied fruitfully to the study of vital phenomena, whether in a normal or abnormal state.

Claude Bernard, Experimental Medicine, I, 1

34 Most physicians seem to believe that, in medicine, laws are elastic and indefinite. These are false ideas which must disappear if we mean to found a scientific medicine. As a science, medicine necessarily has definite and precise laws which, like those of all the sciences, are derived from the criterion of experiment.

Claude Bernard, Experimental Medicine, II, 2

35 I consider hospitals only as the entrance to scientific medicine; they are the first field of observation which a physician enters; but the true sanctuary of medical science is a laboratory; only there can he seek explanations of life in the normal and pathological states by means of experimental analysis.

Claude Bernard, Experimental Medicine, II, 2

36 *Napoleon*. What can doctors cure? One can't cure anything. Our body is a machine for living. It is organized for that, it is its nature. Let life go on in it unhindered and let it defend itself, it will do more than if you paralyze it by encumbering it with remedies. Our body is like a perfect watch that should go for a certain time; the watchmaker cannot open it, he can only adjust it by fumbling, and that blindfold.

Tolstoy, War and Peace, X, 29

37 The Middle Ages took a fancy to some familiar number like seven; and because it was an odd number, and the world was made in seven days, and there are seven stars in Charles's Wain, and for a dozen other reasons, they were ready to believe anything that had a seven or a seven times seven in it. Seven deadly sins, seven swords

of sorrow in the heart of the Virgin, seven champions of Christendom, seemed obvious and reasonable things to believe in simply because they were seven. To us, on the contrary, the number seven is the stamp of superstition. We will believe in nothing less than millions, A medieval doctor gained his patient's confidence by telling him that his vitals were being devoured by seven worms. Such a diagnosis would ruin a modern physician. The modern physician tells his patient that he is ill because every drop of his blood is swarming with a million microbes; and the patient believes him abjectly and instantly.

Shaw, Androcles and the Lion, Pref.

- 38 Doctoring is not even the art of keeping people in health (no doctor seems able to advise you what to eat any better than his grandmother or the nearest quack): it is the art of curing illnesses. It does happen exceptionally that a practising doctor makes a contribution to science (my play describes a very notable one); but it happens much oftener that he draws disastrous conclusions from his clinical experience because he has no conception of scientific method, and believes, like any rustic, that the handling of evidence and statistics needs no expertness. The distinction between a quack doctor and a qualified one is mainly that only the qualified one is authorized to sign death certificates, for which both sorts seem to have about equal occasion,

Shaw, Doctor's Dilemma, Pref.

- 39 The notion that therapeutics or hygiene or surgery is any more or less scientific than making or cleaning boots is entertained only by people to whom a man of science is

still a magician who can cure diseases, transmute metals, and enable us to live for ever.

Shaw, Doctor's Dilemma, Pref.

40 You must not think that the outlook of a patient with regard to medical aid is essentially bettered when the diagnosis points to hysteria rather than to organic disease of the brain. Against the serious brain diseases medical skill is in most cases powerless, but also in the case of hysterical affections the doctor can do nothing. He must leave it to benign nature, when and how his hopeful prognosis will be realized. Accordingly, with the recognition of the disease as hysteria, little is changed in the situation of the patient, but there is a great change in the attitude of the doctor. We can observe that he acts quite differently toward hystericals than toward patients suffering from organic diseases. He will not bring the same interest to the former as to the latter, since their suffering is much less serious and yet seems to set up the claim to be valued just as seriously.

Freud, Origin and Development of Psycho-Analysis, I

41 Psycho-analysis stands to psychiatry more or less as histology does to anatomy; in one, the outer forms of organs are studied, in the other, the construction of these out of the tissues and constituent elements. It is not easy to conceive of any contradiction between these two fields of study, in which the work of the one is continued in the other. You know that nowadays anatomy is the basis of the scientific study of medicine; but time was when dissecting human corpses in order to discover the internal structure of the body was as much a matter for

severe prohibition as practising psychoanalysis in order to discover the internal workings of the human mind seems today to be a matter for condemnation. And, presumably at a not too distant date, we shall have perceived that there can be no psychiatry which is scientifically radical without a thorough knowledge of the deep-seated unconscious processes in mental life.

Freud, General Introduction to Psycho-Analysis, XVI

42 When, in the course of an analysis, we have given the ego assistance and have put it in a position to abolish its repressions, it recovers its power over the repressed id and can allow the instinctual impulses to run their course as though the old situations of danger no longer existed. What we can do in this way is in general accord with the therapeutic achievements of medicine; for as a rule we must be satisfied with bringing about more quickly, more certainly and with less expenditure of energy than would otherwise be the case a desired result which in favourable circumstances would have occurred of itself.

Freud, Inhibitions, Symptoms, and Anxiety, X

18.2 The Practice of Medicine PHYSICIANS AND PATIENTS

Included here are statements about the obligations of the physician to his patient; statements about the things the physician should refrain from doing and which, if done, become malpractice; statements about the relation between physicians and patients; and statements about the qualities

of the good physician. They contribute to the formulation of professional standards—the code of what has come to be called "professional ethics," the cornerstone of which is laid by the famous Hippocratic oath.

For whatever they are worth, justified or not, this section also includes a wide variety of satirical attacks on the incompetence of bumbling and fumbling practitioners. No other profession has been subject to more scathing denunciations, unless it be that of the law. This may be understandable in view of the fact that health and disease, like justice and injustice, are of such monumental concern to mankind, who must look to physicians and to lawyers for special competence in securing what is beneficial, and avoiding what is harmful.

One curious strain in the passages quoted deserves comment. It begins with the admonition, cited by St. Luke: "Physician, heal thyself!" Others discuss the physician's experience of disease in his own body, and disagree—as, for example, Plato and Augustine—on the question whether it is necessary for a physician to suffer disease in order to be able to understand and cure it.

■ ■ ■

1 I swear by Apollo the physician, and AEsculapius, and Health, and All-heal, and all the gods and goddesses, that, according to my ability and judgment, I will keep this Oath and this stipulation— to reckon him who taught me this Art equally dear to me as my parents, to share my substance with him, and relieve his necessities if required; to look upon his offspring in the same footing as

my own brothers, and to teach them this art, if they shall wish to learn it, without fee or stipulation; and that by precept, lecture, and every other mode of instruction, I will impart a knowledge of the Art to my own sons, and those of my teachers, and to disciples bound by a stipulation and oath according to the law of medicine, but to none others. I will follow that system of regimen which, according to my ability and judgment, I consider for the benefit of my patients, and abstain from whatever is deleterious and mischievous. I will give no deadly medicine to any one if asked, nor suggest any such counsel; and in like manner I will not give to a woman a pessary to produce abortion. With purity and with holiness I will pass my life and practice my Art. I will not cut persons laboring under the stone, but will leave this to be done by men who are practitioners of this work. Into whatever houses I enter, I will go into them for the benefit of the sick, and will abstain from every voluntary act of mischief and corruption; and, further from the seduction of females or males, of freemen and slaves. Whatever, in connection with my professional practice or not, in connection with it, I see or hear, in the life of men, which ought not to be spoken of abroad, I will not divulge, as reckoning that all such should be kept secret. While I continue to keep this Oath unviolated, may it be granted to me to enjoy life and the practice of the art, respected by all men, in all times! But should I trespass and violate this Oath, may the reverse be my lot!

Hippocrates, The Oath

- 2 It appears to me a most excellent thing for the physician to cultivate Prognosis; for by foreseeing and foretelling, in the presence of the sick, the present, the past, and the

future, and explaining the omissions which patients have been guilty of, he will be the more readily believed to be acquainted with the circumstances of the sick; so that men will have confidence to intrust themselves to such a physician. And he will manage the cure best who has foreseen what is to happen from the present state of matters. For it is impossible to make all the sick well; this, indeed, would have been better than to be able to foretell what is going to happen; but since men die, some even before calling the physician, from the violence of the disease, and some die immediately after calling him, having lived, perhaps, only one day or a little longer, and before the physician could bring his art to counteract the disease; it therefore becomes necessary to know the nature of such affections, how far they are above the powers of the constitution; and, moreover, if there be anything divine in the diseases, and to learn a foreknowledge of this also. Thus a man will be the more esteemed to be a good physician, for he will be the better able to treat those aright who can be saved, from having long anticipated everything; and by seeing and announcing beforehand those who will live and those who will die, he will thus escape censure.

Hippocrates, Book of Prognostics, 1

- 3 The physician must be able to tell the antecedents, know the present, and foretell the future— must meditate these things, and have two special objects in view with regard to diseases, namely, to do good or to do no harm. The art consists in three things—the disease, the patient, and the physician. The physician is the servant of the art, and the patient must combat the disease along with the physician.

Hippocrates, Epidemics, Bk. I, 11, 5

4 I look upon it as being a great part of the art to be able to judge properly of that which has been written. For he that knows and makes a proper use of these things, would appear to me not likely to commit any great mistake in the art. He ought to learn accurately the constitution of every one of the seasons, and of the diseases; whatever that is common in each constitution and disease is good, and whatever is bad; whatever disease will be protracted and end in death, and whatever will be protracted and end in recovery; which disease of an acute nature will end in death, and which in recovery. From these it is easy to know the order of the critical days, and prognosticate from them accordingly. And to a person who is skilled in these things, it is easy to know to whom, when, and how aliment ought to be administered.

Hippocrates, Epidemics, Bk. III, II, 16

5 The prime object of the physician in the whole art of medicine should be to cure that which is diseased; and if this can be accomplished in various ways, the least troublesome should be selected; for this is more becoming a good man, and one well skilled in the art, who does not covet popular coin of base alloy.

Hippocrates, Articulations, 78

6 Medicine is of all the Arts the most noble; but, owing to the ignorance of those who practice it, and of those who, inconsiderately, form a judgment of them, it is at present far behind all the other arts. Their mistake appears to me to arise principally from this, that in the cities there is no punishment connected with the practice of medicine

(and with it alone) except disgrace, and that does not hurt those who are familiar with it. Such persons are like the figures which are introduced in tragedies, for as they have the shape, and dress, and personal appearance of an actor, but are not actors, so also physicians are many in title but very few in reality.

Hippocrates, The Law, I

7 *Socrates.* Asclepius may be supposed to have exhibited the power of his art only to persons who, being generally of healthy constitution and habits of life, had a definite ailment; such as these he cured by purges and operations, and bade them live as usual, herein consulting the interests of the State; but bodies which disease had penetrated through and through he would not have attempted to cure by gradual processes of evacuation and infusion: he did not want to lengthen out good-for-nothing lives, or to have weak fathers begetting weaker sons—if a man was not able to live in the ordinary way he had no business to cure him; for such a cure would have been of no use either to himself, or to the State.

Plato, Republic, III, 407B

8 The most skilful physicians are those who, from their youth upwards, have combined with the knowledge of their art the greatest experience of disease; they had better not be robust in health, and should have had all manner of diseases in their own persons. For the body, as I conceive, is not the instrument with which they cure the body; in that case we could not allow them ever to be or to have

been sickly; but they cure the body with the mind, and the mind which has become and is sick can cure nothing.

Plato, Republic, III, 408B

- 9 *Athenian Stranger*. The physician, whether he cures us against our will or with our will, and whatever be his mode of treatment—incision, burning, or the infliction of some other pain—whether he practises out of a book or not out of a book, and whether he be rich or poor, whether he purges or reduces in some other way, or even fattens his patients, is a physician all the same, so long as he exercises authority over them according to rules of art, if he only does them good and heals and saves them. And this we lay down to be the only proper test of the art of medicine, or of any other art of command.

Plato, Statesman, 293A

- 10 *Athenian Stranger*. The physician saves any whom he wishes to save, and any whom he wishes to maltreat he maltreats—cutting or burning them, and at the same time requiring them to bring him payments, which are a sort of tribute, of which little or nothing is spent upon the sick man, and the greater part is consumed by him and his domestics.

Plato, Statesman, 298A

- 11 *Athenian Stranger*. Did you ever observe that there are two classes of patients in states, slaves and freemen; and the slave doctors run about and cure the slaves, or wait for them in the dispensaries—practitioners of this sort never talk to their patients individually, or let them talk about their own individual complaints? The slave doctor

prescribes what mere experience suggests, as if he had exact knowledge; and when he has given his orders, like a tyrant, he rushes off with equal assurance to some other servant who is ill; and so he relieves the master of the house of the care of his invalid slaves. But the other doctor, who is a freeman, attends and practises upon freemen; and he carries his enquiries far back, and goes into the nature of the disorder; he enters into discourse with the patient and with his friends, and is at once getting information from the sick man, and also instructing him as far as he is able, and he will not prescribe for him until he has first convinced him; at last, when he has brought the patient more and more under his persuasive influences and set him on the road to health, he attempts to effect a cure. Now which is the better way of proceeding in a physician and in a trainer? Is he the better who accomplishes his ends in a double way, or he who works in one way, and that the ruder and inferior?

Cleinias. I should say. Stranger, that the double way is far better.

Plato, Laws, IV, 720A

- 12 *Athenian Stranger.* Do you remember the image in which I likened the men for whom laws are now made to slaves who are doctored by slaves? For of this you may be very sure, that if one of those empirical physicians, who practise medicine without science, were to come upon the gentleman physician talking to his gentleman patient, and using the language almost of philosophy, beginning at the beginning of the disease and discoursing about the whole nature of the body, he would burst into a hearty laugh—he would say what most of

those who are called doctors always have at their tongue's end:—Foolish fellow, he would say, you are not healing the sick man, but you are educating him; and he does not want to be made a doctor, but to get well.

Cleinias. And would he not be right?

Ath. Perhaps he would.

Plato, Laws, IX, 857B

- 13 He who advises a sick man, whose manner of life is prejudicial to health, is clearly bound first of all to change his patient's manner of life, and if the patient is willing to obey him, he may go on to give him other advice. But if he is not willing, I shall consider one who declines to advise such a patient to be a man and a physician, and one who gives in to him to be unmanly and unprofessional.

Plato, Seventh Letter

- 14 A man who is a doctor might cure himself. Nevertheless it is not in so far as he is a patient that he possesses the art of medicine: it merely has happened that the same man is doctor and patient—and that is why these attributes are not always found together.

Aristotle, Physics, 192b24

- 15 A patient should call in a physician; he will not get better if he is doctored out of a book.

Aristotle, Politics, 1287a33

- 16 Although physicians frequently know their patients will die of a given disease, they never tell them so. To warn of

an evil is justified only if, along with the warning, there is a way of escape.

Cicero, Divination, II, 25

17 Physician, heal thyself.

Luke 4:23

18 A skilful physician, ... in a complicated and chronic disease, as he sees occtision, at one while allows his patient the moderate use of such things as please him, at another while gives him keen pains and drugs to work the cure.

Plutarch, Pericles

19 The physician is only nature's assistant.

Galen, On the Humor

20 The man who has tried a bad doctor is afraid to trust even a good one.

Augustine, Confessions, VI, 4

21 A skillful physician knows, indeed, professionally almost all diseases; but experimentally he is ignorant of a great number which he himself has never suffered from.

Augustine, City of God, XXII, 30

22 The physician strengthens nature, and employs food and medicine, of which nature makes use for the intended end.

Aquinas, Summa Theologica, I, 117, 1

23 A man needs the services of a physician in every item of health and at every time, but his need of a physician during sickness is especially great and avoiding him is dangerous. Fools think that a man needs a physician during his sickness only and at no other time, but it very often happens that a man gets sick while traveling or while in a small town where there is no physician or only a physician on whose wisdom people do not rely.

Maimonides, Preservation of Youth, II

24 What kind of physician would that be who stayed in school all the time? When he finally puts his medicine to use and deals more and more with nature, he will come to see that he hasn't as yet mastered the art.

Luther, Table Talk, 352

25 Wretched is the man who relies on the help of physicians. I don't deny that medicine is a gift of God and I don't reject this knowledge, but where are the physicians who are perfect? A good regimen is worth a great deal. So if I feel tired and nevertheless adhere to my regimen, go to bed by the ninth hour, and have a restful night, I will be refreshed.

Luther, Table Talk, 3733

26 When I feel indisposed, by observing a strict diet and going to bed early, I generally manage to get round again, that is, if I can keep my mind tolerably at rest. I have no objection to the doctors acting upon certain theories, but, at the same time, they must not expect us to be the slaves of their fancies. We find Avicenna and Galen, living in other times and in other countries,

prescribing wholly different remedies for the same disorders. I won't pin my faith to any of them, ancient or modern. On the other hand, nothing can well be more deplorable than the proceeding of those fellow's, ignorant as they are complaisant, who let their patients follow exactly their own fancies; 'tis these wretches who more especially people the graveyards. Able, cautious, and experienced physicians, are gifts of God. They are the ministers of nature, to whom human life is confided; but a moment's negligence may ruin everything. No physician should take a single step, but in humility and the fear of God; they who are without the fear of God are mere homicides.

Luther, Table Talk, H783

- 27 Who ever saw a doctor use the prescription of his colleague without cutting out or adding something? Thereby they clearly enough betray their art and reveal to us that they consider their reputation, and consequently their profit, more than the interest of their patients.

Montaigne, Essays, II, 37, Children and Fathers

- 28 I observe the *Phisician*, with the same diligence, as hee the *disease*; I see hee *feares*, and I feare with him: I overtake him, I overrun him in his feare, and I go the faster, because he makes his pace slow; I feare the more, because he disguises his fear, and I see it with the more sharpnesse, because hee would not have me see it.

Donne, Devotions upon Emergent Occasions, VI

29 The weakness of patients, and sweetness of life, and nature of hope, maketh men depend upon physicians with all their defects.

Bacon, Advancement of Learning, Bk. II, X, 2

30 I esteem it the office of a physician not only to restore health, but to mitigate pain and dolours; and not only when such mitigation may conduce to recovery, but when it may serve to make a fair and easy passage.... The physicians contrariwise do make a kind of scruple and religion to stay with the patient after the disease is deplored; whereas in my judgement they ought both to inquire the skill, and to give the attendances, for the facilitating and assuaging of the pains and agonies of death.

Bacon, Advancement of Learning, Bk. II, X, 7

31 Physicians are some of them so pleasing and conformable to the humour of the patient, as they press not the true cure of the disease; and some other are so regular in proceeding according to art for the disease, as they respect not sufficiently the condition of the patient. Take one of a middle temper; or if it may not be found in one man combine two of either sort; and forget not to call as well the best acquainted with your body, as the best reputed of for his faculty.

Bacon, Of Regiment of Health

32 I can cure Vices by Physick, when they remain incurable by Divinity; and shall obey my Pills when they contemn their precepts. I boast nothing, but plainly say, we all

labour against our own cure; for death is the cure of all diseases.

Sir Thomas Browne, Religio Medici, II, 9

- 33 Apollo was held the God of Physick, and Sender of Diseases: Both were originally the same Trade, and still continue.

Swift, Thoughts on Various Subjects

- 34 These two doctors, whom, to avoid any malicious applications, we shall distinguish by the names of Dr. Y. and Dr. Z., having felt his pulse; to wit, Dr. Y. his right arm, and Dr. Z. his left; both agreed that he was absolutely dead; but as to the distemper, or cause of his death, they differed; Dr. Y. holding that he died of an apoplexy, and Dr. Z. of an epilepsy.

Hence arose a dispute between the learned men, in which each delivered the reasons of their several opinions. These were of such equal force, that they served both to confirm either doctor in his own sentiments, and made not the least impression on his adversary.

To say the truth, every physician almost hath his favourite disease, to which he ascribes all the victories obtained over human nature. The gout, the rheumatism, the stone, the gravel, and the consumption, have all their several patrons in the faculty; and none more than the nervous fever, or the fever on the spirits. And here we may account for those disagreements in opinion, concerning the cause of a patient's death, which sometimes occur, between the most learned of the college; and which have greatly surprized that part of the

world who have been ignorant of the fact we have above asserted.

The reader may perhaps be surprized, that, instead of endeavouring to revive the patient, the learned gentlemen should fall immediately into a dispute on the occasion of his death; but in reality all such experiments had been made before their arrival: for the captain was put into a warm bed, had his veins scarified, his forehead chafed, and all sorts of strong drops applied to his lips and nostrils.

The physicians, therefore, finding themselves anticipated in everything they ordered, were at a loss how to apply that portion of time which it is usual and decent to remain for their fee, and were therefore necessitated to find some subject or other for discourse; and what could more naturally present itself than that before mentioned?

Fielding, Tom Jones, II, 9

- 35 As a wise general never despises his enemy, however inferior that enemy's force may be, so neither doth a wise physician ever despise a distemper, however inconsiderable. As the former preserves the same strict discipline, places the same guards, and employs the same scouts, though the enemy be never so weak; so the latter maintains the same gravity of countenance, and shakes his head with the same significant air, let the distemper be never so trifling. And both, among many other good ones, may assign this solid reason for their conduct, that by these means the greater glory redounds to them if they gain the victory, and the less disgrace if by any unlucky accident they should happen to be conquered.

Fielding, Tom Jones, V, 8

36 Jones had no great faith in this new professor; however, he suffered him to open the bandage and to look at his wound; which as soon as he had done, Benjamin began to groan and shake his head violently. Upon which Jones, in a peevish manner, bid him not play the fool, but tell him in what condition he found him. "Shall I answer you as a surgeon, or a friend?" said Benjamin. "As a friend, and seriously," said Jones. "Why then, upon my soul," cries Benjamin, "it would require a great deal of art to keep you from being well after a very few dressings; and if you will suffer me to apply some salve of mine, I will answer for the success." Jones gave his consent, and the plaister was applied accordingly.

"There, sir," cries Benjamin: "now I will, if you please, resume my former self; but a man is obliged to keep up some dignity in his countenance whilst he is performing these operations, or the world will not submit to be handled by him. You can't imagine, sir, of how much consequence a grave aspect is to a grave character. A barber may make you laugh, but a surgeon ought rather to make you cry."

Fielding, Tom Jones, VIII, 6

37 Being subject ... to so few causes of sickness, man, in the state of nature, can have no need of remedies, and still less of physicians.

Rousseau, Origin of Inequality, I

38 I do not know what the doctors cure us of, but I know this: they infect us with very deadly diseases, cowardice, timidity, credulity, the fear of death.

Rousseau, Emile, I

39 Live according to nature; be patient, get rid of the doctors; you will not escape death, but you will only die once, while the doctors make you die daily through your diseased imagination; their lying art, instead of prolonging your days, robs you of all delight in them.

Rousseau, Emile, II

40 We trust our health to the physician: our fortune and sometimes our life and reputation to the lawyer and attorney. Such confidence could not safely be reposed in people of a very mean or low condition. Their reward must be such, therefore, as may give them that rank in the society which so important a trust requires. The long time and the great expense which must be laid out in their education, when combined with this circumstance, necessarily enhance still further the price of their labour.

Adam Smith, Wealth of Nations, I, 10

41 But the merit of the physician was received with universal favour and respect [by the Huns]: the barbarians, who despised death, might be apprehensive of disease; and the haughty conqueror trembled in the presence of a captive to whom he ascribed perhaps an imaginary power of prolonging or preserving his life.

Gibbon, Decline and Fall of the Roman Empire, XXXIV

42 *Mephistopheles*. Medicine's spirit one can grasp with ease.

The great and little world you study through,
To let things finally their course pursue
As God may please.

It's vain that you in search of knowledge roam and drift,
Each only learns what learn he can;
Yet he who grasps the moment's gift,
He is your proper man.
You are moreover quite well-built, beside,
Will never lack for boldness too;
And if you only in yourself confide,
All other souls confide in you.
Learn chiefly how to lead the women; be assured
That all their "Ohs" and "Ahs," eternal, old,
So thousandfold,
Can at a single point be cured;
And if you half-way decorously come,
You have them all beneath your thumb.
A title first must make them comprehend
That your art many arts doth far transcend.
By way of welcome then you touch all matters
For sake of which, long years, another flatters.
Learn how the little pulse to squeeze
And then with sly and fiery glances seize
Her freely round the slender hips to see
How firmly laced up she may be.

Goethe, Faust, I, 2011

- 43 A physician... is by no means physician to living beings in general, not even physician to the human race, but rather, physician to a human individual, and still more physician to an individual in certain morbid conditions peculiar to himself and forming what is called his idiosyncrasy.

Claude Bernard, Experimental Medicine, II, 2

44 Since there is no such thing as a medical work of art, there is no such thing as a medical artist; physicians calling themselves such injure medical science, because they exalt a physician's personality by lowering the importance of science; thus they prevent men from seeking, in the experimental study of phenomena, the support and criterion which they believe they, through inspiration or mere feeling, have within themselves,

Claude Bernard, Experimental Medicine, III, 4

45 Doctors , . . satisf[y] that eternal human need for hope of relief, for sympathy, and that something should be done, which is felt by those who are suffering. They satisf[y] the need seen in its most elementary form in a child, when it wants to have a place rubbed that has been hurt.

Tolstoy, War and Peace, IX, 16

46 He (Napoleon] showed an interest in trifles, joked about de Beausset's love of travel, and chatted carelessly, as a famous, self-confident surgeon who knows his job does when turning up his sleeves and putting on his apron while a patient is being strapped to the operating table. "The matter is in my hands and is clear and definite in my head. When the times comes to set to work I shall do it as no one else could, but now I can jest, and the more I jest and the calmer I am the more tranquil and confident you ought to be, and the more amazed at my genius."

Tolstoy, War and Peace, X, 29

47 The fact that doctors themselves die of the very diseases they profess to cure passes unnoticed.

Shaw, Doctor's Dilemma, Pref.

48 Everything is on the side of the doctor. When men die of disease they are said to die from natural causes. When they recover (and they mostly do) the doctor gets the credit of curing them.

Shaw, Doctor's Dilemma, Pref.

49 There are men and women whom the operating table seems to fascinate: half-alive people who through vanity, or hypochondria, or a craving to be the constant objects of anxious attention or what not, lose such feeble sense as they ever had of the value of their own organs and limbs. They seem to care as little for mutilation as lobsters or lizards, which at least have the excuse that they grow new claws and new tails if they lose the old ones.

Shaw, Doctor's Dilemma, Pref.

50 Just as the object of a trade union under existing conditions must finally be, not to improve the technical quality of the work done by its members, but to secure a living wage for them, so the object of the medical profession today is to secure an income for the private doctor; and to this consideration all concern for science and public health must give way when the two come into conflict. Fortunately they are not always in conflict. Up to a certain point doctors, like carpenters and masons, must earn their living by doing the work that the public wants from them.

Shaw, Doctor's Dilemma, Pref.

51 By making doctors tradesmen, we compel them to learn the tricks of trade; consequently we find that the fashions

of the year include treatments, operations, and particular drugs, as well as hats, sleeves, ballads, and games. Tonsils, vermiform appendices, uvulas, even ovaries are sacrificed because it is the fashion to get them cut out, and because the operations are highly profitable. The psychology of fashion becomes a pathology-; for the cases have every air of being genuine: fashions, after all, are only induced epidemics, proving that epidemics can be induced by tradesmen, and therefore by doctors.

Shaw, Doctor's Dilemma, Pref.

52 When I promised my patients help and relief through the cathartic method, I was often obliged to hear the following objections: "You say, yourself, that my suffering has probably much to do with my own relation and destinies. You cannot change any of that. In what manner, then, can you help me?" To this I could always answer; "I do not doubt at all that it would be easier for fate than for me to remove your sufferings, but you will be convinced that much will be gained if we succeed in transforming your hysterical misery into everyday unhappiness, against which you will be better able to defend yourself with a restored nervous system."

Freud, Papers on Hysteria, IV

53 I wish to call your attention to a well-known fact, namely, that certain maladies and particularly the psycho-neuroses, are more accessible to psychic influences than to any other remedies. It is no modern talk, but a dictum of old physicians, that these diseases are not cured by the drug, but by the doctor—to wit, by

the personality of the physician in so far as he exerts a psychic influence,

Freud, Papers on Hysteria, VIII

18.3 Health and Disease

Definitions of health are offered here, and also analogies between health and other states of well-being, for example, health in the living body with justice in the body politic. Within the limits of the passages quoted, the understanding of disease does not go much beyond the conception of it as a privation of health. The classification of diseases, the definition of different diseases, and the description of specific disease processes and pathological conditions belong to the technical literature of modern medicine and are beyond the scope of this book.

However, there are some passages from Hippocrates and Galen that indicate an early understanding of the etiology of disease; modern writers approach the subject of the causes of disease from a quite different point of view. The basic issue here—intimated rather than explicitly broached—is whether disease results from an interior imbalance of the factors that constitute the health of the body (first expressed in the humoral hypothesis), or from an attack on the body from without by foreign bodies (first expressed in the germ theory).

The psychologists represented in this collection, such as James and Freud, discuss mental health and disease; but this vast and relatively contemporary subject cannot be adequately treated within the limits that we have set for ourselves.

■ ■ ■

- 1 The Lord shall make the pestilence cleave unto thee, until he have consumed thee from off the land, whither thou goest to possess it.

The Lord shall smite thee with a consumption, and with a fever, and with an inflammation, and with an extreme burning, and with the sword, and with blasting, and with mildew; and they shall pursue thee until thou perish. . . .

The Lord will smite thee with the botch of Egypt, and with the emerods, and with the scab, and with the itch, whereof thou canst not be healed.

The Lord shall smite thee with madness, and blindness, and astonishment of heart:

And thou shall grope at noonday, as the blind gropeth in darkness, and thou shalt not prosper in thy ways: and thou shalt be only oppressed and spoiled evermore, and no man shall save thee....

The Lord shall smite thee in the knees, and in the legs, with a sore botch that cannot be healed, from the sole of thy foot unto the top of thy head.

Deuteronomy 28:21-35

- 2 So went Satan forth from the presence of the Lord, and smote Job with sore boils from the sole of his foot unto his crown.

Job 2:7

- 3 Diseases almost always attack men when they are exposed to a change, and never more than during changes of the

weather.

Herodotus, History, II, 77

- 4 Whenever the Scythian king falls sick, he sends for the three soothsayers of most renown at the time, who come and make trial of their art in the mode above described. Generally they say that the king is ill because such or such a person, mentioning his name, has sworn falsely by the royal hearth. This is the usual oath among the Scythians, when they wish to swear with very great solemnity. Then the man accused of having foresworn himself is arrested and brought before the king. The soothsayers tell him that by their art it is clear he has sworn a false oath by the royal hearth, and so caused the illness of the king—he denies the charge, protests that he has sworn no false oath, and loudly complains of the wrong done to him. Upon this the king sends for six new soothsayers, who try the matter by soothsaying. If they too find the man guilty of the offence, straightway he is beheaded by those who first accused him, and his goods are parted among them: if, on the contrary, they acquit him, other soothsayers, and again others, are sent for, to try the case. Should the greater number decide in favour of the man's innocence, then they who first accused him forfeit their lives.

Herodotus, History, IV, 68

- 5 In the first days of summer the Lacedaemonians and their allies, with two-thirds of their forces as before, invaded Attica, under the command of Archidamus, son of Zeuxidamus, King of Lacedaemon, and sat down and laid waste the country. Not many days after their arrival in

Attica the plague first began to show itself among the Athenians. It was said that it had broken out in many places previously in the neighbourhood of Lemnos and elsewhere; but a pestilence of such extent and mortality was nowhere remembered. Neither were the physicians at first of any service, ignorant as they were of the proper way to treat it, but they died themselves the most thickly, as they visited the sick most often; nor did any human art succeed any better. Supplications in the temples, divinations, and so forth were found equally futile, till the overwhelming nature of the disaster at last put a stop to them altogether.

If first began, it is said, in the parts of Ethiopia above Egypt, and thence descended into Egypt and Libya and into most of the King's country. Suddenly falling upon Athens, it first attacked the population in Piraeus—which was the occasion of their saying that the Peloponnesians had poisoned the reservoirs, there being as yet no wells there— and afterwards appeared in the upper city, when the deaths became much more frequent. All speculation as to its origin and its causes, if causes can be found adequate to produce so great a disturbance, I leave to other writers, whether lay or professional; for myself, I shall simply set down its nature, and explain the symptoms by which perhaps it may be recognized by the student, if it should ever break out again. This I can the better do, as I had the disease myself, and watched its operation in the case of others.

That year then is admitted to have been otherwise unprecedentedly free from sickness; and such few cases as occurred all determined in this. As a rule, however, there was no ostensible cause; but people in good health were all of a sudden attacked by violent heats in the

head, and redness and inflammation in the eyes, the inward parts, such as the throat or tongue, becoming bloody and emitting an unnatural and fetid breath. These symptoms were followed by sneezing and hoarseness, after which the pain soon reached the chest, and produced a hard cough. When it fixed in the stomach, it upset it; and discharges of bile of every kind named by physicians ensued, accompanied by very great distress. In most cases also an ineffectual retching followed, producing violent spasms, which in some cases ceased soon after, in others much later. Externally the body was not very hot to the touch, nor pale in its appearance, but reddish, livid, and breaking out into small pustules and ulcers. But internally it burned so that the patient could not bear to have on him clothing or linen even of the very lightest description; or indeed to be otherwise than stark naked. What they would have liked best would have been to throw themselves into cold water; as indeed was done by some of the neglected sick, who plunged into the rain-tanks in their agonies of unquenchable thirst; though it made no difference whether they drank little or much. Besides this, the miserable feeling of not being able to rest or sleep never ceased to torment them. The body meanwhile did not waste away so long as the distemper was at its height, but held out to a marvel against its ravages; so that when they succumbed, as in most cases, on the seventh or eighth day to the internal inflammation, they had still some strength in them. But if they passed this stage, and the disease descended further into the bowels, inducing a violent ulceration there accompanied by severe diarrhoea, this brought on a weakness which was generally fatal. For the disorder first settled in the head, ran its course from thence through the whole of the

body, and, even where it did not prove mortal, it still left its mark on the extremities; for it settled in the privy parts, the fingers and the toes, and many escaped with the loss of these, some too with that of their eyes. Others again were seized with an entire loss of memory on their first recovery, and did not know either themselves or their friends.

But while the nature of the distemper was such as to baffle all description, and its attacks almost too grievous for human nature to endure, it was still in the following circumstance that its difference from all ordinary disorders was most clearly shown. All the birds and beasts that prey upon human bodies, either abstained from touching them (though there were many lying unburied), or died after tasting them. In proof of this, it was noticed that birds of this kind actually disappeared; they were not about the bodies, or indeed to be seen at all. But of course the effects which I have mentioned could best be studied in a domestic animal like the dog.

Such then, if we pass over the varieties of particular cases which were many and peculiar, were the general features of the distemper. Meanwhile the town enjoyed an immunity from all the ordinary disorders; or if any case occurred, it ended in this. Some died in neglect, others in the midst of every attention. No remedy was found that could be used as a specific; for what did good in one case, did harm in another. Strong and weak constitutions proved equally incapable of resistance, all alike being swept away, although dieted with the utmost precaution. By far the most terrible feature in the malady was the dejection which ensued when any one felt himself sickening, for the despair into which they instantly fell took away their power of resistance, and

left them a much easier prey to the disorder; besides which, there was the awful spectacle of men dying like sheep, through having caught the infection in nursing each other. This caused the greatest mortality. On the one hand, if they were afraid to visit each other, they perished from neglect; indeed many houses were emptied of their inmates for want of a nurse: on the other, if they ventured to do so, death was the consequence. This was especially the case with such as made any pretensions to goodness: honour made them unsparing of themselves in their attendance in their friends' houses, where even the members of the family were at last worn out by the moans of the dying, and succumbed to the force of the disaster. Yet it was with those who had recovered from the disease that the sick and the dying found most compassion.

Thucydides, Peloponnesian War, II, 47-51

- 6 There is in man the bitter and the salt, the sweet and the acid, the sour and the insipid, and a multitude of other things having all sorts of powers both as regards quantity and strength. These, when all mixed and mingled up with one another, are not apparent, neither do they hurt a man; but when any of them is separate, and stands by itself, then it becomes perceptible, and hurts a man.

Hippocrates, On Ancient Medicine, 14

- 7 Respecting the seasons, one may judge whether the year will prove sickly or healthy from the following observations:—If the appearances connected with the rising and setting stars be as they should be; if there be rains in autumn; if the winter be mild, neither very tepid

nor unseasonably cold, and if in spring the rains be seasonable, and so also in summer, the year is likely to prove healthy. But if the winter be dry and northerly, and the spring showery and southerly, the summer will necessarily be of a febrile character, and give rise to ophthalmies and dysenteries. For when suffocating heat sets in all of a sudden, while the earth is moistened by the vernal showers, and by the south wind, the heat is necessarily doubled from the earth, which is thus soaked by rain and heated by a burning sun, while, at the same time, men's bellies are not in an orderly state, nor the brain properly dried; for it is impossible, after such a spring, but that the body and its flesh must be loaded with humors, so that very acute fevers will attack all, but especially those of a phlegmatic constitution.

Hippocrates, Airs, Waters, and Places, 10

- 8 One may derive information from the regimen of Persons in good health what things are proper; for if it appear there is a great difference whether the diet be so and so, in other respects, but more especially in the changes, how can it be otherwise in diseases, and more especially in the acute? But it is well ascertained that even a faulty diet of food and drink steadily preserved in, is safer in the main as regards health than if one suddenly change it to another.

Hippocrates, Regimen in Acute Diseases, 9

- 9 The disease called the Sacred [that is, epilepsy] arises from causes as the others, namely, those things which enter and quit the body, such as cold, the sun, and the winds, which are ever changing and are never at rest.

And these things are divine, so that there is no necessity for making a distinction, and holding this disease to be more divine than the others, but all are divine, and all human. And each has its own peculiar nature and power, and none is of an ambiguous nature, or irremediable.

Hippocrates, The Sacred Disease

- 10 *Socrates*. Where temperance is, there health is speedily imparted.

Plato, Charmides, 157A

- 11 *Socrates*. In a man's bodily frame, you would say that the evil is weakness and disease and deformity?

Polus. I should.

Soc. And do you not imagine that the soul likewise has some evil of her own?

Pol. Of course.

Soc. And this you would call injustice and ignorance and cowardice, and the like?

Pol. Certainly.

Plato, Gorgias, 477A.

- 12 *Socrates*. When a carpenter is ill he asks a physician for a rough and ready cure; an emetic or a purge or a cautery or the knife—these are his remedies. And if some one prescribes for him a course of dietetics, and tells him that he must swathe and swaddle his head, and all that sort of thing, he replies at once that he has no time to be ill, and that he sees no good in a life which is spent in nursing his disease to the neglect of his customary employment; and therefore bidding good-bye to this sort of physician, he resumes his ordinary habits, and either gets well and

lives and does his business, or, if his constitution fails, he dies and has no more trouble.

Plato, Republic, III, 406B

- 13 *Timaeus*. Every one can see whence diseases arise. There are four natures out of which the body is compacted, earth and fire and water and air, and the unnatural excess or defect of these, or the change of any of them from its own natural place into another, or—since there are more kinds than one of fire and of the other elements—the assumption by any of these of a wrong kind, or any similar irregularity, produces disorders and diseases; for when any of them is produced or changed in a manner contrary to nature, the parts which were previously cool grow warm, and those which were dry become moist, and the light become heavy, and the heavy light; all sorts of changes occur.

Plato, Timaeus, 81B

- 14 *Timaeus*. Diseases unless they are very dangerous should not be irritated by medicines, since every form of disease is in a manner akin to the living being, whose complex frame has an appointed term of life. For not the whole race only, but each individual—barring inevitable accidents—comes into the world having a fixed span, and the triangles in us are originally framed with power to last for a certain time, beyond which no man can prolong his life. And this holds also of the constitution of diseases; if any one regardless of the appointed time tries to subdue them by medicine, he only aggravates and multiplies them. Wherefore we ought always to manage them by

regimen, as far as a man can spare the time, and not provoke a disagreeable enemy by medicines.

Plato, Timaeus, 89A

- 15 *Athenian Stranger*. As the physician considers that the body will receive no benefit from taking food until the internal obstacles have been removed, so the purifier of the soul is conscious that his patient will receive no benefit from the application of knowledge until he is refuted, and from refutation learns modesty; he must be purged of his prejudices first and made to think that he knows only what he knows, and no more.

Plato, Sophist, 230B

- 16 Men are called healthy in virtue of the inborn capacity of easy resistance to those unhealthy influences that may ordinarily arise; unhealthy, in virtue of the lack of this capacity.

Aristotle, Categories, 9a21

- 17 Health is better than strength and beauty.

Aristotle, Topics, 116b18

- 18 Bodily excellences such as health and a good state of body we regard as consisting in a blending of hot and cold elements within the body in due proportion, in relation either to one another or to the surrounding atmosphere.

Aristotle, Physics, 246b4

- 19 There is no one who does not obviously avoid some things and not others. Therefore, as it seems, all men

make unqualified judgements, if not about all things, still about what is better and worse. And if this is not knowledge but opinion, they should be all the more anxious about the truth, as a sick man should be more anxious about his health than one who is healthy; for he who has opinions is, in comparison with the man who knows, not in a healthy state as far as the truth is concerned.

Aristotle, Metaphysics, 1008b24

- 20 Both excessive and defective exercise destroys the strength, and similarly drink or food which is above or below a certain amount destroys the health, while that which is proportionate both produces and increases and preserves it.

Aristotle, Ethics, 1104a16

- 21 Wickedness is like a disease such as dropsy or consumption, while incontinence is like epilepsy; the former is a permanent, the latter an intermittent badness. And generally incontinence and vice are different in kind; vice is unconscious of itself, incontinence is not (of incontinent men themselves those who become temporarily beside themselves are better than those who have the rational principle but do not abide by it, since the latter are defeated by a weaker passion, and do not act without previous deliberation like the others); for the incontinent man is like the people who get drunk quickly and on little wine, i.e. on less than most people.

Aristotle, Ethics, 1150b33

- 22 The excellence of the body is health; that is, a condition which allows us, while keeping free from disease, to have the use of our bodies.

Aristotle, Rhetoric, 1361b3

- 23 Rising first and starting from the inmost corners of Egypt, after traversing much air and many floating fields, the plague brooded at last over the whole people of Pandion; and then they were handed over in troops to disease and death. First of all they would have the head seized with burning heat and both eyes blood-shot with a glare diffused over; the livid throat within would exude blood and the passage of the voice be clogged and choked with ulcers, and the mind's interpreter the tongue drip with gore, quite enfeebled with sufferings, heavy in movement, rough to touch. Next when the force of disease passing down the throat had filled the breast and had streamed together even into the sad heart of the sufferers, then would all the barriers of life give away. The breath would pour out at the mouth a noisome stench, even as the stench of rotting carcasses thrown out unburied. And then the powers of the entire mind, the whole body would sink utterly, now on the very threshold of death. And a bitter bitter despondency was the constant attendant on insufferable ills and complaining mingled with moaning. An ever-recurring hiccup often the night and day through, forcing on continual spasms in sinews and limbs, would break men quite, forwearying those forspent before. And yet in none could you perceive the skin on the surface of the body burn with any great heat, but the body would rather offer to the hand a lukewarm sensation and at the same time be red all over with ulcers burnt into it so to speak, like unto the holy fire

as it spreads over the frame. The inward parts of the men however would burn to the very bones, a flame would burn within the stomach as within furnaces. Nothing was light and thin enough to apply to the relief of the body of any one; ever wind and cold alone. Many would plunge their limbs burning with disease into the cool rivers, throwing their body naked into the water. Many tumbled head-foremost deep down into the wells, meeting the water straight with mouth wide-agape. Parching thirst with a craving not to be appeased, drenching their bodies, would make an abundant draught no better than the smallest drop. No respite was there of ill: their bodies would lie quite spent. The healing art would mutter low in voiceless fear, as again and again they rolled about their eyeballs wide open, burning with disease, never visited by sleep.

And many symptoms of death besides would then be given, the mind disordered in sorrow and fear, the clouded brow, the fierce delirious expression, the cars too troubled and filled with ringings, the breathing quick or else strangely loud and slow-recurring, and the sweat glistening wet over the neck, the spittle in thin small flakes, tinged with a saffron-colour, salt, scarce forced up the rough throat by coughing. The tendons of the hands ceased not to contract, the limbs to shiver, a coldness to mount with slow sure pace from the feet upwards. Then at their very last moments they had nostrils pinched, the tip of the nose sharp, eyes deep-sunk, temples hollow, the skin cold and hard, on the grim mouth a grin, the brow tense and swollen; and not long after their limbs would be stretched stiff in death: about the eighth day of bright sunlight or else on the ninth return of his lamp the)- would yield up life. And if any of them at that lime

had shunned the doom of death, yet in after lime consumption and death would await him from noisome ulcers and the black discharge of the bowels, or else a quantity of purulent blood accompanied by headache would often pass out by the gorged nostrils: into these the whole strength and substance of the man would stream. Then too if any one had escaped the acrid discharge of noisome blood, the disease would yet pass into his sinews and joints and onward even into the sexual organs of the body; and some from excessive dread of the gates of death would live bereaved of these parts by the knife; and some though without hands and feet would continue in life, and some would lose their eyes; with such force had the fear of death come upon them. And some were seized with such utter loss of memory that they did not know themselves.

Lucretius, Nature of Things, VI

- 24 Personal health is preserved by learning about one's own constitution, by finding out what is good or bad for oneself, by continual self-control in eating habits and comforts (but just to the extent needed for self-preservation), by forgoing sensual pleasures, and lastly, by the professional skill of those to whose science these matters belong.

Cicero, De Officiis, II, 24

- 25 An illness that's swift and short will have one of two results: either oneself or it will be snuffed out. And what difference does it make whatever I or it disappears? Either way there's an end to the pain.

Seneca, Letters to Lucilius, 78

26 That body is, without doubt, the most strong and healthful which can the easiest support extreme cold and excessive heat in the change of seasons, and that the most firm and collected mind which is not puffed up with prosperity nor dejected with adversity.

Plutarch, Aemilius Paulus and Timoleon, Compared

27 In his sufferings he [Tiberius] would simulate health, and was wont to jest at the arts of the physician and at all who, after the age of thirty, require another man's advice to distinguish between what is beneficial or hurtful to their constitutions.

Tacitus, Annals, VI, 46

28 In reference to the genesis of the humours, I do not know that any one could add anything wiser than what has been said by Hippocrates, Aristotle, Praxagoras, Philotimus and many other among the Ancients. These men demonstrated that when the nutriment becomes altered in the veins by the innate heat, blood is produced when it is in moderation, and the other humours when it is not in proper proportion. And all the observed facts agree with this argument. Thus, those articles of food, which are by nature warmer are more productive of bile, while those which are colder produce more phlegm. Similarly of the periods of life, those which are naturally warmer tend more to bile, and the colder more to phlegm. Of occupations also, localities and seasons, and, above all, of natures themselves, the colder are more phlegmatic, and the warmer more bilious. Also cold diseases result from phlegm, and warmer ones from yellow bile. There is not a single thing to be found which

does not bear witness to the truth of this account. How could it be otherwise? For, seeing that every part functions in its own special way because of the manner in which the four qualities are compounded, it is absolutely necessary that the function [activity] should be either completely destroyed, or, at least hampered, by any damage to the qualities, and that thus the animal should fall ill, either as a whole, or in certain of its parts.

Galen, Natural Faculties, II, 8

29 the peace of the body... consists in the duly proportioned arrangement of its parts. The peace of the irrational soul is the harmonious repose of the appetites, and that of the rational soul the harmony of knowledge and action. The peace of body and soul is the well-ordered and harmonious life and health of the living creature.

Augustine, City of God, XIX, 13

30 How many natural appliances are there for preserving and restoring health! How grateful is the alternation of day and night! how pleasant the breezes that cool the air! how abundant the supply of clothing furnished us by trees and animals! Who can enumerate all the blessings we enjoy?

Augustine, City of God, XXII, 24

31 Just as surgeons, when they bind up wounds, do it not in a slovenly way, but carefully, that there may be a certain degree of neatness in the binding, in addition to its mere usefulness, so our medicine, Wisdom, was by His assumption of humanity adapted to our wounds, curing some of them by their opposites, some of them by their

likes. And just as he who ministers to a bodily hurt in some cases applied contraries, as cold to hot, moist to dry, etc., and in other cases applies likes, as a round cloth to a round wound, or an oblong cloth to an oblong wound, and does not fit the same bandage to all limbs, but puts like to like; in the same way the Wisdom of God in healing man has applied Himself to his cure, being Himself healer and medicine both in one.

Augustine, Christian Doctrine, I, 14

- 32 Health is said to be a habit, or a habitual disposition, in relation to nature.... But in so far as nature is a principle of act, it consequently implies a relation to act. Therefore the Philosopher says that man, or one of his members, is called healthy, when he can perform the operation of a healthy man.

Aquinas, Summa Theologica, I-II, 49, 3

- 33 As bodily sickness is partly a privation, in so far as it denotes the destruction of the equilibrium of health, and partly something positive, namely the very humours that are disposed in a disordered way, so too original sin denotes the privation of original justice, and besides this, the disordered disposition of the parts of the soul.

Aquinas, Summa Theologica, I-II, 82, 1

- 34 If a man would take care of his body as he takes care of the animal he rides on, he would be spared many serious ailments.

Maimonides, Preservation of Youth, I

35 Ponocrates showed him, that he ought not eat so soon after rising out of his bed, unless he had performed some exercise beforehand. Gargantua answered, what! have not I sufficiently well exercised myself? I have wallowed and rolled myself six or seven turns in my bed, before I rose. Is not that enough! Pope Alexander did so, by the ad-vice of a Jew his physician, and lived till his dying day in despite of his enemies.

Rabelais, Gargantua and Pantagruel, I, 21

36 What, said Gargantua, to drink so soon after sleep? This is not to live according to the diet and prescript rule of the physicians, for you ought first to scour and cleanse your stomach of all its superfluities and excrements. O well physicked, said the monk; a hundred devils leap into my body, if there be not more old drunkards than old physicians!

Rabelais, Gargantua and Pantagruel, I, 41

37 I welcome health with open arms, free, full, and entire, and whet my appetite to enjoy it, the more so as it is at present rarer and less ordinary with me; so far am I from troubling its repose and sweetness with the bitterness of a new and constrained way of life.

Montaigne, Essays, II, 12, Apology for Raymond Sebond

38 Health is a precious thing, and the only one, in truth, which deserves that we employ in its pursuit not only time, sweat, trouble, and worldly goods, but even life; inasmuch as without it life comes to be painful and oppressive to us. Pleasure, wisdom, knowledge, and virtue, without it, grow tarnished and vanish away; and to

the strongest and most rigorous arguments that philosophy would impress on us to the contrary, we have only to oppose the picture of Plato being struck with a fit of epilepsy or apoplexy, and on this supposition defy him to call to his aid these noble and rich faculties of his soul.

Montaigne, Essays, II, 37, Children and Fathers

39 Of three sorts of movements that are natural to us the last and worst is that of purgations, which no sane man should undertake except in the most extreme necessity. We disturb and arouse a disease by attacking it head on. It is by our mode of life that we should weaken it, by gentle degrees, and bring it to its end. The violent struggles between the drug and the disease are always at our expense, since the combat is fought out within us and the drug is an untrustworthy assistant, by its nature an enemy to our health, and having access to our constitution only through disturbance.

Montaigne, Essays, II, 37, Children and Fathers

40 Both in health and in sickness I have readily let myself follow my urgent appetites. I give great authority to my desires and inclinations. I do not like to cure trouble by trouble; I hate remedies that are more nuisance than the disease. To be subjected to the stone and subjected to abstaining from the pleasure of eating oysters, those are two troubles for one. The disease pinches us on one side, the rule on the other. Since there is a risk of making a mistake, let us risk it rather in pursuit of pleasure. The world does the opposite, and thinks nothing beneficial that is not painful; it is suspicious of ease.

Montaigne, Essays, III, 13, Of Experience

41 The constitution of diseases is patterned after the constitution of animals. They have their destiny, limited from their birth, and their days. He who tries to cut them short imperiously by force, in the midst of their course, prolongs and multiplies them, and stimulates them instead of appeasing them.... We should give free passage to diseases; and I find that they do not stay so long with me, who let them go ahead; and some of those that are considered most stubborn and tenacious, I have shaken off by their own decadence, without help and without art, and against the rules of medicine. Let us give Nature a chance; she knows her business better than we do.

Montaigne, Essays, 111, 13, Of Experience

42 *King*. Diseases desperate grown
By desperate appliance are relieved,
Or not at all.

Shakespeare, Hamlet, IV, iii, 9

43 *Lear*. Infirmary doth still neglect all office
Whereto our health is bound; we are not ourselves
When nature, being oppress'd, commands the mind
To suffer with the body.

Shakespeare, Lear, II, iv, 107

44 That health of body is best, which is ablest to endure all alterations and extremities; so likewise that health of mind is most proper, which can go through the greatest temptations and perturbations.

Bacon, Advancement of Learning, Bk. II, XX, 11

45 Every affection of the mind that is attended with either pain or pleasure, hope or fear, is the cause of an agitation whose influence extends to the heart, and there induces change from the natural constitution, in the temperature, the pulse and the rest, which impairing all nutrition in its source and abating the powers at large, it is no wonder that various forms of incurable disease in the extremities and in the trunk are the consequence, inasmuch as in such circumstances the whole body labours under the effects of vitiated nutrition and a want of native heat.

William Harvey, Motion of the Heart, XV

46 Let physicians, therefore, cease to wonder at what always excites their astonishment, namely, the manner in which epidemic, contagious, and pestilential diseases scatter their seeds, and are propagated to a distance through the air, or by some *fomes* producing diseases like themselves, in bodies of a different nature, and in a hidden fashion silently multiplying themselves by a kind of generation, until they become so fatal, and with the permission of the Deity spread destruction far and wide among man and beast; since they will find far greater wonders than these taking place daily in the generation of animals. For agents in greater number and of more efficiency are required in the construction and preservation of an animal, than for its destruction; since the things that are difficult and slow of growth, decay with ease and rapidity.

William Harvey, Animal Generation, 41

47 So much is certain, and disputed by no one, that animals, all those at least that proceed from the intercourse of

male and female, are the offspring of this intercourse, and that they are procreated as it seems by a kind of contagion, much in the same way as medical men observe contagious diseases, such as leprosy, lues venera, plague, phthisis, to creep through the ranks of mortal men, and by mere extrinsic contact to excite diseases similar to themselves in other bodies; nay, contact is not necessary; a mere halitus or miasm suffices, and that at a distance and by an inanimate medium, and with nothing sensibly altered: that is to say, where the contagion first touches, there it generates an "univocal" like itself, neither touching nor existing in fact, neither being present nor conjunct, but solely because it formerly touched. Such virtue and efficacy is found in contagions.

William Harvey, Animal Generation, 49

48 *Michael*. Before his eyes appeard, sad, noysom, dark,
A Lazar-house it seemd, wherein were laid
Numbers of all diseases'd, all maladies
Of gastly Spasm, or racking torture, qualmes
Of heart-sick Agonie, all feavorous kinds,
Convulsions, Epilepsies, fierce Catarrhs,
Intestin Stone and Ulcer, Colic pangs.
Dropsies, and Asthma's, and Joint-racking Rheums.
Dire was the tossing, deep the groans, despair
Tended the sick busiest from Couch to Couch;
And over them triumphant Death his Dart
Shook, but delaid to strike, though oft invoc't
With vows, as thir chief good, and final hope.

Milton, Paradise Lost, XI, 478

49 How necessary health is to our business and happiness, and how requisite a strong constitution, able to endure hardships and fatigue, is to one that will make any figure in the world, is too obvious to need any proof.

The consideration I shall here have of health, shall be, not what a physician ought to do with a sick and crazy child, but what the parents, without the help of physic, should do for the preservation and improvement of a healthy, or at least not sickly constitution in their children. And this perhaps might be all dispatched in this one short rule, viz., that gentlemen should use their children as the honest farmers and substantial yeomen do theirs. But because the mothers possibly may think this a little too hard, and the fathers too short, I shall explain myself more particularly; only laying down this as a general and certain observation for the women to consider, viz., that most children's constitutions are either spoiled, or at least harmed, by cockering and tenderness.

The first thing to be taken care of, is, that children be not too warmly clad or covered, winter or summer. The face when we are born is no less tender than any other part of the body. 'Tis use alone hardens it, and makes it more able to endure the cold. And therefore the Scythian philosopher gave a very significant answer to the Athenian, who wondered how he could go naked in frost and snow. "How," said the Scythian, "can you endure your face exposed to the sharp winter air?" "My face is used to it," said the Athenian. "Think me all face," replied the Scythian. Our bodies will endure anything, that from the beginning they are accustomed to. . . .

Give me leave therefore to advise you not to fence too carefully against the cold of this our climate. There are

those in England, who wear the same clothes winter and summer, and that without any inconvenience, or more sense of cold than others find. But if the mother will needs have an allowance for frost and snow, for fear of harm, and the father, for fear of censure, be sure let not his winter clothing be too warm: And amongst other things, remember, that when nature has so well covered his head with hair, and strengthened it with a year or two's age, that he can run about by day without a cap, it is best that by night a child should also lie without one; there being nothing that more exposes to headaches, colds, catarrhs, coughs, and several other diseases, than keeping the head warm. . . .

I will also advise his feet to be washed every day in cold water, and to have his shoes so thin that they might leak and let in water, whenever he comes near it. Here, I fear I shall have the mistress and maids too against me. One will think it too filthy, and the other perhaps too much pains, to make clean his stockings. But yet truth will have it that his health is much more worth than all such considerations, and ten times as much more. And he that considers how mischievous and mortal a thing taking wet in the feet is, to those who have been bred nicely, will wish he had, with the poor people's children, gone barefoot, who, by that means, come to be so reconciled by custom to wet in their feet that they take no more cold or harm by it than if they were wet in their hands. And what is it, I pray, that makes this great difference between the hands and the feet in others, but only custom? I doubt not, but if a man from his cradle had been always used to go barefoot whilst his hands were constantly wrapped up in warm mittens, and covered with *hand-shoes*, as the Dutch call gloves; I doubt not, I

say, but such a custom would make taking wet in his hands as dangerous to him as now taking wet in their feet is to a great many others. The way to prevent this is to have his shoes made so as to leak water, and his feet washed constantly every day in cold water. It is recommendable for its cleanliness, but that which I aim at in it, is health; and therefore I limit it not precisely to any time of day. I have known it used every night with very good success, and that all the winter, without the omitting it so much as one night in extreme cold weather; when thick ice covered the water, the child bathed his legs and feet in it, though he was of an age not big enough to rub and wipe them himself, and when he began this custom was puling and very tender. But the great end being to harden those parts by a frequent and familiar use of cold water, and thereby to prevent the mischiefs that usually attend accidental taking wet in the feet in those who are bred otherwise, I think it may be left to the prudence and convenience of the parents, to choose either night or morning. The time I deem indifferent, so the thing be effectually done. The health and hardiness procured by it would be a good purchase at a much dearer rate. To which if I add the preventing of corns, that to some men would be a very valuable consideration. But begin first in the spring with lukewarm, and so colder and colder every time, till in a few days you come to perfectly cold water, and then continue it so winter and summer. For it is to be observed in this, as in all other alterations from our ordinary way of living, the changes must be made by gentle and insensible degrees; and so we may bring our bodies to anything, without pain, and without danger.

Locke, Some Thoughts Concerning Education, 3-7

50 A fancy would sometimes take a Yahoo, to retire into a corner, to lie down and howl, and groan, and spurn away all that came near him, although he were young and fat, and wanted neither food nor water; nor did the servants imagine what could possibly ail him. And the only remedy they found, was to set him to hard work, after which he would infallibly come to himself. To this I was silent out of partiality to my own kind; yet here I could plainly discover the true seeds of *spleen*, which only seizeth on the *lazy*, the luxurious, and the *rich*; who, if they were forced to undergo the *same regimen*, I would undertake for the cure.

Swift, Gulliver's Travels, IV, 7

51 Mr. Allworthy had been for some days indisposed with a cold, which had been attended with a little fever. This he had, however, neglected; as it was usual with him to do all manner of disorders which did not confine him to his bed, or prevent his several faculties from performing their ordinary functions;—a conduct which we would by no means be thought to approve or recommend to imitation; for surely the gentlemen of the AEsculapian art are in the right in advising, that the moment the disease has entered at one door, the physician should be introduced at the other: what else is meant by that old adage, *Venienti occurrere morbo*? "Oppose a distemper at its first approach." Thus the doctor and the disease meet in fair and equal conflict; whereas, by giving time to the latter, we often suffer him to fortify and entrench himself, like a French army; so that the learned gentleman finds it very difficult, and sometimes impossible, to come at the

enemy. Nay, sometimes by gaining time the disease applies to the French military politics, and corrupts nature over to his side, and then all the powers of physic must arrive too late. Agreeable to these observations was, I remember, the complaint of the great Doctor Misaubin, who used very pathetically to lament the late applications which were made to his skill, saying, "Bygar, me believe my pation take me for de undertaker, for dey never send for me till de physicion have kill dem."

Fielding, Tom Jones, V, 7

52 O blessed health! cried my father, making an exclamation, as he turned over the leaves to the next chapter, thou art above all gold and treasure; 'tis thou who enlargest the soul,—and openest all its powers to receive instruction and to relish virtue. He that has thee, has little more to wish for;—and he that is so wretched as to want thee,—wants every thing with thee.

I have concentrated all that can be said upon this important head, said my father, into a very little room, therefore we'll read the chapter quite through.

My father read as follows:

"The whole secret of health depending upon the due contention for mastery betwixt the radical heat and the radical moisture"—You have proved that matter of fact, I suppose, above, said Yorick. Sufficiently, replied my father.

In saying this, my father shut the book,—not as if he resolved to read no more of it, for he kept his forefinger in the chapter:—nor pettishly,—for he shut the book slowly; his thumb resting, when he had done it, upon the upper-side of the cover, as his three fingers supported the lower side of it, without the least compressive violence.--

I have demonstrated the truth of that point, quoth my father, nodding to Yorick, most sufficiently in the preceding chapter.

Now could the man in the moon be told, that a man in the earth had wrote a chapter, sufficiently demonstrating, That the secret of all health depended upon the due contention for mastery betwixt the radical heat and the radical moisture,— and that he had managed the point so well, that there was not one single word wet or dry upon radical heat or radical moisture, throughout the whole chapter,—or a single syllabic in it, pro or con, directly or indirectly, upon the contention betwixt these two powers in any part of the animal economy.--

"O thou eternal Maker of all beings!"—he would cry, striking his breast with his right hand (in case he had one)—"Thou whose power and goodness can enlarge the faculties of Thy creatures to this infinite degree of excellence and perfection,—What have we Mooniles done!"

Sterne, Tristram Shandy, V, 33

53 I shall ask if any solid observations have been made from which it may be justly concluded that, in the countries where the art of medicine is most neglected, the mean duration of man's life is less than in those where it is most cultivated. How indeed can this be the ease, if we bring on ourselves more diseases than medicine can furnish remedies? The great inequality in manner of living, the extreme idleness of some, and the excessive labour of others, the easiness of exciting and gratifying our sensual appetites, the too exquisite foods of the wealthy which overheat and fill them with indigestion, and, on the other hand, the unwholesome food of the poor, often, bad as it

is, insufficient for their needs, which induces them, when opportunity offers, to eat voraciously and overcharge their stomachs; all these, together with silting up late, and excesses of every kind, immoderate transports of every passion, fatigue, mental exhaustion, the innumerable pains and anxieties inseparable from every condition of life, by which the mind of man is incessantly tormented; these are too fatal proofs that the greater part of our ills are of our own making, and that we might have avoided them nearly all by adhering to that simple, uniform and solitary manner of life which nature prescribed.

Rousseau, Origin of Inequality, I

54 Some speculative physicians seem to have imagined that the health of the human body could be preserved only by a certain precise regimen of diet and exercise, of which every, the smallest, violation necessarily occasioned some degree of disease or disorder proportioned to the degree of the violation. Experience, however, would seem to show that the human body frequently preserves, to all appearances at least, the most perfect state of health under a vast variety of different regimens; even under some which are generally believed to be very far from being perfectly wholesome. But the healthful state of the human body, it would seem, contains in itself some unknown principle of preservation, capable either of preventing or of correcting, in many respects, the bad effects even of a very faulty regimen.

Adam Smith, Wealth of Nations, IV, 9

55 The sufferers parade their miseries, tear the lint from their bruises, reveal their indictable crimes, that you may pity them. They like sickness, because physical pain will extort some show of interest from the bystanders, as we have seen children who finding themselves of no account when grown people come in, will cough till they choke, to draw attention.

Emerson, Culture

56 Give me health and a day, and I will make the pomp of emperors ridiculous.

Emerson, Nature, III

57 There is this noteworthy difference between savage and civilised; that while a sick, civilised man may be six months convalescing, generally speaking, a sick savage is almost half well again in a day.

Melville, Moby Dick, CX

58 Vital phenomena are the result of contact between the organic units of the body with the *inner physiological environment*; this is the pivot of all experimental medicine. Physiologists and physicians gain mastery over the phenomena of life by learning which conditions, in this inner environment, are normal and which abnormal, for the appearance of vital activity in the organic units; for apart from complexity of conditions, phenomena exhibiting life, like physico-chemical phenomena, result from contact between an active body and the environment in which it acts.

Claude Bernard, Experimental Medicine, 11, I

59 We shall never have a science of medicine as long as we separate the explanation of pathological from the explanation of normal, vital phenomena.

Claude Bernard, Experimental Medicine, 11, 2

60 *Unhealthiness of will may thus come about in many ways.* The action may follow the stimulus or idea too rapidly, leaving no time for the arousal of restraining associates— *we then have a precipitate will.* Or, although the associates may come, the ratio which the impulsive and inhibitive forces normally bear to each other may be distorted, and we then have a *will which is perverse.* The perversity, in turn, may be due to either of many causes—too much intensity, or too little, here; too much or too little inertia there; or elsewhere too much or too little inhibitory power. *If we compare the outward symptoms of perversity together, they fall into two groups, in one of which normal actions are impossible, and in the other abnormal ones are irrepressible. Briefly, we may call them respectively the obstructed and the explosive will.*

It must be kept in mind, however, that since the resultant action is always due to the *ratio* between the obstructive and the explosive forces which are present, we never can tell by the mere outward symptoms to what *elementary* cause the perversion of a man's will may be due, whether to an increase of one component or a diminution of the other. One may grow explosive as readily by losing the usual brakes as by getting up more of the impulsive steam; and one may find things impossible as well through the enfeeblement of the original desire as through the advent of new lions in the path.

William James, Psychology, XXVI

61 The popular theory of disease is the common medical theory: namely, that every disease had its microbe duly created in the garden of Eden, and has been steadily propagating itself and producing widening circles of malignant disease ever since. It was plain from the first that if this had been even approximately true, the whole human race would have been wiped out by the plague long ago, and that every epidemic, instead of fading out as mysteriously as it rushed in, would spread over the whole world. It was also evident that the characteristic microbe of a disease might be a symptom instead of a cause.

Shaw, Doctor's Dilemma, Pref.

62 Use your health, even to the point of wearing it out. That is what it is for. Spend all you have before you die; and do not outlive yourself.

Shaw, Doctor's Dilemma, Pref.

63 A strong egoism is a protection against disease, but, in the last resort, we must begin to love in order that we may not fall ill, and must fall ill if, in consequence of frustration, we cannot love.

Freud, On Narcissism, II

64 Do not be astonished to hear... that the physician himself occasionally takes sides with the illness which he is attacking. It is not for him to confine himself in all situations in life to the part of fanatic about health; he is that there is *other* misery in the world besides neurotic misery—real unavoidable suffering—that necessity may

even demand of a man that he sacrifice his health to it, and he learns that such suffering in one individual may often avert incalculable hardship for many others. Therefore, although it may be said of every neurotic that he has taken *flight into illness*, it must be admitted that in many cases this flight is fully justified, and the physician who has perceived this state of things will silently and considerately retire.

Freud, General Introduction to Psycho-Analysis, XXIV

Chapter 19

NATURE and the COSMOS

Chapter 19 is divided into eight sections: 19.1 Nature and the Natural, 19.2 The Nature of Life, 19.3 Cause, 19.4 Chance, 19.5 Motion and Change, 19.6 Space, 19.7 Time, and 19.8 The Universe or Cosmos.

The subjects indicated by the section titles have occupied the forefront of speculation throughout the whole tradition of Western thought. They represent basic ideas or are involved in basic questions treated by the philosophers; the consideration of such subjects defines the task of the metaphysician or cosmologist. Most of them also are of interest to natural scientists; such terms as cause, motion, space, and time represent basic scientific concepts. A few of them, especially nature, life, and time, evoke the fancy of the poets and receive imaginative treatment at their hands.

The opening and the closing sections of the chapter are the most comprehensive, dealing with the whole of what there is. The second section concentrates on that part of nature which is the domain of living organisms. The remaining sections treat the operation of causality and of chance in the universe as a whole and in the order of nature, the movement and rest that are characteristic of all physical things, and the dimensions of space and time that constitute the all-embracing framework of the physical world. For passages that relate to the same subjects treated in other contexts, the reader is referred to Chapter 17 on

Philosophy, Science, and Mathematics; to Section 15.3 of Chapter 15 on History; and to Section 16.1 of Chapter 16 on Art and Aesthetics.

...

19.1 Nature and the Natural

Of all the terms in the vocabulary of speculative thought, the words "nature" and "natural" have, perhaps, the greatest ambiguity. The passages collected here reflect the range and variety of the meanings that have been attached to them.

Nature is sometimes identified with the cosmos itself and, as so regarded, it embraces everything, even being identified with God in the view of pantheists who think of God as immanent in nature, not as transcending it. But it is also conceived as quite distinct from God—as the creation of God, who, as uncreated, is therefore referred to as supernatural. In other contexts, a basic distinction is drawn between nature and art—the natural and the artificial, that which is independent of man and that which is in some way dependent on man's efforts or intervention. But nature is also conceived by certain writers as being an artist or as being the product of the divine art. In still other contexts, nature is personified as if it were a brooding omnipresence, the embodiment of an indwelling reason, purposeful and even benevolent; and against such views, the reader will find the opinion expressed that nature represents blind necessity or chance, indifferent to human well-being and human aspirations.

The quotations included in this section set forth most of the maxims that have been formulated concerning nature's operations, usually expressed in personified form: that nature does nothing in vain; that nature abhors a vacuum; that nature can make no mistakes; that nature knows best; that nature does nothing by jumps; that nature is frugal or economical, employing the fewest means to achieve its ends and wasting nothing; that nature manifests the wisdom of God; and so on. Most of these sayings have been challenged or contradicted.

When nature is regarded as the standard of what is right or reasonable, to say that something is unnatural or contrary to nature condemns it morally; but it has also been maintained that there is nothing unnatural or contrary to nature, though it may violate custom or received opinion.

The poets celebrate the beauties of nature as well as its awesome powers. Together with the philosophers and others, they speak of the things that men can learn from nature, and the benefits to be derived from intimacy with it.

■ ■ ■

1 *Achilleus*. The enormous strength of Ocean with his deep-running waters,

Ocean, from whom all rivers are and the entire sea and all springs and all deep wells have their waters of him, yet even Ocean is afraid of the lightning of great Zeus and the dangerous thunderbolt when it breaks from the sky crashing.

Homer, Iliad, XXI, 195

2 *Eleatic Stranger*. Looking, now, at the world and all the animals and plants, at things which grow upon the earth from seeds and roots, as well as at inanimate substances which are formed within the earth, fusile or non-fusile, shall we say that they come into existence—not having existed previously—by the creation of God, or shall we agree with vulgar opinion about them?

Theaetetus. What is it?

Str. The opinion that nature brings them into being from some spontaneous and unintelligent cause. Or shall we say that they are created by a divine reason and a knowledge which comes from God?

Theaet. I dare say that, owing to my youth, I may often waver in my view, but now when I look at you and see that you incline to refer them to God, I defer to your authority.

Str. Nobly said, Theaetetus, and if I thought that you were one of those who would hereafter change your mind, I would have gently argued with you, and forced you to assent; but as I {perceive that you will come of yourself and without any argument of mind, to that belief which, as you say, attracts you, I will not forestall the work of time. Let me suppose, then, that things which are said to be made by nature are the work of divine art, and that things which are made by man out of these are work of human art. And so there are two kinds of making and production, the one human and the other divine.

Plato, Sophist, 265A

3 *Athenian Stranger*. I am afraid that we have unconsciously lighted on a strange doctrine.

Cleinias. What doctrine do you mean?

Ath. The wisest of all doctrines, in the opinion of many.

Cle. I wish that you would speak plainer.

Ath. The doctrine that all things do become, have become, and will become, some by nature, some by art, and some by chance.

Cle. Is not that true?

Ath. Well, philosophers are probably right; at any rate we may as well follow in their track, and examine what is the meaning of them and their disciples.

Cle. By all means.

Ath. They say that the greatest and fairest things are the work of nature and of chance, the lesser of art, which, receiving from nature the greater and primeval creations, moulds and fashions all those lesser works which are generally termed artificial,

Cle. How is that?

Ath. I will explain my meaning still more clearly. They say that fire and water, and earth and air, all exist by nature and chance, and none of them by art, and that as to the bodies which come next in order—earth, and sun, and moon, and stars—they have been created by means of these absolutely inanimate existences. The elements are severally moved by chance and some inherent force according to certain affinities among them—of hot with cold, or of dry with moist, or of soft with hard, and according to all the other accidental admixtures of opposites which have been formed by necessity. After this fashion and in this manner the whole heaven has been created, and all that is in the heaven, as well as animals and all plants, and all the seasons come from these elements, not by the action of mind, as they say, or of any God, or from art, but as I was saying, by nature and chance only. Art sprang up afterwards and out of these, mortal and of mortal birth, and produced in play certain

images and very partial imitations of the truth, having an affinity to one another, such as music and painting create and their companion arts. And there are other arts which have a serious purpose, and these co-operate with nature, such, for example, as medicine, and husbandry, and gymnastic. And they say that politics cooperate with nature, but in a less degree, and have more of art; also that legislation is entirely a work of art, and is based on assumptions which are not true.

Plato, Laws, X, 888B

4 Of things that exist, some exist by nature, some from other causes.

‘By nature’ the animals and their parts exist, and the plants and the simple bodies (earth, fire, air, water)—for we say that these and the like exist ‘by nature’.

All the things mentioned present a feature in which they differ from things which are *not* constituted by nature. Each of them has *within itself* a principle of motion and of stationariness (in respect of place, or of growth and decrease, or by way of alteration). On the other hand, a bed and a coat and anything else of that sort, *qua* receiving these designations—i.e. insofar as they are products of art—have no innate impulse to change. But insofar as they happen to be composed of stone or of earth or of a mixture of the two, they *do* have such an impulse, and just to that extent— which seems to indicate that *nature is a source or cause of being moved and of being at rest in that to which it belongs primarily*, in virtue of itself and not in virtue of a concomitant attribute.

Aristotle, Physics, 192b9

5 Of things constituted by nature some are ungenerated, imperishable, and eternal, while others are subject to generation and decay. The former are excellent beyond compare and divine, but less accessible to knowledge. The evidence that might throw light on them, and on the problems which we long to solve respecting them, is furnished but scantily by sensation; whereas respecting perishable plants and animals we have abundant information, living as we do in their midst, and ample data may be collected concerning all their various kinds, if only we are willing to take sufficient pains. Both departments, however, have their special charm. The scanty conceptions to which we can attain of celestial things give us, from their excellence, more pleasure than all our knowledge of the world in which we live; just as a half glimpse of persons that we love is more delightful than a leisurely view of other things, whatever their number and dimensions. On the other hand, in certitude and in completeness our knowledge of terrestrial things has the advantage. Moreover, their greater nearness and affinity to us balances somewhat the loftier interest of the heavenly things that are the objects of the higher philosophy. Having already treated of the celestial world, as far as our conjectures could reach, we proceed to treat of animals, without omitting, to the best of our ability, any member of the kingdom, however ignoble. For if some have no graces to charm the sense, yet even these, by disclosing to intellectual perception the artistic spirit that designed them, give immense pleasure to all who can trace links of causation, and are inclined to philosophy. Indeed, it would be strange if mimic representations of them were attractive, because they disclose the mimetic skill of the painter or sculptor, and

the original realities themselves were not more interesting, to all at any rate who have eyes to discern the reasons that determined their formation. We therefore must not recoil with childish aversion from the examination of the humbler animals. Every realm of nature is marvellous: and as Heraclitus, when the strangers who came to visit him found him warming himself at the furnace in the kitchen and hesitated to go in, is reported to have bidden them not to be afraid to enter, as even in that kitchen divinities were present, so we should venture on the study of every kind of animal without distaste; for each and all will reveal to us something natural and something beautiful. Absence of haphazard and conduciveness of everything to an end are to be found in Nature's works in the highest degree, and the resultant end of her generations and combinations is a form of the beautiful.

If any person thinks the examination of the rest of the animal kingdom an unworthy task, he must hold in like disesteem the study of man. For no one can look at the primordia of the human frame—blood, flesh, bones, vessels, and the like— without much repugnance. Moreover, when any one of the parts or structures, be it which it may, is under discussion, it must not be supposed that it is its material composition to which attention is being directed or which is the object of the discussion, but the relation of such part to the total form. Similarly, the true object of architecture is not bricks, mortar, or timber, but the house; and so the principal object of natural philosophy is not the material elements, but their composition, and the totality of the form, independently of which they have no existence.

Aristotle, Parts of Animals, 644b21

- 6 A general principle must here be noted, which will be found applicable not only in this instance but in many others that will occur later on. Nature allots each weapon, offensive and defensive alike, to those animals alone that can use it; or, if not to them alone, to them in a more marked degree; and she allots it in its most perfect state to those that can use it best; and this whether it be a sting, or a spur, or horns, or tusks, or what it may of a like kind.

Aristotle, Parts of Animals, 661b28

- 7 Nature creates nothing without a purpose, but always the best possible in each kind of living creature by reference to its essential constitution. Accordingly if one way is better than another that is the way of Nature.

Aristotle, On the Gait of Animals, 704b16

- 8 Nature flies from the infinite, for the infinite is unending or imperfect, and Nature ever seeks an end.

Aristotle, Generation of Animals, 715b15

- 9 The monstrosity belongs to the class of things contrary to Nature, not any and every kind of Nature, but Nature in her usual operations; nothing can happen contrary to Nature considered as eternal and necessary, but we speak of things being contrary to her in those cases where things generally happen in a certain way but may also happen in another way. In fact, even in the case of monstrosities, whenever things occur contrary indeed to the established order but still always in a certain way and not at random, the result seems to be less of a

monstrosity because even that which is contrary to Nature is in a certain sense according to Nature, whenever, that is, the formal nature has not mastered the material nature.

Aristotle, Generation of Animals, 770b10

- 10 The observed facts show that nature is not a series of episodes, like a bad tragedy,

Aristotle, Metaphysics, 1090b19

- 11 Darkness of mind must be dispelled not by the rays of the sun and glittering shafts of day, but by the aspect and the law of nature; the warp of whose design we shall begin with this first principle, nothing is ever gotten out of nothing by divine power. Fear in sooth holds so in check all mortals, because they see many operations go on in earth and heaven, the causes of which they can in no way understand, believing them therefore to be done by power divine. For these reasons when we shall have seen that nothing can be produced from nothing, we shall then more correctly ascertain that which we are seeking, both the elements out of which every thing can be produced and the manner in which all things are done without the hand of the gods.

Lucretius, Nature of Things, I

- 12 All nature , . . as it exists by itself, is founded on two things: there are bodies and there is void in which these bodies are placed and through which they move about.

Lucretius, Nature of Things, I

13 You should desire with all your might to shun the weakness, with a lively apprehension to avoid the mistake of supposing that the bright lights of the eyes were made in order that we might see; and that the tapering ends of the shanks and hams are attached to the feet as a base in order to enable us to step out with long strides; or again that the forearms were slung to the stout upper arms and ministering hands given us on each side, that we might be able to discharge the needful duties of life. Other explanations of like sort which men give, one and all put effect for cause through wrongheaded reasoning; since nothing was born in the body that we might use it, but that which is born begets for itself a use: thus seeing did not exist before the eyes were born, nor the employment of speech ere the tongue was made; but rather the birth of the tongue was long anterior to language and the ears were made long before sound was heard, and all the limbs, I trow, existed before there was any employment for them: they could not therefore have grown for the purpose of being used. But on the other hand engaging in the strife of battle and mangling the body and staining the limbs with gore were in vogue long before glittering darts ever flew; and nature prompted to shun a wound or ever the left arm by the help of art held up before the person the defence of a shield. Yes and consigning the tired body to rest is much older than a soft-cushioned bed, and the slaking of thirst had birth before cups. These things therefore which have been invented in accordance with the uses and wants of life, may well be believed to have been discovered for the purpose of being used. Far otherwise is it with all those things which first were born, then afterwards made known the purposes to which they might be put; at the

head of which class we see the senses and the limbs.
Wherefore again and again I repeat, it is quite impossible
to believe that they could have been made for the duties
which they discharge.

Lucretius, Nature of Things, IV

14 But, ere we stir the yet unbroken ground.
The various course of seasons must be found;
The weather, and the setting of the winds,
The culture suiting to the several kinds
Of seeds and plants, and what will thrive and rise,
And what the genius of the soil denies.
This ground with Bacchus, that with Ceres, suits;
That other loads the trees with happy fruits:
A fourth, with grass unbidden, decks the ground.
Thus Tmolus is with yellow saffron crowned:
India black ebon and white ivory bears;
And soft Idume weeps her od'rous tears.
Thus Pontus sends her beaver-stones from far;
And naked Spaniards temper steel for war:
Epims, for the Elean chariot, breeds
(In hop« of palms) a race of running steeds.
This is the original contract; these the laws
Imposed by Nature, and by Nature's cause,
On sundry places, when Deucalion hurled
His mother's entrails on the desert world;
Whence men, a hard laborious kind, were born.

Virgil, Georgics, I

15 Some steep their seed, and some in cauldrons boil,
With vigorous nitre and with lees of oil,
O'er gentle fires, the exuberant juice to drain,

And swell the flattering husks with fruitful grain.
Yet is not the success for years assured,
Though chosen is the seed, and fully cured,
Unless the peasant, with his annual pain,
Renews his choice, and culls the largest grain.
Thus all below, whether by Nature's curse,
Or Fate's decree, degenerate still to worse.
So the boat's brawny crew the current stem.
And, slow advancing, struggle with the stream:
But if they slack their hands, or cease to strive,
Then down the flood with headlong haste they drive.

Virgil, Georgics, I

- 16 You may drive out nature with a fork, yet still she will return.

Horace, Epistles, I, 10

- 17 Nature which governs the whole will soon change all things which thou seest, and out of their substance will make other things, and again other things from the substance of them, in order that the world may be ever new.

Marcus Aurelius, Meditations, VII, 25

- 18 Nature alone has the power to expand a body in all directions so that it remains unruptured and preserves completely its previous form. Such then is growth, and it cannot occur without the nutriment which flows to the part and is worked up into it.

Galen, Natural Faculties, I, 7

19 It has been made clear in the preceding discussion that nutrition occurs by an alteration or assimilation of that which nourishes to that which receives nourishment, and that there exists in every part of the animal a faculty which in view of its activity we call, in general terms, alterative, or, more specifically, assimilative and nutritive....

Our argument has clearly shown the necessity for the genesis of such a faculty, and whoever has an appreciation of logical sequence must be firmly persuaded from what we have said that, if it be laid down and proved by previous demonstration that Nature is artistic and solicitous for the animal's welfare, it necessarily follows that she must also possess a faculty of this kind.

Galen, Natural Faculties, III, 1

20 To You, then, evil utterly is not—and not only to You, but to Your whole creation likewise, evil is not: because there is nothing over and above Your creation that could break in or derange the order that You imposed upon it. But in certain of its parts there are some things which we call evil because they do not harmonize with other things; yet these same things do harmonize with still others and thus are good; and in themselves they are good. All these things which do not harmonize with one another, do suit well with that lower part of creation which we call the earth, which has its cloudy and windy sky in some way apt to it. God forbid that I should say: "I wish that these things were not"; because even if I saw only them, though I should want better things, yet even for them alone I should praise You: for that You are to be praised, things of earth show— *dragons, and all deeps, fire, hail,*

snow, ice, and stormy winds, which fulfill Thy word; mountains and all hills, fruitful trees and all cedars; beasts and all cattle, serpents and feathered fowl; kings of the earth and all people, princes and all judges of the earth; young men and maidens, old men and young, praise Thy name. And since from the heavens, O our God, all Thy angels praise Thee in the high places, and all Thy hosts, sun and moon, all the stars and lights, the heavens of heavens, and the waters that are above the heavens, praise Thy name —I no longer desired better, because I had thought upon them all and with clearer judgement I realized that while certain higher things are better than lower things, yet all things together are better than the higher alone.

Augustine, Confessions, VII, 13

- 21 This cause ... of a good creation, namely, the goodness of God—this cause, I say, so just and fit, which, when piously and carefully weighed, terminates all the controversies of those who inquire into the origin of the world, has not been recognized by some heretics, because there are, forsooth, many things, such as fire, frost, wild beasts, and so forth, which do not suit but injure this thin-blooded and frail mortality of our flesh, which is at present under just punishment. They do not consider how admirable these things are in their own places, how excellent in their own natures, how beautifully adjusted to the rest of creation, and how much grace they contribute to the universe by their own contributions as to a commonwealth; and how serviceable they are even to ourselves, if we use them with a knowledge of their fit adaptations—so that even poisons, which are destructive when used injudiciously,

become wholesome and medicinal when used in conformity with their qualities and design; just as, on the other hand, those things which give us pleasure, such as food, drink, and the light of the sun, are found to be hurtful when immoderately or unseasonably used. And thus divine providence admonishes us not foolishly to vituperate things, but to investigate their utility with care; and, where our mental capacity or infirmity is at fault, to believe that there is a utility, though hidden, as we have experienced that there were other things which we all but failed to discover.

Augustine, City of God, XI, 22

- 22 In natural things species seem, to be arranged in degrees; as the mixed things are more perfect than the elements, and plants than minerals, and animals than plants, and men than other animals-and in each of these one species is more perfect than others. Therefore, as the divine wisdom is the cause of the distinction of things for the sake of the perfection of the universe, so is it the cause of inequality. For the universe would not be perfect if only one grade of goodness were found in things.

Aquinas, Summa Theologica, I, 47, 2

- 23 God and nature and any other agent make what is best in the whole, but not what is best in every single part, except in order to the whole. . . . And the whole itself, which is the universe of creatures is better and more perfect if some things in it can fail in goodness, and do sometimes fail, God not preventing this.

Aquinas, Summa Theologica, I, 48, 2

24 But God knows well that nothing man may do
Will ever keep restrained a thing that nature
Has made innate in any human creature.

Take any bird and put it in a cage
And do your best affection to engage
And rear it tenderly with meat and drink
Of all the dainties that you can bethink,
And always keep it cleanly as you may;
Although its cage of gold be never so gay,
Yet would this bird, by twenty thousand-fold,
Rather, within a forest dark and cold,
Go to eat worms and all such wretchedness.
For ever this bird will do his business
To find some way to get outside the wires.
Above all things his freedom he desires.

Or take a cat, and feed him well with milk
And tender flesh, and make his bed of silk,
And let him see a mouse go by the wall;
Anon leaves the milk and flesh and all
And every dainty that is in that house,
Such appetite has he to eat a mouse.
Desire has here its mighty power shown
And inborn appetite reclaims its own.

A she-wolf also has a vulgar mind;
The wretchedest he-wolf that she may find,
Or least of reputation, she'll not hate
Whenever she's desirous of a mate.

All these examples speak I of these men
Who are untrue, and not of sweet women.
For men have aye a lickerish appetite
On lower things to do their base delight
Than on their wives, though they be ne'er so fair
And ne'er so true and ne'er so debonair.

Flesh is so fickle, lusting beyond measure,
That we in no one thing can long have pleasure
Or virtuous keep more than a little while.

Chaucer, Canterbury Tales: Manciple's Tale

- 25 We should... follow the wisdom of nature, which, as it takes very great care not to have produced anything superfluous or useless, often prefers to endow one thing with many effects.

Copernicus, De Revolutionibus, I, 10

- 26 *Pantagruel*. The writings of abstinent, abstemious, and long-fasting hermits were every whit as saltless, dry, jejune, and insipid, as were their bodies when they did compose them. It is a most difficult thing for the spirits to be in a good plight, serene and lively, when there is nothing in the body but a kind of voidness and inanity; seeing the philosophers with the physicians jointly affirm, that the spirits, which are styled animal, spring from, and have their constant practice in and through the arterial blood, refined, and purified to the life within the admirable net, which, wonderfully framed, lieth under the ventricles and tunnels of the brain. He gave us also the example of the philosopher, who, when he thought most seriously to have withdrawn himself unto a solitary privacy, far from the rustling clatterments of the tumultuous and confused world, the better to improve his theory, to contrive, comment and ratiocinate, was, notwithstanding his uttermost endeavours to free himself from all untoward noises, surrounded and environed about so with the barking of curs, bawling of mastiffs, bleating of sheep, prating of parrots, tattling of jack-

daws, grunting of swine, girning of boars, yelping of foxes, mewing of cats, cheeping of mice, squeaking of weasels, croaking of frogs, crowing of cocks, cackling of hens, calling of partridges, chanting of swans, chattering of jays, peeping of chickens, singing of larks, creaking of geese, chirping of swallows, clucking of moor-fowls, cucking of cuckoos, bumping of bees, rammage of hawks, chinning of linnets, croaking of ravens, screeching of owls, whicking of pigs, gushing of hogs, curring of pigeons, grumbling of cushet-doves, howling of panthers, curkling of quails, chirping of sparrows, crackling of crows, nuzzing of camels, whining of whelps, buzzing of dromedaries, mumbling of rabbits, cricking of ferrets, humming of wasps, mioling of tigers, bruizing of bears, sussing of kitlings, clamoring of scarfes, whimpering of fulmarts, booing of buffalos, warbling of nightingales, quavering of meavises, drintling of turkies, coniating of storks, trantling of peacocks, clattering of magpies, murmuring of stock-doves, crouting of cormorants, cigling of locusts, charming of beagles, guarring of puppies, snarling of messens, rantling of rats, guerieting of apes, snuttering of monkies, pioling of pelicans, quacking of ducks, yelling of wolves, roaring of lions, neighing of horses, barring of elephants, hissing of serpents, and wailing of turtles, that he was much more troubled, than if he had been in the middle of the crowd at the fair of Fontenay or Niort. Just so is it with those who are tormented with the grievous pangs of hunger. The stomach begins to gnaw, and bark as it were, the eyes to look dim, and the veins, by greedily sucking some refectation to themselves from the proper substance of all the members of a fleshy consistence, violently pull down and draw back that vagrant, roaming spirit, careless and

neglecting of his nurse and natural host, which is the body; as when a hawk upon the fist, willing to take her flight by a soaring aloft in the open spacious air, is on a sudden drawn back by a leash tied to her feet.

Rabelais, Gargantua and Pantagruel, III, 13

27 When I play with my cat, who knows if I am not a pastime to her more than she is to me? Plato, in his picture of the golden age under Saturn, counts among the principal advantages of the man of that time the communication he had with the beasts; inquiring of them and learning from them, he knew the true qualities and differences of each one of them; whereby he acquired a very perfect intelligence and prudence, and conducted his life far more happily than we could possibly do. Do we need a better proof to judge man's impudence with regard to the beasts? . . .

This defect that hinders communication between them and us, why is it not just as much ours as theirs? It is a matter of guesswork whose fault it is that we do not understand one another; for we do not understand them any more than they do us. By this same reasoning they may consider us beasts, as we consider them.

Montaigne, Essays, II, 12, Apology for Raymond Sebond

28 There is no apparent reason to judge that the beasts do by natural and obligatory instinct the same things that we do by our choice and cleverness. We must infer from like results like faculties, and consequently confess that this same reason, this same method that we have for working, is also that of the animals. Why do we imagine in them this compulsion of nature, we who feel no similar

effect? Besides, it is more honorable, and closer to divinity, to be guided and obliged to act lawfully by a natural and inevitable condition, than to act lawfully by accidental and fortuitous liberty; and safer to leave the reins of our conduct to nature than to ourselves. The vanity of our presumption makes us prefer to owe our ability to our powers than to nature's liberality; and we enrich the other animals with natural goods and renounce them in their favor, in order to honor and ennoble ourselves with goods acquired: a very simple notion, it seems to me, for I should prize just as highly graces that were all mine and inborn as those I had gone begging and seeking from education. It is not in our power to acquire a fairer recommendation than to be favored by God and nature.

Montaigne, Essays, II, 12, Apology for Raymond Sebond

- 29 It is one and the same nature that rolls its course. Anyone who had formed a competent judgment of its present state could infer from this with certainty both all the future and all the past.

Montaigne, Essays, II, 12, Apology for Raymond Sebond

- 30 We call contrary to nature what happens contrary to custom; nothing is anything but according to nature, whatever it may be. Let this universal and natural reason drive out of us the error and astonishment that novelty brings us.

Montaigne, Essays, II, 30, Of a Monstrous Child

- 31 We have abandoned Nature and we want to teach her her lesson, she who used to guide us so happily and so surely.

And yet the traces of her teaching and the little that remains of her image—imprinted, by the benefit of ignorance, on the life of that rustic, unpolished mob—learning is constrained every day to go and borrow, to give its disciples models of constancy, innocence, and tranquillity. It is fine to see these disciples, full of so much beautiful knowledge, obliged to imitate that stupid simplicity, and imitate it in the primary actions of virtue; and a fine thing that our sapience learns from the very animals the most useful teachings for the greatest and most necessary parts of our life: how we should live and die, husband our possessions, love and bring up our children, maintain justice—a singular testimony of human infirmity; and that this reason of ours that we handle as we will, always finding some diversity and novelty, leaves in us no apparent trace of Nature. And men have done with Nature as perfumers do with oil; they have sophisticated her with so many arguments and farfetched reasonings that she has become variable and particular for each man, and has lost her own constant and universal countenance; and we must seek in the animals evidence of her that is not subject to favor, corruption, or diversity of opinion.

Montaigne, Essays, III, 12, Of Physiognomy

32 Let us give Nature a chance; she knows her business better than we do.

Montaigne, Essays, III, 13, Of Experience

33 When I dance, I dance; when I sleep, I sleep; yes, and when I walk alone in a beautiful orchard, if my thoughts have been dwelling on extraneous incidents for some

part of the time, for some other part I bring them back to the walk, to the orchard, to the sweetness of this solitude, and to me. Nature has observed this principle like a mother, that the actions she has enjoined on us for our need should also give us pleasure; and she invites us to them not only through reason, but also through appetite. It is unjust to infringe her laws.

Montaigne, Essays, III, 13, Of Experience

34 *Duke Senior*. Hath not old custom made this life more sweet

Than that of painted pomp? Are not these woods
More free from peril than the envious court?

Here feel we but the penalty of Adam,

The seasons' difference, as the icy fang

And churlish chiding of the winter's wind,

Which, when it bites and blows upon my body

Even till I shrink with cold, I smile and say

"This is no flattery: these are counsellors

That feelingly persuade me what I am."

Sweet are the uses of adversity,

Which, like the toad, ugly and venomous,

Wears yet a precious jewel in his head;

And this our life exempt from public haunt

Finds tongues in trees, books in the running brooks,

Sermons in stones, and good in everything.

Shakespeare, As You Like It, II, i, 2

35 *Amiens*. [sings] Under the greenwood tree

Who loves to lie with me.

And turn his merry note

Unto the sweet bird's throat,

Come hither, come hither, come hither:
Here shall he see
No enemy
But winter and rough weather.

Shakespeare, As You Like It, II, v, 1

36 *Corin*. And how like you this shepherd's life. Master Touchstone?

Touchstone. Truly, shepherd, in respect of itself, it is a good life; but in respect that it is a shepherd's life, it is naught. In respect that it is solitary, I like it very well; but in respect that it is private, it is a very vile life. Now, in respect it is in the fields, it pleaseth me well; but in respect it is not in the court, it is tedious. As it is a spare life, look you, it fits my humour well; but as there is no more plenty in it, it goes much against my stomach.

Shakespeare, As You Like It, III, ii, 11

37 *Edmund*. Thou, nature, art my goddess; to thy law
My services are bound. Wherefore should I
Stand in the plague of custom, and permit
The curiosity of nations to deprive me,
For that I am some twelve or fourteen moonshines
Lag of a brother? Why bastard? wherefore base?
When my dimensions are as well compact,
My mind as generous, and my shape as true,
As honest madam's issue? Why brand they us
With base? with baseness? bastardy? base, base?
Who, in the lusty stealth of nature, take
More composition and fierce quality
Than doth, within a dull, stale, tired bed,

Go to the creating a whole tribe of fops,
Got 'tween asleep and wake?

Shakespeare, Lear, 1, ii, 1

38 *Kent*. Where's the King?

Gentleman. Contending with the fretful element;
Bids the wind blow the earth into the sea,
Or swell the curled waters 'bove the main,
That things might change or cease; tears his white hair,
Which the impetuous blasts, with eyeless rage,
Catch in their fury, and make nothing of;
Strives in his little world of man to out-scorn
The to-and-fro-conflicting wind and rain.
This night, wherein the cub-drawn bear would couch,
The lion and the belly-pinched wolf
Keep their fur dry% unbonneted he runs,
And bids what will take all.

Shakespeare, Lear, III, i, 3

39 *Lear*. Blow, winds, and crack your checks! rage! blow!
You cataracts and hurricanes, spout
Till you have drench'd our steeples, drown'd the cocks!
You sulphurous and thought-executing fires,
Vaunt-couriers to oak-cleaving thunderbolts,
Singe my white head! And thou, all-shaking thunder.
Smite flat the thick rotundity o' the world!
Crack nature's moulds, all germens spill at once,
That make ingrateful man!

Fool. O nuncle, court holy-water in a dry' house is
better than this rain-water out o' door. Good nuncle, in,
and ask thy daughters' blessing. Here's a night pities
neither wise man nor fool.

Lear. Rumble thy bellyful! Spit, fire! spout, rain!
Nor rain, wind, thunder, fire, are my daughters.
I tax not you, you elements, with unkindness;
I never gave you kingdom, call'd you children,
You owe me no subscription. Then let fall
Your horrible pleasure; here I stand, your slave,
A poor, infirm, weak, and despised old man:
But yet I call you servile ministers,
That have with two pernicious daughters join'd
Your high engender'd battles 'gainst a head
So old and white as this, O! O! 'tis foul!

Shakespeare, Lear, III, ii, 1

40 *Perdita*. Sir, the year growing ancient,
Not yet on summer's death, nor on the birth
Of trembling winter, the fairest flowers o' the season
are our carnations and streak'd gillyvors,
Which some call Nature's bastards. Of that kind
Our rustic garden's barren; and I care not
To get slips of them.

Polixenes. Wherefore, gentle maiden,
Do you neglect them?

Per. For I have heard it said
There is an art which in their piedness shares
With great creating Nature.

Pol. Say there be;
Yet Nature is made better by no mean
But Nature makes that mean; so, over that art
Which you say adds to Nature, is an art
That Nature makes. You see, sweet maid, we marry
A gentler scion to the wildest stock.
And make conceive a bark of baser kind
By bud of nobler race. This is an art

Which does mend Nature, change it rather, but
The art itself is Nature.

Per. So it is.

Pol. Then make your garden rich in gillyvors,
And do not call them bastards.

Shakespeare, Winter's Tale, IV, iv, 80

41 *Clerimont.* [sings] Still to be neat, still to be dressed
As you were going to a feast.
Still to be powdered, still perfumed;
Lady, is it to be presumed,
Though art's hid causes are not found,
All is not sweet, all is not sound.

Give me a look, give me a face,
That makes simplicity a grace;
Robes loosely flowing, hair as free—
Such sweet neglect more taketh me,
Than all th' adulteries of art.
They strike mine eyes, but not my heart.

Jonson, Epicene, II, i

42 The subtilty of nature is far beyond that of sense or of the
understanding; so that the specious meditations,
speculations, and theories of mankind are but a kind of
insanity, only there is no one to stand by and observe it.

Bacon, Novum Organum, I, 10

43 As in ordinary life every person's disposition, and the
concealed feelings of the mind and passions are most
drawn out when they are disturbed—so the secrets of
nature betray themselves more readily when tormented
by art than when left to their own course.

Bacon, Novum Organum, I, 98

- 44 The empire of man over things is founded on the arts and sciences alone, for nature is only to be commanded by obeying her.

Bacon, Novum Organum, I, 129

- 45 Easy is everything to nature's majesty, who uses her strength sparingly, and dispenses it with caution and foresight for the commencement of her works by imperceptible additions, but hastens to decay with suddenness and in full career. In the generation of things is seen the most excellent, the eternal and almighty God, the divinity of nature, worthy to be looked up to with reverence; but all mortal things run to destruction of their own accord in a thousand ways.

William Harvey, Animal Generation, 41

- 46 If in the domain and rule of nature... many excellent operations are daily effected surpassing the powers of the things themselves, what shall we not think possible within the pale and regimen of nature, of which all art is but imitation? And if, as ministers of man, they effect such admirable ends, what, I ask, may we not expect of them, when they are instruments in the hand of God?

William Harvey, Animal Generation, 71

- 47 There is no doubt that in all things which nature teaches me there is some truth contained; for by nature, considered in general, I now understand no other thing than either God Himself or else the order and disposition which God has established in created things; and by my

nature in particular I understand no other thing than the
complexus of all the things which God has given me.

Descartes, Meditations on First Philosophy, VI

48 Nature itself cannot err.

Hobbes, Leviathan, I, 4

49 What reason may not go to School to the wisdom of Bees, Ants, and Spiders? what wise hand teacheth them to do what reason cannot teach us? ruder heads stand amazed at those prodigious pieces of Nature, Whales, Elephants, Dromidaries and Camels; these, I confess, are the Colossus and Majestick pieces of her hand: but in these narrow Engines there is more curious Mathematicks; and the civility of these Little Citizens, more neatly sets forth the Wisdom of their Maker. Who admires not *Regio-Montanus* his Fly beyond his Eagle, or wonders not more at the operation of two Souls in those little Bodies, than but one in the Trunk of a Cedar?

Sir Thomas Browne, Religio Medici, I, 15

50 I hold there is a general beauty in the works of God, and therefore no deformity in any kind or species of creature whatsoever: I cannot tell by what Logick we call a *Toad*, a *Bear*, or an *Elephant* ugly, they being created in those outward shapes and figures which best express the actions of their inward forms. And having past that general Visitation of God, who saw that all that he had made was good, that is, conformable to his Will, which abhors deformity, that is the rule of order and beauty; there is no deformity but in Monstrosity; wherein, notwithstanding, there is a kind of Beauty. Nature so

ingeniously contriving the irregular parts, as they become sometimes more remarkable than the principal Fabrick. To speak yet more narrowly, there was never any thing ugly or misshapen, but the Chaos; wherein, notwithstanding, to speak strictly, there was no deformity, because no form; nor was it yet impregnant by the voice of God; now Nature was not at variance with Art, nor Art with Nature, they being both servants of his providence: Art is the perfection of Nature: were the World now as it was the sixth day, there were yet a Chaos: Nature hath made one World and Art another. In brief, all things are artificial for Nature is the Art of God.

Sir Thomas Browne, Religio Medici, I, 16

- 51 Nature has some perfections to show that she is the image of God, and some defects to show that she is only His image.

Pascal, Pensées, VIII, 580

- 52 *Lawrence* of vertuous Father vertuous Son,
Now that the Fields are dank, and ways are mire,
Where shall we sometimes meet, and by the fire
Help wast a sullen day; what may be won
From the hard Season gaining: time will run
On smoother, till *Favonius* re-inspire
The frozen earth; and cloth in fresh attire
The Lillie and Rose, that neither sow'd nor spun.
What neat repast shall feast us, light and choice,
Of Attick last, with Wine, whence we may rise
To hear the Lute well toucht, or artfull voice
Warble immortal Notes and *Tuskan* Ayre?

He who of those delights can judge, and spare
To interpose them oft, is not unwise.

Milton, Lawrence of vertuous Father vertuous Son

53 *Raphael*. Accuse not Nature, she hath don her part;
Do thou but thine.

Milton, Paradise Lost, VIII, 561

54 The attempt ... to show that nature does nothing in vain
(that is to say, nothing which is not profitable to man),
seems to end in showing that nature, the gods, and man
are alike mad.

Spinoza, Ethics, I, Appendix

55 It will doubtless seem a marvellous thing for me to
endeavour to treat by a geometrical method the vices
and follies of men, and to desire by a sure method to
demonstrate those things which these people cry out
against as being opposed to reason, or as being vanities,
absurdities, and monstrosities. The following is my reason
for so doing. Nothing happens in nature which can be
attributed to any vice of nature, for she is always the
same and everywhere one. Her virtue is the same, and
her power of acting; that is to say, her laws and rules,
according to which all things are and are changed from
form to form, are everywhere and always the same; so
that there must also be one and the same method of
understanding the nature of all things whatsoever, that is
to say, by the universal laws and rules of nature.

Spinoza, Ethics, III, Introduction

56 The custom of applying the words *perfect* and *imperfect* to natural objects has arisen rather from prejudice than from true knowledge of them. For... nature does nothing for the sake of an end, for that eternal and infinite Being whom we call God or Nature acts by the same necessity by which He exists; for... He acts by the same necessity of nature as that by which He exists. The reason or cause, therefore, why God or nature acts and the reason why He exists are one and the same. Since, therefore, He exists for no end, He acts for no end; and since He has no principle or end of existence, He has no principle or end of action. A final cause, as it is called, is nothing, therefore, but human desire, insofar as this is considered as the principle or primary cause of anything.

Spinoza, Ethics, IV, Preface

57 We are to admit no more causes of natural things than such as are both true and sufficient to explain their appearances. To this purpose the philosophers say that Nature does nothing in vain, and more is in vain when less will serve; for Nature is pleased with simplicity, and affects not the pomp of superfluous causes.

Therefore to the same natural effects we must, as far as possible, assign the same causes. As to respiration in a man and in a beast; the descent of stones in Europe and in America; the light of our culinary fire and of the sun; the reflection of light in the earth, and in the planets.

Newton, Principia, III, Rules 1-2

58 There are never in nature two beings which are exactly alike.

Leibniz, Monadology, 9

59 Nature makes many *particular things*, which do agree one with another in many sensible qualities, and probably too in their internal frame and constitution: but it is not this real essence that distinguishes them into species; it is men who, taking occasion from the qualities they find united in them, and wherein they observe often several individuals to agree, range them into sorts, in order to their naming, for the convenience of comprehensive signs; under which individuals, according to their conformity to this or that abstract idea, come to be ranked as under ensigns: so that this is of the blue, that the red regiment; this is a man, that a drill: and in this, I think, consists the whole business of genus and species.

Locke, Concerning Human Understanding, Bk. III, VI, 36

60 You will say, Hath Nature no share in the production, of natural things, and must they be all ascribed to the immediate and sole operation of God? I answer, if by *Nature* is meant only the visible *series* of effects or sensations imprinted on our minds, according to certain fixed and general laws, then it is plain that Nature, taken in this sense, cannot produce anything at all. But, if by Nature is meant some being distinct from God, as well as from the laws of nature, and things perceived by sense, I must confess that word is to me an empty sound without any intelligible meaning annexed to it. Nature, in this acceptation, is a vain chimera, introduced by those heathens who had not just notions of the omnipresence and infinite perfection of God.

Berkeley, Principles of Human Knowledge, 150

61 Such is the artificial contrivance of this mighty machine of nature that, whilst its motions and various phenomena strike on our senses, the hand which actuates the whole is itself unperceivable to men of flesh and blood.

Berkeley, Principles of Human Knowledge, 151

62 All are but parts of one stupendous whole,
Whose body Nature is, and God the soul;
That, chang'd thro' all, and yet in all the same,
Great in the earth, as in th' aethereal frame,
Warms in the sun, refreshes in the breeze,
Glow in the stars, and blossoms in the trees,
Lives thro' all life, extends thro' all extent,
Spreads undivided, operates unspent,
Breathes in our soul, informs our mortal part,
As full, as perfect, in a hair as heart;
As full, as perfect, in vile Man that mourns,
As the rapt Seraph that adores and burns;
To him no high, no low, no great, no small;
He fills, he bounds, connects, and equals all.

Pope, Essay on Man, Epistle I, 267

63 It seems evident that, if all the scenes of nature were continually shifted in such a manner that no two events bore any resemblance to each other, but every object was entirely new, without any similitude to whatever had been seen before, we should never, in that case, have attained the least idea of necessity, or of a connexion among these objects. We might say, upon such a supposition, that one object or event has followed another; not that one was produced by the other. The relation of cause and effect must be utterly unknown to

mankind. Inference and reasoning concerning the operations of nature would, from that moment, be at an end; and the memory and senses remain the only canals, by which the knowledge of any real existence could possibly have access to the mind. Our idea, therefore, of necessity and causation arises entirely from the uniformity observable in the operations of nature, where similar objects are constantly conjoined together, and the mind is determined by custom to infer the one from the appearance of the other.

Hume, Concerning Human Understanding, VIII, 64

64 *The Philosopher.* We are curious. I want to know how being so crude in your mountains, in your deserts, in your seas, you appear nevertheless so industrious in your animals, in your vegetables?

Nature. My poor child do you want me to tell you the truth? It is that I have been given a name which does not suit me; my name is "Nature", and I am all art.

Phil. That word upsets all my ideas. What! nature is only art?

Na. Yes, without any doubt. Do you not know that there is an infinite art in those seas and those mountains that you find so crude? do you not know that all those waters gravitate towards the centre of the earth, and mount only by immutable laws; that those mountains which crown the earth are the immense reservoirs of the eternal snows which produce unceasingly those fountains, lakes and rivers without which my animal species and my vegetable species would perish? And as for what are called my animal kingdom, my vegetable kingdom and my mineral kingdom, you see here only three; learn that I have millions of kingdoms. But if you

consider only the formation of an insect, of an ear of corn, of gold, of copper, everything will appear as marvels of art.

Phil. It is true. The more I think about it, the more I see that you are only the art of I know not what most potent and industrious great being, who hides himself and who makes you appear. All reasoners since Thales, and probably long before him, have played at blind man's bluff with you; they have said; "I have you!" and they had nothing. We all resemble Ixion; he thought he was kissing Juno, and all that he possessed was a cloud.

Na. Since I am all that is, how can a being such as you, so small a part of myself, seize me? Be content, atoms my children, with seeing a few atoms that surround you, with drinking a few drops of my milk, with vegetating for a few moments on my breast, and with dying without having known your mother and your nurse.

Phil. My dear mother, tell me something of why you exist, of why there is anything.

Na. I will answer you as I have answered for so many centuries all those who have interrogated me about first principles: I KNOW NOTHING ABOUT THEM.

Phil. Would not non-existence be better than this multitude of existences made in order to be continually dissolved, this crowd of animals born and reproduced in order to devour others and to be devoured, this crowd of sentient beings formed for so many painful sensations, that other crowd of intelligences which so rarely hear reason. What is the good of all that. Nature?

Na. Oh! go and ask Him who made me.

Voltaire, Philosophical Dictionary: Nature

65 While the earth was left to its natural fertility and covered with immense forests, whose trees were never mutilated by the axe, it would present on every side both sustenance and shelter for every species of animal. Men, dispersed up and down among the rest, would observe and imitate their industry, and thus attain even to the instinct of the beasts, with the advantage that, whereas every species of brutes was confined to one particular instinct, man, who perhaps has not any one peculiar to himself, would appropriate them all, and live upon most of those different foods which other animals shared among themselves; and thus would find his subsistence much more easily than any of the rest.

Accustomed from their infancy to the inclemencies of the weather and the rigour of the seasons, inured to fatigue, and forced, naked and unarmed, to defend themselves and their prey from other ferocious animals, or to escape them by flight, men would acquire a robust and almost unalterable constitution. The children, bringing with them into the world the excellent constitution of their parents, and fortifying it by the very exercises which first produced it, would thus acquire all the vigour of which the human frame is capable. Nature in this case treats them exactly as Sparta treated the children of her citizens: those who come well formed into the world she renders strong and robust, and all the rest she destroys; differing in this respect from our modern communities, in which the State, by making children a burden to their parents, kills them indiscriminately before they are born.

Rousseau, Origin of Inequality, 1

66 Give civilised man time to gather all his machines about him, and he will no doubt easily beat the savage; but if you would see a still more unequal contest, set them together naked and unarmed, and you will soon see the advantage of having all our forces constantly at our disposal, of being always prepared for every event, and of carrying one's self, as it were, perpetually whole and entire about one.

Rousseau, Origin of Inequality, I

67 We should beware ... of confounding the savage man with the men we have daily before our eyes. Nature treats all the animals left to her care with a predilection that seems to show how jealous she is of that right. The horse, the cat, the bull, and even the ass are generally of greater stature, and always more robust, and have more vigour, strength and courage, when they run wild in the forests than when bred in the stall. By becoming domesticated, they lose half these advantages; and it seems as if all our care to feed and treat them well serves only to deprave them. It is thus with man also: as he becomes sociable and a slave, he grows weak, timid and servile; his effeminate way of life totally enervates his strength and courage. To this it may be added that there is still a greater difference between savage and civilised man, than between wild and tame beasts: for men and brutes having been treated alike by nature, the several conveniences in which men indulge themselves still more than they do their beasts, are so many additional causes of their deeper degeneracy.

Rousseau, Origin of Inequality, I

68 The General [Paoli] said, that in a state of nature a man and woman uniting together, would form a strong and constant affection, by the mutual pleasure each would receive; and that the same causes of dissention would not arise between them, as occur between husband and wife in a civilized state. *Johnson*. "Sir, they would have dissentions enough, though of another kind. One would choose to go a hunting in this wood, the other in that; one would choose to go a fishing in this lake, the other in that; or, perhaps, one would choose to go a hunting, when the other would choose to go a fishing; and so they would part. Besides, Sir, a savage man and a savage woman meet by chance; and when the man sees another woman that pleases him better, he will leave the first."

Boswell, Life of Johnson (Mar. 31, 1772)

69 *Art* is distinguished from *nature* as making is from acting or operating in general, and the product or the result of the former is distinguished from that of the latter as *work* from *operation*.

By right it is only production through freedom, i.e., through an act of will that places reason at the basis of its action, that should be termed art. For, although we are pleased to call what bees produce (their regularly constituted cells) a work of art, we only do so on the strength of an analogy with art; that is to say, as soon as we call to mind that no rational deliberation forms the basis of their labour, we say at once that it is a product of their nature (of instinct), and it is only to their Creator that we ascribe it as art.

Kant, Critique of Aesthetic Judgement, 43

70 Nature proved beautiful when it wore the appearance of art; and art can only be termed *beautiful*, where we are conscious of its being art, while yet it has the appearance of nature.

Kant, Critique of Aesthetic Judgement, 45

71 For the purpose of keeping strictly within its own bounds physics entirely ignores the question whether physical ends are ends *designedly* or *undesignedly*. To deal with that question would be to meddle in the affairs of others—namely, in what is the business of metaphysics. Suffice it that there are objects whose one and only *explanation* is on natural laws that we are unable to conceive otherwise than by adopting the idea of ends as principle, objects which, in their intrinsic form, and with nothing more in view than their internal relations, are *cognizable* in this way alone. It is true that in teleology we speak of nature as if its finality were a thing of design. But to avoid all suspicion of presuming in the slightest to mix up with our sources of knowledge something that has no place in physics at all, namely a supernatural cause, we refer to design in such a way that, in the same breath, we attribute this design to nature, that is, to matter. Here no room is left for misinterpretation, since, obviously, no one would ascribe *design*, in the proper sense of the term, to a lifeless material. Hence our real intention is to indicate that the word *design*, as here used, only signifies a principle of the reflective, and not of the determinant, judgement, and consequently is not meant to introduce any special ground of causality, but only to assist the employment of reason by supplementing investigation on mechanical laws by the addition of another method of investigation, so as to make up for the inadequacy of the

former even as a method of empirical research that has for its object all particular laws of nature. Therefore, when teleology is applied to physics, we speak with perfect justice of the wisdom, the economy, the forethought, the beneficence of nature. But in so doing we do not convert nature into an intelligent being, for that would be absurd; but neither do we dare to think of placing another being, one that is intelligent, above nature as its architect, for that would be extravagant. On the contrary, our only intention is to designate in this way a kind of natural causality on an analogy with our own causality in the technical employment of reason, for the purpose of keeping in view the rule upon which certain natural products are to be investigated.

Kant, Critique of Teleological Judgement, 68

72 Nature is for us nothing but existence in all its freedom; it is the constitution of things taken in themselves; it is existence itself according to its proper and immutable laws.

Schiller, Simple and Sentimental Poetry

73 We see ... in nature, destitute of reason, only a sister who, more fortunate than ourselves, has remained under the maternal roof, while in the intoxication of our freedom we have fled from it to throw ourselves into a stranger world. We regret this place of safety, we earnestly long to come back to it as soon as we have begun to feel the bitter side of civilization, and in the totally artificial life in which we are exiled we hear in deep emotion the voice of our mother. While we were still only children of nature we were happy, we were perfect: we have become free, and

we have lost both advantages. Hence a twofold and very unequal longing for nature; the longing for happiness and the longing for the perfection that prevails there. Man, as a sensuous being, deplores sensibly the loss of the former of these goods; it is only the moral man who can be afflicted at the loss of the other.

Schiller, Simple and Sentimental Poetry

74 As long as man dwells in a state of pure nature (I mean pure and not coarse nature), all his being acts at once like a simple sensuous unity, like a harmonious whole. The senses and reason, the receptive faculty and the spontaneously active faculty, have not been as yet separated in their respective functions; a fortiori they are not yet in contradiction with each other. Then the feelings of man are not the formless play of chance; nor are his thoughts an empty play of the imagination, without any value. His feelings proceed from the law of necessity, his thoughts from reality. But when man enters the state of civilization, and art has fashioned him, this sensuous harmony which was in him disappears, and henceforth he can only manifest himself as a moral unity, that is, as aspiring to unity. The harmony that existed as a fact in the former state, the harmony of feeling and thought, only exists now in an ideal state. It is no longer in him, but out of him; it is a conception of thought which he must begin by realizing in himself; it is no longer a fact, a reality of his life.

Schiller, Simple and Sentimental Poetry

75 And did those feet in ancient time
Walk upon England's mountains green?

And was the holy Lamb of God
On England's pleasant pastures seen?
And did the Countenance Divine
Shine forth upon our clouded hills?
And was Jerusalem builded here
Among these dark Satanic Mills?
Bring me my bow of burning gold!
Bring me my arrows of desire!
Bring me my spear! O clouds, unfold!
Bring me my chariot of fire!
I will not cease from mental fight.
Nor shall my sword sleep in my hand.
Till we have built Jerusalem
In England's green and pleasant land.

Blake, Milton

76 The pride of the peacock is the glory of God.
The lust of the goat is the bounty of God.
The wrath of the lion is the wisdom of God.
The nakedness of woman is the work of God.

Blake, Marriage of Heaven and Hell, 8

77 And so I dare to hope.
Though changed, no doubt, from what I was when first
I came among these hills; when like a roe
I bounded o'er the mountains, by the sides
Of the deep rivers, and the lonely streams,
Wherever nature led: more like a man
Flying from something that he dreads, than one
Who sought the thing he loved. For nature then
(The coarser pleasures of my boyish days,
And their glad animal movements all gone by)

To me was all in all.—I cannot paint
What then I was. The sounding cataract
Haunted me like a passion: the tall rock,
The mountain, and the deep and gloomy wood,
Their colours and their forms, were then to me
An appetite; a feeling and a love,
That had no need of a remoter charm,
By thought supplied, nor any interest
Unborrowed from the eye.—That time is past,
And all its aching joys are now no more,
And all its dizzy raptures.

Wordsworth, Tintern Abbey, 65

78 I have learned

To look on nature, not as in the hour
Of thoughtless youth; but hearing oftentimes
The still, sad music of humanity,
Nor harsh nor grating, though of ample power
To chasten and subdue. And I have felt
A presence that disturbs me with the joy
Of elevated thoughts; a sense sublime
Of something far more deeply interfused,
Whose dwelling is the light of setting suns.
And the round ocean and the living air.
And the blue sky, and in the mind of man;
A motion and a spirit, that impels
All thinking things, all objects of all thought,
And rolls through all things. Therefore am I still
A lover of the meadows and the woods,
And mountains; and of all that we behold
From this green earth; of all the mighty world
Of eye, and ear,—both what they half create,
And what perceive; well pleased to recognise

In nature and the language of the sense,
The anchor of my purest thoughts, the nurse,
The guide, the guardian of my heart, and soul
Of all my moral being.

Wordsworth, Tintern Abbey, 88

79 Nature never did betray
The heart that loved her; 't is her privilege,
Through all the years of this our life, to lead
From joy to joy: for she can so inform
The mind that is within us, so impress
With quietness and beauty, and so feed
With lofty thoughts, that neither evil tongues,
Rash judgments, nor the sneers of selfish men,
Nor greetings where no kindness is, nor all
The dreary intercourse of daily life,
Shall e'er prevail against us, or disturb
Our cheerful faith, that all which we behold
Is full of blessings.

Wordsworth, Tintern Abbey, 122

80 A slumber did my spirit seal;
I had no human fears:
She seemed a thing that could not feel
The touch of earthly years.
No motion has she now, no force;
She neither hears nor sees;
Rolled round in earth's diurnal course,
With rocks, and stones, and trees.

Wordsworth, A Slumber Did My Spirit Seal

81 Love had he found in huts where poor men lie;
His daily teachers had been woods and rills,
The silence that is in the starry sky,
The sleep that is among the lonely hills.

Wordsworth, Song at the Feast of Brougham Castle, 161

82 Then sing, ye Birds, sing, sing a joyous song!
And let the young Lambs bound
As to the tabor's sound!
We in thought will join your throng.
Ye that pipe and ye that play,
Ye that through your hearts to-day
Feel the gladness of the May!
What though the radiance which was once so bright
Be now for ever taken from my sight,
Though nothing can bring back the hour
Of splendour in the grass, of glory in the flower;
We will grieve not, rather find
Strength in what remains behind;
In the primal sympathy
Which having been must ever be;
In the soothing thoughts that spring
Out of human suffering;
In the faith that looks through death,
In years that bring the philosophic mind.

Wordsworth, Ode: Intimations of Immortality, X

83 And hark! how blithe the throstle sings!
He, too, is no mean preacher:
Come forth into the light of things.
Let Nature be your teacher.

She has a world of ready wealth.
Our minds and hearts to bless—
Spontaneous wisdom breathed by health,
Truth breathed by cheerfulness.

One impulse from a vernal wood
May teach you more of man,
Of moral evil and of good.
Than all the sages can.

Sweet is the lore which Nature brings;
Our meddling intellect
Mis-shapes the beauteous forms of things:—
We murder to dissect.

Enough of Science and of Art;
Close up those barren leaves;
Come forth, and bring with you a heart
That watches and receives.

Wordsworth, The Tables Turned

84 Earth has not anything to show more fair:
Dull would he be of soul who could pass by
A sight so touching in its majesty:
This City now doth, like a garment, wear
The beauty of the morning; silent, bare.
Ships, towers, domes, theatres, and temples lie
Open unto the fields, and to the sky;
All bright and glittering in the smokeless air.
Never did sun more beautifully steep
In his first splendour, valley, rock, or hill;
Ne'er saw I, never felt, a calm so deep!
The river glideth at his own sweet will:
Dear God! the very houses seem asleep;
And all that mighty heart is lying still!

*Wordsworth, Composed Upon Westminster Bridge, Sept.
3, 1802*

85 The world is too much with us; late and soon,
Getting and spending, we lay waste our powers:
Little we see in Nature that is ours;
We have given our hearts away, a sordid boon!
The Sea that bares her bosom to the moon;
The winds that will be howling at all hours,
And are up-gathered now like sleeping flowers;
For this, for everything, we are out of tune;
It moves us not.—Great God! I'd rather be
A Pagan suckled in a creed outworn;
So might I, standing on this pleasant lea,
Have glimpses that would make me less forlorn;
Have sight of Proteus rising from the sea;
Or hear old Triton blow his wreathed horn.

*Wordsworth, The World Is Too Much With Us; Late and
Soon*

86 Nature is the term in which we comprehend all things
that are representable in the forms of time and space,
and subjected to the relations of cause and effect: and
the cause of the existence of which, therefore, is to be
sought for perpetually in something antecedent.

Coleridge, Aids to Reflection

87 Hail to thee, blithe Spirit!
Bird thou never wert.
That from Heaven, or near it,
Pourest thy full heart
In profuse strains of unpremeditated art....

Better than all measures
Of delightful sound,
Better than all treasures
That in books are found.
Thy skill to poet were, thou scorner of the ground!
Teach me half the gladness
That thy brain must know,
Such harmonious madness
From my lips would flow
The world should listen then—as I am listening now.

Shelley, To a Shylark

88 There is a pleasure in the pathless woods,
There is a rapture on the lonely shore,
There is society where none intrudes,
By the deep Sea, and music in its roar:
I love not Man the less, but Nature more,
From these our interviews, in which I steal
From all I may be or have been before,
To mingle with the Universe, and feel
What I can ne'er express, yet can not all conceal.
Roll on, thou deep and dark blue Ocean, roll!
Ten thousand fleets sweep over thee in vain;
Man marks the earth with ruin, his control
Stops with the shore; upon the watery plain
The wrecks are all thy deed, nor doth remain
A shadow of man's ravage, save his own,
When, for a moment, like a drop of rain,
He sinks into thy depths with bubbling groan,
Without a grave, unknell'd, uncoffin'd, and unknown.

Byron, Childe Harold's Pilgrimage, IV, 178-179

89 I cannot see what flowers are at my feet,
Nor what soft incense hangs upon the boughs,
But, in embalmed darkness, guess each sweet
Wherewith the seasonable month endows
The grass, the thicket, and the fruit-tree wild;
White hawthorn, and the pastoral eglantine;
Fast fading violets cover'd up in leaves;
And mid-May's eldest child.
The coming musk-rose, full of dewy wine,
The murmurous haunt of flies on summer eves.

Keats, Ode to a Nightingale

90 O Maker of sweet poets, dear delight
Of this fair world, and all its gentle livers;
Spangler of clouds, halo of crystal rivers,
Mingler with leaves, and dew and tumbling streams,
Closer of lovely eyes to lovely dreams,
Lover of loneliness, and wandering,
Of upcast eye, and tender pondering!
Thee must I praise above all other glories
That smile us on to tell delightful stories.
For what has made the sage or poet write
But the fair paradise of Nature's light?

Keats, I Stood Tiptoe Upon a Little Hill, 116

91 In the history of the world, the idea of spirit appears in its actual embodiment as a series of external forms, each one of which declares itself as an actually existing people. This existence falls under the category of time as well as space, in the way of natural existence; and the special principle, which every world-historical people embodies, has this principle at the same time as a *natural*

characteristic. Spirit, clothing itself in this form of nature, suffers its particular phases to assume separate existence; for mutual exclusion is the mode of existence proper to mere nature. These natural distinctions must be first of all regarded as special possibilities, from which the spirit of the people in question germinates, and among them is the geographical basis. It is not our concern to become acquainted with the land occupied by nations as an external locale, but with the natural type of the locality, as intimately connected with the type and character of the people which is the offspring of such a soil. This character is nothing more nor less than the mode and form in which nations make their appearance in history, and take place and position in it. Nature should not be rated too high nor too low: the mild Ionic sky certainly contributed much to the charm of the Homeric poems, yet this alone can produce no Homers. Nor in fact does it continue to produce them; under Turkish government no bards have arisen. We must first take notice of those natural conditions which have to be excluded once for all from the drama of the world's history.

Hegel, Philosophy of History, Intro.

- 92 Man with his necessities sustains a practical relation to external nature, and in making it satisfy' his desires, and thus using it up, has recourse to a system of *means*. For natural objects are powerful and offer resistance in various ways. In order to subdue them, man introduces other natural agents; thus turns nature against itself, and invents *instruments* for this purpose. These human inventions belong to spirit, and such an instrument is to be respected more than a mere natural object.

Hegel, Philosophy of History, Ft. II, 11, 1

93 If we look at the inner nature of... sports, we shall first observe how sport itself is opposed to serious business, to dependence and need. This wrestling, running, contending was no serious affair; bespoke no obligation of defence, no necessity of combat. Serious occupation is labour that has reference to some want. I or nature must succumb; if the one is to continue, the other must fall. In contrast with this kind of seriousness, however, sport presents the higher seriousness; for in it nature is wrought into spirit, and although in these contests the subject has not advanced to the highest grade of serious thought, yet in this exercise of his physical powers, man shows his freedom, *viz.*, that he has transformed his body to an organ of spirit.

Hegel, Philosophy of History, Ft. II, II, 1

94 The chief objection I have to Pantheism is that it says nothing. To call the world "God" is not to explain it; it is only to enrich our language with a superfluous synonym for the word "world."

Schopenhauer, A Few Words on Pantheism

95 Nature, which is the Time-vesture of God, and reveals Him to the wise, hides Him from the foolish.

Carlyle, Sartor Resartus, III, 8

96 Nature will not have us fret and fume. She does not like our benevolence or our learning much better than she likes our frauds and wars. When we come out of the caucus, or the bank, or the Abolition-convention, or the

Temperance-meeting, or the Transcendental club into the fields and woods, she says to us, 'So hot? my little Sir.'

Emerson, Spiritual Laws

97 There is no great and no small
To the Soul that maketh all:
And where it cometh, all things are;
And it cometh everywhere.

Emerson, The Informing Spirit

98 The stars awaken a certain reverence, because though always present, they are inaccessible; but all natural objects make a kindred impression, when the mind is open to their influence. Nature never wears a mean appearance. Neither does the wisest man extort her secret, and lose his curiosity by finding out all her perfection. Nature never became a toy to a wise spirit. The flowers, the animals, the mountains, reflected the wisdom of his best hour, as much as they had delighted the simplicity of his childhood.

Emerson, Nature, I

99 One can scarcely think upon the subject of atmospheric magnetism without having another great question suggested to the mind: What is the final purpose in nature of this magnetic condition of the atmosphere, and its liability to annual and diurnal variations, and its entire loss by entering into combination either in combustion or respiration? No doubt there is one or more, for nothing is superfluous there. We find no remainders or surplusage of action in physical forces. The smallest provision is as

essential as the greatest. None is deficient, none can be spared.

*Faraday, Experimental Researches in Electricity, XXVI,
2968*

100 The wish, that of the living whole
No life may fail beyond the grave,
Derives it not from what we have
The likest God within the soul?

Are God and Nature then at strife,
That Nature lends such evil dreams?
So careful of the type she seems,
So careless of the single life.

That I, considering everywhere
Her secret meaning in her deeds,
And finding that of fifty seeds
She often brings but one to bear,

I falter where I firmly trod,
And falling with my weight of cares
Upon the great world's altar-stairs
That slope thro' darkness up to God,

I stretch lame hands of faith, and grope,
And gather dust and chaff, and call
To what I feel is Lord of all,
And faintly trust the larger hope.

'So careful of the type?' but no.
From scarp'd cliff and quarried stone
She cries, 'A thousand types are gone;

I care for nothing, all shall go.

'Thou makest thine appeal to me.
I bring to life, I bring to death;
The spirit does but mean the breath:
I know no more.' And he, shall he,

Man, her last work, who seem'd so fair.
Such splendid purpose in his eyes,
Who roll'd the psalm to wintry skies.
Who built him fanes of fruitless prayer.

Who trusted God was love indeed
And love Creation's final law—
Tho' Nature, red in tooth and claw
With ravine, shriek'd against his creed—

Who loved, who suffer'd countless ills,
Who battled for the True, the Just,
Be blown about the desert dust,
Or seal'd within the iron hills?

No more? A monster then, a dream,
A discord. Dragons of the prime,
That tare each other in their slime,
Were mellow music match'd with him.

O life as futile, then, as frail!
O for thy voice to soothe and bless!
What hope of answer, or redress?
Behind the veil, behind the veil.

Tennyson, In Memoriam, LV-LVI

101 Flower in the crannied wall,
I pluck you out of the crannies,
I hold you here, root and all, in my hand,
Little flower—but if I could understand
What you are, root and all, and all in all,
I should know what God and man is.

Tennyson, Flower in the Crannied Wall

102 *Ahab*. O Nature, and O soul of man! how far beyond all
utterance are your linked analogies! not the smallest
atom stirs or lives on matter, but has its cunning
duplicate in mind.

Melville, Moby Dick, LXX

103 The West of which I speak is but another name for the
Wild; and what I have been preparing to say is, that in
Wildness is the preservation of the World.

Thoreau, Walking

104 A child said What is the grass? fetching it to me with full
hands,
How could I answer the child? I do not know what it is any
more than he.

I guess it must be the flag of my disposition, out of
hopeful green stuff woven.

Or I guess it is the handkerchief of the Lord,
A scented gift and remembrancer designedly dropt,
Bearing the owner's name someway in the corners, that
we may see and remark, and say *Whose?* ...

And now it seems to me the beautiful uncut hair of
graves.

Whitman, Song of Myself, VI

105 I believe a leaf of grass is no less than the journey- work
of the stars,

And the pismire is equally perfect, and a grain of sand,
and the egg of the wren,

And the tree-toad is a chef-d'oeuvre for the highest,

And the running blackberry would adorn the parlors of
heaven,

And the narrowest hinge in my hand puts to scorn all
machinery.

And the cow crunching with depress'd head surpasses
any statue,

And a mouse is miracle enough to stagger sextil-lions
of infidels.

Whitman, Song of Myself, XXXI

106 In due time the evolution theory will have to abate its
vehemence, cannot be allow'd to dominate everything
else, and will have to take its place as a segment of the
circle, the cluster—as but one of many theories, many
thoughts, of profoundest value—and readjusting and
differentiating much, yet leaving the divine secrets just
as inexplicable and unreachable as before—maybe more
so.

Whitman, Notes Left Over

107 In looking at Nature, it is most necessary... never to
forget that every single organic being may be said to be
striving to the utmost to increase in numbers; that each
lives by a struggle at some period of its life; that heavy
destruction inevitably falls either on the young or old,
during each generation or at recurrent intervals. Lighten
any check, mitigate the destruction ever so little, and the

number of the species will almost instantaneously increase to any amount.

Darwin, Origin of Species, III

108 It has been said that I speak of natural selection as an active power or Deity; but who objects to an author speaking of the attraction of gravity as ruling the movements of the planets? Every one knows what is meant and is implied by such metaphorical expressions; and they are almost necessary for brevity. So again it is difficult to avoid personifying the word Nature; but I mean by Nature, only the aggregate action and product of many natural laws, and by laws the sequence of events as ascertained by us.

Darwin, Origin of Species, IV

109 As man can produce, and certainly has produced a great result by his methodical and unconscious means of selection, what may not natural selection effect? Man can act only on external and visible characters: Nature, if I may be allowed to personify the natural preservation or survival of the fittest, cares nothing for appearances, except in so far as they are useful to any being. She can act on every internal organ, on every shade of constitutional difference, on the whole machinery of life. Man selects only for his own good. Nature only for that of the being which she tends. Every selected character is fully exercised by her, as is implied by the fact of their selection. Man keeps the natives of many climates in the same country; he seldom exercises each selected character in some peculiar and fitting manner; he feeds a long and a short beaked pigeon on the same food; he

does not exercise a long-backed or long-legged quadruped in any peculiar manner; he exposes sheep with long and short wool to the same climate. He does not allow the most vigorous males to struggle for the females. He does not rigidly destroy all inferior animals, but protects during each varying season, as far as lies in his power, all his productions. He often begins his selection by some half-monstrous form; or at least by some modification prominent enough to catch the eye or to be plainly useful to him. Under nature, the slightest differences of structure or constitution may well turn the nicely balanced scale in the struggle for life, and so be preserved. How fleeting are the wishes and efforts of man! how short his time! and consequently how poor will be his results, compared with those accumulated by Nature during whole geological periods! Can we wonder, then, that Nature's productions should be far "truer" in character than man's productions; that they should be infinitely better adapted to the most complex conditions of life, and should plainly bear the stamp of far higher workmanship?

Darwin, Origin of Species, IV

110 It is scarcely possible to avoid comparing the eye with a telescope. We know that this instrument has been perfected by the long-continued efforts of the highest human intellects; and we naturally infer that the eye has been formed by a somewhat analogous process. But may not this inference be presumptuous? Have we any right to assume that the Creator works by intellectual powers like those of man? If we must compare the eye to an optical instrument, we ought in imagination to take a thick layer of transparent tissue, with spaces filled with

fluid, and with a nerve sensitive to light beneath, and then suppose every part of this layer to be continually changing slowly in density, so as to separate into layers of different densities and thicknesses, placed at different distances from each other, and with the surfaces of each layer slowly changing in form. Further we must suppose that there is a power, represented by natural selection or the survival of the fittest, always intently watching each slight alteration in the transparent layers; and carefully preserving each which, under varied circumstances, in any way or in any degree, tends to produce a distincter image. We must suppose each new state of the instrument to be multiplied by the million; each to be preserved until a better one is produced, and then the old ones to be all destroyed. In living bodies, variation will cause the slight alterations, generation will multiply them almost infinitely, and natural selection will pick out with unerring skill each improvement. Let this process go on for millions of years; and during each year on millions of individuals of many kinds; and may we not believe that a living optical instrument might thus be formed as superior to one of glass, as the works of the Creator are to those of man?

Darwin, Origin of Species, VI

111 As natural selection acts solely by accumulating slight, successive, favourable variations, it can produce no great or sudden modifications; it can act only by short and slow steps. Hence, the canon of "*Natura non facit saltum*" which every fresh addition to our knowledge tends to confirm, is on this theory intelligible. We can see why throughout nature the same general end is gained by an almost infinite diversity of means, for every peculiarity

when once acquired is long inherited, and structures already modified in many different ways have to be adapted for the same general purpose. We can, in short, see why nature is prodigal in variety, though niggard in innovation. But why this should be a law of nature if each species has been independently created no man can explain.

Darwin, Origin of Species, XV

112 It is an error to imagine that evolution signifies a constant tendency to increased perfection. That process undoubtedly involves a constant remodelling of the organism in adaptation to new conditions; but it depends on the nature of those conditions whether the direction of the modifications effected shall be upward or downward.

T. H. Huxley, Struggle for Existence in Human Society

113 Thus we may say that surplus value rests on a natural basis; but this is permissible only in the very general sense that there is no natural obstacle absolutely preventing one man from disburdening himself of the labour requisite for his own existence, and burdening another with it, any more, for instance, than unconquerable natural obstacles prevent one man from eating the flesh of another. No mystical ideas must in any way be connected, as sometimes happens, with this historically developed productiveness of labour. It is only after men have raised themselves above the rank of animals, when, therefore, their labour has been to some extent socialized, that a state of things arises in which the surplus labour of the one becomes a condition of existence for the other.

Marx, Capital, Vol, I, V, 16

114 If there are any marks at all of special design in creation, one of the things most evidently designed is that a large proportion of all animals should pass their existence in tormenting and devouring other animals. They have been lavishly fitted out with the instruments necessary for that purpose; their strongest instincts impel them to it, and many of them seem to have been constructed incapable of supporting themselves by any other food. If a tenth part of the pains which have been expended in finding benevolent adaptations in all nature had been employed in collecting evidence to blacken the character of the Creator, what scope for comment would not have been found in the entire existence of the lower animals, divided with scarcely an exception into devourers and devoured, and a prey to a thousand ills from which they are denied the faculties necessary for protecting themselves! If we are not obliged to believe the animal creation to be the work of a demon it is because we need not suppose it to have been made by a Being of infinite power. But if imitation of the Creator's will as revealed in nature were applied as a rule of action in this case, the most atrocious enormities of the worst men would be more than justified by the apparent intention of Providence that throughout all animated nature the strong should prey upon the weak.

Mill, Nature

115 The word nature has two principal meanings: it either denotes the entire system of things, with the aggregate of all their properties, or it denotes things as they would be, apart from human intervention.

In the first of these senses, the doctrine that man ought to follow nature is unmeaning, since man has no power to do anything else than follow nature; all his actions are done through and in obedience to some one or many of nature's physical or mental laws.

In the other sense of the term, the doctrine that men ought to follow nature or, in other words, ought to make the spontaneous course of things the model of his voluntary actions is equally irrational and immoral; irrational, because all human action whatever consists in altering, and all useful action in improving, the spontaneous course of nature; immoral, because the course of natural phenomena being replete with everything which when committed by human beings is most worthy of abhorrence, any one who endeavoured in his actions to imitate the natural course of things would be universally seen and acknowledged to be the wickedest of men.

The scheme of nature regarded in its whole extent cannot have had, for its sole or even principal object, the good of human or other sentient beings. What good it brings to them is mostly the result of their own exertions. Whatsoever in nature gives indication of beneficent design proves this beneficence to be armed only with limited power; and the duty of man is to co-operate with the beneficent powers, not by imitating but by perpetually striving to amend the course of nature—and bringing that part of it over which we can exercise control more nearly into conformity with a high standard of justice and goodness.

Mill, Nature

116 Nature, with equal mind,
Sees all her sons at play;
Sees man control the wind,
The wind sweep man away;
Allows the proudly-riding and the
foundering bark.

Arnold, Empedocles on Etna, I, ii, 257

117 "Ha-ha-ha!" laughed Pierre. And he said aloud to himself: "The soldier did not let me pass. They took me and shut me up. They hold me captive. What, me? Me? My immortal soul? Ha-ha-ha! Ha-ha-ha! ..." and he laughed till tears started to his eyes.

A man got up and came to see what this queer big fellow was laughing at all by himself. Pierre stopped laughing, got up, went farther away from the inquisitive man, and looked around him.

The huge, endless bivouac that had previously resounded with the crackling of campfires and the voices of many men had grown quiet, the red campfires were growing paler and dying down. High up in the light sky hung the full moon. Forests and fields beyond the camp, unseen before, were now visible in the distance. And farther still, beyond those forests and fields, the bright, oscillating, limitless distance lured one to itself. Pierre glanced up at the sky and the twinkling stars in its faraway depths. "And all that is me, all that is within me, and it is all I!" thought Pierre. "And they caught all that and put it into a shed boarded up with planks!" He smiled, and went and lay down to sleep beside his companions.

Tolstoy, War and Peace, XIII, 14

118 To call the taming of an animal its 'improvement' is in our ears almost a joke. Whoever knows what goes on in menageries is doubtful whether the beasts in them are 'improved'. They are weakened, they are made less harmful, they become *sickly* beasts through the depressive emotion of fear, through pain, through injuries, through hunger.

Nietzsche, Twilight of the Idols: The "Improvers" of Mankind

119 Nature ... is frugal in her operations, and will not be at the expense of a particular instinct to give us that knowledge which experience and habit will soon produce.

William James, Psychology, XIX

120 Who does not feel the charm of thinking that the moon and the apple are, as far as their relation to the earth goes, identical; of knowing respiration and combustion to be one; of understanding that the balloon rises by the same law whereby the stone sinks; of feeling that the warmth in one's palm when one rubs one's sleeve is identical with the motion which the friction checks; of recognizing the difference between beast and fish to be only a higher degree of that between human father and son; of believing our strength when we climb the mountain or fell the tree to be no other than the strength of the sun's rays which made the corn grow out of which we got our morning meal?

William James, of Rationality

121 The claims of our civilization make life too hard for the greater part of humanity, and so further the aversion to

reality and the origin of neuroses, without producing an excess of cultural gain by this excess of sexual repression. We ought not to go so far as to fully neglect the original animal part of our nature; we ought not to forget that the happiness of individuals cannot be dispensed with as one of the aims of our culture....

I do not know whether you will regard the exhortation with which I close as a presumptuous one. I only venture the indirect presentation of my conviction, if I relate an old tale, whose application you may make yourselves. German literature knows a town called Schilda, to whose inhabitants were attributed all sorts of clever pranks. The wiseacres, so the story goes, had a horse, with whose powers of work they were well satisfied, and against whom they had only one grudge, that he consumed so much expensive oats. They concluded that by good management they would break him of his bad habit, by cutting down his rations by several stalks each day, until he had learned to do without them altogether. Things went finely for a while, the horse was weaned to one stalk a day, and on the next day he would at last work without fodder. On the morning of this day the malicious horse was found dead; the citizens of Schilda could not understand why he had died.

We should be inclined to believe that the horse had starved, and that without a certain ration of oats no work could be expected from an animal.

Freud, Origin and Development of Psycho-Analysis, V

122 I hope to enlist your interest in considering the apparently trivial errors made by normal people. I propose now that we question someone who has no

knowledge of psycho-analysis as to how he explains these occurrences.

His first answer is sure to be: "Oh, they are not worth any explanation; they are little accidents." What does the man mean by this? Does he mean to maintain that there are any occurrences so small that they fail to come within the causal sequence of things, that they might as well be other than they are? Anyone thus breaking away from the determination of natural phenomena, at any single point, has thrown over the whole scientific outlook on the world (*Weltanschauung*). One may point out to him how much more consistent is the religious outlook on the world, which emphatically assures us that "not one sparrow shall fall to the ground" except God wills it. I think our friend would not be willing to follow his first answer to its logical conclusion; he would give way and say that if he were to study these things he would soon find some explanation of them.

Freud, General Introduction to Psycho-Analysis, II

123 In Aristotle the conception of human nature is perfectly sound; everything ideal has a natural basis and everything natural an ideal development.

Santayana, Life of Reason, I, Introduction

124 That the unification of nature is eventual and theoretical is a point useful to remember: else the relation of the natural world to poetry, metaphysics, and religion will never become intelligible. Lalande, or whoever it was, who searched the heavens with his telescope and could find no God, would not have found

the human mind if he had searched the brain with a microscope.

Santayana, Life of Reason, I, 5

19.2 The Nature of Life

Many of the passages collected here attempt to define the line that divides the living from the nonliving, and to enumerate the distinctive properties of living organisms, such as nutrition, growth, and reproduction. Within the domain of the living, further distinctions are made between plant and animal life, by reference to sensitivity and local motion as characteristics of animals not found in plants. Some quotations speak of the scale of life, the gradations of vitality, rising little by little from the vegetative level to more complex and more richly endowed forms of life; to which certain philosophers and theologians add levels of life above the highest terrestrial forms—the purely spiritual life of the angels and of God.

The reader will find some indications of the age-old controversy between the vitalists and the mechanists, the one maintaining that life involves principles or factors that have no counterparts in the realm of inanimate things or machines, the other countering with the view that the same mechanical principles or factors that enable us to understand the operation of inanimate things also explain the processes of life. Crucial to this issue is Claude Bernard's introduction of the concept of homeostasis—the internal equilibrium of a living organism. Only living things appear to have an internal as well as an external environment, and are actively involved in the adjustment of the one to the other.

In this connection it should also be pointed out that when soul is spoken of as the principle of life, it is not necessarily conceived as something divorced from matter: early atomists, such as Lucretius, think of soul or mind as constituted by material particles, and Aristotle thinks of soul as inherent in living matter. For him, to be alive is to be besouled.

The origin of life or of living organisms is another basic subject treated in this section, and the discussions of it range from the account of its creation in *Genesis* or the one given by Plato in the *Timaeus*, to later theological commentaries on *Genesis* and then to modern writers such as Darwin. And at least one author offers startling comments on the origin of life: this is Freud who, in his discussion of the life and death instincts, suggests that living things are driven by a profound impulse to rid themselves of the tensions of life and return to the sleep of inanimate existence. For other comments on life and death, viewed more narrowly from the human point of view, the reader is referred to Chapter 1 on Man, especially Section 1.2 and Section 1.8.

■ ■ ■

1 And God said, Let the earth bring forth grass, the herb yielding seed, and the fruit tree yielding fruit after his kind, whose seed is in itself, upon the earth: and it was so.

And the earth brought forth grass, and herb yielding seed after his kind, and the tree yielding fruit, whose

seed was in itself, after his kind: and God saw that it was good.

And the evening and the morning were the third day.

Genesis 1:11-13

2 And God said, Let the waters bring forth abundantly the moving creature that hath life, and fowl that may fly above the earth in the open firmament of heaven.

And God created great whales, and every living creature that moveth, which the waters brought forth abundantly, after their kind, and every winged fowl after his kind: and God saw that it was good.

And God blessed them, saying. Be fruitful, and multiply, and fill the waters in the seas, and let fowl multiply in the earth.

And the evening and the morning were the fifth day.

Genesis 1:20-23

3 And the Lord God formed man of the dust of the ground, and breathed into his nostrils the breath of life; and man became a living soul.

Genesis 2:7

4 For to him that is joined to all the living there is hope: for a living dog is better than a dead lion.

Ecclesiastes 9:4

5 *Timaeus*. Now of the divine, he himself [God] was the creator, but the creation of the mortal he committed to his offspring. And they, imitating him, received from him the immortal principle of the soul; and around this they proceeded to fashion a mortal body, and made it to be

the vehicle of the soul, and constructed within the body a soul of another nature which was mortal.

Plato, Timaeus, 69B

- 6 This power of self-nutrition can be isolated from the other powers mentioned, but not they from it—in mortal beings at least. The fact is obvious in plants; for it is the only psychic power they possess.

This is the originaive power the possession of which leads us to speak of things as living at all, but it is the possession of sensation that leads us for the first time to speak of living things as animals; for even those beings which possess no power of local movement but do possess the power of sensation we call animals and not merely living things,

Aristotle, On the Soul, 413a31

- 7 The soul is the cause or source of the living body. The terms cause and source have many senses. But the soul is the cause of its body alike in all three senses which we explicitly recognize. It is (a) the source or origin of movement, it is (b) the end, it is (c) the essence of the whole living body.

That it is the last, is clear; for in everything the essence is identical with the ground of its being, and here, in the case of living things, their being is to live, and of their being and their living the soul in them is the cause or source. Further, the actuality of whatever is potential is identical with its formulable essence.

It is manifest that the soul is also the final cause of its body. For Nature, like mind, always does whatever it does for the sake of something, which something is its end. To

that something corresponds in the case of animals the soul and in this it follows the order of nature; all natural bodies are organs of the soul. This is true of those that enter into the constitution of plants as well as of those which enter into that of animals. This shows that that for the sake of which they are is soul. We must here recall the two senses of 'that for the sake of which', viz. (a) the end to achieve which, and (b) the being in whose interest, anything is or is done.

We must maintain, further, that the soul is also the cause of the living body as the original source of local movement. The power of locomotion is not found, however, in all living things. But change of quality and change of quantity are also due to the soul. Sensation is held to be a qualitative alteration, and nothing except what has soul in it is capable of sensation. The same holds of the quantitative changes which constitute growth and decay; nothing grows or decays naturally except what feeds itself, and nothing feeds itself except what has a share of soul in it.

Aristotle, On the Soul, 415b8

- 8 As to being what is called an animal and a living thing, we find that in all beings endowed with both characteristics (viz. being an animal and being alive) there must be a single identical part in virtue of which they live and are called animals; for an animal *qua* animal cannot avoid being alive. But a thing need not, though alive, be animal, for plants live without having sensation, and it is by sensation that we distinguish animal from what is not animal.

Aristotle, On Youth and Old Age, On Life and Death, On Breathing, 467b18

9 Of necessity, life must be coincident with the maintenance of heat, and what we call death is its destruction.

Aristotle, On Youth and Old Age, On Life and Death, On Breathing, 469b18

10 Nature proceeds little by little from things lifeless to animal life in such a way that it is impossible to determine the exact line of demarcation, nor on which side thereof an intermediate form should lie. Thus, next after lifeless things in the upward scale comes the plant, and of plants one will differ from another as to its amount of apparent vitality; and, in a word, the whole genus of plants, whilst it is devoid of life as compared with an animal, is endowed with life as compared with other corporeal entities. Indeed, as we just remarked, there is observed in plants a continuous scale of ascent towards the animal. So, in the sea, there are certain objects concerning which one would be at a loss to determine whether they be animal or vegetable. For instance, certain of these objects are fairly rooted, and in several cases perish if detached; thus the pinna is rooted to a particular spot, and the solen (or razor-shell) cannot survive withdrawal from its burrow. Indeed, broadly speaking, the entire genus of testaceans have a resemblance to vegetables, if they be contrasted with such animals as are capable of progression.

In regard to sensibility, some animals give no indication whatsoever of it, whilst others indicate it but indistinctly. Further, the substance of some of these intermediate creatures is fleshlike, as is the case with the

so-called tethya (or ascidians) and the acalephae (or sea-anemones); but the sponge is in every respect like a vegetable. And so throughout the entire animal scale there is a graduated differentiation in amount of vitality and in capacity for motion.

A similar statement holds good with regard to habits of life. Thus of plants that spring from seed the one function seems to be the reproduction of their own particular species, and the sphere of action with certain animals is similarly limited. The faculty of reproduction, then, is common to all alike. If sensibility be superadded, then their lives will differ from one another in respect to sexual intercourse through the varying amount of pleasure derived therefrom, and also in regard to modes of parturition and ways of rearing their young. Some animals, like plants, simply procreate their own species at definite seasons; other animals busy themselves also in procuring food for their young, and after they are reared quit them and have no further dealings with them; other animals are more intelligent and endowed with memory, and they live with their offspring for a longer period and on a more social footing.

The life of animals, then, may be divided into two acts—procreation and feeding; for on these two acts all their interests and life concentrate. Their food depends chiefly on the substance of which they are severally constituted; for the source of their growth in all cases will be this substance. And whatsoever is in conformity with nature is pleasant, and all animals pursue pleasure in keeping with their nature.

Aristotle, History of Animals, 588b4

11 If we except the movement of the universe, things with life are the causes of the movement of all else, that is of all that are not moved by one another by mutual impact. And so all their motions have a term or limit, inasmuch as the movements of things with life have such. For all living things both move and are moved with some object, so that this is the term of all their movement, the end, that is, in view. Now we see that the living creature is moved by intellect, imagination, purpose, wish, and appetite. And all these are reducible to mind and desire.

Aristotle, On the Motion of Animals, 700b11

12 Now (1) some existing things are eternal and divine whilst others admit of both existence and non-existence. But (2) that which is noble and divine is always, in virtue of its own nature, the cause of the better in such things as admit of being better or worse, and what is not eternal does admit of existence and non-existence, and can partake in the better and the worse. And (3) soul is better than body, and the living, having soul, is thereby better than the lifeless which has none, and being is better than not being, living than not living. These, then, are the reasons of the generation of animals. For since it is impossible that such a class of things as animals should be of an eternal nature, therefore that which comes into being is eternal in the only way possible. Now it is impossible for it to be eternal as an individual (though of course the real essence of things is in the individual)—were it such it would be eternal—but it is possible for it as a species.

Aristotle, Generation of Animals, 731b24

13 One might suppose, in connexion with the origin of men and quadrupeds, that, if ever they were really 'earth-born' as some say, they came into being in one of two ways; that either it was by the formation of a scolex at first or else it was out of eggs. For either they must have had in themselves the nutriment for growth (and such a conception is a scolex) or they must have got it from elsewhere, and that either from the mother or from part of the conception. If then the former is impossible (I mean that nourishment should flow to them from the earth as it does in animals from the mother), then they must have got it from some part of the conception, and such generation we say is from an egg.

Aristotle, Generation of Animals, 762b28

14 Whatever things we perceive to have sense, you must yet admit to be all composed of senseless first-beginnings: manifest tokens which are open to all to apprehend, so far from refuting or contradicting this, do rather themselves take us by the hand and constrain us to believe that, as I say, living things are begotten from senseless things. We may see in fact living worms spring out of stinking dung, when the soaked earth has gotten putridity after excessive rains; and all things besides change in the same way: rivers, leaves, and glad pastures change into cattle, cattle change their substance into our bodies, and often out of these the powers of wild beasts and the bodies of the strong of wing are increased. Therefore nature changes all foods into living bodies and engenders out of them all the senses of living creatures, much in the same way as she dissolves dry woods into flames and converts all things into fires. Now do you see that it is of great moment in what sort of arrangement the

first-beginnings of things are severally placed and with what others they are mixed up, when they impart and receive motions?

Lucretius, Nature of Things, II

15 The mind has more to do with holding the fastnesses of life and has more sovereign sway over it than the power of the soul. For without the understanding and the mind no part of the soul can maintain itself in the frame the smallest fraction of time, but follows at once in the other's train and passes away into the air and leaves the cold limbs in the chill of death. But he abides in life whose mind and understanding continue to stay with him: though the trunk is mangled with its limbs shorn all round about it, after the soul has been taken away on all sides and been severed from the limbs, the trunk yet lives and inhales the ethereal airs of life.... When ... I shall choose to speak of the soul, showing it to be mortal believe that I speak of the mind as well, inasmuch as both make up one thing and are one united substance. First of all then since I have shown the soul to be fine and to be formed of minute bodies and made up of much smaller first-beginnings than is the liquid of water or mist or smoke:—for it far surpasses these in nimbleness and is moved, when struck by a far slenderer cause.... Well then since you see on the vessels being shattered the water flow away on all sides, and since mist and smoke pass away into air, believe that the soul too is shed abroad and perishes much more quickly and dissolves sooner into its first bodies, when once it has been taken out of the limbs of a man and has withdrawn. For, when the body that serves for its vessel cannot hold it, if shattered from any cause and rarefied by the withdrawal of blood from the

veins, how can you believe that this soul can be held by any air? How can that air which is rarer than our body hold it in?

Lucretius, Nature of Things, III

- 16 When the earth, all muddied by the recent flood, grew warm again, under the kindly radiance of the sun in heaven, she brought forth countless forms of life. In some cases she reproduced shapes which had been previously known, others were new and strange. It was at that time that she gave birth to the huge Python, among the rest, though indeed she had no wish to do so; and this snake, whose body covered so great a stretch of the hillside, struck terror into the new-born race of men, for they had never known its like. The archer god, Apollo, who had never before used such weapons against anything but fleeing deer or timid wild goats, almost emptied his quiver to destroy the serpent, overwhelming it with a thousand arrows, till the venom flowed out from all its dark wounds. Then, in case the passage of time should blot out the memory of his glorious deed, the god established sacred games, which he called Pythian, after the serpent he had vanquished.

Ovid, Metamorphoses, I

- 17 If there were not an inborn faculty given by Nature to each one of the organs at the very beginning, then animals could not continue to live even for a few days, far less for the number of years which they actually do. For let us suppose they were under no guardianship, lacking in creative ingenuity and forethought; let us suppose they were steered only by material forces, and not by any

special faculties (the one attracting what is proper to it, another rejecting what is foreign, and yet another causing alteration and adhesion of the matter destined to nourish it); if we suppose this, I am sure it would be ridiculous for us to discuss natural, or, still more, psychical, activities—or, in fact, life as a whole.

Galen, Natural Faculties, II, 3

18 Imagine the heart to be, at the beginning, so small as to differ in no respect from a millet-seed, or, if you will, a bean; and consider how otherwise it is to become large than by being extended in all directions and acquiring nourishment throughout its whole substance, in the way that, as I showed a short while ago, the semen is nourished. But even this was unknown to Erasistratus—the man who sings the artistic skill of Nature! He imagines that animals grow like webs, ropes, sacks, or baskets, each of which has, woven on to its end or margin, other material similar to that of which it was originally composed.

But this, most sapient sir, is not growth, but genesis! For a bag, sack, garment, house, ship, or the like is said to be still coming into existence [undergoing genesis) so long as the appropriate form for the sake of which it is being constructed by the artificer is still incomplete. Then, when does it grow? Only when the basket, being complete, with a bottom, a mouth, and a belly, as it were, as well as the intermediate parts, now becomes larger in all these respects. “And how can this happen?” someone will ask. Only by our basket suddenly becoming an animal or a plant; for growth belongs to living things alone. Possibly you imagine that a house grows when it is being built, or a basket when being plaited, or a garment

when being woven? It is not so, however. Growth belongs to that which has already been completed in respect to its form, whereas the process by which that which is still becoming attains its form is termed not growth but genesis. That which is, grows, while that which is not, becomes.

Galen, Natural Faculties, II, 3

- 19 Now all life, even the least valuable, is an activity, and not a blind activity like that of flame; even where there is not sensation the activity of life is no mere haphazard play of Movement: any object in which life is present, and object which participates in Life, is at once enreasoned in the sense that the activity peculiar to life is formative, shaping as it moves.

Life, then, aims at pattern as does the pantomimic dancer with his set movements; the mime, in himself, represents life, and, besides, his movements proceed in obedience to a pattern designed to symbolize life.

Plotinus, Third Ennead, II, 16

- 20 Fire, air, water, earth, are in themselves soulless . . . and there are no other forms of body than these four. . . . None of these, then, having life, it would be extraordinary if life came about by bringing them together; it is impossible, in fact, that the collocation of material entities should produce life, or mindless entities mind.

No one, moreover, would pretend that a mere chance mixing could give such results: some regulating principle would be necessary, some Cause directing the admixture: that guiding principle would be—soul.

Plotinus, Fourth Ennead; VII, 2

21 Since all who think about God think of Him as living, they only can form any conception of Him that is not absurd and unworthy who think of Him as life itself; and, whatever may be the bodily form that has suggested itself to them, recognize that it is by life it lives or does not live, and prefer what is living to what is dead; who understand that the living bodily form itself, however it may outshine all others in splendour, overtop them in size, and excel them in beauty, is quite a distinct thing from the life by which it is quickened; and who look upon the life as incomparably superior in dignity and worth to the mass which is quickened and animated by it. Then, when they go on to look into the nature of the life itself, if they find it mere nutritive life, without sensibility, such as that of plants, they consider it inferior to sentient life, such as that of cattle; and above this, again, they place intelligent life, such as that of men. And, perceiving that even this is subject to change, they are compelled to place above it, again, that unchangeable life, which is not at one time foolish, at another time wise, but on the contrary is wisdom itself.

Augustine, Christian Doctrine, I, 8

22 We can gather to what things life belongs and to what it does not from such things as manifestly possess life. Now life manifestly belongs to animals, for it is said in the book on *Plants* [Aristotle's) that "in animals life is manifest." We must, therefore, distinguish living from non-living things by comparing them to that by reason of which animals are said to live, and this it is in which life is manifested first and remains last. We say then that an animal begins to live when it begins to move of itself, and as long as such movement appears in it, so long is it

considered to be alive. When it no longer has any movement of itself, but is only moved by another power, then its life is said to fail, and the animal to be dead. From this it is clear that those things are properly called living that move themselves by some kind of movement, whether it be movement properly so called, as the act of an imperfect thing, that is, of a thing in potency, is called movement; or movement in a more general sense, as when said of the act of a perfect thing, as understanding and feeling are called movement according to the book on the *Soul* [Aristotle's]. Accordingly all things are said to be alive that determine themselves to movement or operation of any kind; but those things that cannot by their nature do so, cannot be called living, unless by some likeness.

Aquinas, Summa Theologica, I, 18, 1

- 23 Life is in the highest degree properly in God. In proof of this it must be considered that since a thing is said to live insofar as it operates of itself and not as moved by another, the more perfectly this is found in anything, the more perfect is the life of that thing.

Aquinas, Summa Theologica, I, 18, 3

- 24 Bodies not endowed with life, which are the lowest in the order of nature, generate their like, not through some medium, but by themselves; thus fire by itself generates fire. But living bodies, as being more powerful, act so as to generate their like, both without and with a medium. Without a medium—in the work of nutrition, in which flesh generates flesh; with a medium—in the act of generation, because the seed of the animal or plant

derives a certain active force from the soul of the generator, just as the instrument derives a certain moving power from the principal agent. And as it matters not whether we say that something is moved by the instrument or by the principal agent, so neither does it matter whether we say that the soul of the generated is caused by the soul of the generator, or by some seminal power derived from it.

Aquinas, Summa Theologica, I, 118, 1

- 25 God is effectively the life both of the soul by charity, and of the body by the soul; but formally charity is the life of the soul, even as the soul is the life of the body. Consequently we may conclude from this that just as the soul is immediately united to the body, so is charity to the soul.

Aquinas, Summa Theologica, II-II, 23, 2

- 26 *I see the water, I see the fire, the air, the earth, and all their combinations meet their dissolution and endure but little;*

and yet these things were creatures, so that if that which I have said to thee be true, they ought to be secure against corruption.

The Angels, brother, and the unsullied country in which thou art, may be declared to be created, even as they are, in their entire being;

but the elements which thou hast named and all the things compounded of them, have by created virtue been informed.

Created was the matter which they hold, created was the informing virtue in these stars which sweep around

them.

The life of every brute and of the plants is drawn from compounds having potency, by the ray and movement of the sacred lights.

But your life is breathed without mean by the supreme beneficence who maketh it enamoured of itself, so that thereafter it doth ever long for it.

Dante, Paradiso, VII, 124

27 *Panurge*. Now let our microcosm be fancied conform to this model in all its members; lending, borrowing, and owing, that is to say, according to its own nature. For nature hath not to any other end created man, but to owe, borrow, and lend; no greater is the harmony amongst the heavenly spheres, than that which shall be found in its well ordered policy. The intention of the founder of this microcosm is, to have a soul therein to be entertained, which is lodged there, as a guest with its host, that it may live there for awhile. Life consisteth in blood; blood is the seat of the soul; therefore the chiefest work of the microcosm is, to be making blood continually.

At this forge are exercised all the members of the body; none is exempted from labour, each operates apart, and doth its proper office. And such is their hierarchy, that perpetually the one borrows from the other, the one lends the other, and the one is the other's debtor. The stuff and matter convenient, which nature giveth to be turned into blood, is bread and wine. All kind of nourishing victuals is understood to be comprehended in those two, and from hence in the Gothish tongue is called companage. To find out this meat and drink, to prepare and boil it, the hands are put to work, the feet do walk and bear up the whole bulk of the corporal mass; the

eyes guide and conduct all; the appetite in the orifice of the stomach, by means of a little sourish black humour, called melancholy, which is transmitted thereto from the milt, giveth warning to shut in the food. The tongue doth make the first essay, and tastes it; the teeth to chew it, and the stomach doth receive, digest, and chilify it. The mesaraic veins suck out of it what is good and fit, leaving behind the excrements, which are, through special conduits, for that purpose, voided by an expulsive faculty. Thereafter it is carried to the liver, where it being changed again, it by the virtue of that new transmutation becomes blood. What joy, conjecture you, will then be found amongst those officers, when they see this rivulet of gold, which is their sole restorative?

Rabelais, Gargantua and Panlagruel, III, 4

- 28 The eternity of things is connected with the reciprocal interchange of generation and decay; and as the sun, now in the east and then in the west, completes the measure of time by his ceaseless revolutions, so are the fleeting things of mortal existence made eternal through incessant change, and kinds and species are perpetuated though individuals die.

William Harvey, Animal Generation, 14

- 29 Nature does nothing in vain, nor works in any round-about way when a shorter path lies open to her, that an egg can be produced in no other manner than that in which we now see it engendered, viz., by the concurring act of the cock and hen. Neither, in like manner, in the present constitution of things, can a cock or hen ever be produced otherwise than from an egg. Thus (the cock and

the hen exist for the sake of the egg, and the egg, in the same way, is their antecedent cause; it were therefore reasonable to ask, with Plutarch, which of these was the prior, the egg or the fowl? Now the fowl is prior by nature, but the egg is prior in time; for that which is the more excellent is naturally first; but that from which a certain thing is produced must be reputed first in respect of time. Or we may say; this egg is older than that fowl (the fowl having been produced from it); and, on the contrary this fowl existed before that egg (which she has laid). And this is the round that makes the race of the common fowl eternal; now pullet, now egg, the series is continued in perpetuity; from frail and perishing individuals an immortal species is engendered.

William Harvey, Animal Generation, 28

- 30 If there were machines which bore a resemblance to our body and imitated our actions as far as it was morally possible to do so, we should always have two very certain tests by which to recognise that, for all that, they were not real men. The first is, that they could never use speech or other signs as we do when placing our thoughts on record for the benefit of others. For we can easily understand a machine's being constituted so that it can utter words, and even emit some responses to action on it of a corporeal kind, which brings about a change in its organs; for instance, if it is touched in a particular part it may ask what we wish to say to it; if in another part it may exclaim that it is being hurt, and so on. But it never happens that it arranges its speech in various ways, in order to reply appropriately to everything that may be said in its presence, as even the lowest type of man can do. And the second difference is,

that although machines can perform certain things as well as or perhaps better than any of us can do, they infallibly fall short in others, by the which means we may discover that they did not act from knowledge, but only from the disposition of their organs. For while reason is a universal instrument which can serve for all contingencies, these organs have need of some special adaptation for every particular action. From this it follows that it is morally impossible that there should be sufficient diversity in any machine to allow it to act in all the events of life in the same way as our reason causes us to act.

Descartes, Discourse on Method, V

31 Life is a pure flame, and we live by an invisible sun within us.

Sir Thomas Browne, Urn-Burial, V

32 The arithmetical machine produces effects which approach nearer to thought than all the actions of animals. But it does nothing which would enable us to attribute will to it, as to the animals.

Pascal, Pensées, VI, 340

33 If an animal did by mind what it does by instinct, and if it spoke by mind what it speaks by instinct, in hunting and in warning its mates that the prey is found or lost, it would indeed also speak in regard to those things which affect it closer, as example, "Gnaw me this cord which is wounding me, and which I cannot reach."

Pascal, Pensées, VI, 342

34 The effects of reason increase continually whereas instinct always remains in the same state. Beehives were as well laid out a thousand years ago as today, and each bee forms that hexagon as exactly the first time as the last. It is the same with everything animals make by that hidden motion. Nature teaches them in response to the pressure of necessity; but this frail knowledge dies with its need: as they receive it without study, they do not have the happiness of preserving it; and every time they are given it, they find it new, because nature, whose object is merely to maintain animals in an order of limited perfection, infuses in them this necessary knowledge, always the same, lest they perish, and does not allow them to add to it lest they go beyond the boundaries prescribed to them.

Pascal, Preface to the Treatise on the Vacuum

33 *Raphael.* the Sixt, and of Creation last arose
With Eevening Harps and Mattin, when God said,
Let th' Earth bring forth Fowle living in her kinde,
Cattel and Creeping things, and Beast of the Earth,
Each in thir kinde. The Earth obey'd, and strait
Op'ning her fertil Woomb teem'd at a Birth
Innumerable living Creatures, perfect formes,
Limb'd and full grown: out of the ground up rose
As from his Laire the wilde Beast where he wonns
In Forrest wilde, in Thicket, Brake, or Den;
Among the Trees in Pairs they rose, they walk'd:
The Cattel in the Fields and Meddowes green:
Those rare and solitarie, these in flocks
Pasturing at once, and in broad Herds upsprung.
The grassie Clods now Calv'd, now half appeer'd
The Tawnie Lion, pawing to get free

His hinder parts, then springs as broke from Bonds,
And Rampant shakes his Brinded main; the Ounce,
The Libbard, and the Tyger, as the Moale
Rising, the crumbl'd Earth above them threw
In Hillocks; the swift Stag from under ground
Bore up his branching head: scarce from his mould
Behemoth biggest born of Earth upheav'd
His vastness: Fleec't the Flocks and bleating rose,
As Plants: ambiguous between Sea and Land
The River Horse and scalie Crocodile.
At once came forth whatever creeps the ground,
Insect or Worme; those wav'd thir limber fans
For wings, and smallest Lineaments exact
In all the Liveries deckt of Summers pride
With spots of Gold and Purple, azure and green:
These as a line thir long dimension drew,
Streaking the ground with sinuous trace; not all
Minims of Nature; some of Serpent kinde
Wondrous in length and corpulence involv'd
Thir Snakie foulds, and added wings. First crept
The Parsimonious Emmet, provident
Of future, in small room large heart enclos'd,
Pattern of just equalitie perhaps
Hereafter, join'd in her popular Tribes
Of Commonaltie: swarming next appeer'd
The Femal Bee that feeds her Husband Drone
Deliciously, and builds her waxen Cells
With Honey stor'd: the rest are numberless,
And thou thir Natures know'st, and gav'st them Names,
Needless to thee repeated; nor unknown
The Serpent suttl'st Beast of all the field,
Of huge extent somtimes, with brazen Eyes
And hairie Main terrific, though to thee

Not noxious, but obedient at thy call.
Now Heav'n in all her Glorie shon, and rowld
Her motions, as the great first-Movers hand
First wheeld thir course; Earth in her rich attire
Consummate lovly smil'd; Aire, Water, Earth,
By Fowl, Fish, Beast, was flown, was swum, was walkt
Frequent; and of the Sixt day yet remain'd;
There wanted yet the Master work, the end
Of all yet don; a Creature who not prone
And Brute as other Creatures, but endu'd
With Sanctitic of Reason, might erect
His Stature, and upright with Front serene
Govern the rest, self-knowing, and from thence
Magnanimous to correspond with Heav'n,
But grateful to acknowledge whence his good
Descends, thither with heart and voice and eyes
Directed in Devotion, to adore
And worship God Supream, who made him chief
Of all his works.

Milton, Paradise Lost, VII, 449

- 36 We must , . . consider wherein an oak differs from a mass of matter, and that seems to me to be in this, that the one is only the cohesion of particles of matter any how united, the other such a disposition of them as constitutes the parts of an oak; and such an organization of those parts as is fit to receive and distribute nourishment, so as to continue and frame the wood, bark, and leaves etc., of an oak, in which consists the vegetable life. That being then one plant which has such an organization of parts in one coherent body, partaking of one common life, it continues to be the same plant as long as it partakes of the same life though that life be

communicated to new particles of matter vitally united to the living plant, in a like continued organization conformable to that sort of plants. For this organization, being at any one instant in any one collection of matter, is in that particular concrete distinguished from all other, and is that individual life, which existing constantly from that moment both forwards and backwards, in the same continuity of insensibly succeeding parts united to the living body of the plant, it has that identity which makes the same plant, and all the parts of it, parts of the same plant, during all the time that they exist united in that continued organization, which is fit to convey that common life to all the parts so united.

The case is not so much different in brutes but that any one may hence see what makes an animal and continues it the same. Something we have like this in machines, and may serve to illustrate it. For example, what is a watch? It is plain it is nothing but a fit organization or construction of parts to a certain end, which, when a sufficient force is added to it, it is capable to attain. If we would suppose this machine one continued body, all whose organized parts were repaired, increased, or diminished by a constant addition or separation of insensible parts, with one common life, we should have something very much like the body of an animal; with this difference, That, in an animal the fitness of the organization, and the motion wherein life consists, begin together, the motion coming from within; but in machines the force coming sensibly from without, is often away when the organ is in order, and well fitted to receive it.

*Locke, Concerning Human Understanding, Bk. II, XXVII,
4-5*

37 That there should be more species of intelligent creatures above us, than there are of sensible and material below us, is probable to me from hence: that in all the visible corporeal world, we see no chasms or gaps. All quite down from us the descent is by easy steps, and a continued series of things, that in each remove differ very little one from the other. There are fishes that have wings, and are not strangers to the airy region: and there are some birds that are inhabitants of the water, whose blood is cold as fishes, and their flesh so like in taste that the scrupulous are allowed them on fish-days. There are animals so near of kin both to birds and beasts that they are in the middle between both: amphibious animals link the terrestrial and aquatic together; seals live at land and sea, and porpoises have the warm blood and entrails of a hog; not to mention what is confidently reported of mermaids, or sea-men. There are some brutes that seem to have as much knowledge and reason as some that are called men: and the animal and vegetable kingdoms are so nearly joined, that, if you will take the lowest of one and the highest of the other, there will scarce be perceived any great difference between them: and so on, till we come to the lowest and the most inorganical parts of matter, we shall find everywhere that the several species are linked together, and differ but in almost insensible degrees.

Locke, Concerning Human Understanding, Bk. III, VI, 12

38 Any one almost would take it for an affront to be asked what he meant by it [life]. And yet if it comes in question,

whether a plant that lies ready formed in the seed have life; whether the embryo in an egg before incubation, or a man in a swoon without sense or motion, be alive or no; it is easy to perceive that a clear, distinct, settled idea does not always accompany the use of so known a word as that of life is.

Locke, Concerning Human Understandings, Bk. III, X, 22

39 In a watch, one part is the instrument by which the movement of the others is effected, but one wheel is not the efficient cause of the production of the other. One part is certainly present for the sake of another, but it does not owe its presence to the agency of that other. For this reason, also, the producing cause of the watch and its form is not contained in the nature of this material, but lies outside the watch in a being that can act according to ideas of a whole which its causality makes possible. Hence one wheel in the watch does not produce the other, and, still less, does one watch produce other watches, by utilizing, or organizing, foreign material; hence it does not of itself replace parts of which it has been deprived, nor, if these are absent in the original construction, does it make good the deficiency by the subvention of the rest; nor does it, so to speak, repair its own casual disorders. But these are all things which we are justified in expecting from organized nature. An organized being is, therefore, not a mere machine. For a machine has solely *motive power*, whereas an organized being possesses inherent *formative power*, and such, moreover, as it can impart to material devoid of it—material which it organizes. This, therefore, is a self-propagating formative power, which cannot be explained

by the capacity of movement alone, that is to say, by mechanism.

Kant, Critique of Teleological Judgement, 65

40 The resurrection of a spiritual body from a natural body does not appear in itself a more wonderful instance of power than the germination of a blade of wheat from the grain, or of an oak from an acorn. Could we conceive an intelligent being so placed as to be conversant only with inanimate or full-grown objects, and never to have witnessed the process of vegetation or growth; and were another being to show him two little pieces of matter, a grain of wheat and an acorn, to desire him to examine them, to analyze them if he pleased, and endeavor to find out their properties and essences; and then to tell him, that however trifling these little bits of matter might appear to him, that they possessed such curious powers of selection, combination, arrangement, and almost of creation that upon being put into the ground they would choose, among all the dirt and moisture that surrounded them, those parts which best suited their purpose, that they would collect and arrange these parts with wonderful taste, judgment, and execution, and would rise up into beautiful forms, scarcely in any respect analogous to the little bits of matter which were first placed in the earth. I feel very little doubt that the imaginary being which I have supposed would hesitate more, would require better authority and stronger proofs, before he believed these strange assertions than if he had been told that a being of mighty power, who had been the cause of all that he saw around him and of that existence of which he himself was conscious, would, by a great act of power upon the death and corruption of human

creatures, raise up the essence of thought in an incorporeal, or at least invisible, form to give it a happier existence in another state.

Malthus, Population, XII

41 *Wagner*. It flashes, see! Now truly we may hold
That if from substances a hundredfold,
Through mixture'—for on mixture all depends—
Man's substance gently be consolidated,
In an alembic sealed and segregated,
And properly be cohobated,
In quiet and success the labour ends.

Turning toward the furnace again.

'Twill be! The mass is working clearer,
Conviction gathers, truer, nearer.
What men as Nature's mysteries would hold,
All that to test by reason we make bold,
And what she once was wont to organize,
That we bid now to crystallize.

Mephistopheles. Whoever lives long learns full many things;

By naught in this world can he ever be surprised.
I've seen already in my wanderings
Many a mortal who was crystallized.

Wag. [hitherto constantly attentive to the phial]

It rises, flashes, gathers on;
A moment, and the deed is done.
A great design at first seems mad; but we
Henceforth will laugh at chance in procreation,
And such a brain that is to think transcendently
Will be a thinker's own creation.

Looking at the phial rapturously.

The glass resounds with lovely might;

It dims, it clears; life must begin to be,
A dainty figure greets my sight;
A pretty manikin I see.
What more do we or does the world want now?
The mystery's within our reach.
Come, hearken to this sound, and listen how
It turns to voice, it turns to speech.

Homunculus [in the phial, to Wagner]

Well, Daddy! how are you? It was no jest.
Come, press me tenderly upon your breast,
But not too hard, for fear the glass might shatter.
That is the property of matter:
For what is natural the All has place;
What's artificial needs restricted space.

Goethe, Faust, 11, 2, 6848

42 Life is the one universal soul, which, by virtue of the
enlivening BREATH, and the informing word, all organized
bodies have in common, each *after its kind*.

Coleridge, Aids to Reflection

43 The One remains, the many change and pass;
Heaven's light forever shines, Earth's shadows fly;
Life, like a dome of many-colored glass,
Stains the white radiance of Eternity,
Until Death tramples it to fragments.

Shelley, Adonais, LII

44 Was it that this old carpenter had been a lifelong
wanderer, whose much rolling to and fro not only had
gathered no moss, but what is more, had rubbed off
whatever small outward clingings might have originally

pertained to him? He was a stripped abstract; an unfractioned integral; uncompromised as a new-born babe; living without premeditated reference to this world or the next—you might almost say, that this strange uncompromisedness in him involved a sort of unintelligence; for in his numerous trades, he did not seem to work so much by reason or by instinct, or simply because he had been tutored to it, or by any intermixture of all these, even or uneven; but merely by a kind of deaf and dumb, spontaneous literal process. He was a pure manipulator; his brain, if he had ever had one, must have early oozed along into the muscles of his fingers. He was like one of those unreasoning but still highly useful *multum in parvo*, Sheffield contrivances, assuming the exterior—though a little swelled—of a common pocket-knife; but containing, not only blades of various sizes, but also screw-drivers, corkscrews, tweezers, awls, pens, rulers, nail-filers, counter-sinkers. So, if his superiors wanted to use the carpenter for a screw-driver, all they had to do was to open that part of him, and the screw was fast: or if for tweezers, take him up by the legs, and there they were.

Yet, as previously hinted, this omni-tooled, open-and-shut carpenter, was, after all, no mere machine of an automaton. If he did not have a common soul in him, he had a subtle something that somehow anomalously did its duty. What that was, whether essence of quicksilver, or a few drops of hartshorn, there is no telling. But there it was; and there it had abided for now some sixty years or more. And this it was, this same unaccountable, cunning life-principle in him; this it was, that kept him a great part of the time soliloquising; but only like an unreasoning wheel, which also hummingly soliloquises;

or rather, his body was a sentiy-box and this soliloquiser on guard there, and talking all the time to keep himself awake.

Melville, Moby Dick, CVII

45 There is no exception to the rule that every organic being naturally increases at so high a rate, that, if not destroyed, the earth would soon be cervered by the progeny of a single pair. Even slow-breeding man has doubled in twenty-five years, and at this rate, in less than a thousand years, there would literally not be standing-room for his progeny.

Darwin, Origin of Species, III

46 It is good... to try in imagination to give to any one species an advantage over another. Probably in no single instance should we know what to do. This ought to convince us of our ignorance on the mutual relations of all organic beings; a conviction as necessary as it is difficult to acquire. All that we can do, is to keep steadily in mind that each organic being is striving to increase in a geometrical ratio; that each at some period of its life, during some season of the year, during each generation or at intervals, has to struggle for life and to suffer great destruction. When we reflect on this struggle, we may console ourselves with the full belief, that the war of nature is not incessant, that no fear is felt, that death is generally prompt, and that the vigorous, the healthy, and the happy survive and multiply.

Darwin, Origin of Species, III

47 The affinities of all the beings of the same class have sometimes been represented by a great tree. I believe this simile largely speaks the truth. The green and budding twigs may represent existing species; and those produced during former years may represent the long succession of extinct species. At each period of growth all the growing twigs have tried to branch out on all sides, and to overtop and kill the surrounding twigs and branches, in the same manner as species and groups of species have at all times overmastered other species in the great battle for life. The limbs divided into great branches, and these into lesser and lesser branches, were themselves once, when the tree was young, budding twigs, and this connection of the former and present buds by ramifying branches may well represent the classification of all extinct and living species in groups subordinate to groups. Of the many twigs which flourished when the tree was a mere bush, only two or three, now grown into great branches, yet survive and bear the other branches; so with the species which lived during long-past geological periods very few have left living and modified descendants. From the first growth of the tree, many a limb and branch has decayed and dropped off; and these fallen branches of various sizes may represent those whole orders, families, and genera which have now no living representatives, and which are known to us only in a fossil state. As we here and there see a thin straggling branch springing from a fork low down in a tree, and which by some chance has been favoured and is still alive on its summit, so we occasionally see an animal like the *Ornithorhynchus* or *Lepidosiren*, which in some small degree connects by its affinities two large branches of life, and which has

apparently been saved from fatal competition by having inhabited a protected station. As buds give rise by growth to fresh buds, and these, if vigorous, branch out and overtop on all sides many a feebler branch, so by generation I believe it has been with the great Tree of Life, which fills with its dead and broken branches the crust of the earth, and covers the surface with its everbranching and beautiful ramifications.

Darwin, Origin of Species, IV

48 Authors of the highest eminence seem to be fully satisfied with the view that each species has been independently created. To my mind it accords better with what we know of the laws impressed on matter by the Creator, that the production and extinction of the past and present inhabitants of the world should have been due to secondary causes, like those determining the birth and death of the individual. When I view all beings not as special creations, but as the lineal descendants of some few beings which lived long before the first bed of the Cambrian system was deposited, they seem to me to become ennobled. Judging from the past, we may safely infer that not one living species will transmit its unaltered likeness to a distant futurity. And of the species now living very few will transmit progeny of any kind to a far distant futurity; for the manner in which all organic beings are grouped, shows that the greater number of species in each genus, and all the species in many genera, have left no descendants, but have become utterly extinct. We can so far take a prophetic glance into futurity as to foretell that it will be the common and widely-spread species, belonging to the larger and dominant groups within each class, which will ultimately

prevail and procreate new and dominant species. As all the living forms of life are the lineal descendants of those which lived long before the Cambrian epoch, we may feel certain that the ordinary succession by generation has never once been broken, and that no cataclysm has desolated the whole world. Hence we may look with some confidence to a secure future of great length. And as natural selection works solely by and for the good of each being, all corporeal and mental endowments will tend to progress towards perfection.

It is interesting to contemplate a tangled bank, clothed with many plants of many kinds, with birds singing on the bushes, with various insects flitting about, and with worms crawling through the damp earth, and to reflect that these elaborately constructed forms, so different from each other, and dependent upon each other in so complex a manner, have all been produced by laws acting around us. These laws, taken in the largest sense, being Growth with Reproduction; Inheritance which is almost implied by reproduction; Variability from the indirect and direct action of the conditions of life and from use and disuse; a Ratio of Increase so high as to lead to a Struggle for Life, and as a consequence to Natural Selection, entailing Divergence of Character and the Extinction of less-improved forms. Thus, from the war of nature, from famine and death, the most exalted object which we are capable of conceiving, namely, the production of the higher animals, directly follows. There is grandeur in this view of life, with its several powers, having been originally breathed by the Creator into a few forms or into one; and that, whilst this planet has gone cycling on according to the fixed law of gravity, from so

simple a beginning endless forms most beautiful and most wonderful have been, and are being evolved.

Darwin, Origin of Species, XV

49 We have given to man a pedigree of prodigious length, but not, it may be said, of noble quality. The world, it has often been remarked, appears as if it had long been preparing for the advent of man: and this, in one sense is strictly true, for he owes his birth to a long line of progenitors. If any single link in this chain had never existed, man would not have been exactly what he now is. Unless we wilfully close our eyes, we may, with our present knowledge, approximately recognise our parentage; nor need We feel ashamed of it. The most humble organism is something much higher than the inorganic dust under our feet; and no one with an unbiased mind can study any living creature, however humble, without being struck with enthusiasm at its marvellous structure and properties.

Darwin, Descent of Man, I, 6

50 I propose ... to prove that the science of vital phenomena must have the same foundations as the science of the phenomena of inorganic bodies, and that there is no difference in this respect between the principles of biological science and those of physico-chemical science. Indeed, as we have already said, the goal which the experimental method sets itself is everywhere the same; it consists in connecting natural phenomena with their necessary conditions or with their immediate causes. In biology, since these conditions are known, physiologists can guide the manifestation of vital phenomena as

physicists guide the natural phenomena, the laws of which they have discovered; but in doing so, experimenters do not act on life.

Yet there is absolute determinism in all the sciences, because every phenomenon being necessarily linked with physico-chemical conditions, men of science can alter them to master the phenomenon, i.e., to prevent or to promote its appearing. As to this, there is absolutely no question in the case of inorganic bodies. I mean to prove that it is the same with living bodies, and That for them also determinism exists.

Claude Bernard, Experimental Medicine, 11,1

- 51 A living organism is nothing but a wonderful machine endowed with the most marvellous properties and set going by means of the most complex and delicate mechanism. There are no forces opposed and struggling one with another; in nature there can be only order and disorder, harmony or discord.

Claude Bernard, Experimental Medicine, II, I

- 52 The organism is merely a living machine so constructed that, on the one hand, the outer environment is in free communication with the inner organic environment, and, on the other hand, the organic units have protective functions, to place in reserve the materials of life and uninterruptedly to maintain the humidity, warmth and other conditions essential to vital activity. Sickness and death are merely a dislocation or disturbance of the mechanism which regulates the contact of vital stimulants with organic units.

Claude Bernard, Experimental Medicine, II, 1

53 Life Is creation. In fact, a created organism is a machine which necessarily works by virtue of the physico-chemical properties of its constituent elements. To-day we differentiate three kinds of properties exhibited in the phenomena of living beings: physical properties, chemical properties and vital properties. But the term "vital properties" is itself only provisional; because we call properties vital which we have not yet been able to reduce to physico-chemical terms; but in that we shall doubtless succeed some day.

Claude Bernard, Experimental Medicine, 11, 2

54 If some iron filings be sprinkled on a table and a magnet brought near them, they will fly through the air for a certain distance and stick to its surface. A savage seeing the phenomenon explains it as the result of an attraction or love between the magnet and the filings. But let a card cover the poles of the magnet, and the filings will press forever against its surface without its ever occurring to them to pass around its sides and thus come into more direct contact with the object of their love. Blow bubbles through a tube into the bottom of a pail of water, they will rise to the surface and mingle with the air. Their action may again be poetically interpreted as due to a longing to recombine with the mother-atmosphere above the surface. But if you invert a jar full of water over the pail, they will rise and remain lodged beneath its bottom, shut in from the outer air, although a slight deflection from their course at the outset, or a re-descent towards the rim of the jar when they found their upward course impeded, would easily have set them free.

If now we pass from such actions as these to those of living things, We notice a striking difference. Romeo

wants Juliet as the filings want the magnet; and if no obstacles intervene he moves towards her by as straight a line as they. But Romeo and Juliet, if a wall be built between them, do not remain idiotically pressing their faces against its opposite sides like the magnet and the filings with the card. Romeo soon finds a circuitous way, by scaling the wall or otherwise, of touching Juliet's lips directly. With the filings the path is fixed; whether it reaches the end depends on accidents. With the lover it is the end which is fixed, the path may be modified indefinitely.

William James, Psychology, I

55 In a general theory of evolution the inorganic comes first, then the lowest forms of animal and vegetable life, then forms of life that possess mentality, and finally those like ourselves that possess it in a high degree. As long as we keep to the consideration of purely outward facts, even the most complicated facts of biology, our task as evolutionists is comparatively easy. We are dealing all the time with matter and its aggregations and separations; and although our treatment must perforce be hypothetical, this does not prevent it from being *continuous*. The point which as evolutionists we are bound to hold fast to is that all the new forms of being that make their appearance are really nothing more than results of the redistribution of the original and unchanging materials. The self-same atoms which, chaotically dispersed, made the nebula, now, jammed and temporarily caught in peculiar positions, form our brains; and the "evolution" of the brains, if understood, would be simply the account of how the atoms came to be so caught and jammed. In this story no new *natures*,

no factors not present at the beginning, are introduced at any later stage.

But with the dawn of consciousness an entirely new nature seems to slip in, something whereof the potency was *not* given in the mere outward atoms of the original chaos.

William James. Psychology, VI

56 Is each thing born fitted to particular other things, and to them exclusively, as locks are fitted to their keys?

Undoubtedly this must be believed to be so. Each nook and cranny of creation, down to our very skin and entrails, has its living inhabitants, with organs suited to the place, to devour and digest the food it harbors and to meet the dangers it conceals; and the minuteness of adaptation thus shown in the way of *structure* knows no bounds. Even so are there no bounds to the minuteness of adaptation in the way of *conduct* which the several inhabitants display.

William James, Psychology, XXIV

57 If... all organic instincts are conservative, historically acquired, and are directed towards regression, towards reinstatement of something earlier, we are obliged to place all the results of organic development to the credit of external, disturbing, and distracting influences. The rudimentary creature would from its very beginning not have wanted to change, would, if circumstances had remained the same, have always merely repeated the same course of existence. But in the last resort it must have been the evolution of our earth, and its relation to the sun, that has left its imprint on the development of

organisms. The conservative organic instincts have absorbed every one of these enforced alterations in the course of life and have stored them for repetition; they thus present the delusive appearance of forces striving after change and progress, while they are merely endeavouring to reach an old goal by ways both old and new. This final goal of all organic striving can be stated too. It would be counter to the conservative nature of instinct if the goal of life were a state never hitherto reached. It must rather be an ancient starting point, which the living being left long ago, and to which it harks back again by all the circuitous paths of development. If we may assume as an experience admitting of no exception that everything living dies from causes within itself, and returns to the inorganic, we can only say "*The goal of all life is death*" and, casting back, "*The inanimate was there before the animate.*"

Freud, Beyond the Pleasure Principle, V

58 At one time or another, by some operation of force which still completely baffles conjecture, the properties of life were awakened in lifeless matter. Perhaps the process was a prototype resembling that other one which later in a certain stratum of living matter gave rise to consciousness. The tension then aroused in the previously inanimate matter strove to attain an equilibrium; the first instinct was present, that to return to lifelessness. The living substance at that time had death within easy reach; there was probably only a short course of life to run, the direction of which was determined by the chemical structure of the young organism. So through a long period of time the living substance may have been constantly created anew, and

easily extinguished, until decisive external influences altered in such a way as to compel the still surviving substance to ever greater deviations from the original path of life, and to ever more complicated and circuitous routes to the attainment of the goal of death. These circuitous ways to death, faithfully retained by the conservative instincts, would be neither more nor less than the phenomena of life as we now know it. If the exclusively conservative nature of the instincts is accepted as true, it is impossible to arrive at any other suppositions with regard to the origin and goal of life.

If these conclusions sound strangely in our ears, equally so will those we are led to make concerning the great groups of instincts which we regard as lying behind the vital phenomena of organisms. The postulate of the self-preservative instincts we ascribe to every living being stands in remarkable contrast to the supposition that the whole life of instinct serves the one end of bringing about death. The theoretic significance of the instincts of self-preservation, power, and self-assertion, shrinks to nothing, seen in this light, they are part-instincts designed to secure the path to death peculiar to the organism and to ward off possibilities of return to the inorganic other than the immanent ones, but the enigmatic struggle of the organism to maintain itself in spite of all the world, a struggle that cannot be brought into connection with anything else, disappears. It remains to be added that the organism is resolved to die only in its own way; even these watchmen of life were originally the myrmidons of death. Hence, the paradox comes about that the living organism resists with all its energy influences (dangers) which could help it to reach its life-goal by a short way (a short circuit, so to speak); but this

is just the behaviour that characterizes a pure instinct as contrasted with an intelligent striving.

Freud, Beyond the Pleasure Principle, V

59 Are we to follow the clue of the poet-philosopher [Plato] and make the daring assumption that living substance was at the time of its animation rent into small particles, which since that time strive for reunion by means of the sexual instincts? That these instincts—in which the chemical affinity of inanimate matter is continued—passing through the realm of the protozoa gradually overcome all hindrances set to their striving by an environment charged with stimuli dangerous to life, and are impelled by it to form a protecting covering layer?

And that these dispersed fragments of living substance thus achieve a multicellular organization, and finally transfer to the germ-cells in a highly concentrated form the instinct for reunion? I think this is the point at which to break off.

Freud, Beyond the Pleasure Principle, VI

60 All life, animal and vegetable, seems in its essence like an effort to accumulate energy and then to let it flow into flexible channels, changeable in shape, at the end of which it will accomplish infinitely varied kinds of work. That is what the vital impetus, passing through matter, would fain do all at once. It would succeed, no doubt, if its power were unlimited, or if some reinforcement could come to it from without. But the impetus is finite, and it has been given once for all. It cannot overcome all obstacles. The movement it starts is sometimes turned aside, sometimes divided, always opposed; and the

evolution of the organized world is the unrolling of this conflict.

Bergson, Creative Evolution, III

- 61 If our analysis is correct, it is consciousness, or rather supra-consciousness, that is at the origin of life. Consciousness, or supra-consciousness, is the name for the rocket whose extinguished fragments fall back as matter; consciousness, again, is the name for that which subsists of the rocket itself, passing through the fragments and lighting them up into organisms. But this consciousness, which is a *need of creation*, is made manifest to itself only where creation is possible. It lies dormant when life is condemned to automatism; it awakens as soon as the possibility of a choice is restored.

Bergson, Creative Evolution, III

- 62 From our [man's] point of view, life appears in its entirety as an immense wave which, starting from a center, spreads outwards, and which on almost the whole of its circumference is stopped and converted into oscillation: at one single point the obstacle has been forced, the impulsion has passed freely. It is this freedom that the human form registers. Everywhere but in man, consciousness has had to come to a stand; in man alone it has kept on its way. Man, then, continues the vital movement indefinitely, although he does not draw along with him all that life carries in itself. On other lines of evolution there have traveled other tendencies which life implied, and of which, since everything interpenetrates, man has, doubtless, kept something, but of which he has kept only very little. *It is as if a vague and formless*

being, when we may call, as we will, man or superman, had sought to realize himself, and had succeeded only by abandoning a part of himself on the way. The losses are represented by the rest of the animal world, and even by the vegetable world, at least in what these have that is positive and above the accidents of evolution.

Bergson, Creative Evolution, III

63 As the smallest grain of dust is bound up with our entire solar system, drawn along with it in that undivided movement of descent which is materiality itself, so all organized beings, from the humblest to the highest, from the first origins of life to the time in which we are, and in all places as in all times, do but evidence a angle impulsion, the inverse of the movement of matter, and in itself indivisible. All the living hold together, and all yield to the same tremendous push. The animal takes its stand on the plant, man bestrides animality, and the whole of humanity, in space and in time, is one immense army galloping beside and before and behind each of us in an overwhelming charge able to beat down every resistance and clear the most formidable obstacles, perhaps even death.

Bergson, Creative Evolution, III

64 And life? Life itself? Was it perhaps only an infection, a sickening of matter? Was that which one might call the original procreation of matter only a disease, a growth produced by morbid stimulation of the immaterial? The first step toward evil, toward desire and death, was taken precisely then, when there took place that first increase in the density of the spiritual, that pathologically

luxuriant morbid growth, produced by the irritant of some unknown infiltration; this, in part pleasurable, in part a motion of self-defence, was the primeval stage of matter, the transition from the insubstantial to the substance. This was the Fall. The second creation, the birth of the organic out of the inorganic, was only another fatal stage in the progress of the corporeal toward consciousness, just as disease in the organism was an intoxication, a heightening and unlicensed accentuation of its physical state; and life, life was nothing but the next step on the reckless path of the spirit dishonoured; nothing but the automatic blush of matter roused to sensation and become receptive for that which awaked it.

Mann, Magic Mountain, V

19.3 Cause

Other sections of this book treat cause in other contexts: Section 5.7 in the context of discussions of free will; Section 6.7 in the context of discussions of demonstration; Section 15.3 in the context of discussions of fate and destiny; and Section 17.2 in the context of discussions of scientific method. Here the discussion concentrates on the principle of causality and on the analysis of causation.

The passages quoted raise and explore such basic questions as whether everything that happens has a cause of its occurrence or a sufficient reason for happening; whether the chain of causation leads back to some first uncaused cause; whether everything that comes into existence and passes away needs a cause of being as well as of becoming, a cause that preserves it in being as long as its

existence endures; and whether the operation of causes necessitates the production of their effects or allows some room for chance and contingency.

The reader will find Aristotle's famous classification of the four causes—the formal, the material, the efficient, and the final cause—together with the modern rejection of final causes by such writers as Bacon, Descartes, and Spinoza. The reader will find passages in which God is conceived as the first efficient cause and creator of nature, as the prime mover or ultimate final cause of motion or change, and as the only uncaused or self-caused being. The reader will also find a denial by Hume, not of causation itself, but of our ability to know causes and how they operate.

■ ■ ■

- 1 They have sown the wind, and they shall reap the whirlwind.

Hosea 8:7

- 2 *Timaeus*. Everything that becomes or is created must of necessity be created by some cause, for without a cause nothing can be created.

Plato, Timaeus, 20A

- 3 We think we have scientific knowledge when we know the cause, and there are four causes; (1) the definable form, (2) an antecedent which necessitates a consequent, (3) the efficient cause, (4) the final cause. Hence each of these can be the middle term of a proof.

Aristotle, Posterior Analytics, 94a20

4 Knowledge is the object of our inquiry, and men do not think they know a thing till they have grasped the 'why' of it (which is to grasp its primary cause). So clearly we too must do this as regards both coming to be and passing away and every kind of physical change, in order that, knowing their principles, we may try to refer to these principles each of our problems.

In one sense, then, (1) that out of which a thing comes to be and which persists, is called 'cause', e.g. the bronze of the statue, the silver of the bowl, and the genera of which the bronze and the silver are species.

In another sense (2) the form or the archetype, i.e. the statement of the essence, and its genera, are called 'causes' (e.g. of the octave the relation of 2:1, and generally number). and the parts in the definition.

Again (3) the primary source of the change or coming to rest; e.g. the man who gave advice is a cause, the father is cause of the child, and generally what makes of what is made and what causes change of what is changed.

Again (4) in the sense of end or 'that for the sake of which' a thing is done, e.g. health is the cause of walking about. ('Why is he walking about?' we say. 'To be healthy', and, having said that, we think we have assigned the cause.) The same is true also of all the intermediate steps which are brought about through the action of something else as means towards the end, e.g. reduction of flesh, purging, drugs, or surgical instruments are means towards health. All these things are 'for the sake of' the end, though they differ from one another in that some are activities, others instruments.

Aristotle, Physics, 194b17

- 5 The causes concerned in the generation of the works of nature are, as we see, more than one. There is the final cause and there is the motor cause. Now we must decide which of these two causes comes first, which second. Plainly, however, that cause is the first which we call the final one. For this is the Reason, and the Reason forms the starting-point, alike in the works of art and in works of nature.

Aristotle, Parts of Animals, 639b12

- 6 The same thing may have all the kinds of causes, e.g. the moving cause of a house is the art of the builder, the final cause is the function it fulfils, the matter is earth and stones, and the form is the definition.

Aristotle, Metaphysics, 996b5

- 7 Every action must be due to one or other of seven causes: chance, nature, compulsion, habit, reasoning, anger, or appetite.

Aristotle, Rhetoric, 1369a5

- 8 There are things... for which it is not sufficient to assign one cause; you must give several, one of which at the same time is the real cause. For instance should you see the lifeless body of a man lying at some distance, it would be natural to mention all the different causes of death, in order that the one real cause of that man's death be mentioned among them. Thus you may be able to prove that he has not died by steel or cold or from disease or haply from poison; yet we know that it is something of this kind which has befallen him.

Lucretius, Nature of Things, VI

9 In what will all this ostentation end?

The lab'ring mountain scarce brings forth a mouse.

Horace, Ars Poetica

10 By their fruits ye shall know them.

Matthew 7:20

11 Whatsoever a man soweth, that shall he also reap.

Galatians 6:7

12 How great a matter a little fire kindleth!

James 3:5

13 It is His occult power which pervades all things, and is present in all without being contaminated, which gives being to all that is, and modifies and limits its existence; so that without Him it would not be thus, or thus, nor would have any being at all. If, then, in regard to that outward form which the workman's hand imposes on his work, we do not say that Rome and Alexandria were built by masons and architects, but by the kings by whose will, plan, and resources they were built, so that the one has Romulus, the other Alexander, for its founder; with how much greater reason ought we to say that God alone is the Author of all natures since He neither uses for His work any material which was not made by Him, nor any workmen who were not also made by Him, and since, if He were, so to speak, to withdraw from created things His creative power, they would straightway relapse into the

nothingness in which they were before they were created?

Augustine, City of God, XII, 25

- 14 In the world of sense we find there is an order of efficient causes. There is no case known (nor indeed, is it possible) in which a thing is found to be the efficient cause of itself, because in that case it would be prior to itself, which is impossible.

Aquinas, Summa Theologica, I, 2,3

- 15 In efficient causes it is impossible to proceed to infinity *per se* —thus, there cannot be an infinite number of causes that are *per se required for a certain effect; for instance*, that a stone be moved by a stick, the stick by the hand, and so on to infinity. But it is not impossible to proceed to infinity accidentally as regards efficient causes; for instance, if all the causes thus infinitely multiplied should have the order of only one cause, their multiplication being accidental; as an artificer acts by means of many hammers accidentally, because one after the other is broken. It is accidental, therefore, that one particular hammer acts after the action of another, and likewise it is accidental to this particular man as generator to be generated by another man; for he generates as a man, and not as the son of another man. For all men generating hold one grade in efficient causes —namely, the grade of a particular generator. Hence it is not impossible for a man to be generated by man to infinity; but such a thing would be impossible if the generation of this man depended upon this man, and on an elementary body, and on the sun, and so on to infinity.

Aquinas, Summa Theologica, I, 46, 2

16 It must be borne in mind that the higher the cause, the more numerous the objects to which its causation extends. Now the underlying principle in things is always more universal than that which informs and restricts it; thus, being is more universal than living, living than understanding, matter than form. The more widely, then, one thing underlies others, the more directly does that thing proceed from a higher cause. Thus the thing that underlies primarily all things belongs properly to the causality of the supreme cause. Therefore no secondary cause can produce anything, unless there is presupposed in the thing produced something that is caused by a higher cause. But creation is the production of a thing in its entire substance, nothing being presupposed, either uncreated or created. Hence it remains that nothing can create except God alone, Who is the first cause.

Aquinas, Summa Theologies, I, 65, 3

j7 Every effect depends on its cause, so far as it is its cause. But we must observe that an agent is the cause of the becoming of its effect, but not directly of its being. This may be seen both in artificial and in natural things. For the builder causes the house in its becoming, but he is not the direct cause of its being. For it is clear that the being of the house is a result of its form, which consists in the putting together and arrangement of the materials, and results from the natural qualities of certain things. . . . The same principle applies to natural things. For if an agent is not the cause of a form as such, neither will it be directly the cause of being which results from that form, but it will be the cause of the effect in its becoming only.

Aquinas, Summa Theologica, 1, 104, 1

18 Thence it [the living Light] descendeth to the remotest potencies, down, from act to act, becoming such as maketh now mere brief contingencies;

by which contingencies I understand the generated things which are produced from seed, or seedless, by the moving heaven.

The wax of these, and that which mouldeth it, standeth not in one mode, and therefore, 'neath the ideal stamp, is more and less transparent;

whence cometh, that one same tree in kind better and worse doth fruit; and ye are born with diverse genius.

Were the wax exactly moulded, and were the heaven in its supremest virtue, the light of the signet would be all apparent;

but nature ever furnisheth it faulty, doing as doth the artist who hath the knack of the art and a trembling hand.

Dante, Paradiso, XI11, 61

19 The Devil begat darkness; darkness begat ignorance; ignorance begat error and his brethren; error begat free-will and presumption; free-will begat merit; merit begat forgetfulness of God; forgetfulness begat transgression; transgression begat superstition; superstition begat satisfaction; satisfaction begat the mass-offering; the mass-offering begat the priest; the priest begat unbelief; unbelief begat king hypocrisy; hypocrisy begat traffic in offerings for gain; traffic in offerings for gain begat Purgatory; Purgatory begat the annual solemn vigils; the annual vigils begat church-livings; church-livings begat avarice; avarice begat swelling superfluity; swelling

superfluity begat fulness; fulness begat rage; rage begat licence; licence begat empire and domination; domination begat pomp; pomp begat ambition; ambition begat simony; simony begat the pope and his brethren, about the time of the Babylonish captivity.

Luther, Table Talk, H500

- 20 As we divided natural philosophy in general into the inquiry of causes, and productions of effects: so that part which concerneth the inquiry of causes we do subdivide according to the received and sound division of causes. The one part, which is physic, inquireth and handleth the material and efficient causes; and the other, which is metaphysic, handleth the formal and final causes.

Bacon, Advancement of Learning, Bk. II, VII, 3

- 21 The handling of final causes, mixed with the rest in physical inquiries, hath intercepted the severe and diligent inquiry of all real and physical causes, and given men the occasion to stay upon these satisfactory and specious causes, to the great arrest and prejudice of further discovery.

Bacon, Advancement of Learning, Bk. II, VII, 7

- 22 It is rightly laid down that true knowledge is that which is deduced from causes. The division of four causes also is not amiss: matter, form, the efficient, and end or final cause. Of these, however, the latter is so far from being beneficial, that it even corrupts the sciences, except in the intercourse of man with man. The discovery of form is considered desperate. As for the efficient cause and matter (according to the present system of inquiry and

the received opinions concerning them, by which they are placed remote from, and without any latent process towards form), they are but desultory and superficial, and of scarcely any avail to real and active knowledge.

Bacon, Novum Organum, II, 2

- 23 The knowledge of a single fact acquired through a discovery of its causes prepares the mind to understand and ascertain other facts without need of recourse to experiment.

Galileo, Two New Sciences, IV

- 24 To one who pays attention to God's immensity, it is clear that nothing at all can exist which does not depend on Him. This is true not only of everything that subsists, but of all order, of every law, and of every reason of truth and goodness. ... It is useless to inquire how God could from all eternity bring it about that it should be untrue that twice four is eight, etc.; for I admit that that cannot be understood by us. Yet, since on the other hand I correctly understand that nothing in any category of causation can exist which does not depend upon God, and that it would have been easy for Him so to appoint that we human beings should not understand how these very things could be otherwise than they are, it would be irrational to doubt concerning that which we correctly understand, because of that which we do not understand and perceive no need to understand.

Hence neither should we think *that eternal truths depend upon the human understanding or on other existing things*; they must depend on God alone, who, as the supreme legislator, ordained them from all eternity.

Descartes, Objections and Replies, VI

25 Ignorance of remote causes disposeth men to attribute all events to the causes immediate and instrumental; for these are all the causes they perceive.

Hobbes, Leviathan, I, 11

26 Since everything ... is cause and effect, dependent and supporting, mediate and immediate, and all is held together by a natural though imperceptible chain which binds together things most distant and most different, I hold it equally impossible to know the parts without knowing the whole and to know the whole without knowing the parts in detail.

Pascal, Pensées, 11, 72

27 The least movement affects all nature; the entire sea changes because of a rock.

Pascal, Pensées, VII, 505

28 By *cause* of itself, I understand that whose essence involves existence, or that whose nature cannot be conceived unless existing.

Spinoza, Ethics, I, Def. I

29 From a given determinate cause an effect necessarily follows; and, on the other hand, if no determinate cause be given, it is impossible that an effect can follow.

The knowledge of an effect depends upon and involves the knowledge of the cause.

Those things which have nothing mutually in common with one another cannot through one another be

mutually understood, that is to say, the conception of the one does not involve the conception of the other.

Spinoza, Ethics, I, Axioms 3—5

30 Man is born ignorant of the causes of things and ... he has a desire, of which he is conscious, to seek that which is profitable to him. From this it follows, firstly, that he thinks himself free because he is conscious of his wishes and appetites, whilst at the same time he is ignorant of the causes by which he is led to wish and desire, not dreaming what they are; and, secondly, it follows that man does everything for an end, namely, for that which is profitable to him, which is what he seeks. Hence it happens that he attempts to discover merely the final causes of that which has happened; and when he has heard them he is satisfied, because there is no longer any cause for further uncertainty. But if he cannot hear from another what these final causes are, nothing remains but to turn to himself and reflect upon the ends which usually determine him to the like actions, and thus by his own mind he necessarily judges that of another. Moreover, since he discovers, both within and without himself, a multitude of means which contribute not a little to the attainment of what is profitable to himself—for example, the eyes, which are useful for seeing, the teeth for mastication, plants and animals for nourishment, the sun for giving light, the sea for feeding fish, etc.—it comes to pass that all natural objects are considered as means for obtaining what is profitable. These too being evidently discovered and not created by man, hence he has a cause for believing that some other person exists who has prepared them for man's use. For having considered them as means it was impossible to believe that they had

created themselves, and so he was obliged to infer from the means which he was in the habit of providing for himself that some ruler or rulers of nature exist, endowed with human liberty, who have taken care of all things for him, and have made all things for his use. Since he never heard anything about the mind of these rulers, he was compelled to judge of it from his own, and hence he affirmed that the gods direct everything for his advantage, in order that he may be bound to them and hold them in the highest honour. This is the reason why each man has devised for himself, out of his own brain, a different mode of worshipping God, so that God might love him above others, and direct all nature to the service of his blind cupidity and insatiable avarice.

Thus has this prejudice been turned into a superstition and has driven deep roots into the mind—a prejudice which was the reason why every one has so eagerly tried to discover and explain the final causes of things. The attempt, however, to show that nature does nothing in vain (that is to say, nothing which is not profitable to man), seems to end in showing that nature, the gods, and man are alike mad.

Spinoza, Ethics, I, Appendix

- 31 The main business of natural philosophy is to argue from phenomena without feigning hypotheses, and to deduce causes from effects, till we come to the very first cause, which certainly is not mechanical; and not only to unfold the mechanism of the world, but chiefly to resolve these and such like questions. What is there in places almost empty of matter, and whence is it that the Sun and planets gravitate towards one another, without dense matter between them? Whence is it that Nature doth

nothing in vain; and whence arises all that order and beauty which we see in the world? To what end are comets, and whence is it that planets move all one and the same way in orbs concentric, while comets move all manner of ways in orbs very eccentric; and what hinders the fixed stars from falling upon one another? How came the bodies of animals to be contrived with so much art, and for what ends were their several parts? Was the eye contrived without skill in Optics, and the ear without knowledge of sounds? How do the motions of the body follow from the will, and whence is the instinct in animals? Is not the sensory of animals that place to which the sensitive substance is present, and into which the sensible species of things are carried through the nerves and brain, that there they may be perceived by their immediate presence to that substance? And these things being rightly dispatched, does it not appear from phenomena that there is a Being incorporeal, living, intelligent, omnipresent, who in infinite space (as it were in his sensory) sees the things themselves intimately, and thoroughly perceives them, and comprehends them wholly by their immediate presence to himself? Of which things the images only carried through the organs of sense into our little sensoriums are there seen and beheld by that which in us perceives and thinks. And though every true step made in this philosophy brings us not immediately to the knowledge of the First Cause, yet it brings us nearer to it, and on that account is to be highly valued.

Newton, Optics, III, 1

32 Souls act according to the laws of final causes through appetitions, ends, and means. Bodies act according to the

laws of efficient causes or motions. And the two realms, that of efficient causes and that of final causes, are in harmony with one another.

Leibniz, Monadology, 79

- 33 We must rise [from physics] to metaphysics, making use of the great principle, usually little employed, which affirms that nothing takes place without sufficient reason; that is to say, that nothing happens without its being possible for one who should know things sufficiently, to give a reason which is sufficient to determine why things are so and not otherwise.

Leibniz, Principles of Nature and of Grace, 7

- 34 As to the opinion that there are no Corporeal Causes this has been heretofore maintained by some of the Schoolmen, as it is of late by others among the modern philosophers, who though they allow Matter to exist, yet will have God alone to be the immediate efficient cause of all things. These men saw that amongst all the objects of sense there was none which had any power or activity included in it; and that by consequence this was likewise true of whatever bodies they supposed to exist without the mind, like unto the immediate objects of sense. But then, that they should suppose an innumerable multitude of created beings, which they acknowledge are not capable of producing any one effect in nature, and which therefore are made to no manner of purpose, since God might have done everything as well without them: this I say, though we should allow it possible, must yet be a very unaccountable and extravagant supposition.

Berkeley, Principles of Human Knowledge, j3

35 The connexion of ideas does not imply the relation of *cause* and *effect*, but only of a mark or *sign* with the thing *signified*. The fire which I see is not the cause of the pain I suffer upon my approaching it, but the mark that forewarns me of it. In like manner the noise that I hear is not the effect of this or that motion or collision of the ambient bodies, but the sign thereof.

Berkeley, Principles of Human Knowledge, 65

36 Every effect is a distinct event from its cause. It could not, therefore, be discovered in the cause, and the first invention or conception of it, *a priori*, must be entirely arbitrary. And even after it is suggested, the conjunction of it with the cause must appear equally arbitrary; since there are always many other effects, which, to reason, must seem fully as consistent and natural. In vain, therefore, should we pretend to determine any single event, or infer any cause or effect, without the assistance of observation and experience.

Hume, Concerning Human Understanding, IV, 25

37 If there be any suspicion that the course of nature may change, and that the past may be no rule for the future, all experience becomes useless, and can give rise to no inference or conclusion. It is impossible, therefore, that any arguments from experience can prove this resemblance of the past to the future; since all these arguments are founded on the supposition of that resemblance.

Hume, Concerning Human Understanding, IV, 32

38 Here ... is a kind of pre-established harmony between the course of nature and the succession of our ideas; and though the powers and forces, by which the former is governed, be wholly unknown to us; yet our thoughts and conceptions have still, we find, gone on in the same train with the other works of nature. Custom is that principle, by which this correspondence has been effected; so necessary to the subsistence of our species, and the regulation of our conduct, in every circumstance and occurrence of human life. Had not the presence of an object, instantly excited the idea of those objects, commonly conjoined with it, all our knowledge must have been limited to the narrow sphere of our memory and senses; and we should never have been able to adjust means to ends, or employ our natural powers, either to the producing of good, or avoiding of evil. Those, who delight in the discovery and contemplation of final *causes*, have here ample subject to employ their wonder and admiration.

Hume, Concerning Human Understanding, V, 44

39 When we infer any particular cause from an effect, we must proportion the one to the other, and can never be allowed to ascribe to the cause any qualities, but what are exactly sufficient to produce the effect. A body of ten ounces raised in any scale may serve as a proof, that the counterbalancing weight exceeds ten ounces; but can never afford a reason that it exceeds a hundred. If the cause, assigned for any effect, be not sufficient to produce it, we must either reject that cause, or add to it such qualities as will we it a just proportion to the effect. But if we ascribe to it farther qualities, or affirm it capable of producing other effects, we can only indulge the

licence of conjecture, and arbitrarily suppose the existence of qualities and energies, without reason or authority.

Hume, Concerning Human Understanding, XI, 105

40 If a clock is not made to tell the hour, I will then admit that final causes are chimeras; and I shall consider it quite right for people to call me "*cause-finalier*" that is—an imbecile.

All the pieces of the machine of this world seem, however, made for each other. A few philosophers affect to mock at the final causes rejected by Epicurus and Lucretius. It is, it seems to me, at Epicurus and Lucretius rather that they should mock. They tell you that the eye is not made for seeing, but that man has availed himself of it for this purpose when he perceived that eyes could be so used. According to them, the mouth is not made for speaking, for eating, the stomach for digesting, the heart for receiving the blood from the veins and for dispatching it through the arteries, the feet for walking, the ears for hearing. These persons avow nevertheless that tailors make them coats to clothe them, and masons houses to lodge them, and they dare deny to nature, to the great Being, to the universal Intelligence, what they accord to the least of their workmen.

Voltaire. Philosophical Dictionary: Final Causes

41 It is only because we subject the sequence of phenomena, and consequently all change, to the law of causality, that experience itself, that is, empirical cognition of phenomena, becomes possible; and

consequently, that phenomena themselves, as objects of experience, are possible only by virtue of this law.

Kant, Critique of Pure Reason, Transcendental Analytic

- 42 Organisms are... the only beings in nature that, considered in their separate existence and apart from any relation to other things, cannot be thought possible except as ends of *nature*. It is they, then, that first afford objective reality to the conception of an *end* that is an end of nature and not a practical end. Thus they supply natural science with the basis for a teleology, or, in other words, a mode of estimating its objects on a special principle that it would otherwise be absolutely unjustifiable to introduce into that science-seeing that we are quite unable to perceive *a priori* the possibility of such a kind of causality.

Kant, Critique of Teleological Judgement, 65

- 43 Primary causes are unknown to us, but are subject to simple and constant laws, which may be discovered by observation, the study of them being the object of natural philosophy.

Fourier, Analytical Theory of Heat, Preliminary Discourse

- 44 The necessary- is a category entirely by itself. Nothing ever comes into existence with necessity; likewise the necessary never comes into existence and something by coming into existence never becomes the necessary. Nothing whatever exists because it is necessary-, but the necessary exists because it is necessary- or because the necessary is. The actual is no more necessary- than the

possible, for the necessary is absolutely different from both....

The change involved in coming into existence is actuality; the transition takes place with freedom. No coming into existence is necessary. It was not necessary before the coming into existence, for then there could not have been the coming into existence, nor after the coming into existence, for then there would not have been the coming into existence.

All coming into existence takes place with freedom, not by necessity. Nothing comes into existence by virtue of a logical ground, but only by a cause. Every cause terminates in a freely effecting cause. The illusion occasioned by the intervening causes is that the coming into existence seems to be necessary-; the truth about intervening causes is that just as they themselves have come into existence they point back ultimately to a freely effecting cause. Even the possibility of deducing consequences from a law of nature gives no evidence for the necessity of any coming into existence, which is clear as soon as one reflects definitively on coming into existence. The same is the ease with manifestations of freedom, provided we do not let ourselves be deceived by the manifestations of freedom but reflect upon the coming into existence.

Kierkegaard, Philosophical Fragments, Interlude

45 Cause and effect, means and ends, seed and fruit, cannot be severed; for the effect already blooms in the cause, the end preexists in the means, the fruit in the seed.

Emerson, Compensation

46 The truth that every fact which has a beginning has a cause, is co-extensive with human experience.

Mill, System of Logic, Bk. III, V, 1

47 The state of the whole universe at any instant we believe to be the consequence of its state at the previous instant; insomuch that one who knew all the agents which exist at the present moment, their collocation in space, and all their properties, in other words, the laws of their agency, could predict the whole subsequent history of the universe, at least unless some new volition of a power capable of controlling the universe should supervene. And if any particular state of the entire universe could ever recur a second time, all subsequent states would return too, and history would, like a circulating decimal of many figures, periodically repeat itself.

Mill, System of Logic, Bk. III, V, 8

48 First causes are outside the realm of science; they forever escape us in the sciences of living as well as in those of inorganic bodies.

Claude Bernard, Experimental Medicine, II, 1

49 When an apple has ripened and falls, why does it fall? Because of its attraction to the earth, because its stalk withers, because it is dried by the sun, because it grows heavier, because the wind shakes it, or because the boy standing below wants to eat it? Nothing is the cause. All this is only the coincidence of conditions in which all vital organic and elemental events occur.

Tolstoy, War and Peace, IX, 1

50 As in the night all cats are gray, so in the darkness of metaphysical criticism all causes are obscure.

William James, Psychology, V

51 We have no definite idea of what we mean by cause, or of what causality consists in. But the principle expresses a demand for *some* deeper sort of inward connection between phenomena than their merely habitual time-sequence seems to us to be. The word "cause" is, in short, an altar to an unknown god; an empty pedestal still marking the place of a hoped-for statue. *Any* really inward belonging-together of the sequent terms, if discovered, would be accepted as what the word cause was meant to stand for. So we seek, and seek; and in the molecular systems we find a sort of inward belonging in the notion of identity of matter with change of collocation. Perhaps by still seeking we may find other sorts of inward belonging, even between the molecules and those "secondary qualities," etc., which they produce upon our minds.

William James, Psychology, XXVIII

52 All philosophers, of every school, imagine that causation is one of the fundamental axioms or postulates of science, yet, oddly enough, in advanced sciences such as gravitational astronomy, the word 'cause' never occurs.. . . To me it seems that philosophy ought not to assume such legislative functions, and that the reason why physics has ceased to look for causes is that, in fact, there are no such things. The law of causality, I believe, like much that passes muster among philosophers, is a

relic of a bygone age, surviving, like the monarchy, only because it is erroneously supposed to do no harm.

Russell, On the Notion of Cause

53 It is not in any sameness of causes and effects that the constancy of scientific law consists, but in sameness of relations. And even 'sameness of relations' is too simple a phrase; 'sameness of differential equations' is the only correct phrase. It is impossible to state this accurately in non-mathematical language; the nearest approach would be as follows: 'There is a constant relation between the state of the universe at any instant and the rate of change in the rate at which any part of the universe is changing at that instant, and this relation is many-one, i.e., such that the rate of change in the rate of change is determinate when the state of the universe is given.' If the 'law of causality' is to be something actually discoverable in the practice of science, the above proposition has a better right to the name than any 'law of causality' to be found in the books of philosophers.

Russell, On the Notion of Cause

19.4 Chance

In its relation to cause, chance is essentially a negative concept. For some writers, as the quotations here reveal, that which happens by chance is that which happens without cause, such as the swerve of the atoms described by Lucretius; for other writers, it is that which, though it may somehow be caused, is not necessitated by its causes; for still others, it is an event the causes of which we do not know or cannot determine, even though such causes may exist and may even necessitate the occurrence of the event in question. In addition, there is the concept of chance that emerges in Aristotle's discussion of a coincidence, such as the accidental meeting of two persons at a place where neither expected or planned to see the other: each, according to Aristotle, was caused to go to that place by decisions, motives, or other influences operating causatively on his own behavior, but nothing caused these two lines of causation to intersect at the moment of their coincidence.

The historians, biographers, and poets are concerned with the role of chance in human affairs. On this subject, the reader is referred to relevant passages in Section 15.3 on Fate, Fortune, and Destiny. The philosophers and theologians are concerned with necessity and contingency in nature and with the difference between a world in which things occur by chance or by blind necessity and a world governed by an intelligent deity and ordered by a benevolent providence. Spinoza, Hume, Voltaire, Darwin, J. S. Mill, and Tolstoy all deny that anything happens by chance; this, according to

Hume, is consistent with our not knowing the causes of events; to ascribe something to chance, Darwin points out, is merely to confess our ignorance of the causes.

Beginning with Pascal, among the authors quoted, the consideration of chance takes a new direction—the calculus and theory of probability, the most obvious application of which is to the games we call "games of chance." The reader will find this subject further explored in passages drawn from Laplace, Peirce, and Poincare, and the reader will also be interested in Poincare's contradiction of Darwin's remark that chance is nothing but a name for our ignorance of causes. With regard to probability itself, quotations from Locke and from Russell call attention to the distinction between subjective and objective probability—the one, an estimate of the reliability of our claim to know something, its credibility, or the likelihood that it is true; the other, a mathematical calculation of the betting odds on a particular future occurrence, such as making a certain number on the next roll of the dice or drawing a particular card from the pack.

■ ■ ■

1 I returned, and saw under the sun, that the race is not to the swift, nor the battle to the strong, neither yet bread to the wise, nor yet riches to men of understanding, nor yet favour to men of skill; but time and chance happeneth to them all.

Ecclesiastes 9:11

2 *Artabanus*. Chances rule men, and not men chances.

Herodotus, History, VII, 49

- 3 *Jocasta*. Why should man fear since chance is all in all for him, and he can clearly foreknow nothing?
Best to live lightly, as one can, unthinkingly.

Sophocles, Oedipus the King, 977

- 4 *Pericles*. Sometimes the course of things is as arbitrary as the plans of man; indeed this is why we usually blame chance for whatever does not happen as we expected.

Thucydides, Peloponnesian War, I, 140

- 5 *Crito*. But you see, Socrates, that the opinion of the many must be regarded, for what is now happening shows that they can do the greatest evil to any one who has lost their good opinion.

Socrates. I only wish it were so, Crito; and that the many could do the greatest evil; for then they would also be able to do the greatest good—and what a fine thing this would be! But in reality they can do neither; for they cannot make a man either wise or foolish; and whatever they do is the result of chance.

Plato, Crito, 44B

- 6 *Athenian Stranger*. I was going to say that man never legislates, but accidents of all sorts, which legislate for us in all sorts of ways. The violence of war and the hard necessity of poverty are constantly overturning governments and changing laws. And the power of disease has often caused innovations in the slate, when there have been pestilences, or when there has been a succession of bad seasons continuing during many years. Any one who sees all this, naturally rushes to the

conclusion of which I was speaking, that no mortal legislates in anything, but that in human affairs chance is almost everything. And this may be said of the arts of the sailor, and the pilot, and the physician, and the general, and may seem to be well said; and yet there is another thing which may be said with equal truth of all of them.

Cleinias. What is it?

Ath. That God governs all things, and that chance and opportunity co-operate with him in the government of human affairs. There is, however, a third and less extreme view, that art should be there also; for I should say that in a storm there must surely be a great advantage in having the aid of the pilot's art. You would agree?

Cle. Yes.

Plato, Laws, IV, 709A

- 7 Every result of chance is from what is spontaneous, but not everything that is from what is spontaneous is from chance.

Chance and what results from chance are appropriate to agents that are capable of good fortune and of moral action generally. Therefore necessarily chance is in the sphere of moral actions. This is indicated by the fact that good fortune is thought to be the same, or nearly the same, as happiness, and happiness to be a kind of moral action, since it is well-doing. Hence what is not capable of moral action cannot do anything by chance. Thus an inanimate thing or a lower animal or a child cannot do anything by chance, because it is incapable of deliberate intention; nor can 'good fortune' or 'ill fortune' be ascribed to them, except metaphorically, as Protarchus, for example, said that the stones of which altars are made

are fortunate because they are held in honour, while their fellows are trodden under foot.

Aristotle, Physics, 197a37

- 8 Chance has no place in that which is natural, and what happens everywhere and in every case is no matter of chance.

Aristotle, On the Heavens, 289b26

- 9 Things come into being either by art or by nature or by luck or by spontaneity. Now art is a principle of movement in something other than the thing moved, nature is a principle in the thing itself (for man begets man), and the other causes are privations of these two.

Aristotle, Metaphysics, 1070a6

- 10 When bodies are borne downwards sheer through void by their own weights, at quite uncertain times and uncertain spots they push themselves a little from their course: you just and only just can call it a change of inclination. If they were not used to swerve, they would all fall down, like drops of rain, through the deep void, and no clashing would have been begotten nor blow produced among the first-beginnings: thus nature never would have produced aught.

Lucretius, Nature of Things, II

- 11 That the mind itself does not feel an internal necessity in all its actions and is not as it were overmastered and compelled to bear and put up with this, is caused by a minute swerving of first-beginnings at no fixed part of space and no fixed time.

Lucretius, Nature of Things, II

12 *Moeris*. Chance sways all.

Virgil, Eclogue IX, 5

13 I suspend my judgment on the question whether it is fate and unchangeable necessity or chance which governs the revolutions of human affairs. Indeed, among the wisest of the ancients and among their disciples you will find conflicting theories, many holding the conviction that heaven does not concern itself with the beginning or the end of our life, or, in short, with mankind at all; and that therefore sorrows are continually the lot of the good, happiness of the wicked; while others, on the contrary, believe that, though there is a harmony between fate and events, yet it is not dependent on wandering stars, but on primary elements, and on a combination of natural causes. Still, they leave us the capacity of choosing our life, maintaining that, the choice once made, there is a fixed sequence of events. Good and evil, again, are not what vulgar opinion accounts them; many who seem to be struggling with adversity are happy; many, amid great affluence, are utterly miserable, if only the first bear their hard lot with patience, and the latter make a foolish use of their prosperity.

Tacitus, Annals, VI, 22

14 Either there is a fatal necessity and invincible order, or a kind Providence, or a confusion without a purpose and without a director. If then there is an invincible necessity, why dost thou resist? But if there is a Providence which allows itself to be propitiated, make thyself worthy of the help of the divinity. But if there is a confusion without a

governor, be content that in such a tempest thou hast in thyself a certain ruling intelligence. And even if the tempest carry thee away, let it carry away the poor flesh, the poor breath, everything else; for the intelligence at least it will not carry away.

Marcus Aurelius, Meditations, XII, 14

- 15 To make the existence and coherent structure of this universe depend upon automatic activity and upon chance is against all good sense. Such a notion could be entertained only where there is neither intelligence nor even ordinary perception; and reason enough has been urged against it, though none is really necessary.

Plotinus, Third Ennead, II, 1

- 16 There is a difference between universal and particular causes. A thing can escape the order of a particular cause, but not the order of a universal cause. For nothing escapes the order of a particular cause except through the intervention and hindrance of some other particular cause; as, for instance, wood may be prevented from burning by the action of water. Since, then, all particular causes are included under the universal cause, it could not be that any effect should take place outside the range of that universal cause. So far then as an effect escapes the order of a particular cause, it is said to be casual or fortuitous in respect to that cause; but if we regard the universal cause, outside whose range no effect can happen, it is said to be foreseen. Thus, for instance, the meeting of two servants, although to them it appears a chance circumstance, has been fully foreseen by their master, who has purposely sent them to meet at the one

place, in such a way that the one knows not about the other.

Aquinas, Summa Theologica, I, 22, 2

- 17 Certain philosophers of old denied the government of the world, saying that all things happened by chance. But such an opinion can be shown to be impossible ... by observation of things themselves. For we observe that in nature things happen always or nearly always for the best, which would not be the case unless some sort of providence directed nature towards good as an end, which is to govern. Therefore the unfailing order we observe in things is a sign of their being governed.

Aquinas, Summa Theologica, I, 103, 1

- 18 It is written *I saw that under the sun the race is not to the swift, nor the battle to the strong, nor bread to the wise nor riches to the learned, nor favour to the skilful, but time and chance in all.* But things subject to the Divine government are not ruled by chance. Therefore those things which are under the sun are not subject to the Divine government.... These things are said to be under the sun which are generated and corrupted according to the sun's movement. In all such things we find chance. Not that everything which occurs in such things is by chance but that in each one there is an element of chance. And the very fact that an element of chance is found in those things proves that they are subject to government of some kind. For unless corruptible things of this kind were governed by a higher being, they would tend to nothing definite, especially those which possess no kind of knowledge. So nothing in

them would happen unintentionally, which constitutes the nature of chance. Therefore to show how things happen by chance and yet according to the ordering of a higher cause, he does not say absolutely that he observes chance in all things, but *time and chance*, that is to say, that defects may be found in these things according to some order of time.

Aquinas, Summa Theologica, I, 103, 5

19 Every action of nature terminates in some one thing.

Therefore it is impossible for that which is accidental to be the effect *per se* of an active natural principle. No natural cause can therefore have for its proper effect that a man intending to dig a grave finds a treasure. Now it is manifest that a heavenly body acts after the manner of a natural principle, and so its effects in this world are natural. It is therefore impossible that any active power of a heavenly body be the cause of what happens by accident here below, whether by luck or by chance.

Aquinas, Summa Theologica, I, 116, 1

20 To call out for the hand of the enemy is a rather extreme measure, yet a better one, I think, than to remain in continual fever over an accident that has no remedy. But since all the precautions that a man can take are full of uneasiness and uncertainty, it is better to prepare with fine assurance for the worst that can happen, and derive some consolation from the fact that we are not sure that it will happen.

Montaigne, Essays, I, 24, Various Outcomes

21 *King Richard*. A horse! a horse! my kingdom for a horse!

Catesby. Withdraw, my lord; I'll help you to a horse.
K. Rich. Slave, I have set my life upon a cast
And I will stand the hazard of the die:
I think there be six Richmonds in the field;
Five have I slain to-day instead of him.
A horse! a horse! my kingdom for a horse!

Shakespeare, Richard III, V, iv, 7

22 *Chatillon.* And all the unsettled humours of the land.
Rash, inconsiderate, fiery voluntaries,
With ladies' faces and fierce dragons' spleens,
Have sold their fortunes at their native homes,
Bearing their birthrights proudly on their backs,
To make a hazard of new fortunes here.

Shakespeare, King John, II, i, 66

23 *Portia.* In terms of choice I am not solely led
By nice direction of a maiden's eyes;
Besides, the lottery of my destiny
Bars me the right of voluntary choosing:
But if my father had not scanted me
And hedged me by his wit, to yield myself
His wife who wins me by that means I told you,
Yourself, renowned Prince, then stood as fair
As any comer I have look'd on yet
For my affection.

Prince of Morocco. Even for that I thank you:
Therefore, I pray you, lead me to the caskets
To try my fortune. By this scimitar
That slew the Sophy and a Persian prince
That won three fields of Sultan Solyman,
I would outstare the sternest eyes that look,

Outbrave the heart most daring on the earth,
Pluck the young sucking cubs from the she-bear,
Yea, mock the lion when he roars for prey,
To win thee, lady. But, alas the while!
If Hercules and Lichas play at dice
Which is the better man, the greater throw
May turn by fortune from the weaker hand:
So is Alcides beaten by his page;
And so may I, blind fortune leading me,
Miss that which one unworthier may attain.
And die with grieving.

Por. You must take your chance,
And either not attempt to choose at all
Or swear before you choose, if you choose wrong
Never to speak to lady afterward
In way of marriage: therefore be advised.

Mor. Nor will not. Come, bring me unto my chance.

Por. First, forward to the temple: after dinner
Your hazard shall be made.

Mor. Good fortune then!
To make me blest or cursed'st among men.

Shakespeare, Merchant of Venice, II, i, 13

24 *Nestor.* In the reproof of chance
Lies the true proof of men.

Shakespeare, Troilus and Cressida, I, iii, 33

25 *Florizel.* As the unthought-on accident is guilty
To what we wildly do, so we profess
Ourselves to be the slaves of chance and flies
Of every wind that blows.

Shakespeare, Winter's Tale, IV, iv, 548

26 Let us... say, "God is, or He is not." But to which side shall we incline? Reason can decide nothing here. There is an infinite chaos which separated us. A game is being played at the extremity of this infinite distance where heads or tails will turn up. What will you wager? According to reason, you can do neither the one thing nor the other; according to reason, you can defend neither of the propositions.

Do not, then, reprove for error those who have made a choice; for you know nothing about it. "No, but I blame them for having made, not this choice, but a choice; for again both he who chooses heads and he who chooses tails are equally at fault, they are both in the wrong. The true course is not to wager at all."

Yes; but you must wager. It is not optional. You are embarked. Which will you choose then? Let us see. Since you must choose, let us see which interests you least. You have two things to lose, the true and the good; and two things to stake, your reason and your will, your knowledge and your happiness; and your nature has two things to shun, error and misery. Your reason is no more shocked in choosing one rather than the other, since you must of necessity choose. This is one point settled. But your happiness? Let us weigh the gain and the loss in w'agering that God is. Let us estimate these two chances. If you gain, you gain all; if you lose, you lose nothing. Wager, then, without hesitation that He is. "That is very fine. Yes, I must wager; but I may perhaps wager too much." Let us see. Since there is an equal risk of gain and of loss, if you had only to gain two lives, instead of one, you might still wager. But if there were three lives to gain, you would have to play (since you are under the necessity of playing), and you would be imprudent, when

you are forced to play, not to chance your life to gain three at a game where there is an equal risk of loss and gain. But there is an eternity of life and happiness. And this being so, if there were an infinity of chances, of which one only would be for you, you would still be right in wagering one to win two, and you would act stupidly, being obliged to play, by refusing to stake one life against three at a game in which out of an infinity of chances there is one for you, if there were an infinity of an infinitely happy life to gain. But there is here an infinity of an infinitely happy life to gain, a chance of gain against a finite number of chances of loss, and what you stake is finite. It is all divided; wherever the infinite is and there is not an infinity of chances of loss against that of gain, there is no time to hesitate, you must give all. And thus, when one is forced to play, he must renounce reason to preserve his life, rather than risk it for infinite gain, as likely to happen as the loss of nothingness.

For it is no use to say it is uncertain if we will gain, and it is certain that we risk, and that the infinite distance between the *certainty* of what is staked and the *uncertainty* of what will be gained, equals the finite good which is certainly staked against the uncertain infinite. It is not so, as every player stakes a certainty to gain an uncertainty, and yet he stakes a finite certainty to gain a finite uncertainty, without transgressing against reason. There is not an infinite distance between the certainty staked and the uncertainty of the gain; that is untrue. In truth, there is an infinity between the certainty of gain and the certainty of loss. But the uncertainty of the gain is proportioned to the certainty of the stake according to the proportion of the chances of gain and loss. Hence it comes that, if there are as many risks on one side as on

the other, the course is to play even; and then the certainty of the stake is equal to the uncertainty of the gain, so far is it from fact that there is an infinite distance between them. And so our proposition is of infinite force, when there is the finite to stake in a game where there are equal risks of gain and of loss, and the infinite to gain. This is demonstrable; and if men are capable of any truths, this is one.

"I confess it, I admit it. But, still, is there no means of seeing the faces of the cards?" Yes, Scripture and the rest, etc. "Yes, but I have my hands tied and my mouth closed; I am forced to wager, and am not free. I am not released, and am so made that I cannot believe. What, then, would you have me do?"

True. But at least learn your inability to believe, since reason brings you to this, and yet you cannot believe. Endeavour, then, to convince yourself, not by increase of proofs of God, but by the abatement of your passions. You would like to attain faith and do not know the way; you would like to cure yourself of unbelief and ask the remedy for it. Learn of those who have been bound like you, and who now stake all their possessions. These are people who know the way which you would follow, and who are cured of an ill of which you would be cured. Follow the way by which they began; by acting as if they believed, taking the holy water, having masses said, etc. Even this will naturally make you believe, and deaden your acuteness. "But this is what I am afraid of." And why? What have you to lose?

But to show you that this leads you there, it is this which will lessen the passions, which are your stumbling-blocks....

Now, what harm will befall you in taking this side? You will be faithful, honest, humble, grateful, generous, a sincere friend, truthful. Certainly you will not have those poisonous pleasures, glory and luxury; but will you not have others? I will tell you that you will thereby gain in this life, and that, at each step you take on this road, you will see so great certainty of gain, so much nothingness in what you risk, that you will at last recognise that you have wagered for something certain and infinite, for which you have given nothing.

"Ah! This discourse transports me, charms me," etc.

If this discourse pleases you and seems impressive, know that it is made by a man who has knelt both before and after it, in prayer to that Being, infinite and without parts, before whom he lays all he has, for you also to lay before Him all you have for your own good and for His glory, that so strength may be given to lowliness.

Pascal, Pensées, III, 233

27 Whatever is, is in God; but God cannot be called a contingent thing, for He exists necessarily and not contingently. Moreover, the modes of the divine nature have followed from it necessarily and not contingently, and that, too, whether it be considered absolutely, or as determined to action in a certain manner. But God is the cause of these modes, not only insofar as they simply exist, but also insofar as they are considered as determined to any action. And if they are not determined by God, it is an impossibility and not a contingency that they should determine themselves; and, on the other hand, if they are determined by God, it is an impossibility and not a contingency that they should render themselves indeterminate. Wherefore all things are

determined from a necessity of the divine nature, not only to exist, but to exist and act in a certain manner, and there is nothing contingent.

Spinoza, Ethics, I, Prop. 29, Demonst.

28 The highest probability amounts not to certainty, without which there can be no true knowledge.

*Locke, Concerning Human Understanding, Bk. IV, 111,
14*

29 All Nature is but Art, unknown to thee;
All Chance, Direction, which thou canst not see;
All Discord, Harmony, not understood;
All partial Evil, universal Good:
And, spite of Pride, in erring Reason's spite,
One truth is clear, "Whatever is, is Right"

Pope, Essay on Man, Epistle I, 289

30 Though there be no such thing as *Chance* in the world; our ignorance of the real cause of any event has the same influence on the understanding, and begets a like species of belief or opinion.

There is certainly a probability, which arises from a superiority of chances on any side; and according as this superiority encreases, and surpasses the opposite chances, the probability receives a proportionable encrease, and begets still a higher degree of belief or assent to that side, in which we discover the superiority. If a die were marked with one figure or number of spots on four sides, and with another figure or number of spots on the two remaining sides, it would be more probable, that the former would turn up than The latter; though, if it had

a thousand sides marked in the same manner, and only one side different, the probability would be much higher, and our belief or expectation of the event more steady and secure. This process of the thought or reasoning may seem trivial and obvious; but to those who consider it more narrowly, it may, perhaps, afford matter for curious speculation.

It seems evident, that, when the mind looks forward to discover the event, which may result from the throw of such a die, it considers the turning up of each particular side as alike probable; and this is the very nature of chance, to render all the particular events, comprehended in it, entirely equal. But finding a greater number of sides concur in the one event than in the other, the mind is carried more frequently to that event, and meets it oftener, in revolving the various possibilities or chances, on which the ultimate result depends.

Hume, Concerning Human Understanding, VI, 46

- 31 It is universally allowed that nothing exists without a cause of its existence, and that chance, when strictly examined, is a mere negative word, and means not any real power which has anywhere a being in nature.

Hume, Concerning Human Understanding, VIII, 74

- 32 All effects follow not with like certainty from their supposed causes. Some events are found, in all countries and all ages, to have been constantly conjoined together: Others are found to have been more variable, and sometimes to disappoint our expectations; so that, in our reasonings concerning matter of fact, there are all

imaginable degrees of assurance, from the highest certainty to the lowest species of moral evidence.

A wise man, therefore, proportions his belief to the evidence. In such conclusions as are founded on an infallible experience, he expects the event with the last degree of assurance, and regards his past experience as a full *proof* of the future existence of that event. In other cases, he proceeds with more caution: He weighs the opposite experiments: He considers which side is supported by the greater number of experiments: to that side he inclines, with doubt and hesitation; and when at last he fixes his judgement, the evidence exceeds not what we properly call *probability*. All probability, then, supposes an opposition of experiments and observations, where the one side is found to overbalance the other, and to produce a degree of evidence, proportioned to the superiority.

Hume, Concerning Human Understanding, X, 87

- 33 No more by the law of reason than by The law of nature can anything occur without a cause.

Rousseau, Social Contract, II, 4

- 34 Nothing was ever said with uncommon felicity but by the cooperation of chance; and therefore wit, as well as valor, must be content to share its honors with fortune.

Johnson, Idler No. 58

- 35 The explanation adopted by Epicurus... completely denies and abolishes the distinction between a technic of nature and its mere mechanism. Blind chance is accepted as the explanation, not alone of the agreement of the

generated products with our conception, and, consequently, of the technic of nature, but even of the determination of the causes of this development on dynamical laws, and, consequently, of its mechanism. Hence nothing is explained, not even the illusion in our teleological judgements, so that the alleged idealism in them is left altogether unsubstantiated.

Kant, Critique of Teleological Judgement, 73

- 36 All events, even those which on account of their insignificance do not seem to follow the great laws of nature, are a result of it just as necessarily as the revolutions of the sun. In ignorance of the ties which unite such events to the entire system of the universe, they have been made to depend upon final causes or upon hazard, according as they occur and are repeated with regularity, or appear without regard to order; but these imaginary causes have gradually receded with the widening bounds of knowledge and disappear entirely before sound philosophy, which sees in them only the expression of our ignorance of the true causes.

Laplace, Essay on Probabilities, I

- 37 Consider that chance, which, with error, its brother, and folly, its aunt, and malice, its grandmother, rules in this world; which every year and every day, by blows great and small, embitters the life of every son of earth, and yours too.

Schopenhauer, Wisdom of Life: Aphorisms

- 38 Those who live in the midst of democratic fluctuations have always before their eyes the image of chance; and

they end by liking all undertakings in which chance plays a part. They are therefore all led to engage in commerce, not only for the sake of the profit it holds out to them, but for the love of the constant excitement occasioned by that pursuit.

Tocqueville, Democracy in America, Vol. II, II, 19

39 When we look at the plants and bushes clothing an entangled bank, we are tempted to attribute their proportional numbers and kinds to what we call chance. But how false a view is this!

Darwin, Origin of Species, III

40 I have... sometimes spoken as if the variations—so common and multiform with organic beings under domestication, and in a lesser degree with those under nature—were due to chance. This, of course, is a wholly incorrect expression, but it serves to acknowledge plainly our ignorance of the cause of each particular variation.

Darwin, Origin of Species, V

41 I am aware that the conclusions arrived at in this work will be denounced by some as highly irreligious; but he who denounces them is bound to shew why it is more irreligious to explain the origin of man as a distinct species by descent from some lower form, through the laws of variation and natural selection, than to explain the birth of the individual through the laws of ordinary reproduction. The birth both of the species and of the individual are equally parts of that grand sequence of events, which our minds refuse to accept as the result of blind chance. The understanding revolts at such a

conclusion, whether or not we are able to believe that every slight variation of structure,—the union of each pair in marriage,—the dissemination of each seed,—and other such events, have all been ordained for some special purpose.

Darwin, Descent of Man, III, 21

42 Chance is usually spoken of in direct antithesis to law; whatever (it is supposed) cannot be ascribed to any law is attributed to chance. It is, however, certain, that whatever happens is the result of some law; is an effect of causes, and could have been predicted from a knowledge of the existence of those causes, and from their laws. If I turn up a particular card, that is a consequence of its place in the pack. Its place in the pack was a consequence of the manner in which the cards were shuffled, or of the order in which they were played in the last game; which, again, were effects of prior causes. At every stage, if we had possessed an accurate knowledge of the causes in existence, it would have been abstractly possible to foretell the effect.

An event occurring by chance may be better described as a coincidence from which we have no ground to infer an uniformity: the occurrence of a phenomena, in certain circumstances, without our having reason on that account to infer that it will happen again in those circumstances. This, however, when looked closely into, implies that the enumeration of the circumstances is not complete. Whatever the fact be, since it has occurred once, we may be sure that if *all* the same circumstances were repeated, it would occur again; and not only if all, but there is some particular portion of those circumstances on which the phenomenon « invariably consequent. With most of

them, however, it is not connected in any permanent manner: its conjunction with those is said to be the effect of chance, to be merely casual. Facts casually conjoined are separately the effects of causes, and therefore of laws; but of different causes, and causes not connected by any law.

It is incorrect, then, to say that any phenomenon is produced by chance; but we may say that two or more phenomena are conjoined by chance that they co-exist or succeed one another only by chance; meaning that they are in no way related through causation; that they are neither cause and effect, nor effects of the same cause, nor effects of causes between which there subsists any law of co-existence, nor even effects of the same collocation of primeval causes.

Mill, System of Logic, Bk. III, XVII, 2

43 If we assume as the historians do that great men lead humanity to the attainment of certain ends—the greatness of Russia or of France, the balance of power in Europe, the diffusion of the ideas of the Revolution, general progress, or anything else—then it is impossible to explain the facts of history without introducing the conceptions of *chance* and *genius*. ...

Why did it happen in this and not in some other way? Because it happened so! "*Chance* created the situation; *genius* utilized it," says history'.

But what is *chance*? What is *genius*? The words *chance* and *genius* do not denote any really existing thing and therefore cannot be defined. Those words only denote a certain stage of understanding of phenomena. I do not know why a certain event occurs; I think that I cannot know it; so I do not try to know it and I talk about

chance. I see a force producing effects beyond the scope of ordinary human agencies; I do not understand Why this occurs and I talk of *genius*, . . .

Only by renouncing our claim to discern a purpose immediately intelligible to us, and admitting the ultimate purpose to be beyond our ken, may we discern the sequence of experiences in the lives of historic characters and perceive the cause of the effect they produce (incommensurable with ordinary human capabilities), and then the words *chance* and *genius* become superfluous.

Tolstoy, War and Peace, I Epilogue, II
